It may be asked, How is a beginner to acquire the necessary quickness to shoot well? Is he to buy a thousand pigeons and shoot them from a trap? Or a few casks of glass balls and have them thrown in the air a la Bogardus? Not necessarily; although that kind of practice is good after you understand the principle of shooting, and can tell when you miss and the reason why. As to hitting objects thrown in the air it is a mere trick, and may be learned by any shooter in half a day's practice. The way to acquire quickness is to practice using the gun a quarter of an hour—longer if you like—every day in the house. Col. Hawker says, "A man should be measured for his gun the same as for his boots or coat. However, take care that your gun is not too straight, nor too crooked, nor too long in the stock. Practice throwing it up to you shoulder, hammer down, both eyes open, and pointing at any small object in the room. Then look with one eye along the barrel to verify your correctness of aim; then follow imaginary birds, first to the left, then to the right, pull the trigger at some object in passing, and see that the motion of following is not checked When you think you are tolerably perfect in this action try snapping a cap, quickly, at a lighted candle at 10 feet distance, also at one suspended by a string, to which you can give a pendulous motion, and when you can blow the candle out five times out of six, there is little more to be learned. You may go into the field and the birds, like Davy Crocket's coon, will come down. Of course you will not shoot at a bird in motion unless you keep the gun following that motion, but ahead, say one, two or three feet, according to the distance and velocity. If you shoot directly at a flying bird, a moment's consideration will show you that it is impossible to hit it. In the first place the eye says to the mind, shoot; the order has to travel through the nerves to the fingers, the fingers communicates the order to the trigger, the trigger to the hammer, the hammer to the cap, the cap to the powder, the powder to the shot, and the shot has to travel thirty or forty yards to the bird, which has been flying, probably, at the rate of twenty yards in a second, or one yard in the twentieth part of a second. Therefore, all missed cross shots are behind the bird. A bird going straight away is the same as a sitting shot, and merely requires correct aim. But sometimes the eye, in snap shooting, will not allow the finger to pull ahead of the bird, but will insist upon its waiting until the bird comes on a line with the gun. That is where the education is again required. The finger should be practiced on the trigger, the same as practising a shake on a musical instrument, until it will act with quickness and certainty. When you find that you are missing birds, and don't know the reason, just sit down for five minutes and practice the finger on the trigger. It is sluggish and will not obey the eye; you cannot perceive it, but that is what is the matter. How frequently a good shot misses the easiest kind of bird, which, could he have over again, he would kill with the greatest ease. What was wrong? The eye? Certainly not. The finger did not do its duty. Hamlet says, "The play's the thing;" I say, the finger's the thing that makes the shooter. *Quod est demonstrandum.*

COOLNESS.

All writers on shooting dwell strongly, and justly, on this most important quality of the mind. But to tell a man to "keep cool" you might as well say, "Ethiopian, change your skin. Coolness is a matter of temperament. But a great degree of coolness may be acquired. A French writer says: "After the bird rises take a pinch of snuff before you shoot." There is much wisdom in that, but perhaps you do not take snuff, and I would hardly recommend setting up a snuff box on purpose. But as good a plan is, always mentally to count three before you pull the trigger. It gives the bird time to get into its regular flight, your eye gets a clear view of distance and velocity, your nerves, which were startled with the sudden whirr, get composed, your finger gets ready to act, and down comes the bird. It is better to hit a bird at fifty yards than miss it at thirty. In conclusion, I recommend all those who desire to become trully skillful shots, to devote a short time daily, both during and out of the regular season, to a careful systematic practice of handling the gun.

A GILROY SPORTSMAN.

—See Bogardus' advertisement.

PIGEON MATCHES.

CANADA—*Cobourg, April* 11.—The regular monthly contest of the Cobourg Gun Club was shot here to-day on their grounds, but owing to the day being exceedingly windy the shooting was not as good as usual. The conditions were: 10 balls each, 18 yards rise; C. G. C. rules. The following is the score:

Married.																
B Richardson	1	1	1	1	1	1	1	1	1	0	—	9
H F Holland	0	1	1	1	1	1	0	1	0	1	—	7
B Delany	1	0	1	1	1	0	0	0	0	0	—	4
F Delany	1	0	1	0	1	1	0	0	0	0	—	4
R Jakes	1	0	0	0	0	0	0	0	0	0	—	1—25
Unmarried.												
T H Munson	1	1	1	1	0	1	0	1	1	0	—	8
C Wallace	1	1	1	0	1	1	1	1	1	0	—	8
H Burnett	0	1	1	1	1	0	0	0	1	0	—	6
R S Gowan	0	0	1	0	1	0	1	1	1	0	—	5
J Boswell	0	0	0	0	0	0	0	0	0	0	—	0—27

HUGH BURNETT, Sec.

TORONTO GUN CLUB—*Toronto, April* 11.—At Woodbine Park; wind, northwest; heavy:

B Moore	1	0	1	1	0	0	1	1	1	1	—7
S B Graham	0	1	1	0	0	0	1	1	1	1	—7
Dr Elliott	1	1	1	1	1	1	*	1	1	1	—8
Dr W Smith	1	1	1	1	1	0	0	1	0	0	—6
H Watson	0	1	1	0	1	1	1	0	0	1	—6
A McGregor	0	0	1	1	0	w					
R Morrison	0	0	1	1	0	w					

MAINE—*Portland, April* 21.—The Peak's Island Shooting Club met Fast Day for a glass ball shoot, using Card's rotary trap, Ira A. Paine's rules, thirty-six balls, the defeated party paying for a supper at the Union House.

A. G. Sterling's Side.		W. S. Brackett's Side.	
A G Sterling	24	W S Brackett	21
L E Skillings	33	W S Jones	32
G L Brackett	22	J B Jones	32
O A Skillings	27	H Trefethen, Jr	23
W D Brackett	26	E G H Brackett	25
J Massure	22	J W Sterling	30
S A Sterling	32	A V Ackley	24
A L Dyer	32	H S H Brackett	16
E T Holbrook	10	R S Sterling	3
C Stevens	12—230	H Trefethen	12—221

CONNECTICUT—*West Meriden, April* 15.—Glass ball trap shooting for champion cup of Meriden. Weather very cold and raw. Wind blowing fresh; a very disagreeable day to shoot. The winner must make the best score three times in succession at fifteen balls thrown from three Bogardus traps; Bogardus rules to govern. The cup is very neatly gotten up, standing about twelve inches high, the bowl resting upon four breech-loading shot guns:

I Fergu-on	0	1	1	0	1	1	1	1	1	1	1	1	1	0	—	11
J A Thomas	1	1	1	1	1	1	1	0	0	1	0	1	1	1	—	11
F O Downing	1	1	1	1	1	1	0	1	1	1	1	1	1	0	—	13
N Cornwell	1	1	0	1	0	1	0	1	1	0	0	1	1	1	—	10
J Fiers	0	1	1	1	1	0	1	1	0	0	1	0	0	0	—	6
C McKendrick	0	0	1	1	1	0	1	0	0	0	0	1	0	0	—	6
E B Richmond	1	0	1	0	0	0	1	0	1	1	0	0	1	1	—	6
E A Birdsey	0	1	0	1	0	1	1	1	0	1	0	1	1	0	—	9
L J Gaines	0	1	1	1	1	1	1	1	0	1	1	0	1	1	—	11
D P Pease	1	0	1	1	1	0	1	1	1	1	1	1	0	1	—	12
N A Roberts	0	0	0	1	0	0	1	0	0	0	0	0	1	1	—	5
J Phenix	0	0	1	1	1	1	0	1	1	1	1	0	1	1	—	11
S Lawton	0	1	1	0	1	1	1	1	0	0	1	0	0	1	—	6

Following this there were numerous matches made up with small sweepstakes, the shooting of which showed a better average for all than the cup match. DEERSLAYER.

FALCON GUN CLUB—*Dexter's Park, L. I., April* 16.—Match at glass balls, 21 yards, Card's revolving trap, 15 balls each:

Brown	11	J Moller	4
G Butler	9	J H Miller	3
J Ficken	6	W Mangles	3
J Herrman	4	H Meyer	1
C C Doscher	0		

Team shoot at pigeons; 23 yards:

Captain L. R. Brown's Team.																
L R Brown	0	1	*	0	1	1	—3	Mangels	0	*	1	1	0	0	—2	
J Muller	0	1	1	0	1	1	—4	Meyer	0	0	1	w			—1	—14
Butler	1	1	1	0	*	1	—4									
Captain J. H. Miller's Team.																
J H Miller	1	0	*	0	1	0	—2	J Herrman	1	0	0	*	0	1	—2	
Doscher	1	1	0	1	0	1	—4	Meyer	0	0	1				—1	—12
Ficken	1	1	1	0	*	0	—3									

LONG BRANCH GUN CLUB.—The Long Branch Gun Club, composed of members from the various clubs throughout the United States, numbers over 200 members. They intend having an inclosed ground of eight or ten acres, also a grand stand similar to that of the Narragansett Club, at Newport, and from which the shooting can be witnessed without danger to the visitors. The grounds are to be devoted entirely to pigeon and glass ball shooting.

TENNESSEE—*Nashville, April* 18.—Yesterday about 100 of our amateurs met at the Nashville Shooting Park to witness the following matches at glass balls. Tennessee sportsmen's rules, Butterlich and Card's traps. First match was for a beautiful Bavarian rifle, $2 entrance fee:

Dr Buzzard	0	1	1	1	0	1	1	1	0	0	—	6
Simp on	0	1	1	1	1	1	1	0	1	1	—	8
Hamilton	1	0	1	1	1	0	0	1	1	0	—	6
C K Cook	1	1	1	0	1	0	0	1	1	1	—	7
Valentine	0	1	1	0	1	1	1	1	1	1	—	8
F Shields	1	1	1	0	1	1	1	0	0	0	—	6
Higgins	1	0	1	0	1	1	1	0	0	0	—	5
H L Pritchett	1	1	0	w								
Briar	0	1	1	1	1	1	0	0	1	0	—	6
Blood	1	0	1	1	0	1	1	1	1	0	—	7
Maj A E Burr	1	0	0	1	0	0	0	1	0	1	—	4
Wynne	0	0	1	1	1	1	1	1	1	1	—	8

Carter	1	0	1	0	1	w						
Knight	1	1	1	0	1	1	1	1	1	1	—	9
Tinkerton	1	1	1	0	1	1	0	1	1	1	—	8
Buckho 2	0	0	1	1	1	1	1	1	1	1	—	7
Brackman	1	1	1	1	1	1	0	0	w		—	6
Buzzard	1	1	1	1	1	0	1	1	1	0	—	8
Houston	1	1	0	1	1	1	1	0	0	0	—	6
Buzzard	1	1	1	1	1	0	0	1	1	1	—	8
Scott	0	1	1	1	1	0	1	1	w		—	6
Campbell	1	1	1	1	1	1	1	1	1	1	—	10

Second match, sweepstakes:

Ament	1	1	0	w	—2	Razio	0	1	1	w	—2					
Cardwell	1	1	1	1	—4	Grimth	1	1	0	w	—2					
Yorston	1	0	1	w	—2	Napier	1	1	1	0	—3					
Buzzard	1	1	0	1	—4											

Third match, sweepstakes:

Ament	0	w		—0	Mitchell	1	1	1	1	1	—6					
Pritchett	1	0	w	—1	Buzzard	0	1	w			—1					
Cheatham	0	w		—0	Nicholson	1	0	w			—1					
Ragio	1	1	1	1	—5	Carter	1	1	1	0	—4					

Fourth match; first two birds at 18 yards, the other two at 21 yards:

Nelson	1	0	0	1	—2	Carter	1	1	0	1	—3					
Valentine	1	1	0	1	—3	Gilbert	1	1	0	0	—2					
Mitchell	1	1	1	1	—4	Pritchett	1	0	w		—1					

Fifth match:

Valentine	1	1	1	0	1	—4	Cook	1	1	1	0	0	—3			

Sixth match:

Valentine	1	1	0	—2	Cook	0	w									
Pritchett	1	1	1	—3												

J. D. H.

TEXAS STATE SPORTSMEN'S ASSOCIATION.—The second annual tournament of the Texas State Sportsmen's Asso. will be held at Waco, Texas, May 7th to 10th, inclusive, under the auspices of the Waco and Tatham Gun Clubs. Sixteen contests are on the programme, of which nine are sweepstakes, and others for prizes ranging in value from $10 to $150. The officers and committees are: C. G. McCulloch, President, Waco; W. E. Hughes, First Vice-President, Dallas; C. C. Pettit, Second Vice-President, Galveston; M. M. Bond, Third Vice-President, Sherman; P. B. Watson, Secretary and Treasurer, Houston; H. M. Thompson, Assistant Secretary, Waco. Reception Committee—Hon. G. B. Gerald, E. McCall, John Moore. Committee of Arrangements—C. C. McCulloch, H. M. Thompson, J. P. Garland, E. Early, Walter V. Fort. Committee on Grounds—W. S. Aimond, John Thompson, C. M. Downs, E. McCall.

ILLINOIS STATE SPORTSMEN.—The sixth annual convention and tournament of the Illinois State Sportsmen's Association, for the protection of fish and game, will be held at Peoria, Illinois, May 27, 28, 29 and 30. The first day will be devoted to a match for the State championship, prizes of $125, $60, $65, $55 and $34; a team shoot of four men from any club of the State association, prizes of $170, $145, $90 and $65, and a year's subscription to the FOREST AND STREAM for the lowest score. The rest of the contests are open to the world. The first match of the second day will be a team match of two men from any organized club in the United States, prizes of $75, $60, $40 and $25. The second match will be for prizes of $165, $105, $75, $50 and $34. Nos. 5, 6 and 7 are sweepstakes. No. 8 is a team match of four men each from any organized club, for prizes of $150, $90, $50 and $25. There are also a number of special prizes. All shooting will be from plunge traps. Circulars may be obtained by addressing Mr. V. M. Lincoln, Peoria, Ill. The officers of the association are: V. M. Lincoln, President, Peoria; H. W. Belden, First Vice-President, Galesburg; D. F. Reed, Second Vice-President, Evanston; Geo. W. Baker, Secretary, Peoria; Abner Price, Treasurer, Chicago.

ODE TO MY FRIEND "OPEN SEA."

There was a young man from Swamscott,
Who built a fast fisherman's yacht.
She went such a pace, when she sailed in a race,
That she delighted all hands in Swamscott.

New York, April 16, 1879. —R. CENTER.

YACHTING NEWS.

OUR CORRESPONDENCE.—While permitting as wide a discussion and unfettered expression of opinion in our correspondence as is consistent with propriety, the publication of letters in these columns does not necessarily imply that the thoughts expressed receive our indorsement. The object of devoting liberal space to correspondents is to further the free interchange of experiences of one section or class with those of others, thereby winnowing the wheat from the chaff, to the benefit of the interests of the yaching community in general.

THE OLD UNA.—A correspondent writes that the old *Una* was not improved at the suggestion of Stevens, as we recently quoted from a coutemporary, but that the *Una* was built by Steers for Mr. Waterbury, then sold to Mr. Rutherford, who originated and designed the lengthening of the bow, which so improved her speed.

BUFFALO YACHTING.—Sloop *Arrow* has been sold to J. B. Edmonds, who proposes to slush her bottom with sword-fish oil and go for the mugs. The schooners *Mystic, Telephone* and *Fleetwing* are ready to go overboard, waiting only for the ice to break up.

FROM ENGLAND.—Our correspondent, R. T. McMullen, Esq., of Greenbithe, Eng., desires it to be understood that the midship sections of his well-known little cruisers were not in any way as deep as might be inferred from the use of the letter U in describing their main features. The *Orion* has 10ft. 2in. beam and 6ft. 4in. hold. He also adds that he did not care to sail around Land's End in the dark for pleasure, though it is often done from necessity. These little changes to his former letter will serve to express his meaning more concisely. There are unfortunately no "lines" in existence of his vessels that we know of. Such a set would form a valuable addition to the data on hand relating to Corinthian cruisers, and we hope that a set may yet be obtainable. It would be an easy matter to take off the yacht's lines while on the mud.

CANOEING IN THE WEST.—We had the pleasure of a visit from Mr. A. H. Seigfried, business manager of the Louisville *Courier Journal*, accompanied by Mr. Anderson, of Louisville, Wednesday, last week. Mr. Siegfried is well known as one of the most ardent lovers of canoeing in this country, and he has done much to further the development of the sport. He reports a great spread in its popularity throughout the West. While lecturing in Bridgeton, a small town in Ohio, he was surprised to note the interest taken by every one in town, and the canoe on exhibition was besieged with visitors and thoroughly examined by people from far and near. Mr. Siegfried will soon undertake the descent of the Mississippi from its headwaters in company with others. His canoe is of a modified type, a combination of the *Rob Roy* and *Nautilus*.

A NEW SCHOONER.—At the Islip yard, Mr. Alonzo E. Smith has laid the keel for a new schooner, about 56 ft. long, to the order of J. G. Cassatt, Esq., banker, Philadelphia.

MORE CUTTERS.—An imported five-tonner will soon make her appearance in our waters, and a ten will be laid down in time for next year. And so the good work prospers.

THE INTREPID.—This schooner, Mr. Lloyd Phœnix, N. Y. Y. C., has put in at Fernandina, Fla., and will remain till the end of the month.

PORTLAND YACHT CLUB.—This club, with headquarters at Portland, Me., now numbers 157 members, including twelve honorary, possessing a fleet of fourteen schooners, nineteen sloops and two steamers. Club house located on Custom

House wharf, in sight of the general anchorage. *Vixe*, Vice-Com. A. K. Paul, holds the champion cup in her class. Having won it three times in succession, the cup has become her property, and the club has ordered a new one. In the second class schooners *Undine* has the lead, and the *Twilight* among the sloops. The cup for third class sloops now belongs to the *Mist*, and a new one will be sailed for this year. The officers of the club have appeared in a previous number. The following are the fixtures for the year: Annual challenge cup matches, May 23; spring cruise, May 30, probably eastward as far as Mt. Desert; fall cruise in September. Length of courses: first class 31 miles, second class 18, third 12. The club was organized April 26, 1869, with only twenty-one members and four schooners and six sloops. In 1872 the present handsome club house was first occupied, and since which time the club has been steadily growing in strength and popularity, which we ascribe largely to the Corinthian principles adopted and to the active sailing of most of its members. The cruises in squadron are a feature of this club, as with its northern neighbor of Halifax. Club burgee—a white swallow-tail, blue border and red diagonal cross with blue star, near the mast.

THE RESOLUTE.—This schooner returned to Philadelphia, April 15, from an extended cruise to the West Indies, Madeira and Western Isles, sailing in round numbers over fifteen thousand miles, having left Philadelphia in Aug., 1878. She brings with her the body of Dr. Horace Binney Hare, who succumbed after a long illness while the schooner he had chartered was in St. Thomas, March 21. The *Resolute's* contemplated run to the Windward Islands was therefore given up. The family of Dr. Hare returned by steamer to New York.

YACHTS LICENSES.—Next week we will give the latest interpretation put upon the question of licenses for yachts under 20 tons by the Treasury Department.

CHARLESTON (S. C.) ITEMS.—There are some evidences of life among the boating men, and the prospect for a large and exciting regatta in May is good. The Carolina Independent Boat Club have put a good crew in training. The Palmettos will put two crews afloat this week, and the Electrics will follow suit. It is rumored that Augusta will send down two good crews, and it is to be sincerely hoped that Savannah will send over a crew to regain her lost laurels. The yachtsmen are busily engaged in refitting, etc. Mr. Glidden has his yacht, the *Wild Bird*, in the hands of the painters, and it is said that he will make a few slight changes in rigging, etc.

THE CUTTER RIG GAINING.—The former sloop *Glance*, Mr. E. H. Ferris, N. Y. Y. C., has been rebuilt at Northport, L. I., and has received a cutter rig.

SALEM (MASS.) YACHT CLUB.—Fixtures as follows: June 10, review of fleet; July 4, first match; August 12, second match, and September 2, third match. Courses and time of starting will be announced in these columns.

BOSTON ITEMS.—Schooner *Brenda*, Mr. Little, will be out by the middle of May after a thorough overhauling. The new schooner *Adrienne*, built at City Point, is said to be a beauty. She will be put overboard very soon. Mr. Bryant has had a little steam cutter built 15ft. long; weighing less than 100 lbs., for his sloop *Undine*. This cutter is run by kerosene. The Eastern Y. C. will have two extra matches this summer besides the usual fixtures. The Harrington schooner, building at Bath, Me., is a very powerful boat and will sport 34 cwt. of iron on her keel.

ONE OF MANY.—A correspondent writes: I heard a man say he didn't believe in English yachts, the other day, and on bringing him down to the point, he didn't know what a yawl was! Generally the case, we find. FOREST AND STREAM hopes to instruct him and lead him to a better way of thinking, in company with a great many others.

THE SLOOP'S UNHANDINESS.

EDITOR FOREST AND STREAM:

I am the owner of a little centreboard sloop yacht, 31ft. long, and I can sail and handle her fairly well in ordinary weather, with plenty of warning in a stiff blow before it is on me, or I can dodge under some quiet lee and can, with the aid of my man, get my craft under snug, safe canvas very creditably. Of course, any lubber can do this, you say; but I have once or twice been caught holding on a "leetle" too long when it has been breezing up, and have been quite mortified by the rather sorry figure I had to cut in taking in a double reef, especially as I had a friend along who had been beguiled into believing me quite an old salt. Now, will not you or some of your sloop sailers tell me in your paper how I ought to have gone to work—*secundem artem*, of course—to take in a double reef in a sloop when it is blowing very hard, with a rough sea; and while he is about it let him give the orders—*seriatem*—that he would give from the tiller in such a case, so that his man would think that the skipper knew what he was about. I believe reefing down in half a gale is about the hardest job a sloop sailor is called on to perform, and its difficulty and danger is supposed to constitute the one great infirmity of this fast and otherwise handy rig compared to the yawl or schooner. If any of your correspondents can help to vindicate the reputation of their favorite rig for seaworthiness and safety, now is the time to step forward. I at least shall be glad to learn how they would do it, and what is the most approved method of going about it—in a rough sea and half a gale of wind. The value of any answers will consist in their accuracy of detail and minuteness of description of the manœuvres. LUBBER.

Unless our correspondent is desirous of preserving the speed of the sloop for light weather he would do well to shift to the yawl rig. This he will find as handy as the schooner, but much faster and more weatherly. In place of hauling down one or two reefs, as in the sloop, your single hand steps aft on the counter, sings out, "Mind your helm," and lowers away the "mizzen." He then runs forward, lowers away foresail (on the forestay) and runs in the jib on the bowsprit, till a fair balance is re-established. You are at once under short sail, having reduced canvas from twenty-five to thirty-five per cent by an operation manifestly easier, quicker, safer and snugger than reefing a sloop's mainsail and taking bonnet off the jib. Should it blow still harder, lower away mainsail and set mizzen, establishing a balance by the head sail, and while on your course rejoicing, take your time about tying a double or close reef in the mainsail, which you may then set or not as you please. If you expect a dirty time and are a blue water sailor you will have a storm tryesail aboard, which you will proceed to bend and hoist away when ready. The yawl rig combines handiness and speed to a greater extent than any other kind, something which has been fully appreciated by the fleet in San Francisco; and we are happy to add that a number of gentlemen contemplate its introduction in the East, where it is certain to become very popular. The host of small schooners in the East, ranging from twenty five to forty five ft., would all do vastly better, especially in working to windward in a chop, if rigged as yawls instead of schooners, while they would lose nothing in handiness. Of such value do we deem this rig in connection with the furtherance of sea-cruising, that we propose to recur to the subject at some other time. In the meanwhile the yawl rig will help "Lubber" over the difficulties encountered in working a sloop short handed. In England this rig is the prevalent one on fishermen and vessels in which economy in handling is sought after. So rapidly has the yawl risen in favor abroad, that while in 1850 there were only forty five of this class, their number increased to 328 in 1878, a much greater advance than shown by any other rig. To-day the yawl is as frequent as the schooner and represents twenty five per cent. of the entire British Sailing fleet against only ten per cent. in 1850. Such facts speak for themselves and do not require any further endorsement.

HOW IT BLOWS IN 'FRISCO.

SAN FRANCISCO, Cal., April 6, 1879.

EDITOR FOREST AND STREAM:

Your correspondent, "Bob Stay," in your issue of March 27, implies a doubt as to the correctness of my statement about the strength of our breezes. Where I refer to *Fawn*, a 37ft. yawl in the race last August, he very much doubts this assertion: "She stood up to her canvas beautifully, and went to windward against a 35-mile breeze in first-class style, carrying all sail." Your comments on his communication show that you evidently share his doubts, and you tell him I was probably guided by the observations of the Signal Bureau, made at an altitude, and considerable allowance should be made for the force nearer water level, especially when broken or sheltered by surrounding bluffs. You also say that although we "carry small canvas here, it seems improbable we can carry all sail even in a net 20-mile breeze."

Please permit me to say in answer that my statements in this connection were not made thoughtlessly, or with careless exaggeration. I meant exactly what I said, and propose, moreover, to prove it. The only thing on which I may have unintentionally misled you was in using the phrase "whole sail," by which I meant ordinary working canvas, for we do not pretend to carry topsails and flying jibs to windward in our breezes, and few have any light sails at all, except a single topsail. I meant she had no reefs in; in fact, there was not a reef point tied on the fleet. We have no use for light sails, except for winter, our season of light winds. I mentioned the summer afternoon breezes and gave their velocity here simply to show why we so much like the yawl to the exclusion of the sloop rig.

A large proportion of our sailing is done in the channel, which we cross on our way to the club house. When under the high lands of Angel Island or the Marin County shore, although very "puffy," we have smooth water; but the moment we strike the channel where our windward racing is done, we run into a breeze blowing from 20 to 30 miles any afternoon in the summer. We have therefore to build, rig and spar our boats to meet what we are always sure of. It is on account of these strong winds that no New York boats yet brought here have been as successful as home-made ones. They have all had to have spars and canvas reduced, and fine lines help them none. Our first point to gain in building a boat is stability. Our experience here is that the yacht carrying her sail best is the one that wins, and our stiffest boats are the fastest. The strong winds render it necessary for us to have able boats with handy rigs. I may add also that we have to learn to be good sailors.

I have to trespass on your space again to loosen the knot "Bobstay" finds in my yarn about yawls here. The morning winds are usually light, and frequently there is not a breath after midnight until nine or ten o'clock next morning. From midnight to 6 A. M. the breeze will run down to two, four, six, or eight miles an hour, seldom rising over twelve miles. In winter we have little wind, except during the gales. July and August are our windiest months, and our annual regatta is set for the first Saturday in the latter month, at 2 P. M. From September to April the winds are light, and we lay our boats up for that reason more than any other

The following letter to me from the Signal Service observer at this station will convince my friend "Bobstay" and other skeptics that I wrote in good faith, and that my assertion relating to the strength of the wind here is correct:

* * * * *Dear Sir*—You ask me for a brief statement concerning the force of the summer winds prevailing at San Francisco and also wish the record for August, 1878, on the 3d of which the regatta you refer to—of the San Francisco Yacht Club—took place. The following table gives the record for the summer months of 1878:

	Noon to 6 P. M.	6 P. M. to Midnight.	Midnight to 6 A. M.	6 A. M. to Noon.	Maximum Velocity.	Total Miles Traveled
April	2367	1519	955	1242	28	6113
May	3116	1644	1130	1481	30	7571
June	3415	2206	1523	1737	34	8711
July	3107	2306	1379	1791	32	9183
Aug.	3545	2212	1323	1635	32	8180
Sept.	2869	1912	1095	1157	30	7023

Perhaps the record of the 3d of August, 1878, for which you ask, will illustrate the gradual daily increase and decrease of the wind as well as any. At 4:30 A. M. the wind was only blowing 6 miles per hour; at 1:35 P. M. it was 20 miles; at 2 P. M., 28 miles; at 8:30 P. M., 22 miles per hour. It then gradually decreased until at 4:30 on the morning of the 4th it was 8 miles, rising by 1:30 P. M. to 29 miles again. The record of maximum velocity is taken from 12 M. of one day to 12 M. of the next, and may occur at any time in the included twenty-four hours, but is generally—and I may say is always—between 3 and 6 P. M. As my self-registering record shows a maximum velocity of 32 miles an hour for the twenty-four hours ending at 12 M. on that day, this maximum probably occurred somewhere between two and five on the afternoon of the 3d. The total velocity of the day was 389 miles. I see, therefore, no exaggeration in the statement you say you made of a 35-mile breeze that afternoon. The anemometer at this station is at an elevation of about 90ft., but the station is under the lee of California street hill, which is just to the westward. I should judge, therefore, that on the channel, where there is an unobstructed sweep through the Golden Gate, the wind would be from five to six miles stronger than registered at the Signal Station. My record for the month of August, 1878, shows the maximum to have been 32 miles per hour on three days, 29 miles on one day, 28 miles on eight days, 27 miles on two days, 26 miles on two days, 24 miles on two days, 23 miles on three days, 22 miles on two days, 20 miles on four days. On the remaining few days the maximum was never less than 16 miles. These are not considered storm winds, as they are regular here, and not accompanied by rain or snow, though they frequently bring in a heavy fog from the ocean. This statement has been verified, and found to be correct. The figures given are taken from the official records of this office. C. E. BRINSMADE.

Sgt. Signal Corps, U. S. A., in charge of U. S. Signal Office at San Francisco, Cal.

Our yachts could not stand such breezes with whole sails if sparred like yours. If any of you see any of our models and spar plans in New York, please remember our conditions of sailing here. "Bobstay" and others will therefore relieve me of the odium of having exaggerated so simple a matter, and give me credit for knowing what I was talking about, as well as allow that the *Fawn* carried whole lower sail in a 35-mile wind as stated by me. SAUCELITO.

In order that the question of ability of Pacific Coast yachts may be appreciated and Eastern designers understand the conditions of yacht sailing on San Francisco Bay, we have gathered the following information:

From April to October inclusive the prevailing wind is from the NW., changing to west in valleys opening upon the coast, but in no case so strongly as through the Golden Gate. During the summer the wind sets in strong about 10 A. M., increasing until near sunset, when it begins to die away. During its height it almost regularly brings in a dense fog, which, working its way over the peninsula, meets that already advanced through the Golden Gate and envelops San Francisco and the bay by sunset. As a rule, the breeze does not dispel the fog. If a fog exists the wind is sure to bring it in, but the heated earth dissipates it for a time.

From November to March the wind is frequently from the SE., blowing heavily, working round to the southwest, with a large and broken swell from the SW. Weather thick, rainy and squally, the wind not infrequently ending at NW., with an ugly cross-sea.

During heavy southeasters the sea breaks upon the San Francisco Bar clean across the entrance, presenting a fearful sight. During some winters a hard Norther will spring up and blow steadily and strongly from one to five days, with a clear blue sky and cold, bracing weather. Winds rarely blow from points between north, round by east to southeast. The further north we advance the heavier blow the gales in winter. The northwest winds are not predicted by the barometer, but from the southeast almost invariably, the mercury falling one inch from its usual height of about thirty inches. When it begins to rise the wind may be looked upon as soon to shift around to the west and to decrease. Afternoon wind at San Francisco is about twenty-five miles per hour.

To this we append a statement furnished through the kindness of Lieut. H. H. C. Dunwoody, U. S. A., of the Signal Office, Washington, D. C. The following observations are compiled from the records on file at the office of the Chief Signal Officer at Washington, D. C.:

MONTHS, 1878.	Miles during month.	Average miles per day.	Average per hour.	Prevailing direction.	Maximum velocity during month.
May	7571	244.3	10.0	SW.	39
June	8711	290.4	12.1	SW.	34
July	9183	296.2	12.3	SW.	32
August	8180	263.2	11.8	SW.	32
September	7023	234.1	9.8	SW.	30
October	5172	166.8	6.9	W.	28
November	4210	140.3	5.8	W.	24
December	5529	178.3	7.4	N.	40

These observations were taken with the anemometer, Merchants Exchange, San Francisco, Cal., at an elevation of 128 ft. above sea level.

Sea and River Fishing.

FISH IN SEASON IN APRIL.

Speckled Trout—*Salmo fontinalis*, Land-locked Salmon—*Salmo glover*; White Perch.

TROUT FLIES FOR APRIL.

The following are imitations of natural insects which first appear on head springs, and later in the season are found on ponds and rivers:

BLACK GNAT OR MIDGE.—Body and feet, black; wings, sub-hyaline.

DARK CLARET GNAT.—Body, dark claret; feet, black; wings, sub-hyaline.

BRIGHT CLARET GNAT.—Body, bright claret, mixed with yellowish gray; feet, ginger; wings of one sex, hyaline, of the other, ocherous.

OLIVE GNAT.—Body, dark olive; feet, ginger; wings, hyaline.

GRAY GNAT.—Body, dark fox fur, mixed with dark claret; feet, gray; wings, hyaline.

DARK FOX.—Body and feet, dark fox fur, mixed with lemon-colored mohair; wings, sub-hyaline; tail, three fibres of dark gray hackle.

BLUE BLOW.—Same as dark fox, but of blue shade.

POOR MAN'S FLY.—Body and feet, hare's ear and yellow mixed; wings, slightly mottled gray.

BRIGHT FOX.—Body and feet, brightest part of fox fur, mixed with yellow; wings, brightest hyaline; tail, pale yellow.

FISH IN MARKET—RETAIL PRICES.—Bass, 15 cents; smelts, 12½; salmon, 35; mackerel, 10 to 15; shad, 12½; white perch, 12; Spanish mackerel, 75; green turtle, 15; frostfish, 6; halibut, 15;

haddock, 6 ; codfish, 6 ; blackfish, 12½ ; eels, 18 ; lobsters, 10 ; scallops, per quart, 25 cents ; soft clams ; 30 to 75 cents; pickerel, 12½; brook trout, Canada, 50 ; brook trout, Long Island, 51 ; ed-snapper, 15; pompano, 50 ; prawns, $1 ; shrimps, $1; smoked haddock, 10 ; smoked salmon, 15 ; dry cod, 7.

—The "Catskill rod," made by Mills & Son, to which we referred in our last issue, is 10 feet in length, and not 8 feet, as was stated. Weight, 5 oz.

—Messrs. Conroy, Bissett & Malleson, of 65 Fulton St., N. Y., have published a very elaborate illustrated catalogue, or, more properly speaking, "Sportsman's Hand Book," giving in detail directions for every style of fishing, camping and archery. For instance, if a person wishes to order an outfit for black bass fishing he has only to turn to the chapter on Black Bass to find the appropriate tackle, with directions for use; and not only that, but even the lists for fly fishing and bait fishing are separate, so that the angler need made no mistake, but will be sure to get just exactly what he wants. This book will be sent free on application, and it supplies a long-felt want. It has been prepared by Mr. Wm. Holberton, whose experience has qualified him for the work. We consider it quite a step in advance on the old style of descriptive circular, when dealers not only advertise what they have to sell, but instruct purchasers how to use what they buy.

—Fish, like birds and animals, vary in their migrations; for which reason the advent of shad, and various other fishes, is sometimes earlier and sometimes later. This year the cold spring seems to have retarded the arrival of the shad, although a few specimens were taken early in April. We do not, however, share in the apprehension of some fishermen that the aggregate catch will be less than that of last year. The fishing period continues often into the early days of July, so that there at least are ten weeks of open time before us.

Shad fishing is done in two ways—with drift nets and with stationary nets. The drift nets are made of fine twine, at which the shad seem not to take fright as they do at the coarser material of others; these are buoyed up with wood and allowed to float with the tide. The labor involved in handling them is very severe, the heavy rowing, constant hauling, re-arranging and untangling, all make this a laborious occupation; but the fishermen seem to enjoy it hugely, after all, "when the fish bite."

For stationary net fishing the men begin about the middle of March to put down several miles of poles, and fasten nets to them. At certain stages of the tide the nets are regularly lifted, the men going out in clinker built lap-streaks, using a big sprit sail in fair weather only. Lifting the nets when the haul is heavy is hard work, and the fishermen like light hauls better; for the work is then easier and the prices higher.

THE FIRST CONNECTICUT SALMON.—The first Connecticut salmon of the season was caught last Thursday in an alewife net. It weighed twelve pounds. The fisherman who discovered it in his net immediately returned it to the water, but too late to preserve its life. The Connecticut salmon law reads:

Be it enacted, etc. Every person who shall take from any of the waters of this State any salmon or grilse, or any of the young fry thereof, prior to the 1st day of May, 1883, shall be fined not less than fifty nor more than five hundred dollars, or imprisonment not less than two nor more than six months, or both; unless he take such fish unintentionally, and immediately restore it to the waters from which it was taken.

The law takes effect May 1. At the last session of the Legislature, time of opening the trout season was changed from April 15 to April 1, and the time for taking shad closes on the 20th of June, instead of the 25th, as formerly. Commissioner Wm. M. Hudson writes that all bills changing the game laws were defeated, though owing to a new system of publishing the laws, they will not be ready for the public for at least two weeks to come.

NEW HAMPSHIRE—*Dover, April* 14.—Large quantities of smelts are taken in wiers, which is contrary to law. I think it is about time our Fish Commissioners put a stop to this. Codfish are caught on haul lines in our river, some of them very large. No trout have been taken as yet; the brooks are too high with water. G. A. W.

MASSACHUSETTS—*New Bedford, April* 18.—For the past week our markets have been well supplied with cod and halibut from the Vineyard. Perch, eels, herrings and a few shad from our own waters. The brooks are full to overflowing, yet several fine strings of trout have been taken; but not much brook fishing before May. CONOHA.

MOVEMENTS OF THE FISHING FLEET.—The number of fishing arrivals reported at this port the past week has been 43, viz.: 7 from the Banks with 195,000 lbs. halibut, and 36 from Georges with 800,000 lbs. split codfish and 28,800 lbs. halibut. —*Cape Ann Advertiser, April* 18.

NEW YORK—*Attica, April* 16.—The trout season opens slowly; but few taken thus far. No fancy, high-toned, tail-biting members of the family *Fontinalis* in this section. The trout-fisher goes to the woods, cuts a strong pole, ties a hemp line at the end of the pole, digs his worms, puts on a bob and heavy sinker, sits on the bank, baits his hook, dumps the whole arrangement into the creek, and waits for a bite. A great many good strings of six and eight-ounce trout are taken in this way each season. A fly would scare the poor fish half to death. Two snipe seen near town last week. NEWS.

TENNESSEE—*Nashville, April* 18.—I saw to-day a fine specimen of a jackfish, taken on the Cumberland River near here, and weighing thirteen pounds. He was the most beautifully shaped fish I have seen for years. Fancy his having been bought for eighty cents. The darkey who had him, when asked if he would sell him at an advance on his purchase, said: "No, massa; dar's too much goodness in dat critter for me to part wid um at any price." The weather continues cool, and our sports are getting very impatient. The Cumberland Angling Club have not yet started on their grand expedition up the river. J. D. H.

Savannah, April 15. — Our fishing season opened very poorly. A few strings of very small bass, hardly averaging three-quarters of a pound, were taken in March. This month, owing to constant showers, the streams have been too high and muddy to admit of any fishing. This month and next should be closed against bass fishing; but our Legislature, having failed to pass the "Fish Law," we shall soon have the mortification of again seeing the ardent worshiper of Neptune prodding over the spawning-beds with his deadly trident. WILL.

MINNESOTA—*Lake Minnetonka, April* 18.—The ice went out of the river last week. P.

FISH SWALLOWING FISH.—*Editor Forest and Stream:* I see by the tone of your remarks that you regard my fish story (*i. e.*, a 26-inch pickerel swallowed a 15-inch pickerel) as a *fish story.* Now I would like it distinctly understood that I meant every word of it, and would like you to give me an honest answer. Are such things common? E. B. B.
Vail, Iowa, April 14, 1879.

It is quite common to find an entire fish in the maw of a larger one, and as many as three have been observed—one within the other.

There is nothing marvelous about a fish swallowing anything provided the object of its gustatory efforts be not out of proportion to the capacity of its gullet. Fishermen are continually finding queer things in their hauls. Only the other day in Utica, N. Y., according to the *Morning Herald* of that city, the purchaser of a six-pounds pike at one of the markets found, upon cutting it open, a round iron bolt, a three-quarter inch nut, a piece of iron casting, and three stones, one nearly as large as a hen's egg. The whole stock weighed over a pound.

A Belvidere, N. J., correspondent, Mr. Geo. Wolf Holstein, sends us this:

Mr. L. M. Holstein, under date of Eagle Ranch, Texas, April 6, writes: "One of the men caught a minnow last evening, and baiting his hook fastened the line to a bush. This morning he found on it a 2½ lb. eel and a 20 lb. catfish. The eel had swallowed the minnow and the catfish the eel, or rather attempted to, the eel coming out through his gills." For a well authenticated fish story this is, I think, a pretty big one—too good to keep from the F. & S.

HOW TO CATCH BLACK BASS.—*Mr. Editor:* As my ideas are different from others, I give them as the result of fifteen years' experience: I prefer a 11-foot rod to one of 12-foot; I throw as long a line as possible (this is fishing from a boat); I have repeatedly followed boats, in which parties were using 12-foot rods. I have, with a 17-foot rod, caught fish which were probably frightened from their flies by nearness of boat. A light or slim bamboo rod (called pepper-pole by the trade) I think I like the best. They are very durable. After trying all kinds and sizes of flies, I now use medium-sized salmon flies, all black, with legs in place of hackle. If bass are slow about taking fly, after alighting, let it sink to them; then recover, I again cast, being very careful to avoid the slack; after taking, strike very firmly. If they try to jump, drop the tip to the water and swing off, which turns and keeps them under. Use three flies before the rushes grow, and then one. R. H. DIXON.
Canandaigua, N. Y.

THE HOLT PATENT FLY BOOK.—Messrs. Abbey & Imbrie are now prepared to supply sportsmen and the trade with the "Holt Patent Fly Book." Retail prices, with folding cover, each, $5; without folding cover, $3.50. These books are furnished with the Hyde clip, for keeping the snells straight. They are very handsome.

WORMS IN TROUT.

HARRISBURGH, April 11, 1879.

Mr. Editor: I inclose you a sample of worms that were taken out of some trout caught in a stream located about ten miles from this place. These worms are found up near the backbone, and on examination of the intestines, which were left in a can over night, the mass appeared to be alive with these worms. They were squirming in all shapes and sizes, the average length about three-quarters of an inch. There were also some tape worms about three inches long in some of the fish. Can you inform me the cause of the worms in the fish, and if there is any way of curing the evil? This same thing was observed in the fish caught there last year.

I have not fished the stream for the past five years. The last time I was there some person had a slaughter house near the head of the stream, and I am of the opinion that these fish, from eating the offal or blood, produced this trouble.

Yours truly, D. W. SEILER.

Tape worms and entozoa of at least three species are common in the Salmoids. We have known of a tape worm sixty-four feet long in the stomach of a salmon. All the trout of the upper Yellowstone, which has its headwaters within the volcanic region of the geysers, are wormy. These entozoa undoubtedly have their origin in something the fish has swallowed. Either the ovum itself, or the living creature, or possibly the germ from the body of some other fish which it had swallowed. Strange to say, these entozoa do not seem to affect the health of the fish or poison their flesh. Friends of ours have eaten the flesh of trout in which tape worms were found, without detriment, but they were careful in cleaning them. We would not, however, like to run the risk, as every minute part of a tape worm is a worm in itself. It is a curious fact that while these creatures in their mature and free condition are comparatively innocuous, it is the immature parasites, inclosed in cysts, which tend to destroy the life of their host by the destruction of parts, as they pass from one place to another, or from one stage of growth to another.

You can judge whether it would not be prudent to destroy the present stock of trout and substitute a fresh supply, supposing of course the primary cause of the disease to have been first removed, viz., the slaughter house.

NOTES BY W. M. DE VISSER.

The opening has been very well played by White, who has now a much finer game than his opponent.

(*b*) This Kt now takes a very commanding position, and makes Black's game even more cramped than before.

(*c*) To enable Black to move his B-Q3. A more helpless position than his at the present moment it would be difficult to find.

(*d*) This troublesome Kt now takes a position even stronger than the one occupied a couple of moves before.

(*e*) A good move. Black's Q is now almost entirely out of the game.

(*f*) This loses a P, which Mr. Baird gives up to force his game, if possible.

(*g*) Black could not have won the P here by P tks P, on account of White's move of R tks B, which would win Black's Queen.

(*h*) White wins the "exchange," however. Black plays by P-B7 and P-R8.

(*j*) Mr. Mohle has played this game very well throughout, but here misses the quickest road to victory. He should have played R-Q B, which would have forced the game in a few moves viz.:

R-Q B	R-Kt	R tks R
P-B7	R-Q B	R-Q Kt and wins the B
R-Q8	B-B4	

(*k*) Here again White could have won the Bishop by P-K R3. However, in chess sometimes as in other things, the old maxim holds that "the longest way 'round is the shortest way home."

* We think there is an error in the records here. A move has probably been made with the R after White's 17th. White's 21st to 34th moves plainly indicate it. We cannot discover where the error creeps in, not having time to play the game on a board.

CURSORY JOTTINGS.

—The game of Living Chess, which was presented at the Academy of Music Wednesday the 16th inst., we doubt not, was a success in every respect. The programme before us, which we annex, is somewhat original, and of careful and judicious selection, reflecting much credit upon the Manhattan Chess Club and its special or exhibition committee. A World's Chess Tournament in this country is much talked of periodically, but no active steps are taken to insure the success of the project. We do not think we overstate when we assert that a sufficient sum for that purpose can be realized if the chess clubs throughout the country only interest themselves in the project and give exhibitions of Living Chess, the profits of which should be a subscription to the fund:

PROGRAMME.

Overture, "Nabucco".....Verdi
By the Marine Band from the U. S. S. Steamer *Minnesota*
Under the Direction of Prof. Colletti.

Tableau, "Mephistopheles and the Prince."
By Members of Manhattan Chess Club.

Waltz, "Immortelle".....Gungl
Minnesota Band.

Address by Colonel John R. Fellows.

Original Game of Chess, between Capt. Mackenzie and Eugene Delmar.

Selections, "H. M. S. Pinafore".....Sullivan
Minnesota Band.

Chess Problem, "Atalanta, the Fleet-Footed Queen,"
By Eugene B. Cook, Esq.
Composed expressly for this occasion.

Selections, "Die Maien Koningen".....Massini
Minnesota Band.

Game of chess, played in Paris, France, by Paul Morphy, September, 1858, against Mr. Bancher—Mr. Morphy conducting this and seven other games at the same time, without sight of chessmen or boards, six of which he won and two drawn—losing none.

Red, Morphy. Blue, Baucher.

Grand Finale, Chess Problem, the solution of which, in seven moves, produces the initial letter "M."
By Eugene B. Cook, Esq.

—The score in the D. Graham Baird vs. Mohle match now stands: Mohle, 3 won; Baird, 0 won, and 2 games drawn. We are greatly indebted to these players for the games played in this match kindly placed at our disposal, to Secretary Logeling for numerous courtesies and communications on chess topics, and also to Mr. De Visser for annotating this week's game.

—General McClellan is a fine player at chess.

—Kane, the Arctic navigator, and his companions relieved the weariness of their icy confinement by playing chess.

SAPANULE!

TO SPORTSMEN---"THE ONE THING NEEDFUL!"

SAPANULE—Nature's ally—the best friend to man and beast. A preparation that is antagonistic to Inflammation. Congestion, Soreness and Fever cannot exist where this popular lotion is applied. For animals that are hard worked it is a sure restorative. For wounds, cuts, bruises, sprains, contusions, sores, new or old, it is a prompt and infallible cure. For all skin diseases and abrasions its healing and cleansing power is wonderful. SAPANULE is an admirable article for the bath and toilet. Used in foot and sponge baths, it will bring immediate relief from all pain or soreness in feet or limbs. SAPANULE takes all soreness out of bunions and corns, and is a sure cure for chilblains. Owners of dogs will find that by washing their dogs in Sapanule and water will remove any unpleasant odor, leaving the coat clean and silky.

SOLD BY ALL DRUGGISTS, 50c. and $1 per bottle.

LAZELL, MARSH & GARDINER,
WHOLESALE AGENTS, NEW YORK.

SAMUEL CERRY & CO., Proprietors, Providence. R. I.

CUTTING A TIGER'S TOE-NAILS.—The interesting feat of clipping the ingrowing claws of the royal Bengal tiger "Jim," an inhabitant of "The Zoo," at Philadelphia, was accomplished to-day with much difficulty. On account of the lack of constant attrition on rough ground, such as they would have had if traversing their native jungle instead of the smooth floor of his cage, Jim's claws had become lengthened to an unnatural size and, continuing to curve inward, had grown deeply into his paws, by which the animal was exposed to an attack of lockjaw. Hence the clipping. The well-known animal trainer, Mr. A. J. Forepaugh, was retained for the operation, and appeared early this morning at the carnivor house of the Zoo, accompanied by Dr. Chapman, physician to the garden; Arthur E. Brown, the superintendent, and four keepers. Mr. Forepaugh had provided himself for the operation with a strong three-quarter inch rope, looped at one end, a long pole and four short half inch cords, also looped, a thick, knotty hickory club and a pair of sharp wire nippers, and with these tools proceeded to do the job as follows:

The loop of the larger rope was placed on the end of the long pole and thrust into the cage. At the instant the tiger leaped into the furthest corner with a terrific roar which startled the other animals, and the lions, tigers, leopards and hyenas all howled in chorus. The loop, however, was run over "Jim's" neck, and he was gradually drawn, in spite of his struggles, to the front of the cage.

Mr. Forepaugh now showed consummate coolness and judgment, and quietly and quickly directed his assistants to secure the animal to the front of the cage. "Now his feet," and the fore feet were in the loops with the aid of an iron scraper, and the tiger, bewildered at the tactics of his supposed enemies, shook his head, roared, and for a few seconds struggled fiercely to get loose, but instead of getting loose, opportunity was taken to get the loops of the other ropes on the hind feet, and he was thrown on his side and drawn up to the front of the cage with his hind feet striking clear through and the fore feet to the edge.

In this position he was secured and safety cords attached to the ends, each one of the latter being held by one of the assistants, so that as soon as the operation was completed all the feet could be loosed at once. As soon as the feet were thus secured the rope around the neck was cast off, so that the tiger's head was free. One of the keepers was then stationed near the head, so that in case he bit at the ropes binding the feet or at the operator he could thrust the hard wood knotted club into his mouth for him to bite on. This became necessary so often that the hard club was chewed into a pulpy brush.

"All ready," said Mr. Forepaugh, and taking in his right hand a large, sharp wire clip, had each ingrowing claw in turn pryed from the flesh and straightened out, and clipped off to the required size. The right hind foot was the worse one of the claws, having grown fully an inch into the flesh, and by constant irritation caused the wound to inflame and fester. As soon as this, with a part of the outer shell, which had been shed into the wound, had been removed, the tiger appeared to quiet down and submitted to have the rest of the claws of the same foot clipped without making much struggling. The right front paw was also badly lacerated and inflamed. The claws were clipped in every case very quickly and successfully. As soon as the claws of each foot were clipped the operator rubbed burnt alum into the festered wounds to burn away the proud flesh, and then poured over the wounds balsam of fir to heal the same.

After all the claws had been clipped Mr. Forepaugh, stepping back, cautioned his assistants to be ready to pull the safety cords at the word. So the animal, freed from all the cords at once sprang to his legs like a flash and jumped to the rear of the cage, where he first licked his bloody chaps, and, squatting, soothingly licked his paws, apparently satisfied that they were still in his possession, commenced pacing his cage, showing evident signs of having experienced great relief from the operations performed on him. The whole operation occupied only twenty minutes and was very satisfactory to all parties. In a few days the paws will be examined again for proud flesh.—*New York Herald, March 29.*

THE WHARF RATS OF NEW YORK.—This under side of the city is a shadowy world even at high noon, and its structure, as well as its seclusion, makes it as good as a forest for hiding. These piles stand in rows running across the pier, a stringer or heavy timber lies on top of each row, joists lie across the stringers, and planks cover the whole. Thus between the top of each stringer and the planks there is quite a space, where boxes and bundles can be hidden. The under side of a pier can hold a good sloop-load of packages, and a box on a stringer is invisible to any one passing under the pier, unless he passes very close to it. There are many miles of piers about the city, and each pier has a great quantity of stringers. So here is a vast region of secrecy right under the busiest part of New York. Many of the piers are supported on such a dense forest of spiles that only the smallest skiff can pass through the narrow, tortuous openings. Formely the thieves had a channel of this kind from one end of the city to the other, by which they could travel nearly the whole distance without showing themselves.

"You see, sir, here are plenty of chances to hide. These cribs of beams and spiles, mouths of sewers, odd holes here and their along the rocky shores, and all of it covered over from daylight, and some of it almost inaccessible,—all that you would think is enough for any set of thieves. But it is not; for we follow them up and clean out their holes. They find new places now and then. Once we discovered a lot of hardware and tools hidden under the guards and in the paddle-box of a steamboat that was laid up for the winter. Many things they hide under water, such as spelter and other metals. It is almost impossible to discover these 'plants'; but sometimes we hit on them by chance. Once, a man who had been loafing about the deck of one of the Troy steamboats threw overboard a valuable hawser, and then plunged overboard himself before anybody could catch him, although the boat and the wharf were full of people. Both the hawser and the man fell into a skiff alongside the steamboat and disappeared under the pier. He had the start and of course escaped before any of us could get a boat and follow him. But we heard of him afterward under a certain pier, and we went there to look for the rope. We dredged between the piles for three days, and by good luck hooked up the hawser. These men sometimes get their deserts without any of our help. One of them who had stolen a boat-load of pig-iron, ran under Pier 49 to hide. That pier had a shaft and gearing under it for hoisting ice. He hitched his boat, and then climbed up near the shaft; the gearing caught his clothes, and we found him in pieces scattered over his boat. Wharf-thieves used to be more successful than they are now; they were organized in regular gangs. But we have broken them up, scattered them, and driven the most of them away from the docks."

Still darker scenes might be recorded of this under side of the docks. The actors appear first in the city's brighter haunts of pleasure, or in its miserable dens of want and crime. Then they wander in the streets alone; and gradually but surely stray to the water. Night is around them, in them. The city behind them sparkles with life. But it cannot penetrate their night, nor light their dark passage under the waves to the morgue.—*Scribner's*

ONE GOOD LESSON.—Captain Webb, who, next to our Captain Boyton, is the greatest swimmer in the world, tells how he learned one lesson which is worth every boy's learning.

"My first public swim was in July, 1875, when I swam from Blackwall to Gravesend, a feat then thought wonderful—just as Weston walking 110 miles in twenty-four hours was thought very wonderful shortly afterwards, simply because it was not known how much fatigue a man was capable of undergoing. A repetition of either of these feats now would be thought nothing of.

"In this first swim I learned one good lesson, which, thanks to some good advice I got afterwards from one who had been a great friend of mine ever since I swam across the Channel, I believe has been the cause of my ultimate success. When I swam from Blackwall to Gravesend, I very nearly failed, owing to some persons on board the little boat which accompanied me, as well as a steamer, insisting on giving me brandy. Now, I am no teetotaler, and I am happy to say I can keep sober without bragging about it; at the same time having a genuine and heartfelt pity for those who can't.

"Of one thing, however, I am assured, and that is, no really great feat of endurance can be performed unless next door to total abstince is adhered to. When young men go on long walking tours, a glass of beer at every village inn means failure, and as to spirits, they are simply poison. If I had really taken *nothing* I should have reached Gravesend without any difficulty whatever; as it was, I was in kind, but stupid hands, and although I succeeded in my first public attempt, it was with difficulty, and I then determined, from what I felt from sipping brandy during the swim, in the foolish hope of getting good, coupled with what I afterwards heard, never again to take spirits while undergoing prolonged exertions. Weston, the great walker, fully coincides in my opinion on this point."

A STRANGE PEOPLE.—*A Peruvian Race of Remarkable Habits and History.*—Dr. E. R. Heath, in a paper on "Peruvian Antiquites," describes a strange people living in a town called Eten, in seven degrees south latitude, and about two miles from the sea. They number about 4,000, and they speak, besides the Spanish, a language which some of the recently brought over Chinese laborers understand, but there is no other similarity between the two peoples. They intermarry, uncles and nieces, brothers and sisters, nephews and aunts, that is promiscuously, and with no apparent curse of consanguinity; but they will not permit any intermarriage into their number, or with the outside world. They have laws, customs and dress of their own, and live by braiding hats and mats and weaving cloths. They will give no account of the place whence they came or of the time they settled at Eten. History does not mention their existence before the Spaniards arrived, nor does it record their immigration since. Among them there are no sick or deformed persons, their custom being to send a committee to each sick or old person, and those who are reported past recovery or past usefulness are promptly strangled by the public executioner. Eten orders it, they say, and with Eten's orders there is no interference.

A BARE FACED FRAUD.—The Czar wished to shoot a bear. A bear was accordingly found, a ring of peasants surrounded it, and word of its whereabouts was sent to the imperial sportsman. Unfortunately, while those preparations were being made, the creature contrived to slip through the ring and escape. What was to be done? That the Emperor of all the Russias should come and find no game would never do. A happy idea seized one of the foresters. Regardless of cost, a tame bear was procured in the nick of time, turned loose within the ring, and now all was ready. The circle closed in; Bruin was discovered at the foot of a tree; the attendants fell back, the Emperor advanced to fire, but now came the climax—just as the trigger was about to be drawn, Bruin rose slowly on his hind feet and began to perform the national dance! The exhibition saved his life, but it did the reverse of securing for those who introduced him to the presence that royal favor which their ingenuity deserved.

NIGHT LAMP AND TIME INDICATOR.—A recent number of *La Nature* describes a simple and convenient night lamp, indicating the hour by the extent of combustion of the oil. From the oil reservoir rise two vertical glass tubes; one contains oil and is graduated for the hours, the other contains the wick saturated with oil and giving the light. The construction is such that one hour is required to consume the quantity of oil between two graduations of the first-mentioned tube. A reflector placed under the flame at the side throws a luminous beam across the graduated tube. During the night one can thus see at what height the oil stands in the tube and read the corresponding hour.

AMERICAN WARRIORS FOR ZULU LAND.—A reinforcement of 500 double-back-action mules left this port for Zulu land yesterday. They came from Kentucky, and having undergone the ordeal of an English veterinary surgeon's inspection, now move to the front in the campaign against the South African savages. These brutes have been trained to advance at lightning speed heel foremost against the foe and as the Zulus are not up to these tactics it is altogether probable that the employment of American mules may yet be the solution of the South African trouble.

TRUE RECREATION.—One of our readers, on his vacation ramble last summer, penned the following from the shores of Cayuga Lake to one of his county papers (the Monmouth, N. J., *Inquirer*). We select from it an extract. It is from the really excellent summer resort known as Markel's Cove, on the western shore of Cayuga Lake, one of the best of places for parties seeking real pleasure. He says:

Beautiful boats lie at the miniature dock ready for any occupants, while one company is pitching quoits and another is "letting the old cat die" in the capacious swing on the beach. The waters, with lazy wavelets, kiss the pebbles at your feet, while along the shore can be seen the white tents of campers-out, sometimes half-concealed in the evergreens along the banks, cropping out, as Joaquin Miller would say, like quartz among emerald stones. Hammocks swing with their occupants, who, far from being lazy, have all their senses alive to the beauties of nature a round them, and they seem drinking to the full of the overflowing cup that here, in almost myriad ways, she holds up to the thirsty soul. * * * * * * *

We passed one of these coves where there were at one time forty-two of these snow-white tents, with every heart happy and every moment seemingly a golden one. Oh! ye devotees of fashion, who, with "Saratogas" full of finery, seek expensive places of resort to recuperate (?) and fill up (?) the exhausted fountains of being! How far do you come short of the real object of the annual cessations from the "hum and drum" of business, compared with these blue-shirted, plainly dressed devotees at Nature's inexpensive shrine! Compare one of these who has been in communion with nature in her groves—"God's first temples"—who has been self-baptized in her sparkling waters, and whose face and hands have been embrowned by exposure to the united influence of sun and wind;—compare one of these as he returns to his usual vocation, with a step as firm as a rock, a grip like a vise and a look like a sailor-boy, ready for yard-stick or ledger-page, with him who comes from the place of fashonable resort with his physical exchequer as much depleted as his pocketbook, and a woe-begone look that tells of jilted love, a worse than wasted vacation, and no feeling for business.

To Lovers of Angling.

Important Auction Sale, N. Y.

TO CLOSE THE ESTATE OF THE LATE THADDEUS NORRIS, Esq., OF PHILA.

Prize Medal TROUT & SALMON RODS,

Charles Folsom, 53 Chambers St., N. Y., Dealer in

FIRE-ARMS, AMMUNITION AND ALL ARTICLES CONNECTED WITH THE SAME AND SOLE AGENT FOR

J. Stevens & Co.'s Celebrated Arms.

Office of Goss, Sawyer & Packard, Ship Builders, BATH, Me., January 9, 1878.

Mr. Charles Folsom :

DEAR SIR—I have had ample opportunity to test the breech-loading double shot-gun I bought of you a few months since, and can truly say that it has more than met my expectation. I have tested it at a target at various distances and with varying charges, and have not only been pleased but *astonished* at the result.

For simplicity, strength and durability your guns *surpass anything I have yet seen* ; and I don't hesitate to say that mine is as good, if not the best, shooting gun in this vicinity. Her shooting qualities were severely tested at the shooting match in Augusta, the 25th ult., when she made a score that gave credit to her makers. The breech-loading guns were required to shoot the enormous distance of *eighteen and two-third rods*, or 308 feet, at a nine-inch ring. There were nine other guns of several noted makers on the ground. My gun missed but *one shot in four*, which was by far the best score made.

Among the sportsmen present was an agent of one of the above named guns, who came expressly to advertise the same, and had a sample (price $125), the same size as mine. He fired ten or eleven times and scored two. My gun buried No. 5 shot as deep with four drams of powder as his did No: 2 shot with five and a quarter drams of powder. Some of the guns could not stick their shot.

Was present at another match in the same vicinity the next day. Shot sixteen rods (88 yards) at a four-inch ring. There were thirty-five fowl shot, of which *my gun took twenty-five*. I could have taken a few more, but did not like to appear selfish among strangers. My gun was used by four different persons on this occasion. The Augusta sportsmen had never seen the Stevens gun in operation before, but were free to acknowledge that mine did the finest shooting they ever saw. This is a true statement without any exaggeration whatever. I wish you every success in the sale of your arms.

Yours truly, SAMUEL PACKARD.

A GREAT INVENTION!

Imitation

STAINED GLASS.

Patented Dec. 3, 1878.

CURTAINS, SHADES AND BLINDS

dispensed with. New, Elegant, Cheap and Durable. It produces all the unique effects of a richly painted or **Elegantly Stained Window**. It is easily applied to the glass in Windows of Houses, Churches, Public Buildings, Steamboats, Street and Railroad Cars, Libraries, Parlors, Offices, Bath Rooms, Stairways, Transoms, Vestibule Doors, etc., with the full effect and brilliancy of variously colored ground glass. The article has *just been patented*, and not a single agency has as yet been established.

ONE GOOD MAN in each State wanted, to whom exclusive territory will be reserved for five years.

SAMPLES of three of the most beautiful styles will be sent prepaid with full instructions, WHOLESALE PRICES, etc., on receipt of $1.00.

Agents Apply to L. LUM SMITH, Patentee & M'f'r. 717 Sansom Street, PHILADELPHIA, Pa. (Sole Agt. for U. S. & Canada.)

READ the following Extract from the *Representative Agents' Paper* of the world, THE PHILADELPHIA, PA., AGENTS' HERALD:

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and extraordinary sale. It will offer the best opportunity for coining money that has ever been presented to Agents, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the Agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

AGENTS' HERALD

THE LARGEST, SPICIEST AND ONLY REPRESENTATIVE PAPER OF ITS KIND.

ACTIVE AGENTS GIVEN GOOD EMPLOYMENT EVERYWHERE

By over 200 responsible advertisers in this month's issue of the AGENTS' HERALD. TRADE—"BEATS THE WORLD."—MARK.

OLD JUDGE SMOKING TOBACCO.

The Only Tobacco Ever Manufactured that Does not Bite the Tongue.

"OLD JUDGE" CIGARETTES.

Manufactured under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effect of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

FOR SALE BY ALL DEALERS.

GOODWIN & CO., Manufacturers, 207 & 209 Water Street, NEW YORK.

THE LATEST! FRAGRANT VANITY FAIR SMOKING.

In placing this New Tobacco before the public, we do not propose to disclose our special claims and improvements, for the reason that in every instance where we have introduced new articles it has been the custom of manufacturers of inferior productions to adopt our precise claims to obtain notoriety. We will, however, make one broad assertion—that no tobacco has ever before been produced possessing so many valuable requisites.

Sportsmen's Routes.

TO SPORTSMEN:

THE PENNSYLVANIA R.R. CO.

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROTTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

The lines of

Pennsylvani Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, RENOVA, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing Wing Shooting, and Still Hunting.

Also, to

TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

"THE FISHING LINE,"

TAKE THE

Grand Rapids & Indiana R.R.

(Mackinaw, Grand Rapids & Cincinnati Short Line)

FOR THE

Trout, Grayling & Black Bass Fisheries,

AND THE

Famous Summer Resorts and Lakes

OF

NORTHERN MICHIGAN

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equalled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.

The TROUT Season begins May 1 and ends Sept. 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE also abound in large numbers in the many lakes and lakelets of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The Climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma

affections.

The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address A. B. LEET.
Gen'l Pass. Agent, Grand Rapids, Mich.

FOR

New Haven, Hartford, Springfield and the North.

ONE OF THE WORLD'S WONDERS,

SOUR LAKE.

The Great Watering Place of Texas.

This remarkable natural phenomenon consists of a circular pool about an acre in extent, in a continual state of ebullition, produced by escaping gases. Around the lake are a great number of wells and springs, of thirteen distinct varieties of water—sulphur, soda, alum, iron, etc. The waters of the lake and many of the springs are very acid. A specific for rheumatism in its worst forms, dyspepsia, chronic diarhœa, skin, kidney, venereal and female diseases. Fishing excellent and game abundant at all seasons. Open all the year. The tourist, whether for health or pleasure, and the student of nature, can find no place more interesting. Sixty miles east of Houston on New Orleans R. R. Board, week, $10; month, $35. Address

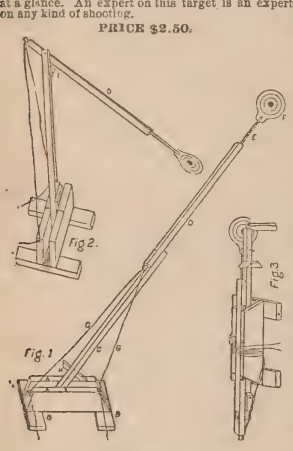
Alford's Practice Target.

PURDY'S PATENT, DEC 1878.

SNAP SHOOTING MADE EASY.

This target is designed to give those who wish to become good snap shots, with either rifle or shotgun, an opportunity for practice which cannot be surpassed in quality or equaled in cheapness by any other method; every variety of movement desirable is obtained, and at a speed suited to the capacity of the person shooting. Its low price puts it within the reach of every one, and the first cost, small as it is, is the only expense necessary to incur in its use. The cords shown in the annexed engravings are designed to reach back of the person shooting and be operated without his direction. The great variety of positions which the target can be made to assume can be seen at a glance. An expert on this target is an expert on any kind of shooting.

PRICE $2.50.



A. ALFORD, 283 BROADWAY,
P. O. Box 3,994. NEW YORK.

PURE TIN-COATED & BURNISHED DROP AND BUCK SHOT.

AMERICAN STANDARD--EAGLE BRAND.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM: NEW YORK, Jan. 13, 1879.

Having been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot my 6,000 ball match, Jan. 8 and 9, with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting I used them until they became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

THE LEROY SHOT AND LEAD M'F'G CO., NEW YORK.

The Delaware Shell.

Our Improved Shell Now Possesses the Following Merits:

1st. Perfect Uniformity of Flange
2d. They are Sure Fire and Gas Tight.
3d. The Paper is Superior.
4th. The Primers are Easily Expelled and Replaced, and can be Reloaded a Number of Times.

PRICE AS LOW AS ANY OTHER SHELL.

ADDRESS, **Delaware Cartridge Co.,**
WILMINGTON, DELAWARE.

Dittmar Powder

THE CHAMPION POWDER

OF THE WORLD.

NO SMOKE--NO DIRT--LESS RECOIL

STRONG AND SAFE

SUPERIOR IN EVERY RESPECT TO BLACK POWDER

6,013 SHOTS WITHOUT WIPING IN A SHOT-GUN.

Captain Bogardus' great feat of breaking 6,000 glass balls has proved that the powder is all that is claimed for it. The barrels, without being wiped, were as clean at the end of the match as after the first shot. The fact of the firing of so many shots in succession, and that the Captain has used about 200 pounds of the same powder during the last year in one gun, shows, without a doubt, that the powder is EFFICIENT, UNIFORM and SAFE.

The rifle powder is also without a rival. The standing challenge to test this powder against any other has never been accepted. Many riflemen throughout the country have been successful with the powder, as, for instance, Mr. E. B. Souther, of the Massachusetts Rifle Association, won last year two gold medals, two silver medals, two revolvers, and four other prizes in using the DITTMAR RIFLE POWDER.

Greater facilities and greater demand have enabled us to reduce the price of the powder considerably, and the fact that the Government Armory at Springfield is making now all kinds of testing machinery for us will enable us to produce always a uniform, and in every way reliable, article.

TRY OUR NEW WATERPROOF SHOT-GUN AMMUNITION. Cheap, and warranted to give satisfaction in every respect. Ammunition for gallery rifle practice always on hand, and all kinds of rifle ammunition made to order.

SEND FOR CIRCULARS AND PRICE LISTS.

ROWING.

'TIS jolly we know to row,
There's life and there's joy in the rowing;
Mayhap, if the breezes do blow,
They will help you along with their blowing.

With all cedar wings spread from the boat,
With muscles augmented in boating,
There is nothing so pleasant afloat,
In speeding or leisurely floating.

Perchance with a fair one to steer,
To captivate you with her steering;
To make you confess without fear,
The very confession you're fearing.

To land where the great branches lean,
While upon you your pilot is leaning;
To further translate what you mean,
Tho' quickly she catches your meaning.

To hear her condole your distress,
And tell her your life is distressing;
To ask for the word that shall bless,
And hear her pronounce the sweet blessing.

Ah! then it is jolly to row,
There's life and there's joy in the rowing;
For what you are striving to know,
There's a world of delight in the knowing.

J. C. BURNETT.

For Forest and Stream and Rod and Gun.

Down the Big River—3d Paper.

OUR voyage was made in the season for tramps. That vast horde of predatory beings, which for the last half decade has desolated the States of the Northwest, carrying terror to the hearts of defenceless women and disgust to the minds of municipal authorities, was just emerging from its winter lairs and entering on its annual migration northward. The vast wheat fields of Northern Missouri, Illinois, Iowa and Minnesota, with their numberless acres of ripening grain, were calling loudly for harvesters, and in response to the call, along with some hundreds, or it may be thousands, of honest laborers, the roads and railroads of the four States were echoing to the tread of fifteen thousand tramps. They tell me that since the panic the genuine Western tramp has shoved himself Eastward until he becomes as common in the Atlantic States as along the Missouri River. But I hardly think the specimens scattered through the seaboard States can be identical with the Western species. The conditions there are not favorable to the development of such. Those grand apologies for the tramp's existence—the broad wheat-fields of the limestone prairies—are wanting in the East, and without such an apology the tramp could hardly exist. The beings dignified by that title east of Illinois are probably only increased numbers of the class which has always been more or less abundant there, whereas the Western species is the outgrowth of the last few fears.

I remember away back in my boyhood's days the tramps who stopped at our country home, one of the sloping gabled farm-houses of old Connecticut, fronting on the turnpike road from Boston to New York. Sometimes they wanted to work for something to eat, sometimes they wanted something to eat without the trouble of working for it, and sometimes they wanted money. They were of all classes, too, I remember—Irish, German, Spanish and French. Some were sailors who had lost a leg by falling from the fore yardarm; some were heroes of the Mexican War who had lost an arm at Buena Vista; some, more rarely, would claim to be veterans of the war of 1812 who had their eyes knocked out by cannon balls. All of them had some particular object for which they were aiming, most of them wishing to reach some place where they had relatives. How different these homeless and usually honest wanderers from our modern Western knights of the road. Where the former were always alone, the latter often travel in companies of hundreds at a time. While the former were seeking to get home, the latter seek for nothing but work, and that usually of the hardest kind—harvesting. While the former were mostly honest, the latter will stand as much watching as a professional thief. While the former sometimes offered to saw wood for food, the man or woman has yet to be found who ever heard a genuine tramp offer to work for anything unless a policeman's billy was suspended, like the sword of Damocles, over his head. Oh, yes! the tramp of the East and the tramp of the West, though belonging perhaps to the same genus, are widely separated species. The genuine tramp is a man whose whole life is bound up in the one object of *looking* for work. To seek employment is the end and aim of his existence. If he has a trade he wants to find work at that; if not, he wants to reach the harvest fields where the best wages are paid. Wherever you meet him his first inquiry always is whether you know of any place where he would be likely to strike a job.

Do not mistake me and infer that the tramp is fond of labor. Such an impression would be very, very erroneous. He only wishes to seek for it without finding it—to make it an excuse for sponging his present subsistence out of those more energetic than himself. Should he be told where he could certainly find employment, he would thank his informant most profusely and—avoid the place as he would a pestilence. To make him work, even at exorbitant wages, would be considered by him the most galling of all tyrannies. Only last fall the roads of Iowa were lined with tramps, while the wheatfields of that State were spoiling for want of harvesters at two dollars per day. And when, in response to a request for food, an opportunity is offered of earning it at the wood-pile, the look of disgust certain to overspread his unwashed features is something "gorgeous to behold."

I have had a fair opportunity to become acquainted with the characteristics of tramps. I have traveled in their company, have bunked under haymows with them, have stolen rides on freight trains with them, and, indeed, on several occasions I have been called a tramp myself. And though to be forced to "tramp it" is a misfortune which should always claim a friendly hand and a kindly word, yet, when the occasional tramp has hardened into the professional, all the virtues will be found dried out of him, and a watchful eye and a knotty woodpile should be their unfeeling reception.

I remember once, in the early autumn of 1876, the tramps were unusually numerous, and people were becoming alarmed, and city authorities were in despair. I was standing one morning that August at the foot of the bridge spanning the river from Rock Island to Davenport, when the St. Louis train stopped opposite and began to discharge its contents. It was a long train for that road, consisting of seven cars, and of these five were loaded with tramps who had seized the train some miles out. There were seven hundred of them in all, and a rougher and more dangerous looking set never swarmed out of the Parisian Fauburgs when the red flag was hoisted on the boulevards. They claimed to be bound for the Iowa harvest fields, and as soon as the train stopped they started across the bridge. I had a good look at them. They were stout and hearty, but seemed acclimated to dirt. Dirt was the prevailing characteristic of the entire crowd. I doubt if many of them remembered the use of soap and towel and comb. Some of them carried old valises and others had bundles done up in dirty handkerchiefs. Some had shirts of red flannel, some of white cotton, some of calico, most of them ragged and all of them dirty. Some had shoes and some had none. Some wore dilapidated straw hats, some well-worn felts, while some sported rumed beavers. One peculiarity I noticed in particular. In the entire seven hundred I failed to note two individuals whose faces led me to judge they were American born. They were all of that class which rises into unenviable notoriety when labor riots spring up in large cities, and forms the only element mingling in our Republican society from which danger is to be apprehended, and from which, in time, it is sure to come.

During the first two weeks of our boat journey we saw many of these creatures, now usually alone or in pairs, for the gregarious season had not yet arrived; but we did not stop to exchange courtesies with them. We had no desire to be honored with the acquaintance of the *sans culottes*. Nevertheless we could not always avoid conversation with them, and an interview with one of them, which I wrote out in my journal the same day it took place, seems worthy of publication, though some may think, as it has no hunting nor fishing in it, it is out of place in this paper.

We had stopped about noon opposite the city of Alton to cook some coffee and eat a lunch. The spot chosen was under a large oak close to the bank, where a wagon road ran along the river about two rods from the water's edge. Between the road and the river there was no wood but the one oak tree, but back of the road was a tangled thicket of oak and underbrush. While we were eating a tramp came up and accosted us. He was a man who might have been forty years of age, but was certainly not more. He wore a slouched straw hat, an old and dirty white shirt, old trowsers with the legs rolled up to the knees, and around one foot was a cloth bandage, and on the other a substantial moccasin of dirt. He had a shovel in his hands, and, as he came up, pretended to cut down an occasional weed or stub. He watched us punishing coffee and crackers for a few minutes and then spoke:

"Fishing, boys?"

"Yes, trying to."

"Going down the river?"

"Yes, as far as Louisiana."

"Well, boys, it ain't any of my business, but you're going into a mighty hard place. You'll find it the hardest place you were ever in. I've been there. I just came from there a little while ago, and I tell you times is awful. They're bad enough here, but they're wuss down there. I went down with eighty-five dollars last winter, and—do you see that?" pointing with his finger to the side of his face.

I looked, and saw a well developed cheek and a goodly supply of dirt, but nothing else; and, supposing he referred to one of these, I nodded in the affirmative.

"Well, that's what I got when they took it away from me. The —— —— —— had to knock me down with a hatchet to beat me, and then it took eight of 'em; but they got it, and when I came to they told me I'd better start North as soon as I could; but I didn't. I hunted around till I got work. The man I worked for was a justice of the peace on the Sunflower River, and I tried to get him to arrest the men that robbed me, but he only told me I'd better mind my own business."

"Who was it robbed you—white or black?"

"Oh, it was whites what robbed me, but the niggers will steal everything they can lay hands on. They ain't a —— bit better nor the whites. Why, I worked four months for a man on the Sunflower River, and when I went for my pay all I got was pistols and the grand bounce pointed at my head and told to git. And I got, too! Did you hear about that fight at Helena when they killed the government surveyers?"

I never had, but, not wishing to appear ignorant, I again nodded.

"Well, I was there and saw that fight. The —— —— —— wouldn't let the government surveyers survey the river, and went out and shot 'em down like dogs. Why, I tell you, boys, I saw 'em come out on the levee and shoot down four Northern men who went down there looking for work before they could get on the boat to come back North. They swear they won't have a Northern man in the country if they can help it, and they shoot 'em as fast as they come down there. There's been so many tramps down there lately they've got the Southerners mad as the devil. They shoot everybody who comes down on the boats with a red shirt on."

I wore a red shirt habitually, and began to shiver inwardly, but tried not to show it.

"There was one man—a planter—who lived near my plantation shot a white man and a nigger one morning before breakfast, and dragged 'em up close to my fence and went through their pockets and threw 'em into a hole together. Ever been South?"

"Not along the river."

"Well, I have, and I tell you it's an awful tough place. They swear they'll drive out every carpet-bagger or kill 'em, and they don't care a —— which. I've been all over. I was three years at Fort Smith. I'm the man who laid the first stone for the bridge at Little Rock. I'm a stone mason by trade. I helped build that railroad too, I did. I had a farm once at Chetopah, Kansas, and I worked on the M. K. & T. railroad when it went through there. Ever been at Wilmington?"

"No."

"Well, you know where it is?"

"Yes."

"I worked there for a long time."

"We came from Rock Island."

"Yes; I know where Rock Island is. I've been there. I worked on the government barracks there ten years ago. I'm acquainted in Davenport, too. Did you know Denny O'Brien, who lived in Davenport?"

"No, but I've heard of him." (He was a notorious character of the lowest kind, who flourished before I "went West.")

"Well, I knew Denny. I tell you Denny and I had a terrible set-to once in Davenport. I found out what Denny was, ha! ha! and Denny found out what I was, too, I reckon. He's dead now; he died in St. Louis."

There was a short pause. I was getting tired, and he was getting exhausted. He soon began again on his (apparently) favorite theme:

"Boys, you'll be mighty tired of your trip before you get to Lousy-anna. Things is awful around here. Why, the tramps are flocking around now. I went from Cairo to Cincinnati, looking for work, and couldn't get it. There were five hundred tramps lying along the road, and they wouldn't let anybody work. Everybody was afraid of tramps, and thought everybody who wanted work was a tramp. The —— —— ——! They'll get to a place about two weeks before harvest begins, and beg around and pretend to be looking for work; and then, just as harvest is about to begin, they skip out for somewhere else. Oh! they're smart, I tell you. I tramped from Cincinnati to St. Louis on three meals, but I never saw such times as there is now."

"How far is it to the Missouri River?"

"About five miles; but if you're going it, you can save about ten miles pulling; by going up a little shoot you'll come to about a mile down."

"Oh, we're not going up it, thank you. Where are you bound?"

"I'm going harvesting when the season begins; but I'm fishing now. I manage to live, and that's about all. Got any tobacco?"

"No; never use it."

"Well, good-day."

"Good-day, Cap."

And he shouldered his shovel and limped away in the direction from which he had come.

This individual was a fair and genuine specimen of his class, save that his tongue was better oiled than usual. Otherwise the picture will do for the whole breed.

About two miles below the spot where this interview was held, we came to the mouth of the little stream which the voluble tramp had told us was one of the branches of the Missouri River. We scarcely needed his information to enable us to recognize it. The fact was apparent on its face. The golden tinge of the incoming waters, impregnated with the ochre-like soil of the Yellowstone valley, told at once that the rapidly-running "shute" was a branch of the famed "Muddy Water." We could not see the main stream, owing to the lay of the land; but about a quarter of a mile distant we perceived the long line of cottonwoods we knew shaded its banks. The "shute" ran down a decline with the impetuosity of a rapid. It was about five rods in width, by as many feet in depth. The banks were covered with a sedge of willow shoots, and selvaged with great numbers of drifting logs, which had come thus far and been washed to the shore, and anchored in the soft mud.

I had never "seen" the Missouri, and for fear I might never have another opportunity, I determined to pull up the "shute" into the main stream, and thence float down to the Mississippi, so that I might truthfully say I had been on the Missouri. I ordered Caywood to turn the bow of the boat into the "shute," and bent myself to the oars. It was the hardest pull I ever had. I pulled all the breath out of my body. I spent fully an hour in trying to row up that stream against the swift current, and haven't succeeded in getting up.

At last, when my strength was nearly exhausted, and I was considering the wisdom of backing out from the undertaking, the bow of the skiff shot clear of the "shute," and caught in the current of the main stream, swinging around, and floated down toward the Mississippi, giving us as it did so a fine view of the union of the two rivers, and especially of the mouth of the Missouri. The scene was a grand one, and long to be remembered. The salient points of attraction, the broad, sea-like surface of the stream, the willow-covered islands a short distance above us, the long line of cottonwoods fringing either shore, the leveling rays of the setting sun, glancing from the rippling current and giving it a golden tinge, all combined to form a picture worthy of remembrance. Truly, it is a noble stream, as grand in volume here as the parent river, and far grander in the associations surrounding it. That turbid, yellow tide is the life-blood, as it were, of the wonderland of the American continent; of a region containing grander scenery than any other spot on earth; a region of romance, of daring adventures and hair-breath escapes; where hardy men of cast-iron mold and intrepid courage wandered alone for weeks and months, trapping the mink and the beaver, hunting the bear, the buffalo, the wapiti or the antelope, or engaging in hand to hand encounters with the Blackfeet, Crows, or Dacotahs. A wild life was theirs, a life of toil and hardship and danger, but a life, nevertheless, which necessarily developed a class of men who alone could make this region historic, and who, from the time when the shadow of the pale-face first darkened the waters of the beautiful river, down to the latest tragedy of the Black Hills, have given to the chronicles of our land nearly all the romance they possess. But for the Boones, the Kentons and the Wetzels, the Carsons, Robideans, Bents and St. Vrains, dry enough reading, I ween, would be the pages of American history.

We soon reached the Mississippi, and, turning down it, began looking for a camping-place, which we found at last, just at dark, on an island about five miles from St. Louis. There we prepared our simple shake-down, and boiled our coffee. Coffee and slapjacks constitute a meal which no man need turn up his nose at after pulling twenty-five miles; but although I had often before contented myself with the like scanty fare, I felt like grumbling now. I knew of course, as every schoolboy does, that the word Missouri is an Indian term, signifying "Muddy Water"; but it is not until we use that water to cook with that we begin to realize the terrible appropriateness of the aboriginal nomenclature. When we gaze upon the sediment left in the bottom of our cups, all the romance and poetry of the mighty tributary drift away and sink into the mud, and we think only of the old saying, that "Every man has to eat a peck of dirt," and wonder how long it will take with such shovelfuls at a time!

There is not another such a body of mud and water on the face of the globe as the Mississippi below the *debouchure* of the Missouri. When subjected to a careful chemical analysis, it is found to consist of two parts of mud to one part of water. Old raftsmen tell us that it is so thick that lumber rafts have to be floated edge downwards, so they will slide more easily; but I do not remember seeing any rafts arranged in that way. I have boiled bean soup in it. The beans were white, but the soup! Ah, me! what a hideous hue of blackish-brown that soup did assume! Upon the inside of the pail above the soup a scum accumulates rapidly. It soon gets to be a quarter of an inch in thickness. It may be nourishing, but—let us call it, rightly named, "The life-blood of the Black Hills."

The next morning we arrived at St. Louis. We did not stop long. The only object seen worthy of especial mention was the big bridge. The structure consists—between the abutments—of one grand iron-framed arch, under which the largest river boats can pass by having a hinge in their smoke-stacks. It bends fifty-eight feet above high-water mark. The approach, on the St. Louis side, extends across several blocks, and on the eastern side runs out nearly a quarter of a mile from the abutment. The railroad runs through the centre of the structure, while on the extreme top is a wagon-road, foot-paths and horse-car track. A toll of five cents is levied on all foot travelers.

GUY RIVERS.

PAUL BOTTON IN DOCK AT LAST.—In spite of water-spouts, angry currents, surging and turbid water, and a whole box of quinine swallowed by mistake, the indefatigable Boyton and his trusty rubber suit made a final harbor at New Orleans a little after six P. M., April 27, thereby bringing to a close his long voyage of 2,342 miles down the Alleghany, Ohio and Mississippi Rivers. His last run was from Baton Rouge, which place he left at eight in the morning, April 26, cheered on by the usual gathering of enthusiastic citizens. When nearing the end of his journey, he was presented with a flag by fair ladies who had come out on a steamer to meet him. A signal rocket announced his arrival at Canal street, New Orleans, and it was not long before the venturesome hero of the Merriman Life Suit had turned in for a doze of twenty-four hours, his weight being some twenty pounds less than when he first started out on this toilsome journey.

DUCK SHOOTING IN THE SUISUN MARSHES.

SAN FRANCISCO, Cal, March 22, 1879.

EDITOR FOREST AND STREAM:

Our friend Childs had sent the Major up to have a day's shooting with us, and we were at a loss as regards accommodation—*i. e.*, in the way of ducks. Lou and I had tried them for two days previous, with but little luck, the hot, sultry weather being decidedly adverse to fine sport. But the Major is here, and says he must take twenty-five brace back to his friends in 'Frisco. "Well, Major," we say, "we propose to go up Suisun Bay prospecting to-morrow, and if you want to go you must take desparate chances." The Major, with his genial, jolly humor, sticks to the boys, and on Saturday, at 10 A. M., with decoys and boats, we embark on the *Flirt*, and take the tide up stream. During the night the weather had changed, and a stiff westerly wind took us up to the mouth of Suisun Creek in a short hour. We put the helm hard down, and rammed her into the tules and mud, made fast, and were within two hundred yards of a beautiful celery pond. Ducks were seen flying in every direction, and a terrible string leading into the pond. Lou was crazy, but silent; the Major was excited beyond control, and business was begun in earnest. Two dozen stools were taken out of the forecastle, our pond boat was loaded with our traps, and we three pulled through the trail into the pond. It took but a few seconds to get into position, and by one o'clock we were just blazing it into them. Mark East, mark North-east, mark North! Just look at them! Did you ever see anything like it, Major? A little more careful; those sprigs are a little wary, and don't shoot until they get over the decoys. That's business—one with each barrel; but slip in another cartridge and give it to that crippled one. Mark now low; these are cans, and let them go by and watch me call them back. Buzz! they go by to the upper end. Oh, what a shame! They were just going to swing back to the stools when Will gave them two barrels, and a clean miss. I'll tell you what, shooting cans is no boy's play. Watch sharp, Major! another flock of cans. Oh, Lord! how they go by! They swing. Now, Major, the big one on the lead. Never mind, you'll get your hand in soon; but I got that brace clean, didn't I? Yes, she's a 12, these large bores are played out. Yes, a modified choke. Major, that was a beautiful shot, but always pick the bull sprig (we call the large, handsome, male pintail the bull sprig out here, and I can think of nothing more expressive), and leave the hens for next year. How are your cartridges holding out? "Well, I don't know where they have gone to, but I have fired just seventy-five times. Don't you know, but I am getting perplexed at missing those devilish cans. But what's the difference, it's all sport." Don't move! Now we will let these cans light, and I will show you something funny. They fly up and down the pond a half dozen times, and I still call. Now two fly down into the decoys with a fearful fuss, and now the rest. I have four cartridges in my left hand, and before the Major is aware, I slap bang-bang into them, and then in one instant, another bang-bang, and still the crazy fools sit there, and I give them the third pair, and they think it is time to "git," but leave six behind. "Major, this is not my way of shooting, but I just wanted to illustrate to you the way the foolish birds will stick to the decoys, and only give a small jump at the gun's report. If you are satisfied, Major, we will take up and go aboard the boat, and feed. Well, one more shot, and then we'll leave."

It is now four o'clock, and wishing to give the birds a chance to feed, we gather up decoys and dead birds, and proceed to the *Flirt*. Of course, the Major is enthusiastic, and says heaps, and feels large, for we have ninety-seven birds, and most of them cans—the first cans of the season, and their cranes plumb full of wild celery root. What nice, fat, plump birds, and what a glorious sight; but, for the morrow! Our birds are drawn, and hung to the rigging. Dinner disposed of, guns cleaned, and dreams of ducks and everlasting popping on the morrow is in order. We are up bright and early, a quick breakfast, and by daylight we are in position. We were rather disappointed, for the cans failed to come up, and we contented ourselves with thirty sprig and widgeon, and quit at ten o'clock; got under weigh, and enjoyed a lovely sail down the bay, and made town—just too late for church, but just in time for dinner of canvas-back, roasted seventeen minutes.

THICK-BROOM.

Fish Culture.

THE USE OF SALT IN FISH CULTURE.

THE almost total loss, by unexplained epidemics, of nearly the half million of whitefish in the State Hatching House at Madison, Wisconsin, was recently noted in these columns. The Milwaukee *Sentinel's* report of this calamity explains that the course of treatment which resulted in this wholesale destruction "consisted in sprinkling over the young fish common prairie muck dirt, which at once became black mud, followed by an application of salt from the hand directly into the troughs containing the young fish, and repeated two or three times each week;" and adds "that such treatment would produce such a result, and might easily have been foreseen by non-experts in fish culture. This insane treatment was not known to the commissioners till the evil had been done, they relying entirely on the acknowledged skill of Supt. Welsher."

This is a very fair instance of salt which has lost its savor; of a newspaper man attempting to write about something of which he is totally ignorant, and writing also in just such a way as not only to display his own lack of knowledge, but to do great injustice thereby to other men. Not only is there nothing "insane" about the reported use of salt, but, on the contrary, such use is both recommended and adopted by practical fish culturists. Mr. Livingston Stone, in his excellent book, "Domesticated Trout," suggests, as the result of experiments made by himself in 1872, the application of salt as a cure for fungus and parasites. Microscopical investigation of the adult fish affected with parasites show that between the roots of the fungus and the body of the fish were hundreds of minute creatures about 1-80 of an inch in length and 1-200 of an inch in diameter, provided at one end with a mouth and at the other with about twenty claw-like appendages for fastening on to the victim. These creatures appear to be incessantly in motion and continually feeding. Mr. Stone, after repeated experiments, discovered that salt would destroy the parasites, cause the fungus to peel off, and effectually cure the diseased fish when not weakened past all recovery. The solution employed was one tablespoonful of salt to one pint of water. The parasite which preys upon the trout fry is smaller than that of the adult fish, being about 1-50 of an inch in diameter. They cause no fungoid growth; the fish may outwardly appear clean and healthy, and the fish culturist may be at a loss to account for the mortality. Hundreds of experiments made by Mr. Stone have demonstrated that the use of salt is also here effectual—the treatment destroying the parasite and not injuring the fry. Mr. Stone adds that the salt bath seems to improve the young fish in other ways, and that large quantities can be used to advantage in the nurseries of the young fry, not only for the purpose of immersion, but to furnish an essential element in which the water has become deficient.

Since the publication of Mr. Stone's book, other fish-culturists, following his suggestion, have employed the saline treatment with marked good results. In the Madison Hatchery last year, Superintendent H. W. Welsher writes us that the trout fry, when from fifteen to twenty days old, were attacked with a disease of the sac, a small white spot appearing and gradually spreading over the whole sac, and death soon following. At the suggestion of Mr. N. F. Dousman, an extensive fish breeder, of Waterville, Wis., the remedy presented by Mr. Stone was adopted, and the result was most satisfactory. The sprinkling of earth over the water, recommended by Mr. Stone, has also been found an efficient aid in securing healthfulness for the young fish, and it was not as an experiment then that Supt. Welsher employed the earth (not prairie muck) as a disinfectant. It has proved beneficial in numerous cases heretofore. The troughs in the Madison Hatchery are sixteen feet long, with from two to five inches of water running freely through them. The earth was sifted over the troughs twice a week, and a handful of salt then sprinkled into each trough. Tasting of the water would then not have revealed the presence of the salt. Instead of there being too much salt, we think it barely possible that if any error was committed the application may not have been in sufficient quantities. We are content, however, to believe that Mr. Welsher knew what he was about. Our own previous knowledge of his eminent success in his former treatment led us to discredit the hastily published report of the supposed trouble in the present instance, and to withhold the matter until communicating with that gentleman. That the desired effect did not follow simply indicates that the true nature of the epidemic was not determined; and through the ill-advised zeal of the newspapers, Mr. Welsher's ability as a fishculturist has been reflected upon in a way which appears to us wholly uncalled for and unjust.

Fish culture is at best still, in a very large measure, in its experimental stage. Our most experienced breeders of fish have much to learn; not from what has been done in the past, but what is to be done in the future. Success can only be hoped for after repeated failures. Just how the work is beset with difficulties we will let Mr. Seth Green (whom we are accustomed to speak of as a "veteran") say in a published letter regarding the Madison fish:

I have received some letters from Mr. Welsher; he says his brook trout are dying. I have advised him all I could, but the fact is that raising fish is like raising wheat—some years the crop fails, and will continue to fail, year after year, and sometimes it will be years before the cause is found out. It is the same thing with fish raising, only a good deal worse. There are so many reasons why they die that it is hard to find the cause, and I know parties that have been in the business ten years and have not found out yet that brook trout is the hardest fish to raise we have. New insects make their appearance in some waters the same as insects make their appearance in fields of grain and in fruit trees. Waters are subject to all the above causes and twenty times more. I was five years in finding a small worm that made a web and killed my trout, and then I did not find it until I put young whitefish in the water and the web held them, and that is the way I found the worm that spun the web. The web was not strong enough to hold the trout, but when they ran into it they would twist around and get it around their gills and kill them. I cite this as one cause of my fish dying, but there are a hundred reasons, and it is hard to find them, but they can and will be found.

KENTUCKY—*Mt. Sterling, April* 25.—Last week Mr. Wm. Griffith, State Fish Commissioner, shipped to this point 8,000 Mackinaw trout and 4,000 speckled trout. They were received by Col. H. C. Howard and planted in the creeks emptying into Red River, which is tributary to Kentucky River. Col. H. saw but one dead minnow in the whole transporting and planting. Mr. Griffith has the sincere thanks of many lovers of the rod, and if we can keep the fish-trap and seine out, we can have sport not excelled any place. Already the Cumberland is teeming with salmon of from one foot to eighteen inches in length. We have formed a fishing club in this town, of five members. Pres., J. W. Harrah; Sec'y, Wm. Van Antwerp. W. VAN A.

KANSAS COMMISSIONER.—The name and address of the State Fish Commissioner of Kansas is D. B. Long, Ellsworth, Kansas.

WISCONSIN—*Madison, April* 18.—One hundred thousand Michigan whitefish fry came from Milwaukee to day to stock the State Fish Hatchery at Nine Springs, near this city.

ROVER.

—About a month ago the State placed 10,000 California salmon in Sugar River, Wisconsin.

HALLOCK'S BIBLIOGRAPHY OF SPORTING BOOKS.—The Fifth Edition of Hallock's Sportsman's Gazetteer, just published, will contain a list of over 800 sporting books, relating to practical angling, shooting, fish culture, dog breeding and diseases, use of the rifle, natural history, yachting, canoeing, etc. Such a list will be invaluable to the sportsman in search of extended information.

Natural History.

LIST OF THE BIRDS OF NOVA SCOTIA.
—Land Birds.

By J. Matthew Jones.

[*Concluded*]

101. *P. pubescens* (L.), Downy Woodpecker.—Common all the year.

102. *Picoides arcticus* (Sw.), Gr., Black-backed Woodpecker. Not common; as also the var. *P. americanus*, Brehm.

103. *Sphyrapicus varius* (L.), Bd., Yellow-bellied Woodpecker.—Common in the interior. A pair of these birds, male and female, were shot on Macneb's Island, Halifax harbor, last May, and were preserved by Mr. T. I. Egan, taxidermist, of this city.

104. *Colaptes auratus* (L.), Sw., Golden-winged Woodpecker.—This species is extremely common all over the province; arriving from the South about the last week in April, and departing about the end of November. It is known to all countrymen under the name of "Yellow-hammer." On the first warm day occurring after the arrival of these birds, they may be heard making their peculiar "chuckle" as they fly from tree to tree. A pair always returned for several successive years to the same old dead apple-tree stock in my grounds and reared their young, which were generally fully fledged by the end of July. I have, however, taken nest and eggs as early as the middle of June in other situations.

105. *Bubo virginianus* (Gm.), Bp., Great Horned Owl.—Common throughout the year.

106. *Otus vulgaris*, L., Long-eared Owl.—Not common.

107. *Brachyotus palustris*, Coues, Short-eared Owl.—Not common.

108. *Syrnium nebulosum* (Forst.), Gr., Barred Owl.—Common throughout the year.

109. *Nyctea nivea* Gr., Snowy Owl.—Rare; only observed in the depth of winter. Some years ago W. Andrew Downs, of this city, kept one in a cage, and I observed that at the commencement of spring its plumage became mottled with darker color, which is doubtless its usual garb in summer time in the regions of the far north.

110. *Surnia ulula* (L.), Bp., Hawk Owl.—Not uncommon throughout the year. I have observed it at midday under a bright sun, beating over the marshes at Lawrencetown in search of prey.

111. *Nyctale Tengmalmi*, Gm., Tengmalm's Owl.—Rare. Breeds, according to Mr. Downs, in Newfoundland.

112. *N. Acadica* (Gm.), Bp., Acadian Owl.—Common throughout the year. This bird is occasionally kept in confinement as a pet, and one afforded great amusement to a military friend, who, whenever the opportunity occurred, turned a live mouse loose in the room in which it was confined at night time, and the keen eye of the bird soon caught the form of its quarry, which in an instant was seized by its talons.

113. *Circus cyaneus* (L.), Lacep., Marsh Harrier.—Females may be considered quite common in all marshy districts contiguous to the coast, but the adult male must be considered as rare.

114. *Accipiter fuscus* (Gm.), Bp., Sharp-shinned Hawk.—Common.

115. *Astur atricapillus* (Wils.), Bp., Goshawk.—Common. Known to countrymen as the "Blue Hawk." It is a most daring bird, coming into a farmyard and swooping upon a fowl and coolly devouring it on the spot, as I have witnessed myself.

116. *Falco sacer*, Faest., Jerfalcon.—Very rare; only one instance on record of its being taken, which occurred on board a ship off Halifax Harbor some years ago, according to Mr. Andrew Downs.

117. *F. communis*, Peregrine Falcon.—One or two specimens have been taken.

118. *F. columbarius*, L., Pigeon-hawk.—Common.

119. *F. sparverius*, L., Sparrow-hawk.—Common.

120. *Buteo borealis* (Gm.), V., Red-tailed Buzzard.—Common.

121. *Archibuteo lagopus* (Brunn.), Gr., Rough-legged Buzzard.—Not uncommon. Mr. Downs informs me that two were taken at Devil's Island, at the entrance to Halifax Harbor a few years ago.

122. *Pandion haliaetus* (L.), Savigny, Osprey. Fish-hawk.—Common throughout the province. It often chooses an old dead tree, with no branches, save at its summit, whereon to make its nest, in which the eggs are laid about the last week in May.

123. *Aquila chrysaetus* (L.), Golden Eagle.—Not uncommon. Mr. William Winton has taken two or three pairs alive about his residence in Colchester County. It breeds in the interior.

124. *Haliaetus leucocephalus*, (L.), Savigny.—Common in some of the sparsely inhabited districts of the coast, where they build their nests on the topmost and generally dead branches of the largest forest trees. The nests, which are of great sizes, are but vast masses of sticks, layed upon each other in the best position to render the fabric secure. They are about four or five feet in diameter, having the interior lined with dead grasses and rough herbage. On one occasion I shot a female on the tree by her nest, and on visiting the spot next morning I found the male sitting on the eggs, and that so close that he allowed me to get under the tree and make a noise before he would go off.

125. *Ectopistes migratorius* (L.), Sw., Wild Pigeon.—This bird some thirty or forty years ago was extremely abundant in the fall, but has now, apparently, almost entirely forsaken the province.

126. *Zenaidura carolinensis* (L.), Bp., Carolina Dove.—Not uncommon on its southern migration about the end of September or the beginning of October.

127. *Tetrao canadensis*, L., Canada Grouse.—This bird, which is known to the countrymen as the "spruce partridge," is not so common as the ruffed grouse. Its nest is extremely difficult to find, as it selects the deep recesses of the spruce woods for its position, and there are only a few instances on record of its having been found in the province. Some years ago I dissected a specimen, which had died while in confinement at Mr. Down's aviary, and I found its windpipe filled with "gape worms," which had evidently caused its death.

128. *Bonasa umbellus* (L.), Steph., Ruffed grouse.—Very common throughout the province. It is known to the countrymen under the name of "partridge," or "birch partridge." About the first week in July the young may be observed in the forest, running about in an unfledged state; but by the middle of the month they are able to fly and take care of themselves. In the depth of winter, when the snow covers the ground and the berry-bearing bushes, with their dried fruit, are hidden from sight, these birds resort to the birch trees and greedily devour the buds; and so intent are they upon their work, that I have seen one come and alight upon a birch beneath which a wood-cutter was chopping, and eat as tamely as a barndoor fowl. The Indians say that they can prognosticate a severe winter by the appearance of the feet of these birds late in autumn, which, if the coming season is to be a severe one, will be found feathered close down to the toes; while if it is to be an open winter, nature does not clothe them with the extra warm covering. Experience, however, I fear, will not substantiate the assertion.

When the Woodcock Come.—*Editor Forest and Stream:* Seeing several articles in one of your late numbers about the early appearance of woodcock, reminds me of something I saw on March 2. As I was walking through an old sedge field, with a marsh running through the middle of it (a place where there has always been a brood of woodcock hatched), I flushed an old woodcock. I thought nothing of it then, except that the bird was on time; but it so happened I passed by the same place in the evening, when the ground was white with snow (and it was then snowing hard), I found the woodcock in the same place. The snow was one of the deepest we had. Now, the question is, how did that bird get anything to eat, for even had it been able to get below the snow the ground was too frozen for it to bore? I will be obliged if you or some of your correspondents will answer this. M.

Bath, Ind., April 16.

We have found woodcock feeding about warm springs in the coldest weather, when the ground was frozen a foot deep.

A Buffle Head.—*Editor Forest and Stream:* Can you tell me the name and species of this variety of drake duck? It was shot in Oregon, and the species had never been seen in the vicinity before. Following is the description, viz.: Size, about as large as a blue-wing teal; head very heavily feathered, one patch of white on the top, and surrounding it are feathers of bright metallic tints—purple, blue, green, etc.—the majority of feathers on its head and neck are of the last-mentioned colors; breast, white; back, black and white; wing feathers on the outer joint black, on inner joint white, just at butt of wing jet black; feet, almost white; odor, very fishy. Any information on the above subject will be thankfully received by me. Geo. A. Sturtevant.

Nyack, N. Y., April 19.

A buffle head, no doubt, *Bucephala albeola;* also known as dipper, diver, spirit duck, salt-water teal, etc.

Fishermen and Natural History.—The United States Fish Commissioner, while at Gloucester last summer, received very substantial aid from the coast fishermen of that port, who contributed many natural history specimens, gathered on their fishing trips. Their interest seems not to have decreased, the National Museum at Washington being constantly in receipt of numerous specimens, some of which are valuable aids in the study of science.

Animals Received at Central Park Menagerie for Week Ending April 23.—One hedge-heg, *Erinaceus europæus*, presented by Mr. Richard J. Shay, N. Y. City; one red-tailed hawk, *Buteo borealis*, presented by Mr. T. McDermott, N. Y. City; two Guinea pigs, *Cavia caprera*, presented by Master Willie B. Ogden, Jr., N. Y. City; one black duck, *Anas obscura*, presented by Mr. Joseph H. Batty, Parkville, L. I; three sharp-shinned hawks, *Accipiter fuscus*, presented by Mr. Charles Rieger, N. Y. City; one Brazilian tree porcupine, *Sphingurus prehensilis*, presented by S'gnor Manuel F. de Gurucaga, Maracaibo; one African buffalo, *Bubalus cafer*, born in the menagerie.

W. A. Conklin, Director.

Arrivals at the Philadelphia Zoological Garden for the Week Ending April 23.—One common skunk, *Mephitis mephitica;* two green lizards, *Anolis principalis;* two red-tailed hawks, *Buteo borealis;* one fox-colored sparrow, *Passerella iliaca;* one broad-winged hawk, *Buteo pennsylvanicus;* one brown snake, *Storeria decaye;* three water snakes, *Tropidonotus sipedon*, and two water snakes, *T. leberis*, all presented. Three prairie wolves, *Canis latrans;* one great kangaroo, *Macropus giganteus*, and one buffalo *Bison americanus*, all born in garden. One Angora goat, *Capra hircus;* one sulphur-crested cockatoo, *Cacatua galerita;* one roseate cockatoo, *C. roseicapilla;* one slender-billed cockatoo, *Licmetis tenuirostris;* two pennants parrakeets, *Platycercus pennantii;* two Rose-hill parrakeets, *P. eximius;* two blood-rumped parrakeets, *Psephotus hæmatonotus;* two yellow-collared parrakeets, *P. semitorquatus* (?); two undulated grass parrakeets, *Melopsittacus undulatus;* four chestnut-eared finches, *Amadina castanotis;* two spotted-sided finches, *A. lathami;* two chestnut-breasted finches, *Donacola castaneothorax;* two Maja finches, *Munia maja;* two spotted munias, *M. undulata*, and two other finches, all purchased.

The Kennel.

THE PHILADELPHIA DOG SHOW.

We print below the full list of awards made at the first annual dog show of the Philadelphia Kennel Club, which closed in that city on Friday last. As intimated in our last issue, the arrangements for the care and comfort of dogs at this show were not exceeded by those of any previous exhibition of a similar character. The members of the committee were most attentive to visitors, and our personal thanks are due to them for many courtesies extended. There are two points, however, upon which we think the show was open to criticism; first as to the time it was continued, and secondly as to the manner in which the judging was conducted. Five days is too long a period for a dog show, and we imagine that the gentlemen of the Philadelphia Kennel Club are now of the same way of thinking. As to the judging, this was conducted strictly in private, neither exhibitors nor members of the press being permitted to be present. This we hold to be entirely wrong, a view which coincides with the opinions of all the owners of sporting dogs with whom we conversed at Philadelphia. We believe that this is the first show of importance held in this country at which this system has been adopted, and we imagine that it will be the last. It is unfair to exhibitors, dogs and the general public. A young dog taken from his house, perhaps for the first time, and led before the judges by a stranger, or chained to a staple in the midst of a crowd of others, would be very unlikely to appear at his best, or even to have an equal chance with the old stager at dog shows; whereas the same dog, with his master present to encourage him, would be a very different animal. So well recognized has this fact become, that private judging has been entirely abandoned in England, at least as far as exhibitors are concerned. Then there is another feature. The only opportunity a representative of the sporting press, who is also supposed to be a critic, has to see the dogs on their feet, is during the judging. He cannot examine them in their stalls or make comparisons; nor would it be practicable for him to have any dog taken from his stall for inspection. We believe that the mode of judging at Philadelphia in private was adopted, at least as far as the sporting dogs were concerned, at the request of the judges themselves; we can only say that judges who dislike to judge before exhibitors should not judge at all. How are they to know the age of a dog, upon which very much, at times, depends, unless by asking the owner, or, in his absence, examining a catalogue?

THE DOGS AND THE JUDGING.

Of the eight dogs entered in the champion pointer class but four were present, Mr. Orgill's Rose being placed first over Sefton, who had beaten him in New York, a decision in which we could not concur, although Rush was looking better than he did at New York. Mr. Orgill's Rush had an easy victory in the bitch class over her one competitor. The absence of the kennels of Messrs. Burgess and Smith reduced the judging in the English setter classes, both dogs and bitches, to a match; in the first the Messrs. McGraw's Royal Duke beating Mr. Max Hellmich's Grouse, and in the second Petrel winning over Rhoda; the latter, however, was big in whelp (to Young Laverack). In the champion Irish class Berkley won another victory, his nearest opponent being Rory O'Moore, who, although quite as well made, did not equal the winner in color. The only competitors in the bitch class were Duck, Mr. Fottler's recent purchase from the St. Louis Kennel Club, and Fire Fly. The latter very properly was placed first, Duck having a dead coat and not being in show condition. The champion black and tan class gave us an opportunity of seeing for the first time the dog Grouse, imported by the Toledo Kennel Club—and a very grand dog he is; one of the best specimens of the Gordon dog, probably, ever brought to this country. He won over two others, the Nassau Kennel Club's Nell beating her solitary competitor in the bitch class. We omitted to mention that Mr. Morris' Lark, owing to an accident, arrived after the judging in the champion English setter class was finished, and was judged against Royal Duke, without changing the previous decision.

The open classes commenced with the pointers, the heavy class of dogs producing nothing remarkable, and the solitary bitch present having a walk-over. The class of dogs under 55lbs. was somewhat better, the 1st prize winner being a good-looking red and white ticked dog, with a good head, but, as far as we could see in his box, rather long coupled and light behind. The 2d, Lord Dufferin, was one of the unplaced ones at N. Y., and brought there by Mr. Wagstaff. In the bitch class the judging was something remarkable. Mr. Orgill's Belle was placed first, and second prize went to a puppy under a year old, a rather pretty little thing, but with a narrow head and very many points behind Mr. Van Waganen's Dutchess, who was good enough to win first in a very large class in New York, but could only get third in this class of five entries. A little analysis of this judging is very amusing. At New York Sefton beats Rush. In the special class for the best pointer which has never won a first prize, Dutchess, who has beaten Belle in the open class, beats Sefton. At Philadelphia Rush beats Sefton. Belle is placed first and Dutchess is placed behind an eleven months old puppy, in no way her equal. But then Sefton and Dutchess were both sired by Sensation! In the puppy class there were four entries, the bitch Crystal, alluded to above as having beaten Dutchess, was first, with a dog puppy, Cheswick, of the same litter, second. Mr. Garrett Roach's Van was also entered in this class, but he unfortunately died before the judging commenced.

There were some very handsome dogs in the imported English setter class, but the impossibility of seeing them, except in their boxes, prevents any attempt at criticism. From the liberality with which V. H. C. and other alphabetical distinctions were bestowed, it must have been a fine class. First prize went to the recently imported Dash III., and, we believe, was rightly bestowed. Thanks to the courtesy of Mr. Nesbitt, of the Harvard Kennel Club, we had an opportunity of examining this dog and his kennel companions, Hamlet (Rock-Dora) and champion Drake, the latter not competing. They are a grand trio of dogs, and ones that any owner might be proud of. Whether a "native" or a "blue" man, no intelligent observer could look at Dash III. without admitting that the material of which field dogs are made, the possession of nose being assumed, was there. The dogs were very fat, which perhaps gave them the appearance of being rather lumbering. Both second and third prizes went to dogs sired by Pride of the Border, viz, Thunder, out of Fairy II., and Pontiac, out of Petrel. In fact, in all the English setter classes Pride of the Border stock did remarkably well and covered themselves and sire with glory. Ray, out of Dimity, obtaining 1st in the native class, and Stanley, by Ray, 2d. In the imported English bitches 1st prize went to Frost, a handsome lemon and white by Leicester out of Victress, owned by W. M. Strother, of Lynchburg, Va. Second prize was taken by the Harvard Kennel Club with another of their recent importations, Countess II., and 3d went to Countess Petrel (Count Dick-Petrel) owned by John C. Higgins, of Delaware City, Del., who had on competition a splendid kennel of a dozen or more dogs, the majority of them out of his champion Petrel. In the puppy class he exhibited seven out of the eleven entries, all out of Petrel by Count Dick, and took both prizes.

In the native English setter class there were fifty dogs entered. Although it could scarcely be called a good one throughout we thought that there were a number of very fine specimens of the native dog that should have been noticed: 1st, as before remarked, went to Mr. Orgill's Ray, and 2d to Ray's son, Stanley. This last named dog was very much admired at New York, and we preferred him to his sire. Both dogs are white with liver markings, a somewhat noticeable fact, as it is rather unusual for setters of this color to be returned as winners. In bitches 1st prize was very justly bestowed on that beautiful bitch Abbey, by Young Laverack out of Dido, bred by Mr. Raymond and owned by Mr. E. C. LaMontagne, of this city. Abbey has twice won second honors at New York. 2d and 3d prizes went to orange and

white bitches, owned in Philadelphia, and with no pedigrees given. The puppies were not remarkable, the Baltimore Kennel Club taking 1st with Beacon, and Mr. Hine, of Philadelphia, 2d with Blanche.

In red Irish setters the Baltimore Kennel Club's Derg had an easy win, and this magnificent dog had many admirers. 2d went to Don, by Rufus out of Colleen, a good colored dog, and 3d to Dan (Kite-Flora), owned by R. B. Morgan, of Canton, Ohio. We considered Mr. Miley's York, who was not even noticed, superior to this dog, and also Mr. Biddle's Grouse, 2d at New York. In the bitch class, Mr. Morgan's Flirt, also by Kite, was 1st, and was sold to the Baltimore Kennel Club; 2d went to Kelpie (Rufus-Friend), and 3d to Kathleen (Pat-Norah). There were no puppies. The red and white Irish setter class was a very peculiar one. If the word Irish had been left out it would have opened the class to cross-bred dogs with perhaps a preponderance of Irish blood, and yet which would have had little or no chance in either the English or Irish classes. As it was, all three of the prizes went to pure bred red Irish setters that should have competed in the red Irish class. 1st was Montague (2d at New York), by Salters' old Dash out of Lill III., names very familiar in the earliest annals of dog shows in this country; 2d was taken by Red Gauntlet (Thorestein-Loo II.), owned by Dr. J. W. Downey, of Newmarket, Md., and 3d by Pat II. (York-Countess). Messrs. Furniss and Fassitt showed some splendid red roan dogs with grand heads, one of them, Dash, having won 3d in New York, but they were not noticed on account of their color, it was said. If this were the case it would be well for judges to look at their scale of points and see how many are allowed for color. In the red Irish setter it is only 5 points, and in a separate red and white class like this, color, as far as a preponderance of either red or white is concerned, should not have been considered. There were but four bitches and one puppy in this class.

The black and tan setter class we regarded as one of the finest in the show, and the judges were also of the same opinion, as all but six of the dogs and all of the bitches were decorated. In the dog class the first prize-winner at New York, Mr. Forman Taylor's Turk, was first, and two more of the get of Mr. Colburn's Dash—Dash and Duke, owned by Mr. S. D. Bergen, of Camden, N. J.—were second and third —quite a feather in the cap of the old dog.

We very much admired a brace of dogs exhibited by Mr. Pancoast, of Philadelphia—Rudy and Grouse—with excellent coats. There was more of the old-fashioned type about most of the black and tans than is now usually seen—fewer of the snipey-nosed kind. And, by the way, why is it that both Irish and Gordon setters are being bred with these objectionable heads?

In the bitch class, the award at New York was again repeated, Lady Gordon, now the property of Mr. Garrett Roach, taking first, and also a splendid special prize of a silver vase for the best Gordon bitch. Lady Gordon is a beautiful bitch, with good head, straight coat and excellent quarters. There was but one puppy entered.

The cocker spaniels were a large class, first going to a liver and white-ticked dog, entered by D. P. Foster, of this city, and second to one of the get of Mr. Bestor's Snip and Juliette, Mr. N. Willey, of Baltimore, showed a brace of all-blacks, and Mr. J. Jauffert, of Philadelphia, another brace that should have been noticed, as they probably possessed more pure old-fashioned cocker blood in them than any of the others. In the class under twenty pounds, Feathers could only get second to Mr. Haywood's Nellie. In the heavy spaniel class, a very beautiful Clumber, Dash, was deservedly first.

There were three Irish water spaniels, first going to Leander, one of Mr. Whitman's stock, owned by Mr. Furniss. Leander has a capital head and top-knot, but his curl was rather wanting. The two Chesapeake Bay dogs were excellent.

As remarked last week, the foxhound display was the feature of the show. As the dogs were in large kennels, or pens, with the ribbons nailed outside, it was impossible to tell which were the prize-winners, but they all looked like workmen. The beagles were also very good. Unfortunately, Mr. Bradbury, of Virginia, arrived with his lot of eight after the judging. In dachshunde, of course Dr. Twaddell had it all his own way, and Unser Fritz added another to his many victories. There were some very good collies, and some very poor ones. The judging did not please us. The first prize dog we thought inferior to several others, and the second was nondescript in color, with prick ears, with no drop to the tips. Mr. Haines showed a handsome pair.

The Newfoundlands, of which there were two classes—one for all-blacks and one for black and whites—were poor.

In St. Bernards, Mr. Haines made a clean sweep, when there was competition; but his Don and Harold exchanged the positions they occupied at New York.

King Olaf had an easy victory in the mastiff class, but we considered Mr. Lennig's Danger II. better than the second prize-winner, Grim, the latter having too much smut in his coat.

In bulldogs, the New York winner, Ben, was an easy first, with his late kennel companion, Jennie, second.

Bull-terriers were very poor, and the judging bad, first being given to an immense brute with black markings. A very fine little brindle bull-bitch was wrongly entered in this class.

Rattler II. and his kennel mate had easy wins for first and second in the foxterrier class over Nelly and Tricksey. The latter, although good in her time, is not up to the type of dogs being imported and bred at present.

The Skye-terriers, although there were of course some animals entered that had no business there, were, as a class, exceptionally good, and we think there were others besides those noticed by the judges entitled to commendation. The invincible Tom was of course first. In the Yorkshire class, the New York winners were present, and carried off both prizes. There were but five pugs, but all good. First went to a large dog, with capital head but too much white on breast. Bothnia, the New York first prize-winner, was second. We liked better than either an eight-months old puppy named Roderick.

The other pet classes call for no particular remark, except that in the class for King Charles and Blenheim spaniels a prize was given to the only entry, an all-liver colored puppy, and should have been withheld.

THE AWARDS.

Champion Pointers—Dogs—1st, Rush, E Orgill, N Y. Bitches—Rose, E Orgill, N Y.

Champion English Setters—Dogs—1st, Royal Duke, H S and S C Magraw, Celora, Cecil Co, Md. Bitches—1st, Petrel, J C Higgins, Delaware City, Del.

Champion Irish Setters—Dogs—1st, Berkley, Massachusetts Kennel Club, Boston, Mass. Bitches—1st, Fire Fly, R W Ganse, Wilmington, Del.

Champion Black and Tan Kennel Club, Toledo, Ohio. Setters—Dogs—1st, Grouse, Toledo Bitches—1st, Nell, Nassau Kennel Club, St Louis, Mo.

Pointers Exceeding Fifty-five Pounds—Dogs—1st, Duke, F S Pancoast, Philadelphia; 2d, Rock, J T Bailey, Philadelphia; 3d, Ned, Joseph Gatley, Philadelphia.

Pointers—Bitches exceeding fifty pounds—1st, Lady, George K Cragin, Philadelphia.

Pointers not Exceeding Fifty Pounds—Dogs—1st, Dash, Thomas Dunbar, Jr, Philadelphia; 2d, Lord Dufferin, C DuBois Wagstaff, Babylon, N Y; 3d, Dash, H C Potter, Philadelphia. Bitches—1st, Belle, E Orgill, N Y; 2d, Crystal, H S Magraw, Celora, Md; 3d, Dutchess, George Van Waganer, N Y; Eliza, L Willy, Baltimore, Md. Puppies over 8 months—1st, Crystal, H S Magraw, Celora, Md; 2d, Chiswick, T H Terry, N Y; H c, Duke, E R Fiske, Philadelphia.

Imported English Setters and their descendants of any generation, without admixture of any other blood—Dogs—1st, Dash III., Harvard Kennel Club; 2d, Rhuador, J Snellenburg, New Brighton, Pa; 3d, Pontiac, J C Higgins, Delaware City, Md. V h c—Roybel, W N Lee; Roger, A Higgins; Warwick, H W Ganse; Lincoln, J C Higgins; Hamlet, Harvard Kennel Club. H c—Pride, J C Higgins. C—Mack, G A Clark. Bitches—1st, Frost, W N Strother, Lynchburg, Va; 2d, Countess II., Harvard Kennel Club; 3d, Countess Petrel, J C Higgins. V h c—Cornelia, L Shusterp; Grace, H Rohrman; Queen Anne, Dr White; Ollie, H W Ganse. H c—Daisy Lincoln, R Higgins; Victoress, J A Porter. C—June, J McMullin; Princess Bonny, J H Clark. Puppies over 8 months—1st, Count Dick II.; 2d, Countess Petrel, J C Higgins. V h c—Dolly, A S Payne; Countess Phantom, J C Higgins. H c—Blast, H W Ganse; Countess Lill, J C Higgins; Count Dan II., same owner. C—Count Dash, same owner.

Native English Setters—Dogs—1st, Ray, E Orgill, N Y; 2d, Stanley, Alfred Schnable, Short Hill, N J; 3d, Jerry, W H Doyle, Philadelphia. V h c—Raven, D C W Smith; Dike, J R Schuyler; Brussell II., F G Sheldon. H c—Jingle, T W Sharples; Dan, D McClinch; Spurt, J B Pattison; Shot, S T Downs. C, Mac, D Shuster. Bitches—1st, Abbey, E C La Montague, N Y; 2d, Dell, J H Roberts, Philadelphia; 3d, May, J H Douglass, Philadelphia. V h c—Jilt, A F Huston; Nell, M Teeny. H c, Culzean, Baltimore Kennel Club. Puppies over 8 months—1st, Beacon, Baltimore Kennel Club; 2d, Blanche, E C Hine, Philadelphia.

Red Irish Setters—Dogs—1st, Derg, Baltimore Kennel Club; 2d, Don, Rufus-Hewee, Wilmington, Del; 3d, Dan, R B Morgan, Canton, Ohio. V h c—Smuggler, J W Sprong, Albany, N Y; Grouse, A Biddle. Bitches—1st, Flirt, R B Morgan, Canton, Ohio; 2d, Kelpie, J O White, Philadelphia; 3d, Kathleen, Robert Neville, Upperville, Va. H c, Floss, C Z Miley.

Red and White Irish Setters—Dogs—1st, Montague, Charles De Rouge and H Inman, Millburn, N J; 2d, Red Gauntlet, Dr J W Downey, New Market, Md; 3d, Dash, J W Fassitt, Philadelphia. V h c, Major, J F Gaffney. H c, Glen, J S Davis. C, Sport, J F Gaffney. Bitches—1st, Lou, Barton Bruce, Hazleton, Pa; 2d, Biddie, H O Steahman, Middletown, Pa; 3d, Psyche, W R Furness, Philadelphia. V H c, Flush, C V Tolson. Puppies over 8 months—1st, Maud, G Sniffen, Philadelphia.

Black and tan and black, white and tan setters—Dogs—1st, Turk, T Foreman Taylor, Monmouth County, N J; 2d, Dash, D Bergen, Camden, N J; 3d, Duke, S D Bergen, Camden, N J. V h c—Judge, Toledo Kennel Club; Ben, E L Mills; Mac, L. Wiley. H c—Hector, S G Dixon; Gladstone, F L Gooch. C, Rudy & Grouse, A A Pancoast. Bitches—1st, Lady Gordon, G Roach, N Y; 2d, Bessie, G N Appold, Baltimore, Md; 3d, Fly, R N Elder, Baltimore, Md. V h c, Belfast, Nassau Kennel Club. C Crete, S G Dixon. Puppies over 8 months—1st, Ned, Lin Hartranft, Philadelphia.

Cocker Spaniels exceeding 20 pounds—1st, Charlie, D P. Foster, N Y; 2d, Snip, S S White, Philadelphia. V h c, Walt, E B Cassatt; Frank, F W Dezilizi. H c, Knight, T D Baldwin; Kate, J Janffert. Not exceeding 20 pounds—1st, Nellie, George Haywood, Philadelphia; 2d, Feather, Frank C Hollins, Jersey City, N J.

Spaniels exceeding 30 pounds—1st, Duke, Alfred Vezin, Frankford, Philadelphia; 2d, Rod; William Kirk, Philadelphia.

Irish Water Spaniels—1st, Leander, Mrs Frank Furness, Philadelphia; 2d, Barney, G W Bailey, Philadelphia.

Chesapeake Bay Retrievers—1st, Rove, Baltimore Kennel Club; 2d, Sinbad, S J Martin, Md.

Poodles—1st, Rolla, W McGonigle, Philadelphia.

Greyhounds—1st, Royal Dane, J F Keene, Jr, Philadelphia; 2d, Rose, H Hooten, Morton, Pa.

Foxhounds—Dogs—1st, Dixey, Jr., T Davis, Warren Tavern, Pa; 2d, Trailer, Rose Tree Hunt, Delaware County, Pa. Bitches—1st, Nip, Rose Tree Hunt, Delaware County, Pa; 2d, Flea, Lower Merion Pack, Pa.

Foxhounds in Couples—1st, Joe and Trick, Rose Tree Hunt, Delaware County, Pa; 2d, Boxer and Ami, T Davis, Warren Tavern, Pa.

Foxhounds over 8 months—1st, Reuben and Ray, Ryse Tree Hunt, Delaware County, Pa.

Beagles—Dogs—1st, Rattler, Dodge & Baker, Detroit, Mich; 2d, Spot, Prentiss & Gallup, Wilmington, Del. Bitches—1st, Bell, Dodge & Baker, Detroit; 2d, Beauty, G Pownall, Christiana, Pa. Beagles in Couples—1st, Charmer and Chanter, J A Stovell, Philadelphia; 2d, Bess and Fan, A Lange, Baltimore, Md. Puppies over 8 months, in couples—1st, Charmer and Chanter, J A Stovell, Philadelphia.

Dachshunde—1st, Unser Fritz, L H Twaddell, Philadelphia; 2d, Zankerle, same owner. V h c, Cora, Baltimore Kennel Club.

Sheepdogs—1st, Frank, H Sparmaker, Philadelphia; 2d, Shep, T Berry, Philadelphia. V h c—Tom, C Pugh; Bruce, Whitehead & Drake; Lassie and Roy, J P Haines. H C, Shepherd, J C Higgins. Puppies over 8 months—1st, Bruce, F Morris, Philadelphia.

Newfoundlands, all Black—1st, Nero, C Crawford Coates, Philadelphia; 2d, Captain, L S Boraef, Philadelphia. Black and White —1st, Frank, Dr Hooper, Philadelphia; 2d, Rob, Margaretta C MacVeagh, Philadelphia.

St Bernard, rough-coated—1st, Turk, F Foster, New York. Smooth-coated—1st, Harold, J P Haines, Mamaroneck, N Y; 2d, Don, same owner. V h c, Judy, J P Haines. H c, Count, R Adams, Jr.

Mastiffs—1st, King Olaf, W F Morgan, New York; 2d, Grim, A C Johnson, Philadelphia.

Great Danes or Siberians—1st, Sedan, Dr E Morwitz, Philadelphia; 2d, Miro, G Bressan, Philadelphia.

Bulldogs—1st, Ben, F A Miller, New York; 2d, Jennie, D Burke, New York.

Bull Terriers—1st, Nan, M Robinson, Jr, Philadelphia; 2d, Pete, Samuel Shearer, Philadelphia.

Fox Terriers—1st, Rattler II., T D Burke, New York; 2d, Vixen, same owner. V h c, Nelly, J Vaughan. C, Tricksey, C Walton.

Rough and Broken-haired Terriers—1st, Sandy, R S Redfield, Philadelphia; 2d, Jack, Ed Daily, Philadelphia.

Skye Terriers—1st, Tom, R McLellan, New York; 2d, Topsy, M R Stroud, Jr, Philadelphia. V h c, Donald Jr, J D Munro.

Yorkshire Terriers—1st, Ben II., T J Kanlgher, New York; 2d; Charley, T D Burke, New York.

Pugs—Dogs—1st, Bothnia, Mrs W W Fisher, Germantown, Philadelphia; 2d, Bothnia, Dr W S Webb, New York. Bitches—1st, Judy, Mrs F J Kimball, Germantown, Philadelphia.

Italian Greyhounds—1st, Neppy, Mrs A M Kramer, Philadelphia; 2d, Vic, Ellis L Campbell, Philadelphia.

King Charles—No first prize; 2d, Fritz, G W Boyer, Philadelphia.

Black-and-Tan Terriers not exceeding 10 pounds—1st, Kate, R Berryman, Philadelphia; 2d, Dellie, W Taylor, Philadelphia.

Rough and Broken-haired Terriers not exceeding 10 pounds—1st, Bounce, Mrs C B McMichael, Philadelphia.

SPECIAL PRIZES.

Best Imported Setter Dog—Prize, corduroy hunting suit; Dash III., Harvard Kennel Club, Cambridge, Mass.

Best Brace of Imported Setters—Prize, Parker gun; Petrel and Pontiac, J C Higgins, Delaware City, Del.

Best Imported Setter Bitch—Prize, portrait of dogs on tiles; Frost, W N Strother, Lynchburg, Va.

Best Pointer dog—Prize, Remington gun: Rush, E Orgill, New York.

Best Brace of Pointers—Prize, 1,500 paper shells; Rose and Belle, E Orgill, New York.

Best Pointer Dog, with two of progeny—Prize, silver tankard; Thunder, J J Snellenburg, New Brighton, Pa.

Best Irish Setter Dog—Prize, Wesson rifle; Berkley, Massachusetts Kennel Club, Boston.

Best Brace of Irish Setters—Prize, $25; Dan and Flirt, R B Morgan, Canton, Ohio.

Best Black and Tan Setter Dog—Prize, case of game birds; Grouse, Toledo Kennel Club, Toledo, Ohio.

Best Brace of Black and Tan Setters—Prize, twenty pictures of birds; Dash and Duke, S D Bergen, Camden, N J.

Best Bitch—Prize, dog whip; Crete; S G Dixon, Philadelphia.

Best Water Spaniel—Prize, Burgess magazine rifle; Barney, C W Bailey, Philadelphia.

Best Sheep dog—Prize, tapestry table cover; Tom, C Pugh, Philadelphia.

Best Newfoundland—Prize, Colt's revolver; Nero, C Crawford Coates, Philadelphia.

Best Mount St. Bernard—Prize, Illustrated Shooting Directory; Don, J P Haines, Mamaroneck, N Y.

Best Mastiff—Prize, silver vase; King Olaf, W F Morgan, New York.

Best Skye Terrier—Prize, Skye terrier plaque; Tom R McLellan, New York.

Best Italian Greyhound—Prize, pair of tiles and silver vase; Neppy, Mrs. A M Kramer, Philadelphia.

Best Pug—Prize, pair candlesticks; Punko, Mrs W W Fisher, Germantown, Philadelphia.

Best Irish Water Spaniel—Prize, ducking skiff; Leander, Mrs Frank Furness, Philadelphia.

Best Black-and-Tan—Prize, plaque; Kate, R Berriman, Philadelphia.

Best English Setter—Prize, oil portrait of winner; Petrel, J C Higgins, Delaware City; Del.

Best Foxhound, with two of his progeny—Prize, muzzle-loading rifle; Boxer, T Davis, Warren Tavern, Pa.

Best Three Couples Foxhounds—Prize, scarlet hunting coat; Leopard Pack, Leopard P O, Pa.

Best Five Couples Foxhounds—Prize, saddle and bridle; Leopard Pack, Leopard, Pa.

Best Beagle—1,500 cartridge cases; Rattler, Dodge & Baker, Detroit, Mich.

Best dachshund—Prize, repeating rifle; Unser Fritz, L Henry Twaddell; Philadelphia.

Best Greyhound—Prize, Encyclopædia of Poetry; Sam, A Simon, Philadelphia.

Best Foxhound—Prize, painting; Dixey, Jr, T Davis, Warren Tavern, Pa.

A special prize of a handsome silver cup offered for the best Gordon setter bitch in the open class was won by Lady Gordon, belonging to Garrett Rosch, of N Y.

BOSTON DOG SHOW—*Editor Forest and Stream:* The entries are now nearly all in, and I have no doubt we shall have a good show. Following is a list of dogs which are entered for the grand cash prize of $500: Harvard Kennel Club, Dash III., E.; C. M. Pond, Trump, Gordon; G. A. Thayer, Daniel Webster, N. E.; Toledo Kennel Club, Grouse and Bee, Gordons; H. S. & S. C. Magrau, Royal Duke, E. S.; Franklin Sumner, Lelaps, E. S.; St. Louis Kennel Club, Bow and Faust, Pointers; W. N. Callender, Rory O'Moore, Irish; John C. Higgins, Petrel and Pontiac, English; L. H. Smith, Paris, English; Baltimore Kennel Club, Derg, Irish S.; J. J. Snellenberg, Thunder, English S.; John E. Long, Coin, English S. In Class B, for the $350 picture, all the above are entered except Trump, Lelaps, Pontiac and Derg, with additional entries of: Geo. H. Hitchcock's Fly; Harvard Kennel Club, Countess II; English setter; Toledo Kennel Club, Bob, Gordon; Edmund Orgill, Rose, pointer; W. H. Leighton, Dash; J. A. Davis, Nell; D. F. Wilbur, Dan, formerly Sam; L. H. Smith, Leicester; J. J. Snellenberg, Peeress. All the classes are well filled, and many interesting contests may be expected. The judging will be done in public, in the lower hall, a splendid place for the purpose.

Boston, Mass., April 26, 1879. CHAS. LINCOLN, Supt.

COCKERS AT THE NEW YORK SHOW.—*Editor Forest and Stream:* I would like, through the medium of your valuable paper, to ask a few questions about the late bench show. 1st. Why, and on what authority, were the cockers and field spaniels put in one class? I have always supposed they were distinct breeds. 2d. When the judges decided to separate the dogs, why did they not know enough to assign the dogs to their proper classes? If there is a difference I should think that the judges ought to know one from the other. A thoroughbred cocker was not only judged as a field spaniel, but given second prize. To me that is the height of the ridiculous. As I bred the dog in question, you may well suppose that it is slightly aggravating to have him judged as of another breed altogether. He (Doctor) is by Dr. Temple's imported black and white cocker, out of my Brownie, and no better bred dog can be found to-day. I think that a man who knows so little about cocker spaniels as this case shows, should do as one of the three judges did—confess his ignorance and not attempt to judge them.

Hoping that you will give this room in your kennel columns, believe me, Yours sincerely, GEO. MCDONALL.

Toronto, April 21, 1879.

Ans. Possibly we can answer some of our correspondent's queries. 1st. We should like to ask him of what breed is a field spaniel? Is not a cocker a field spaniel? This whole thing lies in a nutshell. At some of our shows a class for "field spaniels" was made in order to take in the Sussex and Norfolk, should there be any, or cockers crossed with either of these breeds and of such size as to prevent them from competing with the cockers. Although we were not present at the judging, we presume that the judges separated the heavier dogs from the light ones and called the former field spaniels. As for "pure cockers," as such a thing hardly exists in England—they having been crossed with the springer to such an extent as to nearly extinguish the breed—it would be difficult to set up an arbitrary standard in this country.

"DID YOU EVER HEAR OF SUCH NONSENSE?"—*Editor Forest and Stream:* After carefully reading the great oracle of the "ring" and its twin I have come to the conclusion that I perfectly agree with the former in the expression taken from their columns and placed at the head of this article, for their criticisms of the late show at Gilmore's Garden are truly nonsense. One of these illustrious "impartial and strict criticism" journals says in regard to the champion English setter dogs: "There were but five entries. Lark, P. H. Morris, was in superb form, as was also Lincoln & Hellyar's Frank II. The latter was my favorite, being in both looks and make-up, a remarkable dog." And again: "Lark and

Frank H. and Jersey Duke were examined separately from head to foot, were paced around by their handlers, and finally brought together side by side. There an apparently animated discussion took place, accompanied by as much gesticulation as would have become on excited Italian. Then pencils were brought out, and after much figuring Duke was declared the winner." This beautiful essay closed by saying: "Did you ever hear of such nonsense?" No, I never did; for Frank H. was over one hundred and fifty miles from New York at the time, and was not at the exhibition. This clearly shows their criticisms to be a "sort of catalogue criticism." They also, in speaking of the champion pointer Snapshot, say "he was a long way off of first rate condition." Of this the public can judge. The dog was in such poor condition that Mr. Edmund Orgill bred his celebrated champion Rose to him during the exhibition. Elf, the third prize bitch, also was served by him, and Mr. Van Wagenen has arranged and agreed to breed his first prize Duchess to this same poor old dog, who has now retired from the show ring, standing, as he does, at the head. More concerning this will follow from

SNAPSHOT.

PARKER BROS. PRIZE—*Editor Forest and Stream:* I have just received the "Parker gun," donated as a special prize to the recent N. Y. Bench Show by the Parker Bros., and won by St. Elmo. The gun is a 12-bore, 28-inch, 7lbs. 6oz., of Parkers' best make, and is the equal of any gun I have yet seen, both in beauty of finish and quality of materials. It has already been examined by several experts, and they all agree in pronouncing it "as good as a gun can be." I may mention, as an evidence of the liberal spirit with which the Parker Bros. encourage bench shows, that although the nominal value of the prize offered was $200, this gun is actually worth $300. S. FLEET SPIER.

162 *Montague street, Brooklyn, N. Y., April* 24, 1879.

—The recent dog exhibition at Gilmore's Garden, in New York city, probably furnished the finest collection of dogs ever brought together in the world; it was certainly the finest ever seen on this continent.—*Christian Union.*

A RETRIEVING GREYHOUND—*Belleville, Ont., April* 19.—As a contribution to the discussion anent greyhounds as retrievers, I may state that, when on a visit to England in 1866-7, my cousin, Leopold S. Rowland, owned a greyhound, Lucy, which retrieved all the hares she killed; and not only that, but she was as good to shoot partridges over as an ordinary pointer or setter. This I know, having shot over her at different times. She ranged very close, and on finding birds was as steady as a veteran. Lest you might think from these facts that Lucy was a lurcher, or at all events not purely bred, I state the further facts that she was from the kennels of Mr. James Elliott, of Lawberton, was between four and five years old at that time, and after her then owner gave her to a farmer named Brown, she was the principal prize at a minor coursing meeting, beating some excellent young dogs. This barbarian, Brown, gave poor Lucy six severe runs on his own and a neighbor's farm in one day, over hilly, stony ground and in frosty weather. The magnificent animal killed six hares on that day, retrieved them all, though much bothered by the farm collies; but she was afterward almost worthless. Lucy never "ran cunning," and was in all respects as fine a greyhound as I ever saw. In color she was a fawn, without white; her fect were perfection; rather below the average size; one of the mildest dispositions ever seen, and almost perfect in shape, as defined in the old rhyme—"Would that I had such another." B.

THE FOXES OF GREAT BRITAIN.—The question of the fox supply is of great moment to Britishers. When the railroads were built over the island it was feared by the pursuers of the wily Reynard that his race would be lessened in the land. The owners of packs and stables have, however, of late years taken heart again, for it is found that there are now as many foxes in the country as there were fifty years ago.

—Mr. W. H. Pierce, of Peckskill, N.Y., has had the misfortune to lose his fine setter puppy Royal Pomp, winner of second prize in class 30 at the late Westminster Kennel Club bench show. Royal Pomp was out of Herzberg's Kate II. by Pride of the Border," and was very promising.

—Mr. G. W. Bassford's red Irish setter bitch Gypsey, winner of third prize at last New York show, has been bred to the champion red Irish setter Rory O'Moore.

—Mr. Geo. H. Hitchcock's setter bitch Fly was bred on the 1st inst. to Mr. Luther Adams' field trial champion Drake.

—The imported red Irish setter bitch Rose (Palmerston-Flora), belonging to Dr. Wm. Jarvis, of Claremont, N. H., whelped, on the 20th inst., eight all red puppies—five dogs and three bitches—sired by champion Elcho. The puppies are strong and plump, and perfect beauties.

—The English setter bitch Zita, owned by Mr. Wm. Vie, of St. Louis, has whelped eight puppies, sired by champion France.

—Mr. Joseph T. Allyn, of Norfolk, Va., claims the name of Prince-Elcho for his red Irish setter dog pup by Mr. W. H. Jarvis' champion Elcho out of Mr. E. J. Robbins' Bridget-Plunket (champion Plunket-Dennison's Stella).

—Mr. Wm. W. Johnson, of N. Y., claims the name Ben Butler for his red Irish setter by Dr. Jarvis' Dick out of May.

—Dr. J. R. Housel, of Watsontown, Pa., claims the name White Duke for his setter dog puppy by his Jim out of Dot.

—Ethan Allin, of Pomfret, Conn., has entered a pair of puppies of his justly celebrated strain of dogs for the Boston Bench Show.

BAD FOR THE BREAKERS.

EDITOR FOREST AND STREAM:

I have read with pleasure and profit the articles on "Game Laws and Protection," and sincerely hope your efforts may be crowned with success; and in this connection let me point out one source whence we have a right to expect better things than have been evidenced of late years, viz., from our sporting men. It is a well-known fact that many of our New York friends have their dogs boarded and trained west of the Hudson River, and are only desirous that their dogs shall be afforded every opportunity of acquiring a thorough training, which cannot be accomplished without the use of the gun. I know parties who have no other visible means of support than that of boarding, breaking and training dogs, and, in the language of dog shows, are V. H. C. for their skill, both by the owners and press. These men (so-called) figure prominently at shows, and assume a high-toned "cognomen," and talk dog by the acre. I know further wherein some of these "noted" dog trainers, being faithful to their trust, and deeply conscientious, both in season and out of season, have been made to fee the terrors of Jersey justice for killing game over those dogs out of season, and I believe that the penalties did not come out of the trainer's pocket, while a trip to the city twice a week with a neat traveling bag on the arm would seem hardly necessary so far as "carrying reports and collecting board money" is concerned. Perhaps the sable cook in the gentleman's kitchen can answer. I submit the case to the jury without summing up, and relying upon "our paper" and the sound principles of the Editor, I leave him to be the judge, and charge the jury plainly as to how far an owner of a dog, who knowingly places one in the hands of a notorious violator of the law to be trained and handled, can be relied upon for support in any effort to maintain even present laws; also in what degree he differs from the violator who is arrested and punished. REBUCK.

Game Bag and Gun.

MAY IS A CLOSE MONTH FOR GAME.

For Forest and Stream and Rod and Gun.

A RHYME OF THE GUN.

See the Ancient with his gun!
Clumsy gun!
How he plies the greasy ramrod as he thinks he's having fun!
When he has, with toil and trouble,
Crowned the nipple with a cap,
See him plodding through the stubble
Till he might have had a double
Shot—but both the barrels snap;
And his inward wrath he nurses at the gun, gun, gun,
Or consoles himself with curses at the un-, un-, un-
Reliable, exasperating gun.

See the Modern with his gun!
Greener gun!
Quick he breaks it at the middle, loads it, and the thing is done.
Mark him in his dainty dory,
Having superhuman luck;
Watch him bathe himself in glory
As he lights his pipe before he
Knocks his ninety-seventh duck,
Which of course he's sure to cover with his gun, gun, gun,
His hammerless, inimitable, un-, un-, un-
Approachable ideal of a gun. J.

—Several young rail (*Sora*) have been shot within a few days on the meadows near Philadelphia. According to Wilson and Bartram, rail were often seen in the month of June on the borders of the Delaware and Schuylkill Rivers, and the latter found their nests in tussocks of grass, containing four or five dirty, whitish-colored eggs. The appearance of rail at this season has been quite unusual here on the Delaware of late years.

—Mr. R. V. R. Schuyler (Schuyler, Hartley & Graham,) has just returned from a visit to Missouri, where he had good opportunities to put to a practical test the qualities of the Parker $40 breech-loader. He took with him one of the 12-gauge guns with two sets of barrels—of 7¾ and 8¼lbs.—and now returns a verdict that this Parker is a stronger shooter and as handsome a gun as any in his private armory of sixteen capital guns. The Parker Bros. make their laminated barrels themselves, barrels being for the most part manufactured abroad by two or three firms of repute and long standing.

NEW HAMPSHIRE—*Ashland, April* 12.—At a meeting of the prominent sportsmen of this place held to-day, the Ashland Gun Club was organized, and the following officers elected for the ensuing year: President, E. P. Warner; Corresponding and Recording Secretary, J. G. Morrison; Treasurer, A. S. Clark. We have some splendid shots in the club, and we expect some fine scores will be made later. MASON.

MASSACHUSETTS—*Plymouth Co., April* 25.—I report the best two weeks gunning that we have had for a long time. On the 18th the wind was at sixty miles an hour during the forenoon, and from thirty-eight to forty-five the rest of the day. This was too much for ducks, and the rocks and all the inlets along the shore were just swarmed with them. Thousands don't express it. We used 6 drams powder, 4oz. No. 2 chilled shot. I can mention two good shots made that day—one, out of seven geese five were shot down, three dead and two crippled; and six ducks, with one barrel, dead, with a 10-gauge, 10lbs. choke, which is just the gun for a high wind. Would like to see a muzzle-loader worked in the wind and rain that day. Woodcock plenty about here breeding, and some snipe on the fresh meadows. S. K., JR.

CENTRAL NEW YORK SPORTSMEN.—The Central New York Sportsmen's Club held its twentieth annual meeting at the Butterfield House last week. Among the subjects of importance discussed was the bill for the preservation of game presented to the legislature by Senator Wagstaff. Its provisions were generally approved, and upon motion Senator Goodwin was requested to urge its passage. The following officers were elected: President, D. G. Ray; Vice-Presidents, J. J. Flanagan, I. C. McIntosh, John D. Kernan; Prosecuting Attorney, Scott Lord, Jr.; Secretary, Capt. Harvey D. Talcott; Treasurer, W. Jerome Green. Delegates to State Convention—Chas. W. Hutchinson, J. J. Flanagan, W. M. Storrs, Dr. Charles W. Shapley.

PENNSYLVANIA—*Bellevernon, April* 21.—We had but few quail left after our severe winter. A few flocks I fed during the very severe weather were nearly all taken by hawks. Hawks soon find the places where quail are fed and play sad havoc with them. T. L. D.

MINNESOTA.—There is abundance of game and fish in Otter Tail County, red deer; in the northern and eastern portions an occasional bear, jack-rabbits and hares, and a great variety of feathered game. The lakes contain bass, pickerel, pikes and whitefish, and in the rivers are catfish and sturgeon.

Hallock, Kittson Co., April 20.—Never hereabouts at any time before have I seen so many grouse. They are now having their spring frolic, and anywhere along the St. P. & P. R. R., between Glyndon and Pembina, you may see them from the cars as you pass along, in large flocks, playing, strutting about, and fighting as fiercely as ever a brace of game fowls. They are all sharp-tails. J. S.

WORK AND PLAY IN LOUISIANA.—*Abbeville, Vermilion Parish, La., April* 7.—*Editor Forest and Stream:* The immense flocks of geese and ducks that feed on our marshes each winter have now gone to their nesting-grounds in the far North, and the glorious woodcock and most of the snipe family also have departed and left us disconsolate. The plovers and sandpipers with a few black ducks are about all the feathered game that remain to us. But now cometh "ye fysshe" to make glad the heart. The sun-perch and the striped and black bass are abundant, and down on the Vermilion Bay are plenty of crabs, oysters, redfish, mullet, drum, sheepshead, etc., to cheer our disconsolate hearts. It is true Bob White is here in force, but we do not call him game at this season of the year, he is one of the family, and we would us soon think of shooting one of our children as Bob White. A Texas correspondent has asked the question, "How many degrees of cold will the orange tree stand?" I will in reply give a little of my experience on the subject. I have observed the growth, habits and diseases of the orange in Southern Louisiana for fourteen years. Last winter was the coldest winter experienced here for many years. On Monday morning, Jan. 6, 1879, the thermometer at Abbeville stood at 18° Fah., which was the coldest of the whole winter by several degrees. I thought the young orange trees were surely all killed; but, strange to say, it never hurt them in the least, and the young trees, as well as the old ones, never looked better than at present. I have seen the trees injured and even killed when the thermometer stood at 28°, but now the trees appear benefited by the freeze. It greatly depends on the clouds and other circumstances, how much cold the orange will bear. Southern and southwestern Louisiana, all along the Gulf Coast, is a good orange country. People in their rush to Florida to raise oranges overlook SW. Louisiana, which is equally good for oranges, and besides much better for everything else, than Florida. The soil of Florida for the most part is poor. I know the swamps and river bottoms and hammocks are rich, but the greater part of the inhabitable portion is of inferior soil. Here the entire country is good, not only for oranges, but for sugar cane, rice, cotton, corn, grazing or anything else. Here the fig, the pear, the peach, the plum, the grape will all flourish along with the orange. The land is cheap and fertile (mostly prairie), and the sea breeze tempers the heat so that the climate is delightful. Here is a refuge where the man of small means, or of no means at all, may find constant employment at remunerative wages, or may cultivate his own acres in oranges or other fruit, as he likes. Here is an abundance of game and fish for the lover of rod and gun. Here the good from all lands will be welcome. Should any of your readers wish to inquire further, I will, on receipt of their request with three cent stamp for reply postage, take pleasure in answering their questions.

W. W. EDWARDS.

MICHIGAN NOTES—*Editor Forest and Stream:* Capt. Molt, who came down from the Flats the other day, and was in a great hurry to get back, said ducks were very plenty. Goff Stanten and J. V. D. Eldridge have been above the Flats for two weeks playing freeze-out. The game is played, so they say, by getting frozen in with no way of getting out—no shooting, lots of swearing and very little to eat. So they bet on outstaying one another on the ice, and Goff says they would draw cuts in the morning to see who should try first, and he says Eldridge won all his money—nineteen cents—by getting the first watch, as they called it, when he would place himself on a cake of ice and sit there all day, giving Goff no chance, often sitting so long as to melt a hole through. But this may be a hunter's yarn. E. H. Gillman has been on a grand hunt at the Big Eight Marsh. The party consisted of Gillman, Jackson, Nichols and Colburn—all first class shots—and Ed. reports three hundred and eighty-seven ducks and a white muskrat. Ed. took me three miles to see this white rat. C. A. Mack says he intends to get his shooting clothes on this season. Charley is a good shot. I was giving Mr. George Gillman a little sketch of Texas shooting, when he gave me the old familiar "Is that so?" and taking my arm lead me into his private room and said: "Now don't give this to the papers?" I said I would not, and he then showed me what he was doing in the way of keeping his end up with the shooters. He has a great notion of coon hunting, and you should see the outfit he has—a flint-lock musket (he wants something he can feel when it goes off), a buckskin suit (from the buck that Jordene killed), and a bearskin robe (from the bear that Ed. killed). Then he has the trap that he got at the dog show. It is a glass ball trap, but George has it so arranged that he can throw a coon up with it (when he gets one to throw up). Then his dogs. He keeps his kennel in the cellar, and I think the dog men have imposed on him a little on the coon dog, for he has a variety of them, and all kinds and colors, from the "yaller" dog to the Newfoundland. He dotes on the "yaller" dog that James Canniff sent him, and says C. is a coon-hunter and knows what a coon dog is. George is to pay $100 for him, providing he will catch a coon, and J. C. says if the dog catches one he will give $200 for him. By the way, I hear that Mr. J. C. is at Walpole Island after snipe. At the last match of the Pacific Gun Club Mr. John Demars carried off the medal with a clean score. He shot against C. M. Welsh, B. Gillman, J. Stenten, A. Gore, N. Williams, J. Kent and one other gentleman for the $50 prize. They shot until dark, and adjourned to Mr. Gore's for a frog supper, agreeing to settle it by giving it to the one eating the most frogs, and the winner to pay for the supper. They ate frogs till Gore claimed the fifty were used up, and he refused to give them more till he knew who was going to settle the bill; so they quit, and Gore got the $50. By the way, Gore has a frog pond, where he claims he raises them at the rate of 170 dozen frogs a week, and the boys say you can go to his house any time and see frogs running all over it. Twice a day he exhibits his trained frogs, and offers to match them against any amateur billiard player for $100 a side, 50 points, Irish carom. GOOD BOY.

Detroit.

NO TRESPASSING—*Editor Forest and Stream:* Mr. Shepard lives in the Monongahela Valley; he is a very particular sort of a man and allows no hunting on his farm. Mr. Clarkson, a large coal operator, is very fond of a squirrel hunt, and one day, some years ago, when out squirrel hunting, wandered,

among other places, on to Shepard's farm, who, by the way, has a very fair game preserve by his close watching and making every sportsman who happens on his premises "git up and go." The close season on his farm is perpetual to all but himself. Clarkson is a good squirrel hunter; he carries two guns, a double shotgun and rifle, and makes good bags. Of course, it was simply glorious when he dropped in on Shepard's squirrels, and he cut them down right and left. It was a warm September day. Shepard was plowing in an adjoining field. Being one of those puffy, fleshy sort of men, about 250lbs. avoirdupois, and the horses acting badly from being worried by the flies and hard plowing, he was half mad to start with. When Clarkson's guns went bang! bang! right in his favorite spot, among the very posted trees, to him it was simply an outrage. He had some misgivings, indeed, as to what sort of man it was who would take such a liberty. To make matters worse, it was up hill to the woods and over plowed ground, and when Shepard landed over the fence within fifty yards of Clarkson, he was red hot. "Get out of here!" he yelled at the top of his voice, as he rapidly advanced on the trespasser. Clarkson, in years gone by, was a steamboat pilot of very steady nerve, and scared entirely too slow for Shepard. He wants every trespasser to scare quick and bad. One loud yell followed another from Shepard, while Clarkson cuts down a squirrel or two during the advance of the lordly proprietor. When within good hearing distance for a low tone of voice, Clarkson adds insult to injury by remarking to Shepard: "Look here, old man! if you are going to squirrel hunt with me I want you to keep quiet." That carried the day. D.

Belle Vernon, Pa., April 21, 1879.

A Gun-Shy Shooter—*Editor Forest and Stream:* Two prominent gun firms here, who are enterprising, philanthropical and reckless, have established glass ball hot-houses, where the young idea can be taught how to shoot and gunshy-sters become thoroughly broken by experienced hands. One of them is in the fourth story of J. Bown & Sons' armory on Woods street. Two Bogardus traps, a pair of 16 gauge Parkers and the Dittmar powder are used at this place. Its advantages are its central location and its being within doors, which makes it possible to indulge in glass ball shooting during inclement weather, and also at night by the aid of gas light. The other place referred to is in the Exposition grounds. It is under the direction and control of Messrs. J. Palmer O'Neill & Co., of Fifth avenue. They have here every facility for glass ball shooting, having no restrictions as to the kind of powder, make or size of gun, or trap used, although, we understand, they make a specialty of "Mole's Revolving Trap," which can be made to throw the balls in any way and in a way that "no fellow can find out," or at a set angle, as desired. They will shortly introduce the new "explosive ball," and it is also their intention to establish a 500-yard rifle range at some point near the city at an early date. The example of these firms might be followed by gun firms elsewhere to their advantage, as well as to the satisfaction and convenience of their patrons and to the salvation of many a gun-shy sportsman; for that there are such is evidenced in the case of Mr. Adonis Snodgrass, who came in from the East End recently to shoot "a while away." He was elegantly attired in a blonde mustache, a red neck-tie and his best clothes. He remarked as he got out of his Ulster that "he did not expect to break more than half" as he "had a cold." As he said nothing about "not having brought his music," however, I still had hopes of him. The man who runs the pulverizing factory asked him if he preferred a heavy or light-triggered gun. He replied in a somewhat confused manner that he did, and taking the gun that was offered him, stepped up to the score and said "Pull!" The "gallery god" suggested that he had better load the gun before he broke the first ball, as it looked better, and therewith handed him a couple of shells, for which Mr. Snodgrass tried to find an opening in the gun by pulling back one of the hammers. The gallery man kindly initiated him into the mystery of inserting cartridges into the animal, and again he stepped up to the score. He had never shot in public before, and by this time was becoming a little doubtful as to how these public guns were going to work. However, he grasped the gun firmly and cautiously, pulled up the right hammer, shut his soul windows, faltered "Pull!" pulled the left trigger and—owing to a peculiarity of the gun, it didn't go off. The duck that runs the gunshop again stepped to the fore (N. B.—Plagiarized, but classic), and impressed upon Mr. Snodgrass' understanding the importance of either pulling both triggers or having both hammers up. He accordingly pulled up both hammers and pulled both triggers by way of experiment, not thinking that Mr. Augustus Simpkins, his bosom friend, in another red neck-tie and a gingham suit, who was engaged to his sister, was in the line of fire. But Mr. Simpkins, who from the start had been very watchful, had anticipated the occurrence and had started off to the East End just before the gun went off south, making it a running cross shot for Mr. Snodgrass, who failed to score, as far as Mr. Simpkins proper was concerned; but, owing to the prevailing cut of pantaloons, that portion of Mr. Simpkins' which were too far in the rear to get out of the road were hit. The gun being a choke-bore, the pattern and penetration were all that could be desired. Mr. Simpkins carried himself around all afternoon in a sling, while Mr. Snodgrass, who is in the dry goods trade, went East for gingham. The match between Mr. Augustus Simpkins and Mr. Adonis Snodgrass' sister has recently been broken off. Ahriman.

Pittsburgh, Pa., March 31, 1879.

Breech-Loader Locks.—To come to the point, I wish to call the attention of your readers to the extremely modest advertisement that appears week after week and year after year in your advertising columns. I refer to that of Clark & Sneider, of Baltimore, and I wish to speak of one or two features of their breech-loading shot-guns which their advertisement does not disclose. Those who have seen their more recent catalogues will notice that they have greatly improved what was already, in my opinion, the best breech-loading system. It is difficult to convey a clear idea of this system without reference to the drawings of their catalogue, but it will be sufficient to say that the upper lug (which extends from between the barrels into a mortise in the standing breech), is made to so interlock with the top grip as to secure above the charge the same strength and solidity that the "hooks" impart to the muzzle-loader, in addition to the very strong grip at the extreme end of the barrels beneath the charge. In short, these are two independent grips or bolts, each at the farthest possible point from the pivotal connection of the barrels, one of them above the line of discharge and the other below it; and these two grips so interlock with their respective lugs, that the barrels are held solidly against the face of the breech without the possibilty of their springing forward under the shock of heavy charges. Moreover, all the wearing surfaces are provided with means of easy adjustment, so the Sneider gun is not only one of the simplest and strongest, but the most durable of all breech-loaders. I have never met Messrs. C. & S., and my only acquaintance with them has been in a very pleasant correspondence attending the purchase of one of their guns in 1876, through an advertisement in Forest and Stream, and more recently in regard to an extra pair of barrels for the same gun. I not only wish to call attention to their admirable gun, but also to acknowledge in your columns the very accommodating spirit with which they carried out the (perhaps rather vexatious) details in the order of a

Hartford, Ct., April 10, 1879. Notional Customer.

Yegua.—*New Peakes Roads, Va., April* 25.—*Editor Forest and Stream:* Your issue of the 17th inst. contains an article from "Bird Shot," in which he is made to call the Yegua bottom the Zeguo. My advice to O. C. O. in that article was to spell it with an "u," and now I beg you will spell it with a Y instead of a Z. The name is Yegua, and is the Mexican for marl. I am also in that article made to write of a hen's "squeaking"—rats and mice squeak, and hens are said down here to "squawk." Bird Shot.

Asa.—*Hillsboro.*—Be kind enough to tell me plainly what a choke-bore is, and what is the effect of choking? Ans—Greener describes a choke-bore gun as having the narrowest part of the bore at the muzzle, a "modified" choke being constricted up to 5,000ths of an inch—a "full-choke" as much as 30,000ths. He says: "The effect of the contraction at the muzzle is to drive the outside shots into the centre—that is, shots placed in the cartridge at the top edge, will, after firing, be found in the centre, and equally distributed over the target." Greener ascribes the superior shooting of chilled shot to its leaving the barrel with less injury to its spherical form, owing to its hardness, consequently meeting with less resistance from the air than the ordinary soft shot, a great portion of a charge of which is considerably damaged and knocked out of shape during its passage through the barrel.

Long Guns vs. Short.—*Canandaigua, N. Y., April* 8.—One of your correspondents wishes to get the ideas of your readers on this subject. I greatly prefer heavy guns with long barrels for inland duck shooting. The best gun I've used is the following: single-barrel muzzle-loader; barrel, 7 gauge, 8 lbs., 45 in.; stock, 4½ in.; drop to aim without bending the neck; weight, 9½ lbs. to balance; total 17½; charge, 12 drs. Hazard's 5 ducking, 3 oz. No. 1, have shot 4 oz. with cushion. Most of my shooting has been between 40 and 80 yds. I killed dead two mallards at 55 yds., one with 2 shot through it, the other with 10, none through. I shot this gun against a lighter one, same gauge, I think 9 lbs. 30 in., distance 80 yds. The first put in 10 pellets, second 2. A long barrel of any weight I think must be loaded with coarser powder than the shorter barrel. No. 2 ducking powder (Hazard's) from a 28 in. barrel shoots strong, while No. 5 has proved useless. R. H. Dixon.

For Forest and Stream and Rod and Gun.

THE SPORTING PARADISE OF VIRGINIA.

Staunton, April 11, 1879.

THE best brook trout fishing to be had in Virginia or in West Virginia is all that territory which lies between the Balto. & O. R. R. and the Ches. & O. R. R., bounded on the east by the Shenandoah Valley and west by the Cheat Mountains. In this quadrilateral are the headwaters of the South Fork of the Potomac, of the North Fork of the James and of the Kanawha; and as you get deeper into the Alleghanies, to the very fountain-heads of these streams, there you find the fish most abundant and of the finest size. By counties, we would designate the best as Augusta, Bath and Highlands, in Virginia; Pocahontas, Pendleton, Braxton and Randolph, in West Virginia. The most desirable route to any one of these counties is through Staunton, on the C. & O. R. R., and about the most pleasant trip a man could take in the summer. Hire a one or two-horse wagon, which can be got for $2.50 per day, one or two servants, who can be had cheap, and make the tour through these counties on foot, camping every day on a fresh trout stream, and resting at night in the purest atmosphere on the globe; or, if one would not desire to make such a long trip, there are two streams within twenty-five miles of this place that have plenty of fish in them, from four to thirteen inches, with houses at which small parties can be accommodated, but in a very plain way. They are rough mountaineers, but hospitable, and charge very moderately. About four miles from the best of these streams is a watering-place known as "Stribling Springs," owned by a half brother of mine, that has a very remarkable combination of mineral waters upon it—alum, sulphur and chalybeate. Here, a person desiring to be more at ease, and to fish only when the spirit moved him, could find comfortable quarters, good board, pleasant company, without any fuss or fashion to annoy him, at very moderate price ($30 per month), and as pretty scenery as can be found anywhere. Quail and ruffed grouse were both scarce last fall with us, owing to the bad weather at hatching-time; but the winter has been mild, and about the usual number of birds are now seen. I can't say that we have the best of quail shooting here, because Eastern Virginia and North Carolina are the places on this continent for that; but I will say this—that I believe we have the best quail and pheasant (ruffed grouse) shooting combined anywhere in this country. A friend and myself, two years ago, bagged, in one afternoon and the following day, sixteen pheasants and twenty-seven partridges, all but four of the pheasants being taken in one day; and where most of the pheasants are found there are plenty of deer, while a two hours' ride will bring you into the quail country. There are several gentlemen from Bridgeport, Conn., who have been coming here to hunt every year since the war. They have excellent dogs in point of blood and training, but they can't shoot with our "boys," nor will their dogs find anything like as many birds as ours, owing to the fact that their dogs are brush broken and hunt too close. It seems to strike the Northern sportsman with surprise the confidence a Southern sportsman reposes in his dog, by allowing him to roam so far off, often out of sight. It is a bad plan in some respects, but it is a great thing in cultivating the staunchness of the animal, and helps the bag in a day's hunt.

I had no idea of going into such length when I commenced, and hope you will pardon my prolixity. But apart from being an enthusiastic lover of rod and gun, and having a fellow feeling for every brother sportsman, I would like to see our Northern and Southern people really united in feeling, and am sure that a closer intimacy would break down many of the foolish prejudices on both sides. No better plan to bring this about, in a small way, presents itself than through the medium of field sports, where many of such feelings can be dissipated in the close intimacy which they engender, and much of the coolness which now exists could be warmed into fast friendship around the genial glow of a common campfire. We are too poor to go to your country, but will meet any of you who seek our hospitable shores on such an errand more than half way. J. M. K.

PROPER LOADS.

Editor Forest and Stream:

With your kind permission I would like to give a little advice to the legion of amateurs who are continually asking for information about the kind and amount of ammunition to use.

In the first place, select the kind of powder that you think will suit you, and stick to it. We have several well-known makers that manufacture a first class article, either brand of which will give perfect satisfaction after you become accustomed to it. Bogardus himself could not successfully use a mixed lot of cartridges, especially at cross shots. The reason of this is that one kind will burn slow and another quick, and an aim that would prove deadly with one kind would be very unreliable with the other. Therefore choose a good, clean, strong, rather coarse grained powder, and when you have made your choice use no other. It does not make so much difference with shot, as nearly all of the makers turn out a good article. The greatest trouble with new beginners is that they are apt to use too many shot for their powder, thereby losing penetration. Always bear in mind that one pellet that crashes clean through the bird will bring him to bag much quicker than half a dozen that wind up in the feathers or penetrate but slightly. My gun is a 7-lb. 12-gauge, cylinder-bore, and after a very exhaustive test I decided that three drams of Hazard's No. 3 duck, with two of Ely's pink-edge wads, and seven-eighths of an ounce of No. 8 shot, with thin wad, was the most killing charge for all distances, for common field shooting. For thick cover shooting, when snap shots are the rule, I use the same charge for the left-hand barrel, but for the right, which I always use first for a quick shot, I use the same amount of powder and only five-eighths of an ounce of No. 10 shot, thus obtaining high velocity which ensures penetration. I also get a large area of spread within a short distance, which secures many a bird that I knew that I should not bag with ordinary charges and I consider that my success in snap-shooting is in a great measure owing to the use of this deadly charge. Some may think that No. 10's are too light. I have not found them so, and nearly all of my shooting is at ruffed grouse in the months of November and December, and I have never killed so clean nor so large a proportion of my shots as since I commenced using this charge.

I am well aware that there is a great difference in the shooting of different guns, and the charge that will give good results with one gun will be far from satisfactory with others. Therefore test your gun thoroughly with different charges. Commence with 2½ drams of powder and ¾ ounce of shot, and 2¾ drams of powder and ⅞ ounce of shot, and 3 drams of powder and 1 ounce of shot, vary these charges until you obtain results that are satisfactory; try not less than ten of each kind, and carefully note the result. Always use a fixed rest when firing at the target, as off-hand shooting is very uncertain. When you have found the charge that will give the best average results, be slow to change, and never do so until you find after thorough test that you have something better. Do not base your judgment upon your success or failure in bringing the game to bag, as this is most unreliable unless you are an experienced shot. Comparatively few can ever make first class shots at all kinds of game. Very many by painstaking, care and perseverance and a careful attention to necessary details can achieve a very satisfactory success. If these few rambling suggestions should prove of benefit to any of your numerous readers I shall feel more than repaid for my labor. H.

EXCELLENT PATTERNS.

Painesville, Ohio, April 12, 1879.

Editor Forest and Stream:

Some time since I sent you the targets my gun made with the Dittmar Powder to show how well this powder shot. Now I am prevailed upon to send you another account of its shooting qualities to satisfy Mr. J. T. Ward that he has not the best gun out. My gun is a W. & C. Scott Premier, 12-gauge, 30 inch barrels, 7½ lbs., and was imported by Messrs. Schuyler, Hartley & Graham, No. 9,185, cost $300. The left barrel full choke; right, modified choke. At a public trial—not a private one—three shots, 3½ drs. Orange Lightning Powder No. 6, 1⅛ oz. No. 8 shot, gave a pattern in a 30-inch circle at 40 yards of 385, 392, 406. With the same load, using No. 7 shot, the gun will average 285. Five hundred dollars would not tempt me to part with this gun, not on account of its shooting qualities, but because of its exquisite beauty in every way. It has been pronounced by good judges to be one of the finest guns ever imported. Nanit.

Columbus, Ga., April 13.—*Editor Forest and Stream:* My gun was made by R. Grove, of England; the barrels are of fine Damascus, 12-bore, 30 in. long, double bolt, top snap, rebounding locks and extension rib; the stock has a pistol grip, and the whole gun weighs 8½ lbs., is handsomely finished, and cost $85. It was furnished according to specifications by Messrs. Wm. Read & Sons, Boston. It is marked on the barrel "choke 12-13." When first received it did not make the pattern desired, which was three-fourths of the shot in a 30 inch circle at 40 yards. The Messrs. Read said they would rebore it so that it would shoot as close as I wished it. The following tests were made to see if the gun filled the requirements and to know what charge was best suited. The shot used were marked Baltimore, American Standard, Merchants' Shot Tower. By actual count an ounce of No. 8 was found to contain 438 pellets, and an ounce of No. 6 to contain 249 pellets. The powder used was Laflin & Rand's Orange Rifle, F. G. The charges were struck each time so as to make the measurement exact. I procured sheets of white paper, 34 inches square, from the printing office, and drew on each one a circle having a diameter of 30 inches. I measured off 40 yards, and fired off-hand at the paper tacked to a wall; used the same barrel each time:

1 No. 8 shot	2½ drs. powder	1 oz. shot	400 pellets	91⅕	per cent.
2 "	3 "	1 "	375 "	85 3-5	"
3 "	3 "	1¼ "	410 "	83 1-6	"
4 "	3 "	1¼ "	410 "	75	"
5 "	3½ "	1 "	301 "	55½	"
6 "	3½ "	1¼ "	451 "	84½	"
7 "	4 "	1½ "	492 "	75	"
8 No. 6 shot	3 "	1 "	203 "	93 1-6	"
9 "	3 "	1⅛ "	232 "	82 6-7	"
10 "	3 "	1¼ "	253 "	81⅔	"

In several of the targets a large proportion of the shot is to one side, showing that either the gun was not held fairly upon the centre or that the shot pellets had been deflected by the wind which was blowing at the time. Any of the shots would have killed a robin, nearly all of them a sparrow, and many of them a bee, provided they had been at the centre of the fire. The pattern, except number 5, ought to satisfy any one. Nos. 3 and 4 were more uniformly distributed over the circle than the others. Nos. 1 and 7 were too far to one side. Any of the charges are effective, but for the best results, as in match shooting, No. 7 is certainly the best. For ordinary shooting No. 3 is perhaps the most desirable. No. 6 was not tested to the same extent as No. 8, but I doubt not the result would be the same. The experiment was limited, but I think if more extended there would be no material change in the average result in any of the numbers except 4 and 5. In giving an account of the number of pellets in a given space, I think the writer ought not only to give the size of his charge, but the number of pellets to the ounce in the shot he is using. I have frequently counted them, and never yet have I found my own count to agree with that of the manufacturers. Mr. J. T. Ward wants to know if any one can equal or beat his score. I think mine beats his, but I am not certain. Let him give the number of pellets to the ounce after actually counting them, and then give the percentage in the target, as in my last column. GEO. M. DEWS.

COATESVILLE, Chester Co., Pa., April 18, 1879.

EDITOR FOREST AND STREAM:

A friend of mine in Philadelphia has a Fox gun, full choke, that put 504 grains No. 8 shot in 30in. circle at 40 yards; whole number of grains in charge, 565, counted. Who can beat this? I saw the target, and no one could doubt the word of my friend who knew him, I think. Moreover, he is an experienced sportsman and fully competent to make tests of guns. He says it shoots too close for him, and thinks of either having it changed or getting new barrels. Should say from appearance of target that the gun would tear a bird at 40 yards. My own gun is a P. Webley & Son No. 12, plain cylinder bore, and with it made a test of "Kay's Chips" (concentrators). The result was, as will be seen below, highly favorable to the "Chips:"

No. of test.	Remarks		Size of circle.	No. yds off.	Size of shot.	No. pellets hit.	Charge.		How loaded.		Per ct. hit.
1	Left	bar'l	30in.	40	8	316	3¼	1⅛	With Kay	Chips	61
2	"	"	"	"	6	155	"	"	"	"	56
3	"	"	22½in.	30	6	168	"	"	"	"	61
4	Right	"	"	"	8	233	"	"	"	"	45
5	"	"	"	"	8	173	"	"	Without	"	33½
6	Left	"	"	"	8	191	"	"	"	"	37
7	"	"	"	"	6	84	"	"	"	"	30½
8	"	"	"	"	6	102	"	"	"	"	37

Shooting 40 yards at 30in. circle is equal to 30 yards at 22½ in. circle, when loaded in usual way. There might be a difference, however, when "Chip" is used, from the fact that charge goes some distance before beginning to scatter. In test No. 4 charge was not shot straight at centre of target, although all shots were made from a rest, else the result would, no doubt, have equaled No. 1 in the percentage hit, the upper lefthand quarter of target having twice as many pellets of shot in it as either of the others. U. M. C. Co.'s paper shells were used, with two wads over powder and none but "Chip" over shot. Number of pellets in charge of No. 8 shot was, counted, 515; of No. 6, 276. Should be pleased to hear of other tests of "Kay's Chips." ABRAHAM.

Albany, April 16.—Your correspondents in giving us their exploits at the target do not always tell whose make the shot was or whether measured, weighed or counted. As shot measures do not always prove correct they would do well to state the exact number of shot in the charge used if we are to understand the exact rating of the performance. For instance last week Mr. J. T. Ward says he put in 356 pellets in a 30 inch circle at 40 yards. I saw a $35 Baker 10-gauge do better by 9 pellets, 1 1-8 oz. measured No. 8 shot, 4 drs. powder; come to count a corresponding charge it was equal to 1 5-16 oz., the very charge Major Merrill allows a 10-gauge in his table of proportionate charges. Now we look again and see that Mr. Ward put in 167 No. 4, but gives no charge used. As the number put in equals 1¼ oz. Tatham's soft shot, and within 14 pellets of 1½ oz. Leroy's, it seems he must have used a large charge for a 12-gauge gun. I think it would be much better if they would give the charge they know for a certainty, also state the grain and make of powder used, as all makes are not numbered alike. Then divide their target into squares, say about the size of a pigeon's body for No. 8, and of a duck's for number 4, then we could tell by the number of squares missed what chance the game would have to escape from in front of their guns. I do not wish to take issue with Mr. Ward or any others, but write this that we may have a general understanding with each other and perhaps save the editor a few questions. DEXTER.

—See Bogardus' advertisement.

Ties on seven won by Warner. M.

CONNECTICUT—*Redding, April* 16.—On Fast Day a number of our country sportsmen met and organized themselves into a club for improvement in the use of the shot-gun. They drew up a series of by-laws, etc., among which is one that I think would make glass ball shooting much more popular than it is among our best amateurs, namely: That no stake of any kind shall be made on any match of the club by any member or members, under penalty of expulsion. [A good move.—ED.] The following scores were made under Bogardus rules:

A E Meeker..........0 1 1 1 1—4 C Porter..........1 1 1 1 1—5
W H Hill..........1 1 1 0 1—4 H M Olmstead..........1 1 1 1 1—5—18
J E Miller..........1 0 1 1 0—3 C D Meeker..........1 1 1 0 1—4
Thomas Witcheer..........1 1 1 1 1—5 F N Porter..........1 1 1 1 1—5—17

Second match, first team:

NEW JERSEY STATE TOURNAMENT.—The New Jersey State Sportsmen's Association has perfected most of the arrangements for a State tournament. The following gentlemen are chairmen of the several committees appointed by President Eaton: Dr. J. Q. Bird, on Printing and Rules; F. M. Thomson, on Grounds and Birds; Wm. Hayes, on Rifle and Pistol Practice; Fred Mather, on Fly Casting; B. Payne, on State Club Badge; Chas. H. Raymond, John Q. Bird and F. M. Thomson, together with the President, Committee on Prizes. The tournament will continue three days, perhaps four, days at Waverly Park.

JERSEY CITY HEIGHTS GUN CLUB—*April* 16.—Regular contest for a gun, shot for the first Wednesday in each month, to go to the member that wins the most times in one year. Glass balls, 3 traps, 18 yards, 20 balls:

Wm Hughes	18	T H Hill	18
F W Smith	17	W Zellner	18
J Cole	15	C Fowel	13
C Leroy	13	J Powell, Jr	18
J Gilder	14	J Carman	10
C Lewis	16	J B Eaton	15

Ties on eighteen won by J. Powell, Jr.

April 23.—Regular contest for 15-ball badge; 3 traps, 18 yards rise:

J Powell, Jr	10	C Lewis	10
F W Smith	13	J Gilder	9
J Cole	10	T H Hill	10

April 26—Regular contest for 20-ball badge; 3 traps:

J Cole..........1 1 1 0 1 1 1 1 1 0 1 0 1 1 0 1 1 1 0 1—15
A Heritage..........1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—20
J Burdett..........1 0 1 1 1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 1—18

Ties on ten won by Wm. Hughes P. W. LEVERING, Sec.

THE GLASS BALL TOURNAMENT.—*Editor Forest and Stream:* The marksmen of Monmouth are engaged in another patriotic effort in rendering some little service to build the "Battle Monument." Last year, upon Decoration Day, a grand glass ball tournament was held upon the Fair Grounds, and, although the weather was unfavorable, it realized, clear of all expenses, the handsome sum of $100. This year the same day (May 30) is fixed to hold another tournament upon, and if the weather is not good it will be postponed until the first fair day. The marksmen are already manifesting increased enthusiasm in all parts of the county, and it is earnestly hoped that a full representation of sixteen teams will be present and compete for prizes, honor, etc. As another good result of these meetings, it is desired by prominent sportsmen to organize a permanent association, under a recent statute, to promote the fish and game interests of the section. M.

SHREWSBURY GUN CLUB.—Eighth annual match for the gold championship badge; 15 glass balls, 18 yards rise; Parker revolving trap, screened; Bogardus rules:

L Campbell	1	0	1	1	1	1	1	1	1	1	1	1	1	1	1—14
H C White	1	0	1	1	1	1	1	1	1	1	1	1	1	1	1—14

Ties on fourteen.

L Campbell..........1 1 1 0 1—4 H C White..........0 1 1 0 0—2

WASHINGTON, D. C., *April* 22.—Quite an interesting and much-talked of pigeon shooting match took place yesterday afternoon between the two crack shots of this district, Mr. Derrick and Mr. Lipscomb. Conditions—15 birds each, 21 yards rise, Long Island rules to govern; Col. Moorhouse, referee; Messrs Simons and Gettyings, judges; score

Derrick..........1 1 1 1 1 1 0 0 0 1 1 1 1 1 1—12
Lipscomb..........1 0 1 0 0 1 0 1 0 0 1 0 1 0 1—7

Mr. Lipscomb used a very fine No. 10 Nichols & Lefever gun; Mr. Derrick used a No. 10 Daly. WOODCOCK.

DEFIANT GLASS BALL SHOOTERS—*Murfreesboro, Tenn., April 22 and* 23.—Having been indicted by the Grand Jury to appear before that august body to answer to the charge of gambling by participating in several glass ball matches there last summer, thirteen of our crack shots, and your humble servant, had to put in an appearance according to summons on the above-named date. Knowing beforehand that the whole matter was a farce, they determined to have a jolly time while gone. Guns, glass balls, Butterlich traps, and the master of ceremonies, Billy Carroll, were of the party, and the following is a result of the two days' shooting:

	Shot at	Broke.
J H Nelson, Murfreesboro	33	16
F Mitchell, Nashville	40	32
Gilbert, "	31	21
Buckholz, "	32	21
Kimbro, Murfreesboro	27	21
Smith, "	17	9
Anderson, Nashville	33	25
Boone, "	9	5
Watson, "	13	7
Cook, "	23	14
Arnold, Murfreesboro	21	18

J. D. H.

WISCONSIN—*Neillsville, April* 21.—A few days since the Neillsville Sporting club was organized with the following officers: Capt. J. W. Tolford, President; Dr. B. F. French, Vice-President; C. H. Gates, Sec.; G. A. Grundy, Treas.; Directors—Levi Archer, L. Arnold, Hiram Palmer; Wm. Haislett, store-keeper. April 19 the first practice meeting was held, with the score standing as follows (15 yards, Bogardus trap and rules):

J W Tolford	1	1	1	0	0	0	0	1	1	1	0—7
C H Gates	1	1	1	0	1	1	1	0	0	1	0—8
R J Sawyer	1	1	0	0	1	1	1	0	0	0	1—6
G A Grundy	0	1	1	1	1	0	0	1	0	1	0. 1—7
L Arnold	0	0	0	0	1	1	0	0	0	1	1 0—4
L Archer	1	0	1	0	1	1	1	1	1	1	1 1—10
G Blakeslee	1	1	0	1	0	1	1	1	1	1	0 0—8
H Palmer	0	0	0	1	1	1	1	1	1	0	1 0—7
Wm Haislett	0	0	0	1	1	0	1	0	0	1	1 1—6
H Ferguson	0	1	0	0	0	0	1	1	0	1	1 0—5

We hope to be able to report better shooting after a little practice, and shall endeavor to make it interesting for some of the neighboring clubs before the season is through.

MONACO, *March* 31.—*Editor Forest and Stream:* The final event of the season, the grand *Prix de Cloture*, came off on the 26th and 27th of March. The birds were of a first-class nature, and it will be observed by the annexed score that misses were numerous and often. No one succeeded in killing the twelve, but the victor of the *Grand Prix* showed what best could be done by bringing down ten—five at each distance. The last four birds he grassed with consummate skill, showing that neither his nerve nor his aim failed him at the proper moment. The *Grand Prix de Cloture* ranks next to the great *Grand Prix du Casino* and the *Grand Prix de San Donato* at Florence, and when we bear in mind that Mr. E. R. G. Hopwood has won all three, we feel that, as such form has never been anticipated, it may probably never be repeated unless by himself. The second winner, Mr. A. G. A. Rush, was the winner on the previous year, and thus came very near carrying it off a second time. But for missing his last bird he would have tied with Mr. Hopwood. However, he managed to hold his own and overthrow the four who were left in with him. Capt. Shelley, in his tie with Mr. Rush, missed his last three birds, while Count du Chastel, an elderly sportsman and steady shot, grassed his last three with his usual *sang froid*. The winner, Mr. Hopwood, Mr. Rush and Count du Chastel, used the capital Express bored guns of Messrs. Dougall, of St. James street, London, and Capt. Shelley a gun by Reilly. Mr. Hopwood has thus, in three shoots alone, cleared 26,000 francs, besides the value of the works of art, which is considerable.

Grand Prix de Cloture, an objet-d'art, value $500, and $1,000 added to a sweepstakes of $20 each; 6 birds at 25 metres (27½ yds.), and 6 at 26 metres (28½ yards):

E R G Hopwood (objet-d'art and $1,000)	1 1 1 0 1 1 1 0 1 1 1 1
A Rush ($360)	1 1 0 1 1 1 0 1 1 1 1 0
Capt Shelley ($220)	1 1 1 1 0 0 1 1 1 1 0 1 1 0 0 1
Count du Chastel ($100)	1 1 1 1 0 0 1 1 1 1 0 1 1 0 0 0

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

NO. 111 FULTON STREET, NEW YORK.
[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, MAY 1, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

☞ Trade supplied by American News Company.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, May 2.—Trotting at Washington, D. C. Running meeting at Nashville, Tenn. Base Ball: Star vs. Chicago, at Chicago; Troy vs. Cincinnati, at Cincinnati; Providence vs. Cleveland, at Cleveland; Boston vs. Buffalo, at Buffalo; New Bedford vs. Springfield, at Springfield. Columbia Rifle Association meeting.

Saturday, May 3.—Cricket: St. Georges, at Hoboken; Staten Island Club, at Staten Island. Columbia College athletic games, at Mott Haven. Stevens Institute athletic games, at Hoboken. Manhattan Athletic Club two-hour race. Pacific Am. Rowing Association regatta, at San Francisco, Cal. Musgrove-Crotty sculling match, at New Orleans, La. Running meeting at Nashville, Tenn. Base Ball: Worcester vs. Capital City, at Albany; New Bedford vs. Holyoke, at Holyoke; Manchester vs. National, at Washington; Albany vs. Utica, at Utica; Star vs. Chicago, at Chicago; Troy vs. Cincinnati, at Cincinnati; Providence vs. Cleveland, at Cleveland; Dartmouth vs. Manchester, at Manchester.

Monday, May 5.—Hanlon and Hawdon sculling match on the Tyne, Eng. Base Ball: Worcester vs. Capital City, at Albany; New Bedford vs. Holyoke, at Holyoke; Albany vs. National, at Washington. Trotting at Richmond, Va.

Tuesday, May 6.—Shooting Tournament at Clinton, Iowa. Massachusetts Kennel Club bench show, at Boston, Mass. Base Ball: Troy vs Chicago, at Chicago; Star vs. Cincinnati, at Cincinnati; Boston vs Cleveland, at Cleveland; Providence vs. Buffalo, at Buffalo; New Bedford vs. Springfield, at Springfield; Worcester vs. Utica, at Utica. Trotting at Richmond, Va.

Wednesday, May 7.—Iowa shooting tournament as above. Texas Sportsmen's Association shooting tournament, at Waco, Tex. Massachusetts Kennel Club as above. Trotting at Richmond, Va.

Thursday, May 8.—Shooting tournaments as above. Massachusetts Kennel Club as above. Running meeting at Albemarle, Va. Base Ball: Troy vs. Chicago, at Chicago; Star vs. Cincinnati, at Cincinnati; Boston vs. Cleveland, at Cleveland; Providence vs. Buffalo, at Buffalo; Manchester vs. Capital City, at Albany; New Bedford vs. National, at Washington; Albany vs. Springfield, at Springfield.

A KNOTTY PROBLEM.—A spy, a shooter, a climber, a boatman, an eagle, and a 'possum. The eagle bears off the 'possum; the spy spies the eagle; the shooter shoots, and the bird and 'possum fall into a tree; the climber climbs the tree and seizes the eagle, but the 'possum falls into the river, whence the boatman brings it to the shore. "Now who do de 'possum belongs to?" This, or something like it, is the intricate question for wrestling with which a St. Augustine, Fla., colored debating society has been holding a series of protracted meetings. And it is barely possible that their gianttific but muddled intellects will never settle it at all, unless, haply, a colored Solomon shall come to judgment and decree that they shall "carve dat 'possum."

WOODCOCK BREED TWICE.

A CORRESPONDENT of a not very infallible contemporary has written a brief note to that print taking exception to a recent statement in FOREST AND STREAM to the effect that woodcock usually breed twice in this latitude. The writer of this criticism winds up with this positive and unqualified statement:

"FOREST AND STREAM is all wrong." And then he adds: "No one could have given this matter more close attention, or had a better opportunity than I have had to observe the habits of this bird, and I am confident it is entirely an error in alleging that woodcocks breed twice a year (*sic*)."

Now this is very distressing, for there are few things more humiliating to a journalist than to be convicted of an error and to be obliged to swallow one of his own statements. Mark what this critic says: "I have had good opportunities to observe and have not seen it." Is it not just possible that a few things have taken place in bird history that have not come under the observation of this writer? Because he, a man of wide experience, has not seen it must it therefore be untrue? We think that if this critical person had been bred to the law he would not have ventured on an assertion like the above in the hope of convincing any one that he knew what he was talking about. Are we all of us to trust only to what comes under our own personal observation? There is to-day no people living so barbarous as to accept this standard. It amounts not only to an abolition of all knowledge, but to a breaking down of all faith in human testimony. If this ornithological authority should become President we may look for an order to stop all investigation, to arrest and imprison all writers (alas, for ourselves, to what deepest dungeon should we not be condemned); and to destroy the printing presses. Until that takes place, however, we shall continue (D. V.) to issue FOREST AND STREAM as usual.

Is it necessary for us, at this late day, to tell old sportsmen that woodcock sometimes lay their eggs in February, frequently do so in March and always, except in very unusually backward seasons, have their young hatched in April? Wilson, Audubon and other writers speak of the early date at which the woodcock nest, and the fact is well, we had supposed universally, known to all sportsmen who are at all observing. Of course there are some men who go through life without seeing anything except what is held within an inch of their noses, but their number is less now than it was twenty years ago, and it will be still less in the near future.

For the benefit of those who have never given any consideration to this subject we will give an instance which came under our observation no longer ago than last spring. That season, it will be remembered, was an unusually early one, and woodcock reached this latitude late in February and were frequently heard "hovering" at that time. One day late in March we were told by a friend of a little piece of swampy woods, where there were a pair of woodcock and, desiring to work a young dog on them, we shortly afterward visited the spot, but only succeeded in finding one bird. During the first week in April we paid another visit to the swamp and this time we found both old birds and four young ones, as well. The latter were very small and were as yet unable to fly. Within the next three weeks we several times started these six birds, and were much impressed with the rapid growth of the young which, before they were four weeks old, could make quite long flights.

One day late in April, the 26th we believe, we started again to go to this little piece of woods. It was one of those soft, balmy spring days, which remind one of June, and the sun shone with unusual power, so when we reached our destination we stopped awhile, to rest before sending the dog forward. While seated just within the edge of the woods, the dog lying at our feet, we were surprised to see a woodcock rise at some distance from us, and, flying toward our resting-place, alight within two rods of where we were. We could judge from its size that it was the male bird. He had in his bill a worm, and when he alighted he gave utterance to a low peeping cry, quite unlike anything that one usually hears from a woodcock. Although we could hear no reply to this call, there probably was one, for the bird at once walked up to two of the young, which we had not previously seen, and prepared to feed them. The little ones fluttered their wings, opened their bills, and reached up for the worm, acting almost exactly as a hungry young pigeon would under similar circumstances.

We sat there and watched the birds while the old one made half a dozen trips for food, and were very much astonished at the rapidity with which he secured the worms. He would drop to the ground, and out of our sight, and almost immediately reappear coming toward us again.

The scene which we had witnessed was such a delightful one to us that we had not the heart to disturb the little family just then, and, avoiding the spot where the young were, we started across the woods to visit another bit of swamp. We had not gone more than fifty yards when a woodcock rose from under our feet, and, by her slow and wavering flight close to the ground, betrayed the fact that she had a nest near at hand. A little careful search showed its position—just under an old rail fence at the foot of a rotten stump. It contained three eggs. That this nest belonged to the original pair of birds inhabiting this swamp is not to be doubted, for we took pains to satisfy ourselves on this point. Both broods of young were seen at all ages, and only two old birds were started during the progress of our investigations, which began, as has been said, in March, and continued until June. We should not like to say how many times during the spring we started these nine birds, never more, never less. We were rather proud of our woodcock, as we called them, and very proud of our dogs, and occasionally we would exhibit both to friends, who would appreciate both. Finally, in June, when the weather became warm, we ceased to visit them, and so lost sight of our long-billed friends.

We could give many other instances confirmatory of our statement that woodcock breed twice, but it is unnecessary. We have heard, from many veteran sportsmen, expressions of the greatest surprise that any one could be found, who has done much shooting, who was ignorant of a point so well established. The well-known fact that woodcock lay so early, taken in connection with the frequent killing of scarcely fledged birds in early seasons during the July shooting, would of itself be almost enough to prove the rearing of a second brood.

A curious point about young woodcock, and one which we do not think has been noticed in the books, bears somewhat on the vexed questions about quail withholding their scent, the inability of a dog to scent a sitting bird, etc. When woodcock are two or three weeks old they are able to fly only two or three rods, and on alighting in the grass or among the leaves they will sit perfectly still; and, let a dog run over or about them never so much, he is apparently quite unable to smell them. We have known of more than one instance where, after the bird has been seen to alight and the very spot marked, the dogs have worked in vain to find it, and the man has finally walked up to it and *caught it in his hat!*

Perhaps some worthy that has not seen this done will deny that it is true.

GUNPOWDERS, THEIR WEIGHTS AND MEASURES.

CORRESPONDENTS of London sporting journals have repeatedly called attention to remarkable discrepancies between the number of grains marked on measures made for the old Schultze powder and the number of grains which they will contain of recent issues of that explosive, which, while they may not wholly explain the wide differences of opinion arrived at by persons apparently arguing from the same premises, may induce others to examine for themselves whether certain facts are as they believed them to be, or whether charges supposed to be moderate, have really been excessive. One writer shows that 50 grains of the old powder shaken down would contain about 70 grains of the new. These hints will undoubtedly apply to the Dittmar powder in this country, which is a kindred explosive, and account for the tricks, vagaries and disappointments which several of our own correspondents have complained of in FOREST AND STREAM. In dealing with this powder it is all-important to know how to use it; and it is due to the manufacturers to state, as we have repeatedly done, that their instructions are most explicit. Moreover, the foregoing suggestions apply with much force to the different brand sand grades of Black Powder. It is therefore eminently proper to quote here what an intelligent contributor to the *Field* says on this subject, to wit:—

"There is, as far as I know, no definite rule for determining the capacity of measures which are made for black powder, still less for Schultze; and if a maker takes for his standard any one sample of powder, it will not only vary considerably from other samples, but the same measure of the same powder will vary in weight according to the manner of filling—two or three sharp taps being much more effective in settling down the powder than a much larger number of feeble taps.

"I am of opinion that it is desirable to weigh a charge or two on purchasing a new measure or on getting a new kind of powder, so as to know what quantity you really are using; and with regard to competitive trials, the necessity of weighing the charges in such cases was never so clearly brought to my mind as by carrying out the experiments which I am about to describe.

"The editor kindly placed at my disposal various samples of powder for comparison with regard to weight, and I have supplemented them by others in my possession. For convenience of weighing on a delicate balance, and to prevent any possibility of spilling, I adopted, instead of an ordinary powder measure, a small stoppered bottle, which would hold 3½ drams of black powder, more or less. I say 'more or less' advisedly, for, notwithstanding the general impression that 3 drams or 3½ drams is a definite quantity, I found that this measure would contain, of one sample, nearly a quarter of a dram more than 3½; and of another sample it might be filled by a quarter of a dram less—a fact which I venture to think will be a surprise to others, as it was to myself. Accordingly, if two such samples had chanced to be put in competition at the gun trial the mere measuring of the powder would have afforded no fair comparison of the quantity used in the respective charges.

"I found, moreover, by filling the same measure several times in succession, that there is great difficulty in obtaining exactly the same results, even if the utmost care be used. In order to obtain uniformity I adopted the following process: The glass bottle which I used as a 3½ dram measure was closed by an accurately-fitting stopper, which served as a gauge, for I filled the bottle with powder till it was on a level with the neck and just touched the stopper—tapping the bottom of the bottle on the table in order to settle the powder down equally. If I found there was room for an atom or two more of powder under the stopper, I made the addition; and if I found the stopper would not go fairly in without pressing down the powder, I removed a small quantity. Yet, with all these endeavors to secure exactness, I could not obtain absolutely uniformity of result; for successive measures from the same sample sometimes varied quite a grain in weight, and that with a balance which would weigh to the thousandth part of a grain. If, then, such be the result of my attempts to secure uniformity, how much more likely to vary would be charges measured in a rough-and-ready fashion, without any special attempt at accuracy? No doubt it may be

said that one grain out of ninety or a hundred is only a trifling divergency, and with common scales such differences would be much less apparent, or scarcely noticeable; still it must be observed that this difference was between charges supposed to have received exactly the same handling, and when there was purposely a difference in manipulation (the powder being gently poured in without shaking) there was a marked change in the result, more especially with powders of low density, the variation being sometimes six or seven grains instead of one.

"The difference in the weight of the powder does not depend merely upon the size of the grain, as is commonly supposed, but mainly upon its density. On sifting, however, the large grains from the small, in some granulated Schultze, I found the large were decidedly the heavier; but the mixture of the two was heavier than either taken alone, as the fine dust would lie between the large grains, and consequently add to the weight. Of the black powders I weighed ten samples, and the heaviest and lightest were of the same sized grain—No. 2, for so I class the heaviest of the lot, Curtis & Harvey's 'medium basket grain,' which has no number, but is of just the same size as the Kames Company's 'Medium No. 2,' the lightest of the lot—the latter a sample of powder made some half dozen years ago. The ten samples comprised two of each size, from No. 2 to 6, by various makers, and the results of the weighings of the same bulk of each, well shaken down, are here given in grains. The shaking down was decidedly greater than would be given in ordinary loading; but with less shaking the divergency would have been even greater, from the light powder lying so much more loosely than the heavy.

No. 2—92 gr. and 101 gr.	No. 5—95½ gr. and 97½ gr.
No. 3—94½ gr. and 99 gr.	No. 6—97½ gr. and 98 gr.
No. 4—93 gr. and 94 gr.	

"For comparison, I may mention that 3½ drams avoirdupois are equal to 95½ grains.

"When there is so much divergency in different samples of our old friend the black powder, which is ordinarily looked upon as a model of regularity, we may naturally expect a much greater difference in its modern rival, which has undergone so many modifications in a few years. When imported from Germany it was a 'fluffy' kind of powder of an orange-brown tint, and so light that about 25 grains sufficed to fill my 3½ dram bottle; but it will shake down to almost any extent, and I gave it up at about 33 grains with the conviction that it would take much more. Of English manufacture there was a very similar powder as regards appearance, except that its color was a dull yellow. Then there was a cubical or sawdust-looking powder; and of this, issued about 1872, I find the bottle will hold 42 grains. The powder sent by Mr. Groves is somewhat similar in appearance, but more irregular in shape and less heavy, 38 grains going into the bottle when well shaken down, but 31 grains serving to fill it without shaking. How many more varieties there have been I cannot undertake to say.

"With the granulation of the powder, however, one former objectionable feature is removed, as the samples I have examined now shake down only to a comparatively small extent—less, in fact, than some samples of black powder. But the granulated powder is, as a rule, considerably heavier than the old or sawdust powder, and the bulk used should be diminished accordingly. One sample, issued in 1877 or the previous year, and about which complaints were very rife, is heavier than any other sample I have met with—the 3½ dram bottle containing 52½ grains; and as this was also stronger, weight for weight, than its predecessors, accidents will be readily accounted for if persons loaded with the same bulk as before, as they would be using a much larger quantity than was intended. Another sample, issued in 1877, was decidedly lighter, the bottle only containing 49½ grains. This was followed by the powder made for *The Field* trial of last spring, which was the same, I believe, as that issued at the commencement of last shooting season. It was lighter in color, and I think a trifle heavier in weight, than that of the previous year; but they are so near together that I hesitate to say whether the difference in result is due to the powder or to slight differences of manipulation in filling the measure. With the last issue, however, there is again an increase in weight as well as strength, though not to the same extent as that complained of a year or two since, the weight here being 51 grains.

"It will very likely have been overlooked by many persons that the wording on the label of this last issue of Schultze is different from that of the previous year. The label of 1877 states that 'by measure, 3½ drams are equal to 3 drams of black; by weight, 42 grains of Schultze are equal to 84 grains of black.' The new issue says: 'Charge as compared with black powder, equal measure, or half weight, 42 grains of Schultze being equal to 84 grains of black; by measure, 3 drams in both cases.'' To my mind, however, the density has now been overdone, and the present powder exceeds half the weight of average black powder; indeed, it is rather more than half the weight of the heaviest black powder I have weighed, as described above, and considerably exceeds the samples of low density. It appears also to be in excess by the dram measures; for W. L. showed last week that a 3½ dram measure contained 47 grains by weight of the new issue, and such is in accordance with the results I have obtained. As the half of 3½ drams by weight is 44½ grains, the measure contained 2½ grains more than it should have done if the label were correct. I think it is a great pity that the Schultze Company should have made this last increase in the density of their powder. The issue of the previous season not only gave satisfaction, but was more near to half the weight of black powder than the present, and, in fact, was over the average rather than under. The increase in density seems to be always accompanied by increase in velocity—a quality to be avoided as much as possible.

"It is much to be regretted that there have been so many changes, as they have a tendency to disgust old customers, and new ones hold aloof owing to the complaints which arise. It seems to me incumbent on the Schultze Company, in their own interest as well as for the public advantage, to have such measures manufactured for the use of their customers, and it would be well to have them stamped with their trade mark as a guarantee. The use of grains instead of drams does not appear, however, to be very popular, as it is not easy for persons unaccustomed to them to tell what are the relative proportions for 3, 3¼ or 3½ drams, etc.; and, as some of the old 'grain' measures are shown to be dangerously erroneous, I venture to suggest a 'new departure.' We have adopted a very useful powder of foreign origin, and our legislature has legalized a foreign weight, which is in use in the country where the explosive was invented, and might with advantage be adopted here for the estimation of Schultze powder. The weight in question is the 'gramme,' which is but little heavier than our half-dram, and might be used for the wood powder in like manner as the dram is used for black powder. As I have shown above, both kinds of powder vary in weight in different samples, therefore the statement that the one is half the weight of the other can, in any case, only be taken as approximative; but supposing it to be perfectly true that 42 grains of Schultze are equal to 84 grains of black, it would be very simple to state that '3 grammes of Schultze are equal in strength to 3½ drams of black powder.' Of course the measure would be divided into quarters and eighths, like the black powder measure; and an increase or decrease of a quarter or an eighth in the one would, for all practical purposes, be equivalent to a similar increase or decrease in the other."

It strikes us that there is a large amount of "food for reflection" in the foregoing article. It appears that our own sportsmen are not singular in their difficulties as regards the use of wood powder, and we may add, of black powder as well; for they have the same trouble in England, where neither definite nor uniform results have been reached. Besides the suggestions as to weights and measures given by our English contemporary, and the results of experimental tests made, the history of the origin and development of the wood powder (Schultze) is most interesting and instructive. While we would encourage study and experiments here at home, we may nevertheless hope that our brethren across the sea will soon solve the problem to their own benefit and satisfaction, and inferentially to ours; thus sparing us perplexity and distress.

HETEROPHEMY.—When so careful and punctilious a writer as Mr. Richard Grant White some years ago committed a certain blunder in a magazine article, he corrected his error and silenced his critics by ascribing his mistake to what he was pleased to term "heterophemy," namely, thinking one thing and inadvertently speaking or writing exactly the opposite. The experience is by no means an uncommon one, since every one is human. We have made similar mistakes ourselves, which could not otherwise be satisfactorily explained. Indeed, without Mr. White's theory to fall back upon, we should be desperately at a loss to explain how last week we came to ascribe to another firm the beautiful clock and mantel ornaments which Messrs. Tatham Bros. present to the New York State Sportsmen's Association as a prize for competition in the approaching tournament. Only the week before had we written in well-merited praise of this prize, speaking of it as imported by Taylor & Bro., of 676 Broadway, this city, and presented by Messrs. Tatham & Bros. We trust that the previous notice, together with the present reference thereto, may be sufficient to correct the misleading note which accompanied the cut in our last issue. May the fortunate sportsman who bears off the Messrs. Tatham & Brothers' prize near its tickings until his children's children shall rise up to sing the song of their "Grandfather's Clock."

WISCONSIN SPORTING GROUNDS.—The Wisconsin Central Railroad, which runs from Milwaukee to Ashland, on Lake Superior, traverses, with its 351 miles of track, that stretch of country whose rare attractions for the angler, the gunner and the man who seeks simply recreation, irrespective of bag and creel, have already been set forth at some length in the "Vacation Rambles" of the editor of this journal. Beginning at Elkhart Lake, which is 62 miles from Milwaukee, where there are fish and ducks enough to make him tarry, the tourist may set down nearly every station as an initial point for hunting, fishing and boating. Menasha, Neenah and Green Bay have each good hotel accommodations, boats and plenty of sport bass fishing. At Gills' Landing the rough and ready devotee will find his hands full, and thence to Ashland the forests abound in large and small game and magnificent finny prey, while the scenery of the cold trout streams is picturesque in the extreme. With comfortable accommodations at hand, one may yet plunge into the wilds of nature and be at once completely removed from all the accustomed surroundings of civilization. Phillips, Butternut Lake, Penokee, Silver Creek hold out each their substantial attractions, and the traveler will do well to pitch his tent at any one of these points. Ashland, the terminus of the route, on Lake Superior, has attained a national celebrity for its big railroad dock, Chequamegon Hotel and idigenous fish stories. Sail boats, steam yachts, guides, game and fish, and all other appurtenances of a summer resort will be found here in embarrassing abundance. In drawing the plan of the summer's campaign, our readers and their sisters and their cousins and their aunts should send to D. M. Boynton, Gen'l Agt., 61 Clark street, Chicago, Ill., for a circular of the Wisconsin Central Railroad; or to James Barker, General Passenger Agent, Wisconsin Central R. R., Milwaukee, Wis.

CARVER IN ENGLAND.—Dr. Carver gave an exhibition of his marksmanship before the Prince of Wales at Sandingham, Eng., April 15. The programme called for thirty-two different feats with rifle and shot-gun, including all the more difficult shots made in his various exhibitions in this country. The horse "Winnemucca" also played a part, target and glass ball shooting while riding at full speed being among the Doctor's tasks. One novel feature of the day's sport was the lasso throwing, which was designed as an illustration of the practice of the Western Plains. We venture to say that such an exhibition would prove fully as novel and entertaining to thousands of our own Western settlers as it was to the members of the Royal Family. This rifle practice of Dr. Carver is one of the legitimate fruits of American frontier life; but it smacks as much of the wonderful to us as would the feats of a South American savage with blow-gun and poison arrow.

MONUMENTS AND GLASS BALLS.—Just how is it possible to erect from the fragments of shattered glass a monument which shall be *perennium ære*, more enduring than brass, is one of these things which can be explained only by the peculiar civilization which numbers among its important inventions that of the glass ball. We referred last year to the efforts of the Monmouth, New Jersey, sportsmen to raise funds for a monument commemorative of the Battle of Monmouth by the novel means of a glass ball tournament. In another column our readers may learn that a repetition of the successful effort will be held next Decoration Day, and we join with our correspondent in bespeaking for the day a full attendance of participants and spectators. It is peculiarly appropriate that generous rivalry in the peaceful use of deadly weapons should serve to commemorate their sterner employment in time of warfare. The gallant Monmouth sportsman who shoots the glass ball on the spot may nerve his arm and steady his aim with a touch of the patriotism that animated his forefathers when they squinted along their sights at the Red-coats.

SPRING HAS COME.—When we see the buds swelling, the sun shining, the robins hopping about, and the frog-spittle gathering on the surface of the ponds, then we clap our hands and cry: "Behold, spring'scum!"

GAME PROTECTION.

EXPORTATION OF GAME.—Laws prohibiting the exportation of game are gradually being adopted as an effective measure by the States interested in the preservation of their game. There is a great satisfaction in sending home the tangible evidences of one's prowess, and every sportsman, as he brings a fine deer to the ground, or adds another trout to his creel, takes pleasure in the thought of its reception among friends at home. But while depriving the gentleman sportsman of this gratification the non-exportation of game strikes at the very root of the pot-hunting difficulty; and the pot-hunting of poachers is the most serious scourge the localities driven to adopt these laws have to contend against. Marketmen in the States which import game will naturally regard these measures with but little favor; but aside from this mercenary view, which after all is a secondary one, interested parties ought to welcome all statutes confining game privileges; because such laws, by their very stringency, afford the only remedy for the abuse of former freedom.

CANADA.—The annual meeting of the London District Fish, Game and Insectivorous Bird Protective Society, was held last week in that city. The annual report shows that no flagrant breaches have come to the notice of the Society's officers. A new local game law was passed in the beginning of the year which altered the close seasons for woodcock, from 1st January to 1st August, instead of from 1st January to 1st July; partridge from 1st February to 1st October, instead of from 1st January to 1st September; waterfowl, from 1st January to 1st September, instead of from 1st January to 15th August. The Association has devoted especial attention to the diffusion of information regarding the game laws. The passage is urged of an amendment to the present bill prohibiting the exportation of game from the Province. The following officers were elected for the ensuing year: President, Dr. Niven; 1st Vice-President, Dr. Woodruff; 2d Vice-President, W. C. L. Gill; Secretary and Treasurer, Mr. D. Skirving; Executive Committee, Messrs. T. H. Smallman, Henry Bruce, John S. McBeth, A. McRae, W. Hudson, A. Smith, W. R. Elliott.

CAYUGA LAKE—*Ithaca, N. Y., April 23.—Editor Forest and Stream:* A fisherman at this, the upper end of Cayuga Lake, reports that recently, at the lower end, a seine party scooped upward of fifty bushels of Oswego bass, a very small number of black bass among them. You will remember that the "Game Law" lays open, at or near the lower end of the lake, a certain four miles up and down to indiscriminate fishing. It was upon that "happy hunting ground" that this slaughter took place. H.

THE NEW YORK GAME BILL.—*At Sable Forks, April 17. —Editor Forest and Stream:* There are many things in the bill reported by the Committee on Game Laws in the New York Assembly to be commended by sportsmen, but it contains some things that should be changed. Last year the Legislature passed a law prohibiting the hounding of deer, the new bill repeals that clause and allows deer to be run by dogs; the new bill also extends the time allowed for killing deer to include the month of August, and allows them to be run in that month by dogs. It is the opinion of many sportsmen that in this latitude late fawns are dependent upon their mother's milk as late as the 1st of August, and consequently does should not be killed at that time. It seems clear that hounding deer should not be allowed in August, the fawns are too young to keep away from the dogs, and the weather is altogether too hot for the deer to have a fair chance. Under the present laws our deer are being rapidly exterminated, and it seems as though this proposed radical change against the deer would almost discourage him from trying to live. The time for taking brook trout is extended to include the month of March. Brook trout can only be taken in March in this climate by cutting holes through the ice and dragging them out on a hand-line. I have never known them caught in this way except for market. Even on Long Island March is not a suitable month for trout fishing. The season for killing lake trout is extended to include the whole year except the months of October, November and December. This is equally bad. Were it not for the title of this act, which reads "An act for the preservation of deer, birds, fish and other game," one would suppose that our Legislature looked upon deer and trout as the average Californian hoodlum regards the Chinaman. The moral sense of our Legislature deems it necessary to fine a man twenty-five dollars for "shooting, hunting, trapping or caging," on Sunday, but does not deem it necessary to fine him at all for "angling, spearing or trolling" on Sunday. This seems to be a discrimination in favor of the rod against the gun, and it would appear more equitable to compromise the matter and fine him twelve dollars and fifty cents for either hunting or fishing. GEORGE CHAHOON.

WHO DID IT?—*Cleveland, April 24.—Editor Forest and Stream:* This is the question I would ask of the sportsmen living in the vicinity of Fort Wayne, Ind., who propose to protect the game of their State—Who killed the contents of this box of game received here this morning by one of our hucksters, by express from Fort Wayne: 2 Canada geese, male and female, 4 blue-winged teal, 8 mallards, 9 prairie hens, 3 woodcocks, 8 quail and 73 snipe? The killing of the snipe is all well perhaps, as it is in accordance with the State law, but how about the Bob Whites, woodcock and prairie hens? These, together with the other birds, with the exception of the snipe, were breeding. They were all fresh killed birds, not more than 48 hours dead. Who did it? The box was packed with the snipe on top so as to cover up the iniquity. A box was received last week from the same source by the same hucksters, containing quail, woodcock and prairie hens. There were none of them last fall birds, but spring birds, in spring plumage and fresh killed. SILEX.

MICHIGAN.—Henry Phillips, of Colfax, Wexford County, was, on the 17th, convicted of infringing upon the game laws of this State through the act of shooting deer, and sentenced to 30 days in the county jail. This prosecution was made by the Forester Club of Cadillac.

INDIANA'S NEW LAWS.—The new Indiana law provides that it is unlawful to shoot quail between January 1 and November 1; wild turkey between February 1 and November 1; prairie chickens, between February 1 and September 1; woodcock, between January 1 and July 1; wild duck, between April 15 and September 1; song birds can never be killed. For trapping or netting, a fine of not less than $10 or more than $100 is assessed. It makes it unlawful to expose for sale, to sell or to possess any bird out of season, with a fine of $1 for each bird. The possession by any railroad company, express company, common carrier, or any person or persons of any game or birds, labelled or marked for any points out of this State, intended for delivery, out of the regular lawful seasons, shall be *prima facie* evidence of a violation of this law.

TOLLING FOR TROUT.—*Editor Forest and Stream:* The village of Bloomsbury is situated on the Musconetcong Creek, a stream once the habitat of the speckled trout. Ten years ago a skillful angler could, in a few hours' fishing, return with a well-filled creel; now he can only catch a few chubs in a whole days' fishing. I am speaking now of the part of the stream best known to us—from its mouth to a distance twenty miles up. No stream in this State is better adapted to trout than the Musconetcong. All along its banks flow in small spring runs, and the water of the stream itself is as clear as crystal. Between the years 1868 and 1872 the three proprietors of Troutdale Ponds offered the men and boys, who were willing to do such work, $2 per hundred, and afterwards $1 per hundred, for all the little trout they could catch. Young, middle-aged, and old men went to work during the month of January and February, if the snow was off—but generally about the 1st of March—to catch these little trout; and at that time one could count them by the dozen in almost any little pool. These poachers made from $1 to $5 each per day. Some of us remonstrated against such unfair means of stocking the waters of Troutdale Ponds; but as the law was in the proprietor's favor, and as he promised to replace as many as were caught out, no more was thought of it. But now we can all see the result of this course. It is the duty of some one to furnish this Musconetcong Creek with trout.

I notice in the report, published in your issue of the 3d inst., that other streams are being stocked, and when one goes to any of them for a day's fishing they are very curtly informed that the stream is regarded as private property, and we cannot fish.

I am told of another way in which our trout are exterminated. The person who gave the information called it a "toll." He said: "Not a great many miles from this place there is hung over the water, not far from shore, the head or carcass of some animal, and there left to decay. After hanging in this way, exposed to the action of the flies and rays of the sun, the maggots drop from it into the water, and are quickly seized by the hungry trout. Others soon find out where their fellow-creatures find so much food, and they too stop there for their meals, and can be seen waiting patiently under or near this 'toll' for the next victim to drop into the water. This way of feeding the trout was a novel one, and I have no doubt the fish would soon fatten on this food if left to themselves; but that was not the idea of the concoctor of this device, and if any one had taken the pains to watch this lure they would have seen, as I saw, a large seine quietly drawn around the fish that were waiting underneath for a morning meal, and the whole school drawn to the bank." This is the explanation given me of a "toll."

Why will not our commissioners pay a little attention to our stream? It seems but just that we should reap a part of the benefit. If we cannot have it in dollars and cents let us have it in the pleasure of trouting. AUGMENTER.

Bloomsbury, N. J., April 11, 1879.

If "Augmenter" will write to the Fish Commissioners of his State and make application for trout fry his request will probably meet with proper compliance. The citizens of Bloomsburg should insist upon a restocking of their stream by the Troutdale Ponds proprietors. The tolling device is as disgusting as any form of wholesale fishery we ever heard of. Faugh!

The Rifle.

MASSACHUSETTS.—*Walnut Hill, April* 26.—In addition to the match with the Bergen Pointers, the Massachusetts men held the regular Winchester rifle match, at 200 yards, the scores standing:

J N Frye	4	5	4	5	4	5	5	5	4	5	5—69
J S Sumner	5	5	5	5	5	5	4	5	4	4	5—69
O M Jewell	5	5	5	5	4	4	4	4	5	5	5—68
W H Jackson	5	4	4	4	5	5	5	5	4	4	5—68
D Kirkwood	4	5	4	5	4	5	5	5	4	5	5—68
E B Souther	5	5	5	4	4	5	5	5	3	5	4—67
H Tyler	4	5	5	4	4	5	5	4	4	5	4—66
L L Hubbard	4	4	4	5	5	4	4	5	5	4	4—66
E W Lord	4	4	5	4	4	5	4	4	5	5	4—66
W Charles	5	4	5	4	4	4	4	6	5	4	4—66
E F Richardson	4	4	5	5	4	4	5	4	4	4	4—66

In the April Amateur Series Match, 10 shots at yards were fired, and scores made:

W Charles	5	4	5	5	5	5	5	5	4	5—48
E W Law	4	5	5	5	5	5	5	4	5	3—46
C R Griffing	5	4	4	4	4	5	5	4	4	5—44
O M Jewell	4	5	4	4	5	5	3	5	5	4—44
E F Richardson	4	4	4	5	4	5	4	5	4	4—43

MASSACHUSETTS VS. JERSEY.—The Walnut Hill riflemen of the Massachusetts Rifle Association met the Bergen Point riflemen on Saturday last by telegraph, and the Bostonians suffered a very emphatic defeat. At Walnut Hill the weather was nearly all that could be desired by the most exacting rifleman, and, as a consequence, some good work was done before the butts at short range. The sky was cloudy during a major portion of the day, and the wind, what little there was of it, was steady. The targets showed up plainly in the clear, grayish light, and wind-gauges required but little changing throughout the shooting. The marksmen, too, had an incentive to skill in a liberal attendance of spectators, and more than usual interest attached to the contest between teams of eight men from the Bergen Point (N. J.) rifle club and Massachusetts Rifle Association. The match was the result of a recent challenge issued by the last-mentioned organization, and the conditions required that it should be shot at 200 yards, ten shots at the distance, and that it should begin at 3 o'clock P. M., each club shooting on its own range, the respective results to be announced by telegraph at the conclusion of the match.

The scores stood:

H Tyler	4	4	5	5	4	5	5	5	4	5—47
W H Jackson	4	4	4	5	5	4	4	5	5	5—45
N W Arnold	4	4	5	5	4	5	4	5	5	4—43
L L Hubbard	4	5	4	4	4	5	4	4	5	4—43
O M Jewell	4	4	5	4	4	4	4	4	4	5—42
D Kirkwood	4	4	4	4	4	4	5	5	4	4—42
J S Sumner	5	4	4	4	4	5	4	4	4	4—42
E B Souther	5	4	4	4	4	4	5	4	3	4—41
Total										347

On the Bergen Point range at 4:10 P. M. "time" was called. The individual shooting was very good, and the average of the team much above ordinary. The score was kept by Mr. Ed. Mann, the official scorer of the club, while Mr. Chas. Overhauer, of John street, New York, acted as umpire for the Massachusetts Club, Mr. H. T. Rockwell, secretary of that club, acting in a similar capacity for the Bergen Point Club. The score at the close, 5:45 P. M., stood as follows:

J F Rathyn	4	5	5	4	4	5	5	5	4	5—46
T J Conroy	5	4	5	4	5	5	5	5	4	4—46
H Meiggs	4	4	4	4	5	5	4	5	4	5—44
F Schilling	4	5	4	4	5	4	4	5	5	4—44
A Schoverling	2	4	5	4	4	4	5	5	5	4—42
Dr Dart	4	5	5	5	5	5	5	4	5	4—48
A Duane	4	5	5	4	4	4	5	4	5	4—44
J T B Collins	5	4	5	5	5	5	4	4	5	5—47
Total										351

As soon as this score was completed three cheers were proposed for the Bergen Point Rifle club, and they were given with a will. Harry Meiggs, the secretary of the association, then read the following dispatch from Mr. H. T. Rockwell, the Secretary of the Massachusetts Rifle Association:

"MONTVILLE, Mass., April 26.

"*To Henry Meiggs, Jr.:*

"We make three forty-seven. H. T. ROCKWELL."

When it was known that the Bergen Point Club had won by 14 points the enthusiasm was great, and the members adjourned to pledge each other to renewed conquests:

Boston Mammoth Rifle Gallery, April 26.—Large scores have been in order by local as well as out-of-town riflemen during the week. Only three more days remain in this month's shoot. The following is the standing of the several competitors to date; 150 feet, rounds 8, possible 40:

F Hollis	5 5 5 5 5 5 5—40	H J Sargent	5 5 5 5 4 4 6—38
Wm Brodleton	5 5 4 5 5 5 5—39	Ed W Archer	4 5 4 4 5 5 5—37
George Lamb	5 5 5 4 5 5 5—39	A L Kames	4 5 4 4 5 5 5—37
U A Pollard	5 4 5 4 5 5 5—38	E Shumway	5 4 5 4 4 5 5—37
C Edwards	5 5 4 4 5 5 5—38	W H Resarick	4 4 5 5 4 5 5—36
D B Raymond	5 4 5 5 4 5 5—38	F P Holman	4 5 4 5 4 5 5—37
E S Tobey, Jr	4 5 5 5 5 4 5—38	D Sturtevant	5 5 4 4 4 4 5—36

Medford.—The fourth competition in the April series took place at Medford, Mass., Wednesday, April 23. There were 45 re-entries. Appended are the scores:

First Class.

H Withington	4	5	5	4	5	5	5	4	5	4—45
R Sawyer	4	4	5	4	4	4	4	5	5	4—41
C D Harrison	5	5	4	4	5	4	4	5	4	4—44
C H Russell	3	4	5	4	4	4	5	5	4	5—42

Second Cla s.

G H Howe	4	5	4	4	3	5	4	4	4	5—42
E S Piper	4	5	4	4	4	3	4	4	5	4—41

Third Class.

F E Garden	5	4	4	4	4	4	4	3	4	4—40
J Richardson	4	3	3	3	5	5	3	5	4	3—39
G B Gill	3	4	3	5	2	3	4	3	4	4—36

CONNECTICUT.—*Collinsville, April* 24.—The members of the Rod and Gun Club have been shooting for a gold badge during the past year under the following conditions—that the one making the largest score at each weekly meeting on a Massachusetts target in 10 shots, 200 yards off-hand, trigger 3-lb. pull, might hold the badge until the next weekly meeting, and at the end of the year the one having made the largest score in the twelve monthly shoots, or 120 shots, should become the final owner of said badge. The following are the five leading scores for badge, some of which were shot in very unfavorable weather:

	Massachusetts Target.										Total.
J D Marks	99	101	103	102	99	104	101	104	93	103	1212
O B Hull	84	96	96	95	73	94	93	89	82	97	1063
J Hamilton	91	96	79	73	76	90	84	90	94	85	1063
Laubenstein	79	89	86	73	68	96	84	79	96	84	991
J D Andrews	64	69	86	84	80	84	85	77	65	85	999

Averages—101, 88 7-12, 86 1-12, 82 7-12, 83⅓.

	Creedmoor.										
J D Marks	42	44	45	44	45	48	45	45	43	45	534
O B Hull	39	40	41	47	37	41	39	40	37	42	443
J Hamilton	41	43	39	38	38	42	39	40	42	39	421
Laubenstein	35	37	40	47	36	36	45	39	37	43	415
J D Andrews	34	35	41	40	38	39	41	37	31	40	377

Averages—44½, 40 1-3, 40 1-12, 39½, 37¾.

The scores in the last competition stood:

	Massachusetts.	Creedmoor.
Moore	89	41
Hull	104	44
Laubenstein	89	40
Puster	75	37
Andrews	78	38
Lewis	84	40
Bidwell	83	50
Marks	98	44

A field glass was also offered to the one that made the largest single score in ten shots at any of the weekly meetings, Massachusetts target. Mr O. B. Hull was the lucky man in shooting off this tie, making 108 Mass. and 47 Creed.

Hartford, April 24.—The prizes offered by Mr. J. C. Lester, of the "International Rifle Range" of this city, for the two weeks ending April 23, were won by the following scores, the shooting taking place at a 200-yard target reduced proportionately for the 100 foot distance; 10 shots:

	Mass.	Creed.		Mass.	Creed.
E H Williams	110	39	W W Tucker	109	43
Henry Gyare	114	43	H O Whitney	106	46
Henry Andrus	113	49			

In shooting off the tie for fourth prize H. O. Whitney won with 114. P. X.

NEW YORK—*Greener's West Side Rifle Team.*—Weekly score; 200-yard target reduced; possible 50:

John Roesner	47	John Och	43
John A Reitweisner	47	Adam Dory	42
John Reitweisner	45	S R Campbell	42
Geo Greener	44	E Holzmann	42
Jos Roesner	44	P Albert	42

J. C. C.

Brooklyn, April 27.—The second match of the best two in three, between the South Brooklyn and the Seppenfeldt rifle clubs, came off on last Thursday evening at the gallery of Mr. H. Fisher, under the Park Theatre, Brooklyn. The Seppenfeldt boys were again victorious. The following are the scores:

South Brooklyn Team.

J W Naughton	44	J B Hazleton, Jr	41
J H Roache	45	W H McKune	41
Dr G W Welty	46	A H Anderson	44
C F Zeigler	42	D Trotter	40
J F Burns	41	P A Stratton	43—421

Seppenfeldt Team.

I Garrison	43	J W Adams	41
E Holzmann	45	H Jaehne	45
W Seppenfeldt	45	J Maher	42
A Keller	44	J Rien	43
P Freimuth	44	M Kern	41—441

Dr. Ford and John McCoy, referees. G. A. Sherman, umpire.

After the match the Seppenfeldt team was handsomely entertained at a supper given them by the South Brooklyn boys.

ZETTLER RIFLE CLUB—*New York, April* 22.—Weekly shoot at 207 Bowery for a medal. Creedmoor target reduced to gallery distance; ten shots per man; possible 50:

M B Engel	50	Brown	4
M L Riggs	49	G A Schurman	4
C Judson	48	L Trebel	4
P Herring	49	H Ochs	3
B Zettler	49	J G Beatse	45
J Dutil	48	F Fabaris	44
D Miller	48	H Hutzinger	43
C G Zettler	48	C Vollers	41
R Zimmerman	48	Neally	40
Wm Klein	47	C Recht	38

C. VOLLERS, Sec.

CONLIN'S GALLERY.—Some variation has been introduced in the usual gallery sport. Two matches were devised to encourage quick shooting. In the first one minute was given to each contestant in which to make as many shots as possible. The usual gallery target was used, and the .22 Ballard rifle, single loader. Prize to be won three times before becoming personal property. The match closing each week. The principal scores for the first week's contest opening on the 15th stood:

	Shots.	Score.		Shots.	Score.
P Lorillard Jr	16	59	Dr M M Maltby	11	46
C E Blydenburg	14	54	Judge Smith	12	46
I F Duckworth	13	50	D A Davis	10	44
T Fitz	11	49	W H Dunlap	10	40
Dr Dudley	12	49	S P Wells	9	37
H D Blydenburgh	13	49			

Shooting at the word was another test of the ability of the men in catching the sight quickly and surely. The gun is held loaded as in pigeon shooting, and the attendant asks, "Are you ready?" Marksman—"Ready." Attendant—"Fire. One—two—three." These words are pronounced slowly and uniformly, the shot to be fired between the words fire and three. It is a wonderful help to confidence, and tends to remove nervousness. Ten shots are thus fired.

HELVETIA RIFLE CLUB.—The following is the programme for the year 1879: Precision shooting at the usual ¾ ring targets, 200 yards distance. Minimum one shooting day from January to October inclusive. The shooting committee divides the applicants in three series, viz.: Breech-loaders, 1st division; breech-loaders, 2d division; muzzle-loaders, 3d division. Shooters of the 1st and 3d divisions are admissable to both, but are to use the respective rifle, and can only win on one series. The 2d division applies to beginners. Each member is allowed a maximum of 3 tickets, 10 shots each, in January and April; 3 ditto in March and April, 3 ditto in May and June; 3 ditto in July and August; 3 ditto in September and October, at official shooting places and days. No interruption allowed, and breech-loaders not to be cleaned while shooting a ticket. Breech-loaders not to have any artificial rest, nor to be over 15lbs. weight; no discrimination as regards to trigger and sight. The total number of points, hits and tickets of each shooter forms his aggregate for the year. In case of ties, preference is given 1st, points; 2d, hits; 3d, tickets. Time shooting at Creedmoor targets, 200 yards distance, with breech-loaders, under the same restrictions governing the precision shooting. Five are allowed to each member for each period of the two months above mentioned, to shoot on one day without interruption, without leaving the stand and without cleaning the rifle. Repeating apparatus not to be used. During the time given the target remains untouched, and the shots will be shown and registered only at its expiration; the number of points, hits and shots to form the year's aggregate for each shooter, and in case of ties, preference is given to the highest number of, 1st, points; 2d, hits; 3d, shorts. Prizes shall coosist of voluntary contributions, and also of gold medals and other prizes in the possession of the Helvetia. The Helvetia Rifle Club is the oldest shooting society of New York and vicinity, and ahn ways marches at the head of the German-American Sharpshooters.

SCHUETZEN NOTES.—The New York City Schuetzen Corps held a meeting on the 17th instant, and adopted the following summer programme: Practice shoots to take place each second Friday at Jones' Wood, at a distance of 120 yards; and each fourth Friday at Morrisania Schuetzen Park, Boston Road, at a distance of 200 yards. There will be three classes of shooters. On the shorter distance the half-inch ring target, and on the long-range the three-quarter-inch ring target. Mr. William Schroeder, of the Morrisania Park, offers a gold medal for the one who makes the highest score, and Mr. William Walker gives also a medal to the one who makes the lowest score, providing he has not been absent and has not missed the target.

The third practice shooting of the New York Schuetzen Corps, Captain D. G. Yuengling, took place Friday, the 18th instant, at Schuetzen Park, Union Hill. At the Hill, and especially over the shooting ground, a very heavy gale was blowing, making shooting very difficult. Phil Klein made 202, W. Klein 185, G. Menken 148, and Captain Aery 134 rings on the regular ring target.

—The New York Rifle Club held an opening "field" day at Creedmoor yesterday. A good company was present about the club tent, from which streamed the colors of this crack club. The opening contest for the Donaldson

Badge was held at 200 and 300 yards, 7 shots each. In subsequent contests the winner suffers a handicap of 2 points at each range. There was a team match for a supper, between teams picked from the men present. In the evening the supper was eaten at the Grand Hotel, and Captain L. V. Sone was given a surprise, in the presentation to him of the Winchester Express rifle, won by the club in the recent F. & S. Tournament. The scores made will be given in our next issue.

—In the FOREST AND STREAM tournament Col. M. L. Riggs, of the Zettler team, was credited with the use of a special eye-glass. On objection being made to this he at once laid it aside, and with one of the gallery rifles, fitted with the ordinary peep and globe sights, rattled off a score of 47, to the delight of his fellow-teammen and the dismay of the opposing teams.

Mystic Avenue Park, Brooklyn.—The shooting stands (200 yards distance) in this park are open for practice, free of charge, for all comers, every Thursday and Friday during the season.

NEW JERSEY—*Newark, April* 22.—Weekly score of the Newark Amateur Rifle Club:

Wm Hayes	5	5	4	5	5	5	4	5	5	4—47
J F Bill	3	5	5	5	4	5	5	5	4	5—46
J Bayer	4	3	5	4	4	5	4	4	4	5—45
Theo Felsburg	5	4	5	5	4	5	5	4	4	4—45
V Hesse, Jr	5	3	5	5	5	5	4	4	3	5—43
G L Freche	4	4	3	4	3	4	4	4	5	4—39

BRINTON RANGE, *April* 22.—Second competition for Whitney rifle, value $75, offered by the Whitney Arms Co. Open to all comers, 200 yards standing, ten rounds, any rifle:

W M Farrow	5	5	4	5	5	4	5	4	4	4—45
A Nielsen	4	3	4	4	5	4	4	4	3	5—40
Col G H Houghton	4	4	5	4	4	4	3	4	4	3—39
J W Mangam	4	3	4	3	4	4	4	4	4	4—38
E T Davis	4	4	3	4	4	4	5	2	5	3—38
W A Mulford, Jr	3	4	3	4	4	3	5	4	4	4—37
E M Sculer	3	4	4	5	2	5	3	4	4	3—37
R K Backman	3	4	4	4	4	2	4	4	4	4—36

April 26.—Sharps rifle, third competition; 200 yards. Position standing, any rifle; ten rounds. To be won three times before becoming property of owner; won for the third time by and became the property of W. M. Farrow:

W M Farrow	4	5	4	5	4	5	4	5	5	4—45
F H Holton	5	4	4	4	4	5	4	4	5	4—43
F L Sheldon	4	3	5	5	4	4	4	5	4	5—43

T Fitz	4	4	4	4	4	4	4	3	3	3—37

NEW JERSEY COLUMBIA RIFLE ASSOCIATION.—The first annual spring meeting at the West End Range comes off on the 10th instant. The matches are as follows:

Competition 1—100 yards, 7 shots, any rifle, standing; entrance fee, $1. First prize, 50 per cent. of entrance money; second prize, 15; third prize, 10.

Competition 2—200 yards, 7 shots, any rifle, standing; entrance fee, $1. First prize, a Winchester repeating rifle, presented by the Winchester Arms Co.; model 1873; value, $50. Seven prizes; total value, $80 and 60 per cent of entrance money.

Competition 3—200 yards, 7 shots, standing with elbow clear of the side or hip, any authorized military rifle; open to all members of the C. R. A; entrance fee, $1. Seven prizes.

Competition 4—500 yards, 7 shots, any position, any authorized military rifle; entrance fee, $1. Seven prizes.

Competition 5—1,000 yards, 20 shots, any rifle, any position; entrance fee, $2; all comers. Prize, an elegant silver cup, presented by Col. E. P. C. Lewis, President C. R. A.

A curious rule, and one which will be difficult to carry out, provides that "professional riflemen will not be allowed in any match except that for the Lewis Cup."

—The Saratoga Rifle Club have decided to invite the Burlington, Vt., Rifle Club to visit Saratoga Springs on Thursday, June 12, and shoot a return match with the former club at its new range. The match is intended to be shot over the three distances—800, 900, and 1,000 yards—with 15 shots for each marksman at each. Teams of six or eight.

OHIO—*Akron, April* 18.—Score of Akron Rifle Association; 200 yards, wind strong:

Young	5	5	4	5	5	4	5	4	4	4—45
Criss	5	4	4	5	5	4	4	4	4	4—43
C Terrass	5	4	4	4	4	4	5	5	4	4—43
Eves	4	4	5	3	4	4	5	5	4	4—42
Lawrence	4	4	4	4	5	4	4	5	4	4—42
Wing	5	3	4	4	4	4	4	4	4	4—40

LAKE VIEW RIFLE CLUB—*Lake View, Ill., April* 26.—The following is the score of the Lake View Rifle Club at practice, at 200 yards off-hand; wind from 4 o'clock strong:

J S Cram	4	4	5	4	5	5	4	5	4	5—45
H C Bradley	4	5	4	3	4	5	4	4	5	4—43
J E Fish	4	4	5	4	4	5	4	4	5	4—43
John Macauley	5	4	4	4	4	4	4	5	4	4—42
Chas Catlin	4	3	5	4	5	5	4	4	4	4—42

Wm Barns	3	4	4	5	5	4	4	5	4	3—41
J A Colehour	4	4	5	5	4	4	4	3	5	4—41

BRAD.

MILWAUKEE VS. DENVER—This interesting match came off on the 25th, and resulted in a victory for the Colorado boys by 9 points at 200 yards, while 8 of these were swept away at 500, leaving the Denverites just 1 point ahead. The conditions called for 10 shots per man at 200 and 500 yards, and teams of six men. The Milwaukee Rifle Club men met at the National Home ranges at 1 o'clock. Quite a number of spectators were in attendance, among them Col. Roberts, of Chicago; the veteran deer hunter, C. Simmonds, and Messrs. De Witt Davis and William Sherman, who acted in behalf of the Denver Club. The wind was a bothersome one to a rifleman. When the shooting began it was a brisk 8 o'clock wind, and at the close it was a gentle chopping 1 o'clock wind, which shows the difficulties our men had in keeping right as to the wind.

At the range of 200 yards the shooting was off-hand, with a three-pound pull of trigger, while at the range of 500 yards any position is allowed, provided no artificial rest is used. It will be seen that all the shooting was most excellent. To an outsider it appeared as if there could be no real test of marksmanship shooting 1,000 miles apart, as there must be great differences in weather to be taken into account. Such matches, however, cannot but add greatly to the interest taken in the rifle, and tend to excellence in its use. The scores of the club stood:

At 200 yards.

Welles	5	5	4	4	5	5	5	5	5	5—48
Meunier	5	4	5	4	4	5	4	4	4	5—44
Drake	4	4	4	5	4	4	4	4	4	4—42
Hill	4	5	5	4	4	4	4	4	4	4—42
Markham	4	3	4	4	4	4	5	5	5	4—43
Fielding	4	4	5	4	5	4	4	5	3	4—42
Total at 200										260

At 500 yards.

Bangs	5	5	5	5	5	5	5	5	5	5—50
Johnston	4	5	5	5	5	5	5	5	5	5—49
Drake	5	5	5	5	5	5	5	5	4	5—49
Hill	4	4	5	5	5	4	5	5	5	5—47
Markham	4	4	5	5	5	5	5	5	5	5—48
Murray	3	5	5	5	5	5	5	5	4	5—47
Total at 500										292
Grand total										550

The members whose scores were not counted in the match made as follows:

At 200 yards.

Bangs	3	3	5	4	5	4	5	5	4	4—42
Murray	5	3	4	4	4	4	5	4	4	4—41
Williams	5	4	5	3	4	4	3	4	4	5—41
Johnston	3	5	4	4	4	4	4	4	4	4—40

At 500 yards.

Meunier	5	5	5	4	5	5	5	3	5	5—47
Fielding	5	5	5	4	5	5	4	4	4	5—46
Welles	5	4	5	5	3	5	4	5	5	5—46

During the afternoon the following came from Denver:

"DENVER, April 25.—Best six at 200 yards, 269. Best six at 500 yards, 282. Total, 551. F. W. PITKIN,

"N. B. Lord."

Gov. Pitkin and Col. Lord acted for Milwaukee at Denver, as DeWitt Davis and William Sherman acted for Denver at Milwaukee.

THE BEST ON RECORD.—Our Washington friends have been making some very good records, but they are a trifle hasty in claiming the best on record for Mr. Chambers' 134 out of 150 at 200 yards. That has been beaten within two months half a dozen times at Walnut Hill, by Kirkwood, Jewell, Farrow, Poland, Frye and Tyler, and I do not know but by others. I have not the figures of the others, but I know that Tyler has a record of 139, and he does not claim the best by any event. TYLER.

Boston, April 26, 1879.

Springfield, April 28.—In your last issue you remark that Mr. Chambers' score you believe to be the largest on record of 30 consecutive shots. On last November one of our team, S. S. Bumstead, with a Springfield military rifle, without sighting shots and without cleaning his 30 consecutive shots, scored 136, possible 150, and going on with 5 more shots scored 157, possible 175. This was witnessed by our team.

J. F. CRANSTON.

MORE CREEDMOOR MATCHES.—At the meeting of the Executive Committee of the National Rifle Association, on the 24th inst., it was decided to employ paid assistants in the executive and statistical departments of the spring meeting. For the several monthly matches the members of the Board of Directors will act as executive officers. Hon. J. G. Dimond offered a $75 trophy, which was accepted and arranged for competition as follows:

"Dimond Match—1st competition April 30 at 2:45 P. M.; 1st prize a trophy presented by Hon. J. G. Dimond, value $75, and 20 per cent. of the entrance money; 2d prize, 10 per cent. of the entrance money; 3d prize, 10 per cent. of the entrance money; 4th prize, 10 per cent. of the entrance money. The trophy to become the property of that competitor who, at the close of the season of 1879, shall have won it the greatest number of times. In case of a tie, the highest aggregate score of all the competitions participated in up to that time to decide. The 20 and 10 per cent. divisions of entrance money to be awarded to the highest and second, third and fourth highest aggregate scores respectively in each competition. Open to all members N. R. A. and all members of the N. G. S. N. Y. in uniform. Distances, 200 and 500 yards; five shots at each distance; weapon, Remington rifle, N. Y. State model; position, standing at 200; any, with head toward the target, at 500 yards. Members of cavalry organizations will be permitted to compete in the match under the same conditions as are required of them to qualify for the N. Y. State Marksman's Badge. Entrance fee, 50 cents. Competitors allowed two entries in each match, but only the hightest score to take a prize. Members of the National Guard may, with the consent of their Inspector of Rifle Practice, count their scores made in this match as a qualification for the Marksman's Badge issued by the State.

Schoverling, Daly & Gales sent for monthly competition a Ballard rifle, to be shot for at 100 and 200 yards, off-hand, seven shots each distance without cleaning.

It was resolved to invite the opinions of the press and of the various rifle clubs throughout the country on the barring or handicapping of what are styled professional marksmen.

Gen. Hawley sent the following, which explains itself. The Secretary replied suggesting the omission of the sighting shots and the provisions about loading:

HOUSE OF REPRESENTATIVES,
WASHINGTON, D. C., April 10, 1879.

Dear Sir—I am uncertain as to whether you are a Director of the National Rifle Association; but, if you are not, you will oblige me by passing this to some friend who is. I beg leave to recommend for the next annual meeting a long-range off-hand match; any rifle under the rules; distance, 880 yards—half a mile—the marksman to stand erect; the forward sight not to be changed during the contest; the elevation may be corrected at will; fifteen shots; two trial shots. The marksman may have his rifle handled, wiped and loaded by a friend or assistant. The distance is but half a mile that it may be better appreciated by the public at large. You would be surprised—perhaps you have observed it yourself—to see how many people do not comprehend without explanation just what 800 or 1,000 yards mean. Half a mile seems longer to them than 1,000 yards. The restriction about changing the forward sight is intended to compel judgment on the instant upon the effect of the wind. The marksman will soon learn that one point on the wind-gauge is equivalent to 9 or ten inches, or a scale of 1-40—about 25 inches—as the case may be, and hold his rifle to the right or left accordingly.

This practice would necessarily be required in war of all except a few specially detailed sharp shooters. I would permit the marksman to have an assistant clean and load the rifle, so that his arm might remain at rest in the interval and his nerves be kept more steady. This is not material, however. The whole proposition has in view silencing the criticism of those who say that Creedmoor does not train men for practical purposes. I know they are wrong, for the most of the firing in battle hereafter will be done from a horizontal position; but the critics can be completely silenced by such a match as I propose. You are aware that many men have become extraordinary shots at short range, off-hand, within a few years. I am sure they can shoot equally well in proportion off-hand at long range if they have had practice in lying down at the great distances. That is to say, a good Creedmoor long-range shot, who is also a first rate off-hand short-range shot, could do well off-hand at long range. A man who can put nearly all his shots within an 8-inch bull's-eye at 200 yards, off-hand, should put very nearly an equal proportion into a 36-inch bull's-eye at 900 off-hand. If a dozen of the best men can be drawn into this match, I am sure that the result would astonish the world, and the association could issue a challenge that would amaze our English friends. I am authorized to offer a small sum toward working up a few prizes for such a match or one similar in its general character. JOS. R. HAWLEY.

GEN. M. T. MCMAHON.

WANTED—ELBOW ROOM.—*Newark, N. J., April* 23.—Being an amateur marksman and a constant reader of your valuable publication, I take the liberty of asking your opinion, as well as that of all riflemen who may feel an interest in the matter upon the question of professional marksmen.

First—Does not the issuing of a professional challenge, and the publication of the same, make a man a professional? Second—Is not a challenge for the championship of the U. S., when a certain money consideration is mentioned together with it, a professional challenge? Third—Is it not directly contrary to the universal custom to allow professional marksmen to compete for prizes in the "all comers'" matches at Creedmoor, Brinton and other ranges of like magnitude and government, where nearly all of the shooting is done by beginners?

Mr. Wm. M. Farrow a few months since issued, and caused to be published, such a challenge as is referred to above, and is now generally spoken of as a professional, and he is allowed to enter all amateur matches and of course carry away nearly all of the prizes, leaving nothing for the amateurs, although there are some very good marksmen among them. I would think that if the National Rifle Association and the New Jersey State Rifle Association desired to make their respective ranges popular and have them well patronized, they would look into the matter and try and devise some means of protecting amateurs against this professional. I do feel that amateur marksmen are entitled to some protection and encouragement. With all due respect for Mr. Farrow, I must say that I think he carries the matter decidedly too far, and I would think that common courtesy would keep him away once in a while in order to give others a chance.

AMATEUR.

ROUND BULLETS.—*Riverton, Conn., April* 20.—I have read the interesting articles signed "Bear Paw," "Sunny South" and "P," and now desire to ask for information as to the manner of using spherical bullets. Does "Sunny South" place the round ball in the end of the cartridge naked, or does he force it down from the muzzle with a linen patch? I have experimented with round bullets, but have never been able to do even tolerable shooting when I inserted them at the breech; but when loaded from the muzzle in the old-fashioned way, with a patch, can, with a .40 calibre and 60 to 70 grains of powder, shoot quite accurately up to say 125 yards. After inserting the cartridge (which has a dry felt wad over the powder) I put down from the muzzle one or two thick wads which are saturated with a lubricant. This leaves the bullet well up in the barrel, which it will leave with accuracy. A correspondent of yours once illustrated with cuts how he patched round bullets, but I have never been able to get as good a result with them as when the bullet was put into position as I have described. In order to load in this way it is necessary to carry a loading-rod, of course, which in this part of the country we can do well enough; there being no large game to encounter, haste is unnecessary. Considering the flatter trajectory, I can shoot at ordinary hunting distances with greater certainty of killing with the round than with the elongated bullets. I want to ask also—referring to enormous charges of powder, which it is claimed are necessary in order to develop the Express principle—if say 135 grains will burn in a rifle of .44 cal? Long-range experts have told me that they obtained no flatter trajectory with 110 grains than with 95. If it is true that a 34-inch rifle barrel of .44 cal. will burn no more than 95 grains, how is it that the shorter barrel of a hunting rifle develops the terrible effect claimed for the Express bullet?

For Forest and Stream and Rod and Gun.

THE EXPRESS SYSTEM.

IN a late number some writer raises a doubt as to the accuracy of the Henry Match Rifle in using light Express bullets. There is before me Alexander Henry's last catalogue, in which he advertises "Breech-loading match rifle, made also as an Express rifle and Match rifle combined, £26." It is not to be supposed that a rifle maker of Mr. Henry's reputation would advertise and put out a rifle as an Express that was not as accurate as any of his other Express rifles, and I hope "G. J. R." will communicate with Mr. Henry on this point. Though not familiar with the Henry rifle, I will hazard the opinion that this "Match and Express rifle combined" will equal in accuracy, with the Express bullet, any double Express, either of his own or any other make. The fact of an arm being made as a Match rifle argues superior accuracy. The sole province of the grooving of a rifle is to give the ball the necessary "twist" to keep it "straight" in its flight. Any properly built rifle, with such a system of grooving as will invariably give the proper twist to a properly shaped light Express bullet, will throw that ball true and accurate within the proper range for that weight of ball. There may be difference of opinion as to twist, aptness for fouling, wear, etc., but that does not affect the question when the rifle is kept clean. A Target or Match rifle, designed especially for extreme accuracy and uniformly close work, that has such a system of rifling as will

twist the light Express ball with its heavy charge, must, *ceteris paribus*, at least throw those balls as true as the double Express rifle, built especially for its destructiveness at short range.

In Benton's work on Ordnance is a notice of a target rifle (muzzle-loader) deposited in the museum or armory at West Point, using 100 grains of powder and a conical ball of 200 grains (the high proportion of powder to ball of 1 to 2). As the question of heavy charges of powder and light balls is being discussed, the testimony of the maker of this rifle would be valuable, if he is now living. The book is not before me and the maker's name has escaped me, but he must have been a maker of some note, or the rifle would not be at West Point. The old muzzle-loading Match rifles grouped their balls very closely, and if this rifle was a success it would be valuable information to know the system of grooving used. The maker's name can be obtained from Benton's Ordnance.

In the interest of the hunting rifles and those who use them, I suggest that a match be shot during the coming season to test the accuracy of different rifles in using a light hollow or Express bullet. Let the match be both for accuracy and flatness of trajectory. Let the conditions be for the present patterns of American rifles, with the conditions of proportion of powder to ball (to be not less than 1 to 3), so arranged that the largest shell used by our rifle makers can be used. Arrange so that the double Express rifles of Great Britain can compete. I think some of our rifles can compete successfully as to accuracy, and probably as to trajectory, with those arms. What the hunter requires in this country is accuracy, flatness of trajectory and destructiveness all combined.

Germain to this subject is the best powder for the rifle, and I would further suggest that at the same time there should be a trial as to the best powder suitable for the sporting rifle. I notice Mr. Dittmar proposes such a trial for his powder, and the trial could be extended to include the black powders. Open the competition likewise to the English powder factories. What is needed for the sporting rifle is a powder that will give the highest velocity combined with uniformity of results and freedom from fouling. The question of recoil is important, but secondary. Of course, the question of safety is paramount. P.

Montana, March 18, 1879.

THOSE GRIZZLIES.

No. 1 CORTLANDT ST., April 17, 1879.

EDITOR FOREST AND STREAM:

There seems to be a difference of opinion between "Viator" (Mr. C. Messiter) and "Bear Paw" (I don't know his first name) as to the number of grizzly bears and other game killed by the former with the Express rifle which is now on exhibition at my store. "Viator" claims six grizzlies, seventy deer and antelope, two elk and a lynx. The other disputes the claim for so many, but says it was two grizzlies, sixteen deer and antelope, and two elk, and positively denies the killing of the lynx. I do not pretend to know the actual facts, but I can convince any one who comes to see the rifle that it looks as if it might do all that is claimed for it by "Viator." It will be on exhibition until sold. HENRY C. SQUIRES.

—Read the adv. of EXPRESS Rifle for sale.

Sea and River Fishing.

FISH IN SEASON IN MAY.

Trout, *Salmo fontinalis*. Salmon Trout, *Salmo confinis*.
Salmon, *Salmo Salar*. Shad, *Alosa*.
Grayling, *Thymnallus tricolor*. Land-locked Salmon, *Salmo gloveri*.

FLIES IN SEASON IN MAY.

BLACK MAY, No. 10.—Body, black; feet, black; wings, grayish hyaline

COW DUNG, Nos. 10 AND 11.—Body and feet, brownish yellow; wings, yellow gray.

GREAT DUN, Nos. 9 AND 8.—Body, purple brown; feet, gray brown; wings, dark gray hyaline; seta, dark brown, annulated with gray.

RED SPINNER, Nos. 10 AND 9.—Body, bright claret, ribbed with gold tinsel; feet, brick color; wings, gray hyal; setæ, paleine brick color

YELLOW MAY, No. 10.—Body and feet, pale yellow; wings, pale yellow, mottled with brown; seta, yellow.

COACHMAN.—Body, peacock herl; feet, dark red hackle; wings, white.

KING OF THE WATER.—Same as queen of the water, with scarlet body instead of orange.

GOLD SPINNER.—Body, orange, ribbed with gold tinsel; feet, pale red hackle; wings, bright gray.

CAPTAIN.—Body, posterior half, peacock herl, anterior half, gray; white feet; red hackle; wings gray; setæ, scarlet green and wood-duck feathers mixed.

SOLDIER.—Body, crimson; feet, red hackle; wings, gray.

KINGDOM.—Body, white, ringed with green; feet, peacock herl, and red hackle; wings, gray, mottled with brown.

Black Palmer, Brown Palmer, Red Palmer and *Gray Palmer* are made respectively of the colored hackles that distinguish them.

—The early fly catches the fish. Remember that; read the advertisement of Mr. E. H. Seaman, of Ridgewood, Long Island, whose trout are beauties; and be wise before other people get there ahead of you.

RANGELEY LAKES.—A new and popular route to the Rangeley Lakes the coming season will be via Portland, Mechanic Falls, to Canton, over the New Buckfield and Rumford Falls Railroad; thence up the Androscoggin River to Dexfield, Mexico; the route then follows up the swift river through Roxbury and Byron, through a fine trout-fishing region. The point where this road reaches the Lakes is at the famous Bemis Stream Camp. The road passes near the four ponds, which have never been fished to any extent. On one of the popular old routs, via Farmington, a new narrow-gauge railroad is about to be built, from Farmington to Phillips, which will place this beautiful village at only seventeen miles from Rangeley City. The work of building this road is to be pushed as rapidly as possible. The season is several weeks later than last year. OXFORD.

THE CHEQUAMEGON.—Former visitors will hardly recognize the Chequamegon Hotel at Ashland, Wis., this summer. Its size has been doubled; the bluff has been finished and terraced, and a splendid dock is built right in front of the hotel, at which all the boats can land. Steam water-works have also been constructed. Mr. Sam Fifield, who now presides as host, has secured a first-class set of men for guides, a plentiful supply of boats, and all other requisites for the accommodation and comfort of guests.

VAN—*Brooklyn, April* 24—*Mr. Editor:* The letter of "Grilse" in April 17 number would lead one to suppose that there was free salmon fishing in the vicinity described by him. I was under the impression that anglers had to lease a river before fishing was allowed. If there are streams free to all for so much *per diem*, without lease, you would doubtless confer a favor on many readers by naming them. VAN.

It has probably escaped the notice of our worthy correspondent, although repeatedly mentioned in our columns, that there are $1 *per diem* angling privileges on the Restigouche at Matapedjac Station, on the Intercolonial Railway. Most excellent fishing, with use of cottage with three rooms, canoe, guides, etc., can be obtained at a very moderate rate by application to Willis Russell, Esq., St. Louis Hotel, Quebec. For other information relative to rod privileges, leases, etc., apply to Chief Fish Commissioner Whitcher, Ottawa, Canada.

MASSACHUSETTS—*New Bedford, April* 26.—Numerous parties have shown fine strings of trout, J. L. Sisson leading with one trout weighing two pounds six ounces. CONCHA.

MOVEMENTS OF THE FISHING FLEET.—The number of fishing arrivals reported at this port the past week has been 36—11 from the Banks and 25 from Georges. Three of the Bank arrivals were from codfishing trips, bringing 290,000lbs., making seven arrivals in this branch of the fisheries this season, the total receipts being 575,000lbs. The receipts of Bank halibut for the week have been 325,000lbs. Georges receipts, 550,000lbs. codfish, 20,000lbs. halibut.—*Cape Ann Advertiser, April* 25.

CONNECTICUT—The Hartford *Daily Courant* chronicles that Mr. Albert S. Hibbard, while hunting for muskrats last Thursday afternoon, at North Hadley, Mass., saw lying near the surface of the water a large muscalonge. He shot it, when two fish came to the top. The water being shallow, he jumped in and succeeded in capturing both. The weight of the larger one was 14½lbs. and the smaller 6¼lbs.; total, 21lbs. at one shot. Frank Clark shot one the day before weighing 8lbs.

Our Connecticut friends may consider that the approved way of capturing muscalonge. It was all right so long as the man was equipped only for muskrats. But the usual method is to take the fish with a hook.

NEW YORK—*Keeseville, April* 22.—Snow is still three feet deep in the Saranac Woods, and the lakes are covered with very thick ice. Our brethren need not arrange to go to the woods until about the 12th or 15th of May. Will telegraph you when the ice moves out, so that the news may make glad the hearts of the impatient ones, of whom I am chief, being anxious to start on my twenty-seventh annual trip.

J. R. R.

—Bobbing for flounders and eels attracts numerous anglers to the Harlem River on a sunny afternoon. Having once baited his line, and fastened his pole into a knot-hole on one of the broken-down wharves, which line the water just above High Bridge, the would-be fisherman lies down, pulls his hat over his eyes and goes to sleep. After a sound nap of half an hour or so, he pulls in the line, puts on a new bait, and indulges in another snooze. He never finds any fish on his hook; a pair of very small boys in a very small boat under the wharf take care of them. For a *dolce far niente* there is no better place in the world than the decaying piles of a Harlem River wharf.

ONONDAGA FISHING CLUB.—At the last meeting of the Onondaga Fishing Club, of Syracuse, N. Y., 35 new members were elected, making the membership of the club 176, which will soon be increased to 200. The following officers were elected: President, Reuben Wood; Vice-President, Alexander H. Davis; Secretary, Frederick S. Wicks; Treasurer, Wm. G. Anderson.

FLORIDA—*Homosassa, April* 14.—The latest novelty here was the hooking and landing of a large sheepshead on a trolling line, baited with a roach. J. W.

MISSISSIPPI—*Corinth, April* 23.—The disciples of Walton are out in force, and some fair strings of perch and black bass have been taken. I heard this morning for the first time this spring the love note of Bob White, from the green wheat. That he may multiply and replenish the earth is the wish of GUYON.

ILLINOIS—*Chicago, April* 22.—Some parties netting in Pecatonica River caught three fine California Salmon below the dam, at Freeport, Ill. They were nearly two feet long, weighing 5¼lbs., 5¾lbs. and about 6lbs. They were undoubtedly trying to get above the dam. Caught April 12.

NORMAN.

A LEGAL TWIST.—It takes a Syracuse lawyer to dodge the galling trespass regulations. The *Standard* relates this of one of the legal lights of that city:

A good story is told of a prominent attorney residing in this city. While fishing a day or two since, he pointed out to his companion a sign-board, remarking, "The fellow that put that up is a liar."

"Why?" asked his companion.

"Because that sign reads, 'No fishing in this brook,' and I caught the best trout in my basket directly under that board."

MOONLIGHT.—*Oakfield, Wis., April* 12.—*Editor Forest and Stream:* I have fished, hunted and camped out for the past twenty years, and during the late war I served four years and a half in the Western Army. During that time we marched 3,000 miles; nearly always without tents or covering of any kind, sleeping in the open air. We also passed up and down the Mississippi from New Orleans to St. Louis eighteen times, and across the Gulf four times, always sleeping on the upper deck with my men with no covering but our blankets. In all that time I never knew of any ill effect of sleeping in the moonlight. Never knew or heard of a case of moon blindness or distortion of the features. Have seen wagon loads of fresh beef exposed night after night and never heard of it being injured by the rays of the moon. With this experience I look upon the ill effects of the moon as all moonshine. HORICAN.

This subject has now been ventilated enough to satisfy the most moony of our correspondents. The old salt who originated the discussion has incontinently retired from the championship of his theory, and we will allow him to dwell in unobtrusive seclusion.

FERGUSON'S NEW JACK LAMP.—We have been shown one of the new model camp, jack and boat lamps, manufactured by Mr. A. Ferguson, the patentee. It is well and strongly made, and is a great improvement on the old model lamp. It can be adjusted to the head, boat or staff by suitable fixtures, burns either lard, sperm or signal oils eight to ten hours without refilling, and cannot be extinguished by wind or rain. It is very compact, and weighs so little that it can be carried without any trouble. The other articles manufactured by Mr. Ferguson, or for which he is the sole wholesale agent, are highly spoken of by those who have used them, especially his Improved Rust Preventer, of which he has sold a large quantity during the past season, and the demand is steadily increasing. See his advertisement.

HOLBERTON'S FLY BOOKS.—*Editor Forest and Stream:* Will you allow me a little space to pour forth my wrongs, as it were. You know I take considerable pride in the fly book that I got up some two years ago, and which has been so well received by my brother-anglers. Well, I have before me an imitation of one of them, made, I believe, by a former clerk in my employ, and which is simply disgraceful—clips loose, leaves cut crooked, and in every way calculated to give a bad impression of my book. They say imitation is the sincerest flattery. If they would only make a good copy I would not care; but goods like these will certainly bring discredit on Holberton's fly books. The new clip I now use is a great improvement on the Hyde clip, and cannot possibly come out; but even the other would hold if fastened with care. My own book—the first ever made—is in perfect order yet, although it has seen two or three years' hard service. W. HOLBERTON.

New York, April 28.

TROUT, THUNDER AND ELOQUENCE.—*Editor Forest and Stream:* It was July 4, 1872. A crowd of 300 or 400 backwoodsmen and women were assembled to do honor to the day on the banks of the Beaverkill, near Camp Honeymoon, where the writer hereof spent two delightful months. While waiting for the band, the orator of the day, etc., a dapper little gentleman, with the loveliest set of fishing-tackle, waded out in the pellucid stream in front of the crowd to exhibit his skill in fly-casting and trout-catching. He was an adept. With unerring skill he dropped his red hackle over the rippling water, and ever and anon a half-pound trout would rise, hit that fly a tremendous clip with its tail, and, after turning a complete back somersault, took the fly in its mouth and met its doom like a hero. The crowd looked on and applauded, and the handsome little fisherman renewed his efforts with a zest that showed he appreciated his audience and the work before him. He was fast filling his basket, when, with a boom which shook the earth, came a peal of thunder. Quick, like batteries opening a battle, came sulphurous flashes and thunder peals; but the fisherman heeded it not—far flew his flashing line, until, all at once he stepped into a hole not fathomed, and went down, down out of sight. A gasping gurgle as he rose, and then he found he had no audience. They had fled to a big barn to escape the rain. He followed, and joined the chorus of "Hail Columbia Happy Land—if this ain't true, may I be lammed!" The lone fisherman then read the Declaration of Independence, and the writer hereof orated. The first was Sawyer Van Sickle—the second was, yours truly. NED BUNTLINE.

CAPE COD TURKEY.—The boneless codfish industry is yearly assuming larger proportions. According to the market editor of the Boston *Herald*, fully one-half of the prepared salt fish sold in the United States is now put up in the boneless style. It is labeled "Boneless Fish," and "Boneless Codfish," the difference, besides the price, being that one is cod and the other is not. "Boneless Fish" is made of any kind of dried salt fish, excepting codfish, and it usually sells from 35 to 60 per cent. lower than boneless codfish. It is most commonly made of hake, cusk or haddock—the flesh of these three approaching more nearly to the appearance of codfish than that of any other denizens of the briny deep. Its largest market is in the West and South, and no doubt many buyers of it imagine they are purchasing genuine codfish. But in New England it meets with a less ready sale, since it is more difficult to deceive a Yankee in the matter of codfish, and he is generally willing to pay a few cents more per pound for the real article. The boneless fish and boneless codfish put up in Boston take the highest rank in the trade. In the busiest season, from September to January inclusive, some 200 hands are employed in putting up boneless fish and codfish, and they probably prepare in this way not less than 75,000 out of the 260,000 quintals of cod, hake, haddock and cusk that are handled by the fish merchants of Boston per annum.

A (R) EAL STORY, NOT AN EEL STORY.—*Editor Forest and Stream:* Reading account in issue of April 3 of an eel getting away with a railroad switch-key, reminded me of this: Just two years ago, Messrs. G. B. Sproule, W. P. Shaw, and myself made a hurried trip to some small lakes about forty miles north of Peterboro, for lake trout, as they are called, a handsome fish weighing on an average three pounds. We fished by cutting holes through the ice, with about eight feet of line attached to a pole, two feet long, baited with chub and minnows, taken from Peterboro, packed in snow. While we were busily engaged attending to "bites," all fishing in different parts of the lake, Mr. Shaw hooked and secured a nice three-pound trout. In landing the fish he saw something dangling from its mouth, and found it to be a piece of gut, with a small pistol cartridge fastened on for a sinker. A trout hook was also tied to the gut, and firmly hooked in the fish's mouth. This new article of fish food was carefully stowed away in Mr. Shaw's pocket until the day's sport was over, when we all met. The piece of gut, with hook and sinker attached, was then produced. The tackle was at once recognized by Mr. Sproule as being the "tail-end" of a rod and line used in the same lake by Mr. James Little just a week before. Mr. Little had been fishing with fair success, when he got a "loud call" from this trout, and, in his eagerness to secure the prize, did not use the necessary precaution. I have heard of instances where maskinonge have been taken with one or two trolling hooks and spoons hooked in the mouth; but that large one, which is said to have his mouth silver-plated, from the fact of his "getting away" with so many favorite baits, I have not been able to take yet, but hope my friend W. P. Shaw may meet with him and be as successful as he was with Mr. Little's trout.

Guelph, Canada, April 9. C. A. POST.

HOW TO FASTEN TROUT.—*Mr. Editor:* Most anglers, after considerable practice, make very good casts, though few seem to understand the most successful method of hooking their

fish. Premising that trout frequently hook themselves, it is alike true that many are missed through lack of skill. A majority of those who are deservedly regarded as good fishermen make the cast well, the line and leader extended straight out on the water far in front, and the rod at an angle of 45 degrees. The angler is on the alert, and a rise to the fly is seen. Just at this exciting and critical moment he gives the rod a strong, quick jerk upward and backward. This is not the proper method. See its disadvantages (assuming that you have missed hooking the fish): The fly has been twitched far away from the game, the line slackened, the rod brought back over the shoulder, and the cast has been lost; the line must be recovered, and a new cast made. Besides, you have strained your tackle, and if by chance you had hooked the fish, quite likely the fly would have been torn from its mouth. Whether this movement be effected by the bend of the wrist or elbow, the effect is the same. You have had to lift, and then to check the movement of the rod. The rod, being limber, has borne a wave-motion, up and down, from the hand to its tip, and vibrating there, like a pendulum, it has not made a direct, instantaneous and sure movement of the fly. All this requires time; and meanwhile the trout may have taken the fly (with a full quantity of water) into its mouth, detected the cheat, disgorged it, and taken a distaste for that fly for the length of his memory (about five minutes).

The better method is this: Imagine again all the circumstances, as above stated, when the rise is seen and the fly is in the mouth of the fish. Now, what is the object to be attained? It is, that by a movement of the rod (it cannot be done too soon, but it may be too strong) the fly may be moved toward you a few inches, which is quite enough, so as to fasten itself in the mouth. It is best done in this way: Turn the hand outward, so as to move the tip of the rod about three feet to the right and about one foot to the rear (one inclined movement). If you then feel the hook catch, all right, take your time. If not, observe the fly is still near the game, and is likely to tempt it again, and you, too, and your rod, are ready for him by another like movement of the hand; and even for a third time. Observe, too, you have saved your strength and your tackle, and you have had all the chances of, at least, three casts. This hand-turn movement is easy and circular, turning upon an axis, beginning at the centre of the wrist and running straight through the centre of the hand; while the wrist or elbow-bend movement is angular and fatiguing. By this hand-turn movement the wave-motion along the rod does not occur, as in the other case.

Take your bare rod in hand, or take even your walking-stick, and try the two motions, and you will see the difference. Gentlemen accustomed to handle the sword, well understand this hand-turn movement, the *en quarte*, as well as the wrist-bend, and their difference.

It is hardly necessary that I should say that this hand-turn movement is nothing new, but old; yet few have ever heard it described, or mentioned even, otherwise than as a "peculiar movement of the wrist, not easily explained, and only to be acquired by practice." It is more expressive to call it a hand-turn than a wrist-movement. NELSON MERRILL.

COLORS OF ARTIFICIAL FLIES.

MERIDEN, Conn., April 2, 1879.

EDITOR FOREST AND STREAM:

I notice in your issues of last year as well as the present season, in quoting the trout flies to be used in April, you speak of some materials that they are made of which are quite new to me, although an old country fly maker for the past thirty-six years or more, and if not over troubling you, would take much pleasure in getting information of the same. For instance:

The light claret gnat (the wings of one sex hyaline, of the other ocherous). Please state what hyaline and ocherous are? Again: In the dark claret gnat you give for the wings, "sub-hyaline." In the gray gnat you quote dark fox fur. Is this the reddest part from an old fox, or from the cub, which is gray or slate color; or is it taken from his pate, or what part of the body—young fox or old one?

Hyaline and sub-hyaline are indefinite colors, the former being the most decided of the two, and intend to apply to the hues of the wings of the neuroptera, as of the domestic house-fly. Ocherous means an indefinite tint approaching the yellow of ochre. Dark fox fur would apply to a color combining the shades of all the hues of the fur of the fox. The idea of these indefinite hues is to imitate the uncertain tints of nature which are constantly modified by the rays of light which strike them. They are tints such as painters of fish in particular have for so long a time endeavored in vain to catch and convey to canvas. They are seen in the uncertain shimmer of a midsummer atmosphere which the eye can observe, but the memory cannot hold or transfer.

YACHTING NEWS.

EMPIRE (HARLEM) YACHT CLUB.—The date for the annual match of this club has been altered to Wednesday, June 11. To sail over the regular club course of twenty-five miles, to and around the Gangway buoy. Officers of the club have been given in a previous issue.

BOSTON YACHT CLUB.—This club is the oldest one in New England waters, having been organized in 1866 and chartered by the State of Massachusetts two years later. The Boston *Herald* says, that in 1834 there was an organization of some kind which survived its birth only three years. If this be so, the Hub may fairly claim the honor of having had the first yacht club in America. The Boston Y. C. numbers 225 members, who own 75 yachts and a club-house and pier at City Point. Matches will be sailed June 21 and Sept. 6, with probably some extra fixtures and an open or "union" match in addition. For officers of the club see issue of Feb. 6.

MADISON (WIS.) ITEMS.—The boat yards at Freeman's Landing, on Lake Mendota, present a lively appearance. This beautiful lake has become the popular lake since the enterprising Captain Freeman established himself at this point. His steam yacht *Mendota* has been refitted and will be launched about May 1, with Captain Patterson in command. Mr. McLeod, our leading builder, has added several fine boats to Freeman's fleet, so that it at present consists of fifteen boats and three yachts. Mr. McLeod has also built several craft for Major O. G. Meyers and Col. Wm. F. Vilas. The hunting scow, *Solid Comfort*, has been greatly improved. A few days ago there was launched at this pier a craft built for Col. Wm. F. Vilas, to be used as row or sailboat combined. It is 17ft. long, 3ft. 10in. wide, and 15in. deep; supplied with jointed masts. The body of the boat is of the finest white pine. Its finishing present red cedar, maple and cherry. The oar-locks are silver-plated, and so are the belaying cleats. It was built by McLeod & Freeman, and is pronounced the best built boat in the West. On Mono's beautiful waters Capt. Barnes has refitted his steamer as well as his other boats. The new summer hotel erected on Lake Mono will be opened for the reception of guests about the 15th of June, and will be under the management of Col. West, of the Park. The place is beautiful, and will no doubt receive the hearty patronage of the public. The Ton-ya-wa-tha Springs Hotel will add much to the attraction of this city. ROVER.

YAWL AND CUTTER RIG.—"Rouge-Croix," in a most interesting description of a cruise from Halifax out to sea in rough water, published in *Hunt's* for April, has the following in relation to rig: "The wind still increased, and my longing to have an English cutter or yawl under me increased with it, for the unhandiness of the sloop rig became every moment more and more apparent."

CRUISING SOUTH.—As we have upon several occasions called attention to the many advantages offered by Southern waters, especially Chesapeake Bay, for cruising, we hear with pleasure that the cutter *Muriel* has sailed for those parts, with Norfolk, Va., as her headquarters. This is the third craft now in that neighborhood, the schooners *Magic* and *Meta*, of Boston, with the cutter, making up the trio.

THE RESOLUTE.—Captain Dayton, who had charge of the schooner *Resolute* on her extended cruise of 15,000 miles, before noticed, reports that since the schooner received a keel in place of her board, he has found her to be one of the most weatherly craft he ever sailed in. In this connection it may be mentioned that the schooner *Palmer*, Mr. Rutherford Stuyvesant, N. Y. Y. C., is likewise being altered to a keel vessel. Cabin accommodations will be re-arranged in consequence.

MORE NEW YACHTS.—Besides the new craft already mentioned in these columns, Smedley, foot of Smith street, South Brooklyn, is building a sloop 38ft. long for J. and G. Fowler, of St. Johns, New Brunswick. She will be christened *Rosetta*. John Mumm, foot of Court street, Brooklyn, is building a small craft of an experimental sort. She is 20ft. over all, 7ft. beam, and 3ft. 8in. deep. She will have a centreboard, and 800lbs. of the "superior" metal on her keel; mast 21ft. above deck, bowsprit 7ft. 10in. outboard, boom 19ft. 3in., and gaff 10ft. 4in. In Mumm's shop there is also an able and roomy-looking centreboard sloop for sale, 32ft. long, 13ft. beam, and 4ft. deep. Greater depth than hitherto customary is gradually coming into use here, the increase, however, being as yet more in the direction of greater freeboard than draft. Lennox, foot of Thirty-fourth street, South Brooklyn, will fit out the sloop he built two years ago for J. Buchanan Henry. She will receive a 38ft. mast, 18ft. bowsprit, 36ft. boom, and 18ft. gaff.

PROVIDENCE YACHT CLUB.—The following officers have been elected for the year: Commodore, Walter M. Greene; Vice-Commodore, Edwin N. Pettus; President, Benjamin Stillwell; Secretary and Treasurer, E. F. Dustin; Measurer, A. M. Black; Trustees, E. J. Anderson, Benjamin Davis and S. W. Cameron; Regatta Committee, E. F. Dustin, Benjamin Stillwell, S. W. Cameron, Benjamin Davis and E. J. Anderson.

KEELS IN THE EAST.—Sloop *Julia*, at Harrison Square, Boston, and sloop *Violetta*, at South Boston, have both shed their centreboards and followed the fashion by coming out with keels.

THE YAWL IN ENGLAND.—Says the London *Field* in speaking of this rig: "However, in 1872 our eyes were opened as to what might be done with the yawl rig, when the lovely *Corisande* made her appearance at Ryde in a match. In fact, Cowes folk and visitors to Cowes said she was the handsomest craft Ratsey had ever built. Then, when under way, *Corisande* was the beauty of the sea on, and her prowess in a couple of matches was such as to make every yachtsman wish he had a yawl such as the *Corisande*. Yawls became the fashion and the rage, and as *Florinda* (in 1873) *beat all comers of whatever rig*, no one hesitated about the position of yawls as racing vessels." The italics are our own. In face of such evidence, and the constant increase in popularity of the yawl rig, what shall we say of a recent outburst against this rig by some correspondents, who, more hasty than discreet, have rushed into print only to advertise themselves as very poor seamen, and hardly capable of taking charge of the tiller of a forty? Mr. Weguelin writes to the *Field* that, "With only one mast more sail can be carried to the same angle of heel than with two; or, to put it the other way, the same area of sail can be carried in a cutter to a less angle of heel than in a yawl." Indeed! Is it possible that a gentleman of such experience as Mr. Weguelin claims is actually ignorant as to what causes a vessel to heel, and that the angle depends upon area multiplied into height of centre of effort, and not at all upon the disposition of the sail upon one or more masts? And does he not know that the yawl carries her area lower, and is therefore stiffer, than the cutter? Again he says: "The mizzen has a powerful effect on the centre of effort of the sails, and therefore requires more headsail; and the larger the base of the sail the slower of course a vessel will be in coming about, and the less handy." We find it hard to believe that Mr. Weguelin actually gave shape to this latter idea, but are willing in charity to him to credit it to some garbling of the compositor. If such be not the case, Mr. Weguelin is evidently not familiar with the lever, and contradicts himself, when he first asserts that the mizzin requires much headsail to counterbalance it, and in the same breath informs us that the yawl must be slow in coming about, overlooking in his haste that the necessity of a large amount of headsail is a virtual acknowledgment of the power of the mizzen in turning to windward. However, Mr. Weguelin will have all he can do to maintain his faulty seamanship in face of the many thorough sailors the British yacht fleet can fortunately boast of, should indeed any of them deem such absurd statements as those of Mr. Weguelin deserving their notice or challenge, as they parade a most crushing answer of themselves.

FORE-FOOT.—It has been intimated that the reasoning we applied in a recent article in favor of cutting away fore-foot could be equally as well said of dead-wood aft. The reverse, however, is the case. For, if we cut away aft, between wind and water, it is evident that when by the head the centre of lateral resistance will shift forward to a less degree than if the dead-wood about the run had been left intact, and there fore the weatherliness of the vessel's sail balance will not be increased by an outline aft similar to that recommended forward.

STABILITY.—Though the exact theoretical position of the meta-centre is still somewhat involved in uncertainty, or at least has not yet been generally recognized, it is always customary in shipyards boasting of a draughting office to calculate the stability of new designs by the meta-centric method, which affords practical results sufficiently close to form comparisons of stability. For this purpose the meta-centre is regarded as located at the intersection of the vertical through the centre of buoyancy and the middle line of the vessel, an approximation which introduces no material error in moderate angles. The centre of gravity, from which the meta-centric height is measured, can be ascertained with greater accuracy than generally supposed, especially in such simple structures as a yacht. We believe that the calculated position of this centre in the English schooner *Seabelle* differed by something less than three inches from its position as found by actual experiment after launching, while the calculation of the accurate draft of water of vessels is of common occurrence even among the wooden shipbuilders, who, as a rule, have not the assistance of trained naval architects. In the design of yachts after well-known models, long experience with which has furnished ample data for guidance, it may not be necessary to find the meta-centric height; their stability is a thing already sufficiently known. But in departing from the usual standards and in seeking a compromise between different types in existence, calculating the meta-centre's position by the well-known formula of "Moment of inertia of water-line area divided by volume of displacement," will be found of great aid to the designer in shedding light upon his work and indicating the amount of ballast necessary to accomplish the ends he has in view. With the gradual increase in intelligence, we hope to see this method come into more general use among yacht-builders, as it has among the shipbuilders.

THE SHOE-WAE-CAE-METTES.—The brave crew, which struggled hard last year for the Henley Cup on the Thames, are making efforts to meet their English rivals once more this year. Subscriptions are rapidly coming in, and the crew have already been out in their new paper shell. But how about the new definitions of an amateur, adopted by the Henley Stewards; will not they interfere with the entry of some of the crew?

THE OTHER SIDE.

BEVERLEY, Mass., April 11, 1879.

EDITOR FOREST AND STREAM:

I agree perfectly with "Open Sea" in the sentiments about yachting on this coast, *i. e.*, in having a boat of not over 7ft. draught of water, and suitably modeled and rigged to put to sea in spite of wind and weather, and at the same time have all the comforts possible, and I think that he has gone to the right source to secure it, but I do not think his craft all that is claimed for her. I passed her frequently last summer, and should hardly have suspected that she was a yacht had it not been for her ensign. Certainly she will not compare with many of the fishermen about here in point of appearance in spite of the modern yacht sheer. If built for strength, why did he not give her a flush deck? We fail to see what is gained by having a break amidships for the sake of a few inches more under deck aft. A visit to this schooner will show how well the specifications in your issue of April 3 were carried out—no buts in the deck plank, buts to break, etc. I am certain he could have secured a craft here faster—for I can name fishermen that have beaten his famous model in her own weather—every whit as seaworthy, and a craft that would have been a credit alike to her builder and owner. I find that I am not alone in my opinion, as I have the word of men who have followed this coast from Cape Cod to Newfoundland, winter and summer, and who, if allowed to, would take any one of several fishermen which have been in his vicinity, and excel him in point of speed, beauty and seaworthiness, and in fact, all that pertains to real yachting. BEVERLEY COVE.

CONCERNING RIG AND FITTINGS.

BOSTON, Mass., March 28, 1879.

EDITOR FOREST AND STREAM:

As you well know, I believe in the seagoing yacht. Last year I adopted a modification of the foresail on my schooner, which works well. It is a combination of a boom and lug sail. For some reason a schooner works better on the wind with a lug foresail which hauls aft, say, 5 to 10ft. abaft the mainmast, so long as the sail can be trimmed flat, *i. e.*, she will hold up closer to the wind than with the boom foresail, and go ahead faster, as I have found by experience. On the other hand, a lug foresail is difficult to handle, and it often proves a hard lift to trim in the sheet. To avoid these inconveniences, I had my foresail made with the regular fore-boom and sheet, working on a traveler, and likewise with what I call a lug, going aft of the boom and mainmast, and trimmed with a lug sheet by itself. By this means I get a better fitting sail than the common boom foresail, because my lug sheet blocks are so placed as to haul down the outer leech of the sail and cause it to set flat, while the main foresheet operates in the same way upon the boom. As the boom and main foresheet do the greater part of the holding of the sail, when the yacht comes in stays all that is necessary with the lug sheet is to catch it upon its cleat at the proper moment and haul the lug flat, which a boy can do without trouble; the main foresheet working, of course, upon its traveler without being touched. The lug sheet is double, one each side of the deck. I have found that this enables me to work my yacht to windward in heavy weather under her jib and foresail alone, like a sloop, because the lug of the foresail gives so much more canvas low down and well aft, which holds her up to the wind. I discovered this one equally night when I lay to under the foresail between Montauk Point and Block Island last summer, not having wind enough to get into Stonington the previous evening. Early in the morning, wishing to work up to windward, I set the jib, but a sudden squall delayed our setting the mainsail for a few minutes, during which time we discovered that we were going to windward as well, if not so fast, as

under the mainsail, and from curiosity, the weather being heavy and a smart sea on, I contrived to sail her under that canvas, and work into port with it. If it blows too hard for the full mainsail and jib, by hauling down the mainsail you can work to windward under the foresail without reefing; and while a reef is being taken in the mainsail, no time need be lost, as he keeps right on under the foresail. In fact, it must be heavier weather than I ever yet experienced on a summer cruise to prevent my working on the wind under this foresail with my jib. And the best of it is that it requires no extra crew to manage, like the common lug sail, which is with most the important item as with myself.

There seems to be one radical evil in yacht building upon which you have not commented to any great extent, and which is more important to cruising yachts than any question of model. That is the building of yachts without proper strength for seagoing purposes. Yachts have been and are being built in Boston as well as New York which, between the weight of their lead ballast deep down upon their keel and the pressure of the large amount of canvas aloft, would be wrenched to pieces in a respectable gale in the open sea. For instance, I am credibly informed that a keel schooner yacht of about 50ft. is being built in Boston, having her mainmast set in her house and supported by 1½in. decking upon 2½x4in. beams, merely bolted down through the sides of the house in the ordinary way. Just imagine such a vessel caught in a gale on a lee shore, where it becomes necessary to carry sail to "claw off" to windward. Yet her builder contends that she is built strong enough "for a yacht," and her owner probably relies upon his judgment. It is such yachts as this which have brought discredit upon our American models, and will so long as the ignorance of their owners allows it to be done. It is such yachts which are not found in line for a race of ten or twenty miles out to sea, as suggested by you in a recent number of the FOREST AND STREAM, because their sailing masters know better than to go there, although they never tell the owners the trouble. It is such yachts which avoid Cape Cod as a dreaded barrier to be slipped around in pleasant weather only, and creep along our coast ready to dodge into port at the first approach of a respectable sea. If a yacht has a good bilge and plenty of ballast it stands to reason that she must also have commensurate strength of hull to carry her sail in a seaway.

One other novelty before I close. Being dissatisfied with white paint and gilding for a cabin finish, I desired last year to have my cabin finished off in the natural wood in my new craft. A difficulty presented itself, however, which was that all our common hard woods, such as ash, black walnut and mahogany, if put in a cabin, creak so when the yacht is in a seaway that they sometimes even prevent sleep, and are a great annoyance. In looking around, my attention was called to California Red Wood, which is of beautiful grain, softer than pine, and greatly resembles Rosewood; besides, it is comparatively cheap, costing about the same as pine. I used it to finish off my cabin, and I find that it serves the purpose admirably. It never creaks when the vessel is in a seaway, and it possesses another advantage, even greater, for it never shrinks or swells. Doors made of it never bind or have cracks. It has a beautiful dark purple tint not found in any other wood, which, combined with the appearance of rosewood, gives a characteristic and rich finish to a cabin, both bright and cheerful. Combined with our snow-white Eastern (Lombardy) poplar, which is also a soft wood, with black walnut or mahogany trimmings, it places within reach of the yachtsman possibilities in cabin finish not otherwise to be had. I have a single partition in my yacht of the redwood, driven together green, and which has since thoroughly seasoned, that has not shrunk at all, and is as tight as the day it was put up. I speak of shrinking widthways of the boards. It does shrink endways, but the ends being properly covered, that does not show. I hope that we shall at no distant day have a large fleet of seagoing yachts, and I believe that the stand taken by FOREST AND STREAM on the subject will conduce greatly to so desirable a result. If the public do not adopt the English cutter type, they will at least be moved to adopt a style and build which, while comprising comfort, which the Englishman knows not of, will meet him on equal terms upon the ocean. OPEN SEA.

CANOES AND THEIR RIGS.

BROOKLYN, April 5, 1879.

EDITOR FOREST AND STREAM:

If your readers (including those who may have built skiffs) really want a light, handsome boat to cruise in this summer, let them take their plans, if they have any, to some good professional boat-builder, and let him do the work. The cost will be greater, but you will be fully repaid in comfort and peace of mind, for there are few things so utterly beastly as a heavy, clumsy, ugly, home-made canoe. Of course there are some amateurs who build their own boats, and well, too; but, understand, they have had considerable practice. However, whether you build or buy, there is one thing you must not lose sight of—your canoe must be suited to the waters and work she is meant for.

If I lived inland, near a narrow, winding river, or intended to do all my cruising on such waters; or if I only wanted to paddle about on some quiet lake, I should certainly get a Rob Roy, for there is no other canoe that I know so easy and swift under paddle. This is due to her being narrow and shallow, having very little bearings and no sheer to catch the wind. I can tell you the last is a great advantage. She won't make a very comfortable bed-room, but you can have a camber of three or four inches to the deck, and that will help matters a little. She won't sail well either, except down the wind, but in inland cruising one has to rely chiefly on the paddle. Then, too, the Rob Roy's well is small, less than three feet long, and a single sliding hatch, or a little apron, will cover it completely.

If, on the other hand, I meant to do most of my canoeing on wide rivers or bays, but also occasionally to take a trip inland, I should have a very different style of boat. She should be considerably wider than the Rob Roy, with good bearings, so that she could carry fifty or sixty feet of sail in a light breeze without ballast. She should have a sheer of six or seven inches—enough to keep her good and dry—and a long, flat floor, for that would give her buoyancy and light draft. She would be slower under paddle than the Rob Roy at any time, and, because of her sheer, particularly when working to windward; but you can never expect to combine the best sailing and paddling qualities in any one canoe.

The *Shadow* and the new *Jersey Blue* are both boats such as I have described, and for this work I think would suit you better than any other type. Their sleeping accommodations are excellent. But, speaking of sailing canoes, don't fall a prey to the old *Nautilus* monster. As a provoker of "bad language and abuse" it has no equal on the face of the waters. If you want to realize this fact, just try to paddle a full-grown *Nautilus*, with twelve inches sheer, for five miles against a stiff head wind. Ugh! Besides, if you want to carry full sail on her you must also use ballast, and why any man should want to embitter his life by toting around forty or fifty pounds of shot, when he can gain the same stiffness and greater speed from a little more beam and a flatter floor, passes my understanding. I know what you are going to say. You've been reading, and you want to have a fling at mere initial stability. Why, that is all one wants or can have in such a cockle-shell. No one cares to keep perpetually hanging out to windward, and in a squall you must let your sheets fly anyway, and sometimes let go your halliards, too, for that matter.

You must not expect to be able to sail well close-hauled in any canoe. She will always make more or less leeway, depending on the strength of the wind. For nearly fifteen years canoeists have been trying to find some thorough remedy for this fault, and not one of them has yet succeeded. An ordinary centreboard would, of course, check leeway, but the trunk takes up the room needed for sleeping, and the slit amidships weakens the boat and makes her leaky. A temporary centreboard, bolted to the keel, answers well enough for sailing in deep water, but it brings too great a lateral strain on the keel, and the necessity for constantly shipping and unshipping it makes it unsuitable for cruising.

Some men have used "side-boards," working like centreboards, between the side of the boat and a metal band; but they are apt to strain the top-streak, and are troublesome after all. As for leeboards, of whatever shape they may be, they are simply unmitigated nuisances. I once knew a canoeist who said that perhaps he had been a little too hard on his jib; that, though it was useless for sailing, it made a very decent towel at a pinch; but I never heard any one say a kind word about his leeboard, and I should advise you in cruising to do without anything of the sort, and paddle to windward when you must.

The well in all sailing canoes is much larger than in the Rob Roy. There are several good reasons for this, which I haven't time to speak of now, but, as it is so, the forward and after ends must each be covered with a hatch. The *Shadow* has two extra hatches—one to be used instead of an apron, the other meant to cover all the rest of the well when the boat is out of the water. This is a very neat arrangement, but after all I should stick to the apron. When not in use it can be rolled up on the forward hatch and will take up no room at all in the boat.

For steering a sailing canoe have a ruddor with foot gear, then both hands will be free. A good way of arranging this is to have a stretcher about two inches high at the sides and running up to, say, seven inches amidships. On top pivot the foot yoke; then from this lead copper wire straight along the inside of the well-combing, and out through it aft to the rudder yoke. Fit snap-hooks to the ends of the wires, and small rings to the yokes—they will save you trouble when you have to unship the rudder or stretcher—and be careful to make everything about the stretcher and foot-yoke strong. The designer of the *Jersey Blue* is the father of this gear, which I tested thoroughly last season, and like very much. You had better, however, in addition, have a socket for a rowlock on each side of the boat, for in very rough water it is both safer and easier to steer with the paddle. In the Rob Roy you will, of course, always use the paddle for steering. A seven-foot paddle is long enough for a narrow boat, but one of eight feet in length is better adapted for use in a wide craft like the *Shadow* or *Jersey Blue*, or even the *Nautilus*.

A canoe's sails must be low, because she is very narrow in proportion to her length. Then they must be so arranged that you can set them, tie down a reef, take them in and, if necessary, stow them below, without moving far from your seat. You must be able to do this easily and quickly, too, and it follows that the whole rig must be just as simple as it possibly can be and meet these needs. Remember, a canoe is not a yacht, and nothing pays so well in a small boat as simple gear. In the Rob Roy you will carry no little canvas anyway that you had better have it all in a mainsail. Some canoeists carry jib as well, but it would give you more annoyance than it is worth. The standing lug is probably the best mainsail for this boat. To set it you have only to toggle the boom to the mast, then bend the halliard to the yard and run it up, while to take it in the operation must be reversed.

With the sailing canoes, however, the case is different. One of these boats will stand a spread of thirty-five or forty feet of sail in a moderate breeze, and about sixty feet in light winds. Now, most canoeists agree that the best way to divide this is to put about two-thirds of it into a mainsail, and the rest into a jib and dandy of equal size. Then the mainsail tube must be stepped well aft, say about four feet and a half from the bow, and with a six-foot boom the centre of effort of the sail will be in the right place. The tube for the dandy-mast steps just aft the well, and the dandy and jib of course balance each other. This arrangement is the handiest one possible, excepting one which I'll speak of later, for in cruising and ordinary sailing there is but one sail to be managed, as the jib and dandy are only meant to be set in light weather. A triangular sail has been found the most convenient dandy, and the jib can only be of one shape. The chief difference between the four or five boat rigs lies in the shape and fittings of the mainsail. Three books—Baden Powell's "Canoe Traveling," Alden's "Canoe and the Flying Proa," and "Canoeing in Kanuckia"—contain plates which will give a better idea of the appearance of the sails than writing could. Mr. Baden Powell says he found the sliding sprit very handy, and the chief advantages he claims for it are the ease with which the sail can be stowed by simply unshipping the topmast and untoggling the boom, and the fact that, as the sprit slides down with the gunter-brass and topmast, the sail will keep a square head when reefed But then Mr. B. P. is the inventor of this particular rig, and we must make allowance for some paternal fondness on his part. Other people have found that the sliding gunter-brass often belies its name, and persists in staying aloft when it "hadn't oughter;" and that a mainsail which won't lower to the deck is a nuisance. Besides, there is too much gear for comfort.

(To be continued.)

National Pastimes.

MASSACHUSETTS TO THE FRONT.—Massachusetts is beating to arms, and archery clubs are forming in different towns. Springfield has two—the Lancewood and the Glen.

The officers and members of the Lancewood are as follows: Captain, E. W. Seeger; Lieutenant, Miss H. B. Atwater; Clerk, W. T. Seeger; Ladies, Misses M. B. Atwater, L. D. Foot, M. E. Gunn, Mattie Hall, M. F. Hatch, C. E. Warner, E. B. Warner, Mrs. J. W. Kirkham, Mrs. O. B. Ireland; Gentlemen, F. D. Foot, S. D. Foot, J. W. Kirkham, O. B. Ireland, Fred Harris.

The officers and members of the Glen are: Captain, Miss Mary Benton; Lieutenant, Miss Mary Leonard; Clerk, Miss Fannie Stebbins; Ladies, Misses Nellie Morris, Nannie Leonard, Louise Stebbins, Clara Shurtleff, Clara Collins; Gentlemen, R. F. Hyde, Edward Morris. There are also about a dozen honorary members, who attend the meetings simply to witness the sport.

Greenfield archers will soon organize. The rivalry ought to develop some good work in these clubs.

STRIPED PEDESTRIANS.—Some of the Massachusetts Charlestown State Prison men, who were allowed the freedom of the yard, found go-as-you-please races—eighteen times around to the mile—a glorious way of dispelling their *ennui*. We have no records of the results, save that a poor debtor's act prisoner usually came in ahead of his competitor, a corpulent, puffy bank defaulter. To beat the "Blower" Brown's record the course should have been straight-away from the prison.

"BLOWER" BROWN'S RECORD.—The six days go-as-you-please match, at Islington, England, which closed last Saturday night, is remarkable as developing the biggest pedestrian record yet made. The men on the track were "Blower" Brown, Hazael, Corkey and Weston. Hazael, in the first 26 hours, made the astonishing distance of 137 miles, a task never before approached; and "Blower" Brown, who held the first place at the end of the six days, added another wonderful record in his score of 542 miles and two laps. This was 23 miles better than any one has done before. Corkey, who took second place, scored 492 miles; Hazael, 473; and Weston, who walked, 450. At this rate, American pedestrians will have to brush up if the belt is to be brought back. We shall see 100 miles per day for six successive days before these long-distance tasks are over and the belt finally allowed to rest.

A NEW TASK.—Miss Lulu Loomer, a New York pedestrienne, who recently out-Andersoned Anderson at Boston in the quarter-mile style of locomotion, has now begun the task of making a better record than the long-standing one of Capt. Barclay's 1,000 miles in 1,000 hours. Boston was somewhat later than New York in surrendering to the woman-walk mania, and the disease lingers there longer than it has on this Island. We think a six-days' *fiasco* like that at Gilmore's Garden recently might be effectual.

CRICKET.—The Manhattan Cricket Club opened the season at Prospect Park last Saturday with a game between sides chosen by Messrs. Mackenzie and George Scott, the totals being respectively 12 and 46.

YOUNG AMERICA CRICKET CLUB.—This club, of Germantown, Pa., has secured new and commodious grounds which will be eleven acres in area, inclosed with an open fence eight feet in height, and will embrace grand stands, with a seating capacity for over 1,000 people, and running and walking cinder track twelve feet wide and one-third of a mile in length, with a 100 yard stretch of twenty feet wide; and, in addition, a full assortment of implements for lawn-tennis, archery and all popular athletic sports and outdoor games. A noteworthy and commendable move is the opening of the club privileges on a fixed day in each week to the ladies. The Young Americas number over three hundred strong and is in excellent financial condition. The following officers were elected for 1879: President, E. M. Davis, Jr.; vice-president, C. E. Morgan, Jr.; secretary, D. S. Newhall, 225 Church street; treasurer, E. G. H. Howell, 720 Filbert street, who with G. M. Newhall, W. R. Wright and G. Willis, constitute the committee. The club are arranging to play matches with Lord Harris' team in May, with the Lascelles club in June, and and with Daft's professional team in August, all foreign teams.

INTERNATIONAL CRICKET MATCH—*New York, April 29.*—Lord Harris' team arrived safely in San Francisco, and at once telegraphed Mr. Soutter, of the St. Georges Club, arranging a match for Tuesday and Wednesday, May 6 and 7, to be played at Hoboken, N. J. The American eleven will be composed of the best New York and Philadelphia cricketers. This will be the only game the English eleven will play in the East. On Oct. 17 of last year Lord Harris' eleven sailed from Southampton, bound for the antipodes. The first match was played at Adelaide, on Dec. 12, in which the travelers were victorious. Varied success followed the visitors throughout their trip—a trip originated by a party of gentlemen solely out of a pure love of sport, and it is greatly to be regretted that their pluck in going so far was not rewarded by better treatment at the hands of both Australian cricketers and public, the insult offered to the English team at Sidney, during the progress of a match with the New South Wales eleven, being unprecedented in cricket annals for unfairness, blackguardism and brutality; and it is to be hoped that America and England have seen the last of Australian cricket sharps. It is stated that five of the English team have returned to England, via Suez. This will leave nine men to travel this way. Lord Harris, however, can easily fill the two vacancies on his eleven from English cricketers now visiting this country. A match has already been arranged to be played in San Francisco. The next number of the FOREST AND STREAM will contain the dates of matches and name of the visitors.

—R. Daft's team of English professional cricketers to visit the United States in August is as follows: R. Daft, F. Morley, J. Selby, A. Shrewsbury, W. Oscroft, Ephraim Lockwood, G. Ulyett, W. Mycroft, R. G. Barlow and probably A. Shaw.

UNION ATHLETIC CLUB.—The programme of the spring games of the Union Athletic Club, to be held Saturday, May 21, includes: Putting the shot, throwing the hammer, 100-yard run, pole leaping, running broad jump, one-mile walk (limited to members only), three-mile walk, seven mile walk, three-mile run, one-mile run, one-half-mile run, one-quarter-mile run, bicycle race. Putting the shot, throwing the hammer, running broad jump, and pole leaping, will take place during the seven-mile walk.

RACKETS.—The racket match, which completed the choosing for the club championship, was played between Mr. G. C. Allen and Mr. Oliver Adams, with the following score:

	1st.	2d.	3d.	Total.
Mr. Allen	15	15	15	45
Mr. Adams	4	2	5	11

The second-class handicap match between Mr. F. R. Halsey and Mr. W. M. Hodges resulted as follows:

	1st.	2d.	3d.	4th.	Total.
Mr. Halsey	11	15	11	15	52
Mr. Hodges	15	4	15	18	52

They were even at 13 in the fourth game and set 5.

The most exciting contest of the day was the second-class handicap match between Mr. L. M. Rutherford and Mr. A. Noel, in which the former had to give the latter five aces each game. The whole of the five games had to be played to decide the contest. The score was as follows:

	1st.	2d.	3d.	4th.	5th.	Total.
Mr. Rutherford	15	6	9	15	15	60
Mr. Noel	11	15	15	7	5	53

SCOTTISH-AMERICAN ATHLETIC SPORTS.—The events of the annual spring handicap games of the Scottish-American Athletic Club, held at their grounds last Saturday, were:

Seventy-five Yards Dash—Fifteen first trial heats, with 60 entries. In the second trial heats the list was reduced to L A Stewart, 8½s; W J Crowley, 8½; M J Gilligan; 8½s, and J F Carroll, 8½s. The final heat resulted in a victory for W S Crowley in 8s, with Stewart second and Gilligan third.

Two-mile Walk—Two heats with 21 starters. Final heat won by F Lackenmacher in 16m 46½s.

Half-mile Run—All the runners in the first heat, by mistake, stopped one lap short, the first one to correct the error being W U Roberts, who won in 2m 28s. J Steele, Jr, won second heat in 2m 19s, and W Childs won third heat in 2m 27⅗s. Carroll took the final in 2m 17⅘s.

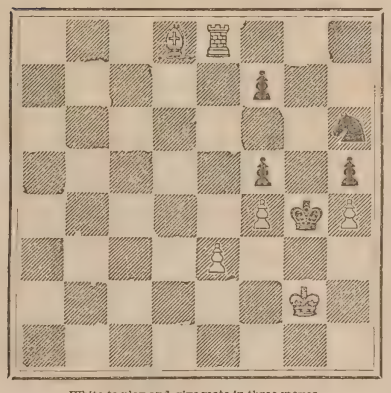
One-mile Walk—Open to members only, and won by F G Fanning, six competitors, in 7m 45½s.

The Game of Chess.

MANHATTAN CHESS CLUB, CAFE LOGELING, NO. 49 BOWERY

Problem No. 52.

Motto: XV Amendment.



White to play and give mate in three moves.

Game No. 114.—EVAN'S GAMBIT.

Mr. Orchard, the able editor of the Charleston (S. C.) *News*, publishes Morphy's last games, of which the subjoined is a selection. Of it he says: "A beautiful Evan's Gambit, that was played Nov. 11, 1866, at New Orleans:"

REMOVE WHITE'S QUEEN KNIGHT.

White. Morphy.	Black. C. O. Maurian.	White. Morphy.	Black. C. O. Maurian.
1—P-K4	1—P-K4	16—P tks P ch	16—K tks P
2—Kt-K B3	2—Kt-Q B3	17—Q-B4 †	17—K-Kt
3—B-B4	3—B-B4	18—Q-K R4	18—K-B
4—P-Q Kt4	4—B tks Q Kt P	19—Q tks R P	19—Q-Q3
5—P-B3	5—B-B4 (a)	20—B tks Kt †	20—R tks B

14—B-K Kt5	14—R-K (e)	29—Q tks R and wins	
15—P-K6	15—B-Q		

NOTES.

(*a*) The leading authorities say it makes no difference whether the B be played to this square or R's 4; but when the Q's Kt is given, the latter move is unquestionably preferable.

(*b*) I have no hesitation in recommending Kt-K B3 here.

(*c*) This certainly cannot be Black's best move; P-K R3 was the safest and best play.

(*d*) Again P-K R3 would have been better.

(*e*) Another inferior move. P-K B3 would have given Black a safe position.

(*f*) An old-time Morphy attack—sacrificing both Rooks, but winning the game.

(*g*) Nothing else is left for him to do.

(*h*) If instead of this Black play 27—P Q B3, the following variations would have ensued:

27—P tks Q	27—P-Q B3	33—Q-K5 †	30—K-B1
28—Q-B5 †	28—K-B2	31—P-Q7 and wins	
29—Q-Q7 †	29—K-K3		

CURSORY JOTTINGS.

—Queen Victoria says that chess is the only game that is entirely free from objectionable tendencies. Her son, Prince Leopold, is a fine player.

—Philip II., of Spain, is said to have conferred the Bishopric of Segorta on Ruy Lopez, a famous chess master, in recognition of his skill at chess.

—Sir Walter Raleigh is reported to have said, "I wish to live no longer than I can play at chess."

—The Glasgow vs. Copenhagen correspondence match games are now sufficiently advanced to become interesting, as may be seen by the subjoined record of the moves thus far made, according to the Glasgow *Herald*:

White. Glasgow.	Black. Copenhagen.	White. Copenhagen.	Black. Glasgow.

—The not wholly unexpected death of Professor Andersen caused Chessdom to weep and mourn over the loss of one of its greatest masters, to whose life-long devotion to Cassia the career of none of his predecessors is comparable. The chess world not only keeps moving, but is an active one withal, so much so that even so sad and distressing an occurrence as that neither impedes nor retards its progress, nor causes Cassia's votaries to forget their present and future duties as true knights. In chess, enthusiasm, sympathy and love go hand in hand, year in and year out.

—The unexpected announcement by Mr. Charles Mosliip that the brilliant career of the *Westminster Papers* is ended with this month's number, chess players universally regard as a calamity, and one that causes them to even forget, for the moment, to mourn for the great Andersen. The decision that thus suddenly consigns the *Papers* to the tomb that it must have eventually reached, in the height of prosperity, usefulness and popularity, is announced with much feeling, and although all regret that it is done, a more fitting time could hardly have been selected. Better now than when the tide of adversity sets in, or the weakness of old age is realized—the last move made, and the inevitable mate, so near at hand, that the resignation must be spoken with the best grace possible. We shall say but little of the *Westminster Papers* as a chess organ—the eleven volumes which the April number completes are a noble and fitting monument to its memory. As a chess monthly it was universally esteemed as the best published. The last number contains the following, with the request, "American papers please copy," which we are not at all disinclined to do: "There is a three-halfpence-a-line man infesting the chess world just now, whose lucubrations upon the subject of chess and chess players would be entertaining if they were not offensive."

—The *Echo* "hears that Mr. Jacob G. Ascher, who recently defeated Captain Mackenzie in a chess tournament at Montreal, will be entertained at a dinner by one of the London clubs on the occasion of his visiting London. Mr. Ascher is a Jew." Considering the mendacious character of this precious piece of information, most people will be inclined to think that the "informer" of the *Echo* is also a member of the only community of persons that ever attempted to make bricks without straw, and that the paragraph is a *Jew d'esprit* prompted by *esprit Jew corps*. But we do not think so. The thing seems to us to be a currish snap at a gentleman by some loafing Gentile, whose characteristics are too contemptible to be described in a phrase or an epithet. During his recent visit to Montreal, Captain Mackenzie played a very large number of off-hand games, occasionally a dozen or so consecutively, and lost, of course, "in clustering battle," a game or two; but he was defeated, in a chess player's sense, by no one, so pass that "informer" on, Mr. Passmore Edwardes. The same person, we should imagine, furnished the *Times* with a masterpiece of ignorant buffoonery, in the guise of an obituary notice of the late Herr Andersen's career. It occupied about twenty lines, and the corrections it provoked required just about as many in the subsequent issues of the "Thunderer."

—Nothing is more democratic than chess. The whole object of the game is to mate (or kill, as the word originally signified) the kings, which is often done by good players in the most red republican style; and the humblest piece, the pawn, may rise to the highest dignity.

—Tamerlane, Henry IV. of France, Charlemagne, Charles XII. of Sweden, Queen Elizabeth, Frederick the Great, and many other sovereigns, were lovers of chess.

—John, son of King Henry, and Fulco fell out at chess, and John broke Fulco's head with the chess board; and then Fulco gave him such a blow that he almost killed him.—*Old Manuscript.*

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

—We cannot attempt to comply with the requests of persons who write for the full names and addresses of the correspondents whose initials appear in this column.

J. B. G., Toronto.—The scores of Oct. 9, 1875, did not reach us.

BLACK BASS, New York.—The black bass open season in New York State opens May 20.

F. W. S.—The Newhouse trap is made by the Oneida Community, Oneida, N. Y. Minnesota pays a bounty on wolves.

A. F. D., Philadelphia.—We regard a double nose in a pointer as a freak of nature, and decidedly against the dog's appearance.

W. L. B., Danville, Ky.—Distemper comes in many forms, each requiring different treatment. We must have symptoms in order to prescribe.

G. W. S., Akron, Ohio.—Your puppy will probably get over his trouble. Feed him stimulating food, and keep him out of doors as much as possible.

J. B. McL., Janesville.—We shall shortly publish a cut of a Dandy Dinmont, together with full description. Do not know of any one in this country having them for sale.

L. M., Salem, Oregon.—Buy Livingston Stone's book, entitled "Domesticated Trout." We can furnish it. Mr. Stone is in charge of the U. S. Salmon Hatchery on the McCloud River, California.

SUBSCRIBER.—I have a lot of silk-worm gut, and find it very brittle. Can you inform me through your paper the best means to make it more pliable? Ans. Soak the gut several hours in strong vinegar.

READER, Newport, R. I.—Can you inform me of the proper bait for land-locked salmon at this or any season of the year? Ans. Artificial flies or worms. They will take any bait which a trout will take.

J. R. H.—Skag is the after keel or deadwood placed under the round-up of a small boat's stern. The term is also applied to designate a piece called shoe bolted to the keel aft to secure greater draught.

MASTIFF, New York.—Would you kindly inform me where I could procure a mastiff and what would be a fair price? Ans. We know of no regular dealers in mastiffs and can only suggest to you to advertise.

D. G. B., Austin, Ill.—Please tell me where to procure a copy of the new circular issued by the G. R. and I. R. R. Co., referred to in your last number? Ans. Address A. B. Leet, at the Company's office in Grand Rapids, Mich.

L. F. N., Salem.—Where can I get "Shooting Simplified," by J. D Dougall? Ans. Address Orange Judd Co., Broadway, New York.

A. B. C., Boston.—What is the title of J. D. Dougall's latest work on gunnery, where can I get it, and what is the price? Ans. We believe the title is "Breech-Loaders." It can be had from Chas. Scribner's Sons, 743 Broadway, N. Y.

T. R. K., Wheeling, W. Va.—A pointer pup has two lumps under neck. Ans. The probability is that the lumps will disappear, but you might put a flax-seed poultice on them. The thinness of your dog must be due to some other cause.

W. B. R., Welland, Ontario.—Give your dog a couple of capsules of balsam of copaiba every day. The discharge may be in the sheath alone, in which case wash it with the following lotion: Sulphate of zinc, 10 to 15 grs.; rosewater, 1 oz.; mix.

C., Statesville, N. C.—I have a pup, Saidie, by Elcho out of Stella. How and where can I obtain information as to the two latter, their pedigree, etc.? Ans. Elcho's pedigree can be obtained from his owner, Dr. Wm. Jarvis, Claremont, N. H. We do not know to which Stella you allude.

A. W. R., Ridge Hill, Mass.—About a week ago my dog was taken sick purging, and since then has become nearly blind; his eyes look smoky. Ans. Change the diet of your dog, and if the purging continues give him a tablespoonful of the following night and morning: Castor, oil, 2 oz; tincture of opium, 1 oz.; mix.

W. A. McG.—Best way to learn how to sail a catboat is to take an experienced hand out with you. From him and actual experiment you can learn more in half an hour than you can from books. If you want to read up upon boat sailing generally, Kemp's "Manual" is the best book published on that subject, price $3.50. Can obtain it for you.

COCK FIGHTER, Charleston, S. C.—We must protest our utter ignorance of all rules of the cock-pit. Had we ever investigated the laws governing the handling of fighting cocks, or were we in any way familiar with the usual mode of procedure in such gatherings, we should be happy to answer your queries. As it is, we know nothing of cock-fighting rules, and what is more, we do not care to learn anything about them.

F. D. B., Mt. Morris, N. Y.—It has been asserted that no white man was ever far enough north to see the nest, egg or young of the wild goose (common). I wish more light. Will you please give us their nesting-place, or where they rear their young? Ans. Wild geese breed in considerable numbers within the limits of the United States. We have frequently seen nests and young on the Missouri River, and in other parts of the West.

J. A., Hoboken, N. J.—1. I own a pair of Irish water spaniel pups. Their father and mother, both imported, took two first prizes at the W. K. C. show, 1875, and first and second prizes, 1873. If I line the bitch with a first-class Irish water spaniel dog, what ought I to get for the puppies? 2. Could I put my dog to his sister's pups without any harm? 3. Can you tell me of a good book to train my dogs by? Ans. 1. About $25 each. 2. Yes. 3. "Sportsman's Gazetteer."

W. R., New York.—I have been feeding my dog for the last month on Spratt's biscuit, mixed with oat meal. He seems to be in pretty good health, but his nose is always hot and dry. Do you think that the oat meal given him every day with the biscuit is too heating, and if so, is Spratt's biscuit alone sufficient to keep a dog in good health? How many of the biscuits should be given to a dog when not in exercise, and fed once a day? Ans. Feed the biscuits alone, giving three each day.

F. B. M., Luling, Texas.—1. What is a skeleton breech? 2. My dog, when over-heated, jumped into the river, and had a fit; what do you think caused it? 3. My Borden shell burst in the plating; what caused it to give way? Ans. 1. The metal heel plate or base of the stock which exists merely at the edges all around, and the wood checkered inside the metal. 2. Jumping in the water when over-heated, and he is not likely to have them again, except under similar circumstances. 3. They were poorly plated.

E. A. M.—A catboat's sail is like an ordinary mainsail, being fitted with boom, gaff and hanks on the mast. A lug sail has a yard along the head, projecting from one quarter to one-third its length forward of the mast. No boom nor hanks nor lacing around the mast. A standing lug has a boom in addition. Lugs are hoisted by bending on the halliards to the yard, or better, to a traveler or iron ring around the mast, the yard being hooked to the ring. In ordinary lug the tack is lashed down to the mast or thwart.

J. S., St. Paul, Minn.—For miscellaneous shooting, where one is liable to meet both large and small game, which would you recommend, the Shelton auxiliary rifle barrel, or the Baker three-barrelled gun? Ans. Both are excellent. Our choice would depend upon which predominated, the large or small game: if the latter, the Shelton auxiliary. If liable to jump a deer or a bear in cover at any moment, the Baker would have the preference, since no time would be lost, as there would be in adjusting the auxiliary barrel to your gun. For open ptairie shooting the Shelton would obviously be preferable.

F. L., Alpena.—A gentleman here, who pretends to know, says there is no such species of duck commonly called mallard, except the drake, and that the female is the gray duck. I claim that they are just as much a mallard as the drake, and that the gray duck is a species in itself. Am I right or wrong? Ans. We would answer your question with a word if we knew what you meant. The female mallard is entirely different from the drake in color, as you can see by looking at any flock of domestic ducks. The gray duck is a different species, belonging to another genus, and is, of course, very different from the female mallard.

AMATEUR, Cedarville, Ohio.—Would you kindly give me the proportions of a bass fishing rod that is well balanced, etc; to be about 15ft. long, and to be made of ash, with lancewood tip? Give length of each joint, and circumference of each where joined, with size and taper of but piece? Ans. A rod of two joints ash and tip of lancewood weighing about 2 lbs., fifteen feet in length, and tapering symmetrically from about ¾ of an inch diameter at the reel seat to almost a point at tip is an approved rod. Better buy Hallock's "Sportsman's Gazetteer," which devotes a very considerable space to bass rods, tackle, reels, artificial flies, methods and places for fishing, characteristics of species, etc.

RUFUS, Montreal.—Can you give the address of publishers of maps of Northern Maine and New Hampshire, bordering on Canada, or where such maps may be purchased? Also, please give me the name of a thorough work on Ichthyology, and where it may be procured? I have the "Gazetteer," and want a work that contains an introduction to the science if possible, as well as a book of reference. Ans. Please refer to the Bibliography of your "Sportsman's Gazetteer" for numerous works on Ichthyology. The Fifth Edition, ready this week, contains many additions. Livingston Stone's Appendix to "Domesticated Trout" (a most valuable book, price $1.75,) contains four or five pages of titles of works on Ichthyology, in English, French, and German text. For maps of Eastern Townships apply to Smith & Co., St. Johns, P. Q., or to Roberts & Co., Montreal.

SAPANULE!

TO SPORTSMEN---"THE ONE THING NEEDFUL!"

SAPANULE—Nature's ally—the best friend to man and beast. A preparation that is antagonistic to Inflammation. Congestion, Soreness and Fever cannot exist where this popular lotion is applied. For animals that are hard worked it is a sure restorative. For wounds, cuts, bruises, sprains, contusions, sores, new or old, it is a prompt and infallible cure. For all skin diseases and abrasions its healing and cleansing power is wonderful. SAPANULE is an admirable article for the bath and toilet. Used in foot and sponge baths, it will bring immediate relief from all pain or soreness in feet or limbs. The coat clean and silky.

FOR SALE.

A sportsman's home. I have a plantation of 1,222 acres which I wish to sell. It has on it a beautiful dwelling house, outhouses, stables, cribs, etc. It is entirely new; the soil is very fine, and is well known as the finest game farm in Eastern Va. The fields abound in quail, snipe, turkey, woodcock, geese, ducks and deer, also beautiful fish in the streams. The house is newly furnished, the grounds are in grass and beautiful flowers; there are a fine pair of horses, carriage and wagon, and provisions to last one year. I will sell the whole as it stands for $10,000, $5,000 cash and $5,000 on 2 years time at 6 per cent. I refer all parties to Capt. John M. Taylor, who has been on the farm and is well known to the sporting world. C. D. EPES, Nottoway Court House, Va. apr24 2t

FILE BINDER.

A FILE WHICH, WHEN COMPLETED, MAKES a permanent binding. For sale at this office. Price, 75 cents By mail, $1.

FIRE-ARMS, AMMUNITION AND ALL ARTICLES CONNECTED WITH THE SAME AND SOLE AGENT FOR

J. Stevens & Co.'s Celebrated Arms.

Mr. Charles Folsom, 53 Chambers St.: NEW YORK, May 23, 1877.
DEAR SIR—For the benefit of my friends and all marksmen in general, I desire to inscribe the "Stevens' Arms."
In my gallery, where so many tastes are to be suited, I will say that your rifles and pistols are the favorites. They have made the best shooting on record at my place, and last, but not least, they are seldom or never out of repair.
According to my ideas, which by my long experience I trust are correct, the shooting qualities of the J. Stevens & Co.'s arms are as near perfection as human ingenuity and skill can make them.
I take pleasure in making this voluntary contribution to your already large number of well-deserved recommendations. Yours truly, JAS. S. CONLIN, Shooting Gallery, 1,222 Broadway, N. Y.

A GREAT INVENTION!

Imitation

STAINED GLASS.

Patented Dec. 3, 1878.

CURTAINS, SHADES AND BLINDS dispensed with. New, Elegant, Cheap and Durable. It produces all the unique effects of a richly painted or Elegantly Stained Window. It is easily applied to the glass in Windows of Houses, Churches, Public Buildings, Steamboats, Street and Railroad Cars, Libraries, Parlors, Offices, Bath Rooms, Stairways, Transoms, Vestibule Doors, etc., with the full effect and brilliancy of variously colored ground glass. The article has *just been patented*, and not a single agency has as yet been established.

ONE GOOD MAN in each State wanted, to whom exclusive territory will be reserved for five years.

SAMPLES of three of the most beautiful styles will be sent prepaid with full instructions, WHOLESALE PRICES, etc., on receipt of $1.00.

Agents L. LUM SMITH, Patentee & Mf'r's.
717 Sansom Street, (Sole Agt. for U. S. & Canada.
Apply to PHILADELPHIA, Pa.

READ the following Extract from the *Representative Agents' Paper* of the world, THE PHILADELPHIA, PA., AGENTS' HERALD:

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and extraordinary sale. It will offer the best opportunity for coining money that has ever been presented to Agents, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the Agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

AGENTS' HERALD

THE LARGEST, SPICIEST AND ONLY REPRESENTATIVE PAPER OF ITS KIND.

ACTIVE GENTS GIVEN OOD EMPLOYMENT VERYWHERE

By over 200 responsible advertisers in this month's issue of the AGENTS' HERALD. Grand outfit, including Circulars, terms and a beautiful 10x14 Engraving of the SMITHOGRAPH, sample card, and full particulars of the AGENTS' DIRECTORY and sample copies of last month's AGENTS' HERALD, all for 10 CENTS. YEARLY SUBSCRIPTION, $1.00. One cent stamps taken. We cannot afford to give the paper away, so don't ask us. Address in haste,

TRADE— "BEATS THE WORLD." —MARK.

OLD JUDGE SMOKING TOBACCO.

The Only Tobacco Ever Manufactured that Does not Bite the Tongue.

"OLD JUDGE" CIGARETTES.

Manufactued under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effect of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

FOR SALE BY ALL DEALERS.

GOODWIN & CO., Manufacturers, 207 & 209 Water Street,

NEW YORK.

THE LATEST! FRAGRANT VANITY FAIR SMOKING.

In placing this New Tobacco before the public, we do not propose to disclose our special claims and improvements, for the reason that in every instance where we have introduced new articles it has been the custom of manufacturers of inferior productions to adopt our precise claims to obtain notoriety. We will, however, make one broad assertion—that no tobacco has ever before been produced possessing so many valuable requisites.

Sportsmen's Routes.

TO SPORTSMEN:

THE PENNSYLVANIA R.R. CO.

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROTTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

The lines of

Pennsylvani Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, RENOVA, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing Wing Shooting, and Still Hunting.

Also, to

TUCKERTON, BEACH HAVEN. CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

"THE FISHING LINE,"

TAKE THE

Grand Rapids & Indiana R.R.

Mackinaw, Grand Rapids & Cincinnati Short Line)

FOR THE

Trout, Grayling & Black Bass Fisheries,

AND THE

Famous Summer Resorts and Lakes

OF

NORTHERN MICHIGAN

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equalled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.

The TROUT Season begins May 1 and ends Sept. 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE also abound in large numbers in the many lakes and lakelets of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The Climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma

affections.

The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address A. B. LEET.
Gen'l Pass. Agent, Grand Rapids, Mich.

ONE OF THE WORLD'S WONDERS,

SOUR LAKE.

The Great Watering Place of Texas.

This remarkable natural phenomenon consists of a circular pool about an acre in extent, in a continual state of ebullition, produced by escaping gases. Around the lake are a great number of wells and springs, of thirteen distinct varieties of water—sulphur, soda, alum, iron, etc. The waters of the lake and many of the springs are very acid. A specific for rheumatism in its worst forms, dyspepsia, chronic diarhœa, skin, kidney, venereal and female diseases. Fishing excellent and game abundant at all seasons. Open all the year. The tourist, whether for health or pleasure, and the student of nature, can find no place more interesting. Sixty miles east of Houston on New Orleans R. R. Board, week, $10; month, $35. Address

J. A. MERCHANT,
apr24 3mos Sour Lake, Texas.

Gunpowder.

THE

HAZARD POWDER CO

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only*.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shotguns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration*. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12½ and 6¼ lbs, and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist*. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR *EXPORT*, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office.

PURE TIN-COATED & BURNISHED DROP AND BUCK SHOT.

AMERICAN STANDARD--EAGLE BRAND.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM: NEW YORK, Jan. 13, 1879.

Having been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot my 6,000 ball match, Jan. 8 and 9, with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting I used them until they became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

THE LEROY SHOT AND LEAD M'F'G CO., NEW YORK.

TheDelaware Shell.

Our Improved Shell Now Possesses the Following Merits:

1st. Perfect Uniformity of Flange
2d. They are Sure Fire and Gas Tight.
3d. The Paper is Superior.
4th. The Primers are Easily Expelled and Replaced, and can be Reloaded a Number of Times.

PRICE AS LOW AS ANY OTHER SHELL.

ADDRESS, **Delaware Cartridge Co.,**
WILMINGTON, DELAWARE.

Dittmar Powder

THE CHAMPION POWDER

OF THE WORLD.

NO SMOKE--NO DIRT--LESS RECOIL

STRONG AND SAFE

SUPERIOR IN EVERY RESPECT TO BLACK POWDER

6,013 SHOTS WITHOUT WIPING IN A SHOT-GUN.

Captain Bogardus' great feat of breaking 6,000 glass balls has proved that the powder is all that is claimed for it. The barrel, without being wiped, were as clean at the end of the match as after the first shot. The fact of the firing of so many shots in succession, and that the Captain has used about 200 pounds of the same powder during the last year in one gun, shows, without a doubt, that the powder is EFFICIENT, UNIFORM and SAFE.

The rifle powder is also without a rival. The standing challenge to test this powder against any other has never been accepted. Many riflemen throughout the country have been successful with the powder, as, for instance, Mr. E. B. Scuther, of the Massachusetts Rifle Association, won last year two gold medals, two silver medals, two revolvers, and four other prizes in using the DITTMAR RIFLE POWDER.

Greater facilities and greater demand have enabled us to reduce the price of the powder considerably, and the fact that the Government Armory at Springfield is making now all kinds of testing machinery for us will enable us to produce always a uniform, and in every way reliable, article.

TRY OUR NEW WATERPROOF SHOT-GUN AMMUNITION. Cheap, and warranted to give satisfaction in every respect. Ammunition for gallery rifle practice always on hand, and all kinds of rifle ammunition made to order.

THE WARY TROUT.

Down in the deep
Dark holes I keep,
And there in the noontide I float and sleep;
By the hemlock log,
And the springing bog,
And the arching alders I lie *incog.*

The angler's fly
Comes dancing by,
But never a moment it cheats my eye;
For the hermit trout
Is not such a lout
As to be by a wading boy pulled out.

King of the brook,
No fisher's hook
Fills me with dread of the sweaty cook;
But here I lie
And laugh as they try;
Shall I bite at their bait? No, no; not I.

But when the streams,
With moonlight beams,
Sparkle all silver and starlight gleams,
Then, then look out
For the hermit trout;
For he springs and dimples the shallows about,
While the tired angler dreams.

—*American Turf Register*, 1849.

Down the Big River—4th Paper.

[CONTINUED FROM APRIL 24.]

WHAT a terribly long State is Illinois! We had started nearly one hundred miles below the northern edge of the State. We had been eight days getting to St. Louis, and it was another full week after leaving that city before our skiff rounded Cairo Point. The interval was quite without interest; but, to convey an idea of what occurs on such a trip, I will transcribe a few notes from my diary:

Monday, June 10—On the Illinois shore here there are no bluffs, but opposite there is a long line of cliff of grayish colored stone. The turkey buzzards begin to be more numerous than the crows, and an occasional eagle is seen. The snipe have all disappeared, at least we have seen none for several days. We do not see so many snakes, either, as we did last week. After a short pull this morning we arrived at a place called Harrisonville, where I mailed a letter. We made fair time during the day, getting below St. Genevieve early and finding a camping place at the mouth of a small slough. In the bluffs just below I noticed some curious natural bas relief work, which seemed from the river to be quite perfect. I noticed several arches, and such which might be mistaken at a distance for the imitation abutments of modern would-be pretentious buildings. There are a great many logs lodged on the sand-bars here and there.

Tuesday—Began the day's voyage by skirting an island close to the Illinois shore. The shute was only five or six rods wide, and the shores were lined with cottonwoods of large size, forming a fine grove. We started up an owl on the island—a medium sized bird of reddish-brown. He kept just out of shooting distance for more than half a mile, and then flew around to the other side of the island and sent us a dismal hoot to let us know of his safe arrival. Just above Chester we passed an odd looking grove. It was composed of bean-pole cottonwoods, and the trunks and branches were so closely woven about with climbing plants as to be completely covered. The St. Mary's River and another smaller stream come in near here (Chester) We stopped at noon to boil coffee at a place where a kind of soft reddish stone cropped out, nearly every piece of which was more or less pitted by rain drops.

Wednesday—Got up stiff and disgusted. Mosquitoes were around all night. Had a good camping place otherwise. To-day has been a miserable one—rainy, windy, uninteresting. We are encamped to-night just below Cape Girardeau in a not very good place, but too tired to look further.

Thursday—Another miserable day.

Friday—Slept under a beech-tree, but it rained all the same, and, as this cheated us out of sleep during the night, we made it up by sleeping in the morning and postponing our journey until night. We are twenty-five miles from Cairo. Found a lot of pennyroyal, and picked a big bunch to rub our skins with as an anti-mosquito cosmetic. Saw here our first ticks—small ones, but vicious looking as those of larger development. Shot a young rabbit and had him for supper, though he was hardly larger than a squirrel. Heard here, also, for the first time, the notes of the "chuck-wills-widow." I at first mistook it for the voice of the whip-poor-will, only one note in the cry being different. Did not see the bird. The city of Thebes is located a mile above us, and Santa Fee is a mile below. The region round about the mouths of the Ohio bears the local nick-name of 'Eygpt,' and as a result (or cause, which?) is plentifully besprinkled with old Coptic names, furnishing a good illustration of the folly of naming localities and places of the New World after those of the Old. As I pass these insignificant villages bearing such magniloquent titles, I cannot help reflecting how our maps are disfigured with such travesties. We have a York, a Rome, a Paris, a Milan, a Dresden, a Carthage, a Cairo, a Thebes and I know not how many more in nearly every State in the Union. Our mountains are inappropriately christened with proper names of persons of note, while insignificant streams immortalize a Smith, a Jones or Robinson. I remember once standing on the summit of a magnificent peak in the Adirondacks which the Indians called Tahowns, but which our map makers must rechristen after the author of the "Army Life on the Border." And where, in the entire list of titles adopted from geographical and biographical gazetteers, can be found three such beautifully appropriate names as those bestowed by the aborigines on our three great rivers: "Misi-sipi," Father of Waters; "Mis-ouri." The Muddy Water, and "O-hi-o" The Beautiful River. Alack! for New-World nomenclature! It was the town of Thebes that called out these reflections. This homonym of the city of a hundred gates contains barely one score of houses, the principal one of which combines in itself a grocery, drygoods, hardware and boot and shoe store.

Saturday—We had intended to travel to-night, and to keep awake I lit the lamp and amused myself by reading Taylor's 'Coming Empire,' a very interesting book. Mr. Taylor's Empire is Texas,

—'That beautiful land,
The far-away home of the tick and the chigger,
Where the centipede crawls o'er the hot burning sand,
And the tarantulas sting both the white and the nigger.'

But it will be a long time before the imperial crown rests on the standards of that thinly populated State. Just as we got ready to start it began to rain again, so we turned in and slept till morning. It rained quite hard before daylight, but so thick was the canopy of beech-leaves over us that we were not wetted in the least. We got up early and went on without breakfast, stopping about noon to partake of a lunch of coffee and crackers. After dinner we passed the Ohio and got a distant glimpse of the city of Cairo. This city is about a mile from the Mississippi on the Ohio. There is a long, low point forming the northern corner of the latter's mouth, and the steamers have to make a wide circuit to get up to the city. This point is uninhabited and so long that even after we had caught a glimpse of the steeples of Cairo we feared we had passed the mouth of the Ohio without seeing it, as we had passed the mouths of the Des Moines and the Illinois. We pulled for nearly an hour, straining our eyes to catch sight of the river before it finally appeared. But at last we came to it and saw it well. And it was well worth all our looking to gaze on its beautiful waters after voyaging for a week on the muddy waters of the Mississippi. Well did the savages name it the Beautiful River. We shot past the southern end of Illinois, and in an instant the green tint of the waters on our left told us the river was there. How beautiful seemed the clear green water! The oar-blades flashed through it, visible to their very tips, as they had not done in any water we had floated in for days. On our right a rushing ridge of ripples of a dirty cast told where the Mississippi's muddy flood was endeavoring to pollute the incoming tide. It was the battle ground where purity and impurity strove for the mastery. West of this ridge all was foul with the mud of thousands of northwestern miles; to the east all was clear and limpid save in spots where the Mississippi, as though unable to meet her antagonist in honorable combat, shoved her dirty undercurrents along the bottom under the Ohio's waters to bubble up in dirty, yellowish-green, poisonous-looking whirlpools. Through many of these the skiff slowly floated, and finally came to where the green water alone was to be seen around us, and we began to rejoice in the prospect of a drinkable fluid to float on. It is a long way across the yawning estuary, longer almost, it seemed, than across the mouths of the Missouri; but we got across it at last, and then, to our disgust, the oar blades disappeared in the yellow waters of the Mississippi, only slightly tempered and toned down by the crystaline purity of its most beautiful tributary. As in most battles between Beast and Beauty, the Beast is triumphant. We passed on and got some ways below Columbus before stopping. Camped in a little bay. The bank close to the water's edge is very muddy, but higher up it is baked hard by the sun. The soil here is a kind of clay. Above Columbus we noticed a long bluff of reddish clay with a substratum of whiter color, and here it crops out again. A few miles below here is a quarry where the clay has been extracted. Close by is a lighthouse, *i. e.*, a post with a board on top on which is stencilled: "U. S. Light-house Establishment." A lanters is hung here every night. These lamps are quite numerous all along the river, and the men who attend them get from ten to fifteen dollars per month per lamp. One man usually attends two lamps

We spread the cover of the boat on the ground and made our beds on it, and for the first time on the trip enjoyed a good night's rest. No mosquitoes bothered us, it was cool enough for comfort, and I was tired enough, after pulling twenty-five miles on nothing but a coffee and cracker lunch, to sleep without a disturbing dream. It was a rare thing in this bug infested valley. This day we have devoted to overhauling our outfit and washing the boat and making ourselves clean after our three weeks' voyage. While at supper, after the close of our labors, a young man came up to light the Government lamp, and we fell into a conversation about our surroundings. Nothing of especial interest, however, was said on either side until he chanced to remark that he would not come into these woods after dark for twice the price paid for lighting the lamps.

"Why?" I asked; "what's the danger?"

"Oh, it ain't safe."

"But why? Are there robbers here?"

"Worse than that—murderers! There are men in these woods would murder a man for a nickel. You've heard of Chalk Bluffs, haven't you? Well, this is the place. There's been heaps of folks murdered here, and not so very long ago, either. I wouldn't want to be caught here after dark, I tell you."

"Can't they put a stop to it?"

"No; at least I reckon not, for the murderers are never caught, and they don't ever know who they are. Some reckon they're niggers, but I think they're tramps from the North. But I must be going. I don't attend the lamps myself. I'm lighting up to-night for my cousin. It's getting dark, and I don't want to be here then. Good evening."

"Good evening."

Well, it certainly might be called Chalk Bluffs if the vast amount of chalky clay around can be taken as a basis for a name; and it is dismal enough, all except the waters of the bay and the immediate shore, to suggest murder or anything else disagreeable. The soil close to the water was mud, dry then, but only wanting a slight rain to render it slippery and disgusting. About four or five rods from the water's edge rose a wooded hillside, down which trickled several small streamlets which furnished us with drinkable water, though slightly impregnated with chalk. The woods on the hillside were thick and tangled and cast a very gloomy shade, in which a nervous imagination might easily locate murderers *ad infinitum*. Our camp was located in about the best spot in the bay—a level spot of about two rods square, of dry mud, with a shelving beach of the same material extending to the water's edge, where our boat was tied to a stump. A large cottonwood was standing not far from the water, and about two rods back of this were several smaller trees, to which on this second night we had decided to hang our hammocks.

At last every task was completed and the last piece of luggage stowed away, and we prepared for bed. Our valises were piled on the ground under our heads, our clothes were suspended from our hammock-ropes, and our pistols were under our pillows. We soon tumbled in, hoping to get another full night's sleep, which would enable us to be up with the sun and off on a fifty-mile pull in the morning. Well, we were up with the sun. Indeed, we were up a long time before the sun dreamed of being up. I had slept for perhaps an hour when I heard Caywood calling out to me in the darkness, and I heard a rustling among the young trees close to his bed. What he said I do not know, but I thought he said "Get your pistol," and my thoughts instantly went back to what the lamp-lighter had told us about the murderers haunting this hillside, and I put my hand under my pillow and grabbed my pistol and prepared myself to resist to the bloody end. At this moment I heard a rushing sound, and in the darkness saw a dim white figure, which I thought must be Caywood, scouting toward the boat with his legs bare and his arms fondly clasping a bundle of clothes. This corroborated my impression that he had been attacked by robbers, and I began to peer through the darkness to discover their whereabouts, when the big rain drops spattering in my face and the two streams of water running down into my hammock—one from the head, the other from the foot—awoke me to a complete consciousness of the true state of affairs. A heavy thunder shower had sprung up, and Caywood, who has a mortal terror of getting wet, had grabbed his clothes and made for the boat. He says that as he started he cried out: "How is this?" and the next moment found himself seated gracefully in the mud and sliding rapidly toward the big cottonwood, which he was forced to straddle to stop his progress. In his flight he dropped his breeches, and this morning they were found half covered with mud and "gorgeous to behold." As soon as I realized what was the matter, I too started for the boat. I seized my pillow and my blanket, and kept hold of my pistol. Unwarned by Caywood's fall, which I had not seen, I "followed suit," but with a higher card. I took one step forward and then a slide onward and downward, and then—just imagine it—with nothing on but a short flannel undershirt, and closely hugging my blanket and pistol and pillow, I sat gently down in the mud, firmly and gracefully; sat for a moment trying to wonder if this was the territory named

by the old savages "the dark and muddy ground" (we were in Kentucky), and then picked myself up and hurried into the boat. During this escapade I dropped my pillow; my blanket was wet and muddy; Caywood had on nothing but his coat and shirt; the boat was half full of water, and the cover was too low to sit upright under, and the seats were too near together to lie down between, and everything we touched was cold and wet and clammy, and we ourselves were somewhat in the condition of clams at the lowest stage of low water. At last we lay down on our backs with our necks poised across the edge of the stern sheets and our legs thrown over the hindmost thwart, and made up our minds to bear it. In this condition we laid till morning solacing ourselves with such parodies as this:

"Oh, ever thus from childhood's days,
Misfortunes have my steps attended;
I never crossed a slippery place
But I was sure to be up-ended;
Ne'er yet my netted couch I've swung
Beneath some young tree's emerald awning
But all the founts of Heaven were sprung,
And I was soaked with rain ere morning."

Such misfortunes never come alone. Misery loves company, and soon the measure of our discomfiture was full. A steamer—one of the largest on the river, the *Belle of Shreveport*—came along, and the swell created by her paddles was proportionately high and heavy. As the waves reached us our skiff began to rock, gently at first, like a baby's cradle, then more fiercely, with sudden stops as she was dashed against the muddy beach; then we could hear the sough of the waves as they broke along the shore. It was pleasant music to me. Oft, when a child, I have listened to the wash of the shore-dashing waves as they beat on the shores of Long Island Sound, and I never hear similar sounds now without pleasant memories being awakened and a sense of delight thrilling my bosom. But presently, when one wave larger than the rest gathered itself into a heap a yard or two distant and broke over the stern end of the boat, covering us like a shock shower bath and filling the boat until it was impossible to lie on the bottom without holding ourselves down, that drove all the pleasant memories out of my head. Ugh! how cold and wet that water was! All that night and most of the next morning the rain poured down in torrents while we lay there like drowned rats, only more wretched and cold and wet. At last, about ten o'clock, it stopped raining, and we crawled to the front of the boat and surveyed the camp. Mud and water were the principal objects visible. Not since old Noah climbed down the flood-soaked sides of Ararat was there ever such a picture of complete drownedness. Our hammocks were hanging there dripping, with our guns at their heads covered with the disagreeable oxide; our shoes were full of mud and water and our breeches were covered with the same material. A repulsive looking object half way down the beach I had some difficulty in recognizing as my beautiful white pillow of last night. Our valises lay in puddles of water with everything in them wet, and all the wood within reach had all the blaze soaked out of it and only the smoke left in. I dislike to confess it, but before we again got everything washed and dried enough profanity resounded through Chalk Bluffs to justify its reputation as a dangerous neighborhood.

Just as we crawled out of the boat a man—the cousin of the boy who had come the night before—came up to take down the Government lamp, and he said, in answer to our inquiries, that nobody had ever been hurt in those bluffs to his knowledge, but that owing to their being so dark and gloomy they were celebrated as a dangerous locality for miles around, and that there was not a boy in the whole country who could be induced to enter them after dark.

GUY RIVERS.

JERSEY SNIPE SHOOTING, PAST AND PRESENT.

MR. EDITOR:

Years ago, when a man could go shooting on our meadows without fear of having his gun knocked out of his hand by a locomotive, and before unlimited co-operative snipe stock companies were formed, there were no better grounds than those bordered by the Hackensack and Passaic rivers. In those days a snipe was a snipe—not a knife-blade, a corkscrew or a gray streak, with a chance of his nibs being at either end. Glorious times were they, indeed, when Herbert and Mike Sandford used to swear that they—the snipe—lit in trees, and enabled the old stagers to make the large bags "we've heerd on." It might be pertinent to ask, "Why don't they do so now?" But the fact is that the snipe of to-day is a degenerate offspring, cast loose upon the world, after being sired by the sharpest kind of blade and dammed by the crookedest kind of streak, a blessing only to powder manufacturers and shot tower proprietors.

When Bill Herbert wrote "Tom Draw's Visit to Pine Brook" he had much to account for. What an inspiring, jolly, life-like sketch it is! How well can I remember reading it over and over when a boy, and in the evening listening, with eyes and mouth wide open, to the old colonel as he told how he and a friend of his killed 102 snipe once on Ford Island! At such times the excitement obliged me to oil my gun, and I really believed that I had been born forty years too late. I cannot say now but that I was right, for in these days what private individual can be successful against large corporations? Even while I write my desk is shaken and my windows rattled by the passing of the vanguard of the Pine Brook W. C. S. S. Co., of Newark, on their way to let loose the dogs of war and to collect their dividend of one-half snipe per man.

Mr. Editor, honestly, have you been on a well written up snipe ground in the year of our Lord, 1879? Business. Ah, yes. Well, I'll tell you, which will do as well. You, of course, know that the best shooting is to be found near a house of public entertainment. I would have you there. Long before dawn reach the meadow, and as the sun and mist arise, you will see seated on logs centering each favorite spot those to the manor born, whose only cry is "Up and at them!" The smell of India rubber boots and great splashings announce the approach of the co-operative snipe stock companies, which, across fence rails, quarter on to the meadows in single file, soon to scatter far and near. For number and variety of dogs the New York bench show is nowhere. Should a dog unfortunately point on the Troy meadows, he will be backed in rotation by other dogs on Ford Island, Leonard Meadows, Pine Brook Flats, and so on down the river to the Big Piece, five miles away. In fact, a dog frequently backs at Little Falls three hours after the dog that made the point has gone home.

When a wild bird is flushed the cry of "Mark! Mark!" resounds along the line through Morris and Passaic counties, informing the inhabitants of Paterson and Morristown simultaneously that a bird is on the wing. At such times good sportsmen can be distinguished squatting down, which enables them to mark the bird's course with great accuracy, and when the armed men get up it reminds one of the rising of the Doones! It matters little where the starved phantom of a bird takes his flight, for he must run the gauntlet of a thousand guns. When the *scaipe*-grace has dodged New Jersey, and the mountains far away are tired of repeating the deafening fusillade which celebrated his departure, the screen of blinding smoke then settles down and discovers the meadows resembling one vast Inferno, the vapors tainted with muttered execrations, and every blade of grass reeking with sulphur and saltpeter, more villainous than one hundred representations of the Black Crook.

This is where we go, and consider it sport!

Should a stranger venture on that unhallowed spot at evening, his unsophisticated eye would at first detect the countless droppings of a great flight of birds, but in reality what he sees are wads, scattered over the green sward as if some mighty game of chance had just ended in a row, and the chips had been left behind uncashed.

And so it is, as year after year rolls on, what with bad laws and laws that have become a dead letter, the speedy extermination is inevitable of this poor, friendless bird on the Atlantic sea-board. Take it here at home. The law of New Jersey prohibits spring snipe shooting after April, and yet, either the ignorance or selfishness of our would-be sportsmen will lead to more birds being killed in May than have been already slaughtered. When the Government decides to put a license on guns, it will take more than one step in the right direction toward game preservation.

EPINS.

TWO FRAGMENTS.

FIRST—THE MARCH TO CAMP.

A STIR at daybreak in a dismal rain! The tents are struck and we are drenched; there is no dry thing to be seen or touched. The monster wagons, schooners of the prairie sea, are freighted, and at the words "Pull out!" the long train falls in line like the uncoiling of a whip-lash to trail along the ground. The road, the teams, the humor of the camp are heavy, and we wind around the base of Turtle Mountain as a lethargic serpent drags its slow length along. We mire down in every sag of the ground, and extricate ourselves but to stick again. Now it is a steep-banked coulée, with a treacherous black streak of mud in the cul-de-sac. A halt on the brink. Down go the men with scythes and axes to mow long grass and hew willow withes and fill the bottomless pit, till we span it with a haystack bridge. "All ready, sir." "Go on!" The wheels are locked, the teamster gathers his off-wheeler's bridle short, and shakes his lead-line to straighten out the swing. With both wheelers on their haunches, down plunges the monster wagon like an avalanche. Axes flash in the air; the lock-chains are knocked from the wheels; the mules flinch for an instant before the final plunge. In they go, the wagon pitching after with a lurch, crunching up to the hubs in the yielding mass; they throw themselves into their collars, and pull through with the energy of desperation, lashed into splendid achievements by the file of sturdy fellows who ply those dreadful black-snakes. They go straining up the steep ascent, to pause for breath on the summit. The next, and the next. But one is not so fortunate; perhaps the load is greater or the lines less skillfully handled. With a fearful lurch the wagon stops, hopelessly tilted to one side, with the team tied up in a kicking, writhing, floundering knot, while the black-snakes hiss in the blue air of blasphemy. "Stuck, by blank, blank, blank!" says the teamster. The traces are slipped, the animals are led out, a fresh, cool team are hooked on and the Rubicon is passed. The train strings out again, this time along a stretch of soggy prairie, and we creep on to camp like autumnal flies upon a gummy window pane.

In camp, who cares for this? The storm and the march are past. We rest on an outlying knoll of the mountain, overlooking a boundless horizon. To our backs, the bold acclivity of the Turtle, which has mantled its shell with verdure during its sleep of ages. In the far west, a faint, green line shows where a fringe of noble trees bedecks the Souris River. The sun sinks to rest in a sea of splendid purple, touching with reddened hand the billows of *cumulo-stratus*, and the scene is bathed in a flood of light. Sunset is below us—seeming at our very feet; and just before the fiery disk had grazed the horizon, it were strange—nay, ominous—to see a shadow steal along the prairie till it rose to wrap us also in its folds. But now to the preparations for the night. The smoke curling sleepily upward; the animals gathered in sixes at the wagon-tongues; the rattling of halter-chains, munching of forage, the mules' tails incessantly switching; knots of men lolling and smoking, taking no thought of this day or the morrow. Then to their blankets, and sleep is the god of the camp, save over yonder, where the big white tent looms up aglow with the bull's-eye, where, with the telescope fixed on the zenith, an astronomer learns from the stars to determine the bounds of two nations.

SECOND—THE BIVOUAC OF DEATH.

Aye, save over yonder again, where in the gloom of the mountain ravine stands the lone tepée. The master of the lodge is gone, but his tent is pitched with all the circumstance of life, the lodge-poles protruding from the summit, like bony fingers pointing significantly upward. The patchwork cover of raw-hide is closed with care around the entrance. He may enter now, if he will, without moving the flap. Before the entrance lies the horse of many a battle, stiff in a pool of blood. Within, disposed in formal order, are the arms and implements, the equipments of the chase and warfare—the knife, the bow and quiver, the saddle, the bridle and the lariat; the beaded hunting shirt and fringed leggings, the head-dress of eagle plumes, the necklace of bears' claws, the scalps of vanquished foe. These were all his once—and why not now? For this is the material embodiment of a faith and system of theology. The mound of earth hard by the tepée holds the visible form—the horse, the lodge and all the paraphernalia are in keeping. The widow crouches by the grave, and all night long the cries of the bird of darkness echo her despairing lamentations; the rest is silence, gloom and fear. But her dim vision reaches into spirit land, beyond the black river, where the ghostly brave on a phantom steed still urges the chase, still conquers his foes on the voiceless shore.

DR. ELLIOTT COUES, U. S. A.

Fish Culture.

WISCONSIN FISH COMMISSION—*Madison, Wis., May* 1.—A meeting of the Commission was held on the 30th ult. There were present Gov. Wm. E. Smith, *ex officio*; Wm. Welch, Madison, President; Moses Hooper, Oshkosh, Secretary; Mark Douglass, Melrose, Jackson County; John P. Antisdel, Milwaukee; Christopher Hutchinson, Beetown, Grant County. After disposing of regular business, the principal object of the meeting was discussed. A fierce war has been raging through the newspapers as to the management of our fish hatchery, near Madison. After a thorough examination of affairs, the present Superintendent, Mr. Welsher, was retained. It is expected that by next fall one million trout will be ready for distribution.

ROVER.

MISSISSIPPI SHAD AND SALMON—*Editor Forest and Stream:* Again, earlier than usual, appears the genius who notes the capture of salmon and shad near Memphis, Tenn. The shad inhabiting those waters is a very old resident, and is familiarly known as the "gizzard shad" (*Dorosoma cepedianum*). He is not very abundant, and bears some resemblance to the fish known here as "skipjack." The salmon was the Ohio River salmon, sometimes known as glass-eyed pike and American pike perch (*Stizostedian americana*). Nothing would afford me more pleasure than to record the occurrence of these species of fish—the genuine shad and salmon—in Mississippi waters; and I verily believe that the establishment of the *Salmo quinnat* in these waters, through repeated annual plantings by way of Springfield, Mo., in the upper waters of the white River of Arkansas, is possible. It is there that suitable conditions for the spawning of these fish can be found, several hundred miles nearer the Gulf than upon any other stream. Plantings further down the stream are exposed to the rapacity of countless schools of game fish, such predatory fellows as the pike-perch above mentioned, the black bass (*Micropterus salmoides*), and the striped bass (*Roccus chrysops*) at a time when the young fish are least able to take care of themselves. It would seem that three to five years of intelligent and faithful effort in the way of planting the fry should solve this most difficult, important and interesting problem.

Mouth of Black River, Ark., April 28, 1879.

CALIFORNIA MOUNTAIN TROUT IN EASTERN WATERS.

DANSVILLE, N. Y., April 30, 1879.

EDITOR FOREST AND STREAM:

About one year ago, at the time of our annual fish planting, this Association was kindly furnished by Seth Green with a few thousand "California mountain trout" fry. After some deliberation a stream not far from town was selected as being the proper place for their deposit. Here they were placed and forgotten, save by a few interested ones. A farmer in town a few days ago, who is somewhat interested in sporting matters, and through whose land the above-mentioned stream flows, told one of our members of a peculiar fish his boy had caught the day before. Suspicions were instantly aroused, and an expert was sent at once with rod and flies to investigate. The result was a half dozen beautiful specimens of genuine California mountain trout, from five to seven inches in length, which were immediately sent to Seth Green, who answered at once as follows:

"The fish were received. I am very much obliged. They are the California mountain trout, eleven months old. When they are two years old they will weigh one pound. You should not take them this year. I am raising 15,000 of the same age, and when they get large enough to spawn we will stock the country fast. Let me know how you took them, and whether there are many in the stream. They spawn in April and should not be taken. Are they gamy on the hook? Yours, SETH GREEN.

"P. S.—Could you take them fast? I have just got through eating the specimens, and they were splendid. S. G."

The success of this effort on the part of the Dansville Sportsmen's Association demonstrates the fact that the California mountain trout can be successfully raised in Western New York at least. Growing as they do very rapidly, and possessing all the gamy qualities of our own splendid brook trout, it is reasonable to suppose that when Mr. Green is able to supply the fry in quantities, the time will not be far distant when the California mountain trout will not only offer great sport to the Eastern anglers, but form a food supply at once delicate and abundant.

Natural History.

THE BITE OF THE SKUNK.

EASTON, Pa., March 17, 1879.

EDITOR FOREST AND STREAM:

Col. Byer's paper on "Skunk Bite," in your March 13 number, is definite and circumstantial. A veteran editor like the Col. knows how to employ his data. It is to be hoped the plainsmen will be stirred up to give their experience upon this subject. It is a part of their faith that it results in rabies. What is wanted are facts, not only the bites that result in hydrophobia, but the bites that do not. The objection to most of the testimony so far is that it is opinionative and comes second or third hand. Col. Dodge is one of the much quoted authorities for the affirmative. He knows *by report* of sixteen cases—every one proving fatal—while he was stationed at Fort Dodge, and quotes Dr. Janeway's report of ten out of eleven cases of skunk bite proving fatal. His only personal experience was with one of his men who had the ball of his thumb badly gnawed by a skunk. This the Col. treated (having no caustic) by washing with castile soap and simple water dressing. The man was with him for over a year afterward and had experienced no ill-effect from the wound. The writer has heard the subject much discussed in Colorado, but taking no notes will not attempt to report the statements. Lieutenant Wheeler, then stationed at Fort Lyon (1875), was the most definite. He was brought up on the plains and his

belief that skunk bite resulted in rabies was pronounced. If this officer will send his experience to FOREST AND STREAM it will be interesting and valuable. B.

PUTNAM, March 18, 1879.

EDITOR FOREST AND STREAM:

I thought perhaps this affair that happened some thirty years ago might amuse some of the readers of your paper. Around my native place on Cape Cod, skunks used to be very thick. My great-aunt Achsah was a powerful woman; she could row cross-handed, dig clams, hold plow, set fence, in fact do the work of an able-bodied man. After Uncle Samuel died she kept a breechy cow that half the time was in her neighbors' gardens, but they suffered in silence rather than get into a row with Aunt "Exey," as we called her. Under the addition of her house one could crawl on their hands and knees; an old hen hatched out a large brood of chickens, and one night Aunt "Exey" heard the old hen squawk. Lighting her lantern, she took a stick and crawled under to see what was getting her chickens. She saw a big skunk with a chicken in its mouth. She crawled up and struck it as hard as she could, and the skunk attacked her. She screamed for help, meanwhile the skunk continued to fight and deluge her until the neighbors came, and we dragged her out as best we could. I was there and helped, and I assure you the perfume was pungent. My aunt could scarcely stand, and was nearly blinded. We got some soap and water and washed her head and arms, and I was obliged to take the shears and cut off all her hair; her hands and face were bitten and bloody. She told me she buried her clothing, but it was a week or so before the perfume was all gone, and she said she should never tackle a skunk again. She lived some ten years after that, but would always get *mad* when any one referred to that skunk fight. I should think this ought to settle the skunk question. W.

BERLIN HEIGHTS, O., March 24, 1879.

EDITOR FOREST AND STREAM:

I read in FOREST AND STREAM of the fatality of skunk bite in the West or Southwest. To-day a young man came to my office who was bitten on the 21st inst. by one; was digging him out and put in his hand to feel the direction of the hole when the skunk caught him by the finger within a half inch of the end. The wound in the ball of the finger had healed, showing only a mark in the cuticle, but the wound where the other tooth entered by the side of the nail was still discharging a peculiar gummy discharge. I read him the article in your issue of March 13 regarding skunk bite, and advised amputation at once or cauterization, both of which he refused to have done. There was lividity extending about one and one-half inches up the finger, but without swelling or soreness or any unnatural feeling, which seemed rather strange. I will keep this case in mind and report the facts regarding it in a month or sooner should there be anything worth reporting. This is the first and only case I have ever heard of in this vicinity. TONIC.

EAST TEMPLETON, Mass., March 31, 1879.

EDITOR FOREST AND STREAM:

I have been considerably interested in the discussion of the "skunk question," and, thinking that I may have some evidence in regard to the matter under discussion which may have an important bearing on the case, I take the liberty to offer the following incident, as related by my father, who was at the time the incident happened a resident of the town of Pomfret, Conn: There was, about thirty years ago, a negro family by the name of Malborne, or Malbone, living in the village of Abbington, in the town of Pomfret. One night the father was awakened by the screams of his infant child, who was sleeping in a low cradle in the room with its parents. He immediately procured a light, and discovered a skunk fastened to the child's hand, which had been hanging over the side of the cradle, the animal having made its entrance through the open "cat-hole" in the door. The father killed the skunk, and nothing more was thought of the matter until about two weeks after the bite occurred. The child was taken sick, and died of what the attending physician pronounced to be hydrophobia.

Coincident with the above is the fact, received by me from the same source, that a Deacon Osgood (I think this is the name), living near by, lost two hogs, both dying the same day and about the time of the death of the negro child, being attended with symptoms which were pronounced those of hydrophobia. Whether they were bitten by the same skunk which bit the child is not known. This may meet the eye of some one who can tell more about this case than I can, my father having recognized among your correspondents from that section the names of persons who were living within a few miles of the place where the above incidents occurred at that time, and were well known to him.

CHAS. E. INGALLS.

BLACKSBURG, Va., March 8, 1879.

EDITOR FOREST AND STREAM:

I have been interested in the statements of your correspondents about the fatal results of the bite of the skunk, and I think the idea that the bite of this animal, when itself in health, can produce the disease commonly known as hydrophobia, is not well founded. I know from experience the great difficulty of distinguishing between some cases of hydrophobia and some cases of tetanus, and I have no confidence in a differential diagnosis made by an inexperienced physician. It has also appeared to me strange that, although I have lived in a locality where these animals abound, and from having been for years devoted much to the old Virginia sport of "coon hunting," have encountered great numbers of them, I yet never knew or heard of a person being bitten by one; but have known dogs to be bitten and scratched by them hundreds of times, and never saw any bad result of any sort from the wounds. I have twice known the eye of a dog to be put out by having the odorous secretion thrown into it. What I think is a very remarkable fact is, that dogs which have just killed a skunk, and have their heads, faces, necks, and their very noses saturated with this overpowering odor, can yet work out a comparatively cold trail of a raccoon and tree it, which I have seen them do more than once. I have seen it stated as a remarkable fact, that setters or pointers retrieving a bird should be able to point another of the same sort with the dead bird in the mouth. This I have seen often, but it seems to be far less surprising than the fact first stated. M. G. E.

EDITOR FOREST AND STREAM:

THE BITE OF THE SKUNK.—I have camped out very often where skunks are very numerous, especially in northwestern Texas. As others who may do so may get bitten by this pest, I here give the best treatment, viz.: At once ligate tightly above and below the wound; if the lips have no abrasions, suck the wound at once, first greasing the lips, if it can be done quickly; continue the sucking for some time until blood ceases to flow, then inject ammonia, which should always be in camp; lastly, not the least important, place a red-hot iron as close to the wound as can be borne, and for ten minutes. MEDICUS.

A PLEASANT ARTICLE.—We notice in *Lippincott's Magazine* for May a delightful article on "Beach Birds," which we are sure will be read with pleasure by all lovers of natural history. It is from the pen of Mr. Nathan Clifford Brown, of Portland, Me., who is well known in scientific circles as one of the most energetic and hard-working ornithologists of the Nuttall Club. We recommend his essay to all bird lovers.

MALE EELS.—We are indebted to Prof. A. S. Packard, Jr., for advance sheets of the forthcoming May *Naturalist*, detailing the discovery of male eels. We shall publish the paper next week.

BEAVERS AND THEIR DAMS.—*Editor Forest and Stream:* Your contributors, who have had opportunities of observing the ways of the beaver, would confer a great favor on many of your readers if they would describe minutely the habits of that wonderful animal; particularly in the building of his dams and lodges, what sized sticks are used, how laid, etc. I believe very little is generally known concerning these matters, notwithstanding so much has been written. But few persons comparatively have seen even the remains of a beaver dam, as in all the older parts of the country every vestige of them has long ago disappeared, and only the "beaver meadows" are left. I saw an old one in the Adirondacks several years ago, which was still a respectable embankment, thickly overgrown with bushes, except where cut through by the small water-course; but I had no time to examine its structure. Our guide said that when his father first knew the place there were several lodges standing, but they had been destroyed by the cattle. He said they were built of sticks, two or three inches in diameter, laid up like a log house, and gradually drawn in to form a cone-shaped top. In Essex in this State, about twenty years ago, I saw a portion of the remains of one laid bare in draining a cranberry swamp. The sticks of which it was built were from two to three inches thick, and eight to twelve inches long, and appeared to have been laid in tiers crossing each other at right angles, diagonally as to the direction of the dam, thus, XXXX They were soft with decay, but showed the marks of the chisel-like teeth as plainly as if cut yesterday. E. C. Hale, a late contributor, and others, can give us much interesting information on this subject, and I hope will do so. AWAHSOOSE.

Ferrisburgh, Vt., March 8.

Morgan's "American Beaver," published in Philadelphia by J. B. Lippincott & Co., gives very full information on the points referred to by our correspondent, and contains maps and diagrams of many of their dams and other structures.

MORE WICKED SPARROWS.—*Editor Forest and Stream:* Three weeks ago there were two pairs of bluebirds about the yard, and they took possession of houses; but the sparrows dispossessed them, drove them away, by calling on their friends to the number of twenty. They fought hard, and the bluebirds gave it up and disappeared. A pair of sparrows took one house. The door is very small, and the male can't get in; but it seems to make no difference, and they seem determined to keep house in that box. I don't know which would be the more useful, but I think it too bad that we must lose the songs of the bluebirds for the noisy chatter of the sparrows. I have a little plan which I respectfully submit to all who admire the song birds and wish for the sparrows extermination. If those who rob birds' nests, and call it the study of oology, would confine their study entirely to sparrows' nests for a year or two, I think there would be a notable increase in the number of song birds, and no doubt there would be a decrease in the number of sparrows. Why would not the sparrows' eggs do as well as any others, anyhow? P. G.

Milburn, N. J., April 3, 1879.

THE LOGGERHEAD SHRIKE IN MAINE.—In your issue of April 3 I spoke of a nest and eggs of the great northern shrike, found at Bangor, Me., by Mr. E. T. Bowler, but more particularly called attention to the remarkable statement of the gentleman that the loggerhead shrike was, in summer, the more common of the two, and nested in that vicinity. In the April number of the Nuttall Club *Bulletin* a writer also mentions the occurrence and breeding of the latter bird about Bangor, and mentions that no authentic instance is known of *Lanius borealis* nesting near that city. Since the appearance of the *Bulletin* I have received a letter from Mr. Bowler, who thinks he may have been wrong in his identification of the nest in question, and that it was probably that of *Lanius ludovicianus*. That this is the shrike alone summering in Central Maine is a very unexpected and remarkable fact.

H. A. PURDIE.

ACCLIMATIZATION OF HYENAS.—During the past fall the quarters in-doors assigned to our spotted hyenas (*Hyæna crocuta*) becoming too crowded, I determined to move some of them outside. Taking two old traveling dens, I had them placed on trestles alongside one of the walks, transferred the hyenas and gave them plenty of bedding during the very cold weather, particularly when the thermometer marked 14 deg. below zero, and to-day they seem to be in finer condition than those which were kept in doors. Their coats have become so thick and heavy that several menagerie parties have inquired if they were not a new variety, and remarked that it was a new idea to keep hyenas as one would dogs.

F. J. THOMPSON.

Zoological Garden, Cincinnati, Ohio.

INCUBATION UNDER DIFFICULTIES.—About the first of March, noticing that the passenger pigeons (*Ectopistes migratoria*) were mating, I procured some small sticks, wove them into small, slight platforms and placed them on some large limbs in the aviary, which has no roof, being simply covered with wire netting. I then took a small quantity of twigs, broke them into short lengths and scattered them on the floor. The pigeons immediately commenced building, and on the third day three nests were completed, a single egg laid in each, and incubation commenced at once. On the 16th inst. snow fell to the depth of six inches, and for several days after the birds were partially hidden by the snow which had lodged around their nests. On the night of the 17th a self-registering thermometer hanging in the aviary marked 14 deg. Far., and on the 25th I found one of the nests deserted, but in each of the others was a fine, well developed squab. On the 28th the deserted nest was again occupied by its original tenants, who are now engaged in making a second, and I hope more favorable, attempt at reproduction. FRANK J. THOMPSON.

Zoological Garden, Cincinnati.

EARLY NESTING OF EAGLES.—On the 16th of January last I saw the female of a pair of bald eagles building, or rather repairing, a nest that was occupied last year by a pair of ospreys. Was not that very early? They seemed to have completed it on the 20th. C. J. SALE.

Essex Co., Va.

KILLED BY TELEGRAPH.—*Byron Station, Minn., March 28.—Editor Forest and Stream:* A dead swan was found by the railroad section men lying under the telegraph wires about a mile from this station this morning. It had flown against the wires and broken its neck. It was a fine specimen of *Cygnus americanus*, weighing 14½ lbs. Have never read of so large a bird being killed by the telegraph wires, although prairie chickens, quails and other small birds are often found on the railroad tracks, killed by the wires. It was rainy and very foggy this morning, which probably accounts for the swan's flying so low. H. W. AVERY.

MORE SOUTHERN WOOD NOTES.

BARTOW, Ga., Feb. 16, 1879.

EDITOR FOREST AND STREAM:

There is nothing more delightful to me than to watch the peculiarities and habits of certain feathered gentlemen and ladies, whom to know well is a never-ending fund of delight and entertainment.

There is a certain old woodpecker whose age I should estimate to be at least one hundred years, judging from the knowing look of his eye and general veteran-like air which he assumes whenever we meet. This knowing old bird has been much harassed by the pot-metal shotguns of ambitious nigger boys, and he has developed decided mathematical talent; for he knows their range (the guns', not the boys') to an exact certainty.

The first time that I ever saw him he was sitting on an old pine stump, by the side of the road that led to the quail ground. He stood, like a grenadier on guard, until I approached within some forty yards, when, giving a low chuckle of derision, he flew into the very tip top of a tall dead pine, from which secure elevation—secure as to pot-metal guns—he scolded me to his heart's content.

Finding, on intimate acquaintance, that I was quite friendly to birds of his kind, he would sit on his stump, not without casting suspicious glances at my breech-loader, giving me as I passed by friendly glances out of his bright, black eyes and any number of bows from his crimson head.

The general verdict among the blacks is that he is a "witch" bird. That is, that no mortal gun can kill him. Long may he be the "witch" bird of that part of Georgia!

In a low thicket of pines, near which I wander almost every day, there is a large colony of bluejays, whose whole duty seems to be to make as much noise as possible; while one solemn old fellow blows the trumpet in the intervals of the screaming. The birds all flew away when I first walked by the thicket, but, finding that I did not molest them, they returned and we were soon on the very best terms. One morning, as I approached this noisy colony, I was surprised to see them rise high above the pines and then dart back, then rise, with loud cries and screams, very different from their daily notes. I thought that a large cat, which I had seen wandering in a neighboring field a few days before, might be seeking a dinner here, so entered the thicket in order to drive it away. Looking around, carefully, I soon found the cause of the disturbance to be, not the cat, but a huge owl; the terror of all the neighboring hen roosts, and as "rieving" a rascal as Rob Roy McGregor himself. Slipping back quietly I returned home and again entered the thicket well prepared for his owlship. While parting the branches, that I might get a fair shot, I saw one of the owl's legs shoot out like lightning; there was a scream from an unfortunate jay, and a chorus from his more fortunate companions. Not wishing to see any more harm done on my blue favorites I gave the owl a charge of No. 8, at point blank distance, which effectually closed his sanguinary career. On examining the ground under the pine I found the remains of three jays, which had ventured too near the owl and paid for rashness with their lives. Regardless of my presence the brave little jays flew upon their prostrate enemy and pecked him and even followed me for some distance as I bore off the dead robber, pecking at him and heaping insults upon his carcass, thus keeping up the practice of ancient warriors, as told us in the pages of the grand old bards Homer and Virgil.

Nearly allied to the jays, but with more brain, are the crow and jackdaw. Allied, I mean in habits. The same sly, dark ways to accomplish their ends, the same thievish, rascally propensities. Yet, while always shooting the crow, when I have a chance, I must confess to a sneaking fondness for this sable, intellectual bird. A fondness based entirely upon his intellect.

Strange as it may seem to those who are not familiar with crows, this bird is well acquainted with form, and can distinguish accurately between a walking stick and a gun. You may shoulder your cane, you may even point it at him, and he does not stir from his contemplative attitude on the top of the dead pine; but have a gun in your hand and a sudden "change comes o'er the spirit of his dream." With a low, insulting laugh, he flies in a straight line from you. No circling around for him, for he knows that you can shoot on the wing, and he has been well instructed in the laws of projectiles. In fact, I once knew an old farmer in Kentucky, who swore solemnly that he believed that crows on his farm could tell whether he was armed with a rifle or with a shot-gun. Be that as it may, I know that in a country where the rifle is not used you can get within easy rifle shot of them, until they are educated,—say seventy-five yards. When, however, you have killed a few, the sable schoolmasters immediately open a school to explain the difference between a shot-gun and a rifle to the rising generation of young crows. And well do they profit by their instructions, for in vain do you seek to come in range of a crow thereafter with any kind of a gun. Experience is their school, and we whites could profit by their example. Crows are incapable of the most primary mathematical reasoning. They know distance and form, but they cannot count. All through the South they are among the farmer's most inveterate enemies. Nothing can be more laughable than to see one of these solemn birds walking up and down a row of newly planted corn. He turns out his toes with the air of a *petit maître* in the fine gentleman age of England, and, too, with something of his lordly disregard of the rights of others. The farmer sees nothing comic in the crow, but seeks all means for his extermination. The favorite method is to "bait" a place in the cornfield, near thickets or some other convenient blind, for a few days, and then the farmer pours out the contents of his shot-gun upon their devoted heads. When the blind is in the middle of the

field it becomes necessary for two persons to enter it at once, and then one goes away while the other remains. Why? Because, as I said before, crows cannot count, and, in fancied security, they fly down to the rich feast, and find, alas, too late, that their mathematical education has been unfortunately neglected.

Among the most curious of my little feathered acquaintances is a bird of Northern birth. He is widely known among you by the name of bobolink; he is known in the South under the name of "rice bird." Some stragglers with flaming epaulets haunt our mill ponds, and make the summer air full of music with their long-drawn cadences as they swing from some pendant bough. They are known in the South as the "swamp blackbird," and when the darkies shoot into a flock of rice birds and kill the crimson-shouldered ones, they call them "officers." The rice birds are curious in that they develop something of the crow habit of measuring distances. While in Pennsylvania or Delaware, they are known, I believe, as "reed birds." They are then unsophisticated and full of confidence in man, for who would think of shooting a bobolink? They fall by thousands in those States and in the Carolinas, until they acquire a good education, at least as to the range of No. 10 shot. They are called blackbirds in Georgia, and even those who ought to know better are deceived into calling them blackbirds, because a few of those birds are found in every large flock. They post sentinels on some tall tree near by, and then fly down by twenties and thirties, until they have all collected upon the same feeding-grounds. They become very poor just before their migration to the North, and are scarcely eatable. They have a very singular habit, which I have never noticed in any other song bird—a habit of flying up and down like woodpeckers—if it is not a misnomer to call them song birds. Yet it is true; for, well do we know that when the sweet spring shall have burst the icy fetters of the stern winter king, that from the top of flaunting rag weed, or from branch tree swaying in the summer air, the ringing music of the gentle bobolink will be heard from Massachusetts to the vine-clad hills of New Jersey. And right welcome will he be, I trow, to those who live in those Hyperborean regions, for he is the representative of summer. He has been off on his Southern tour, and now settles down to business—the business of rearing young bobolinks to become the prey of Pennsylvanian and Southern epicures.

There is another bird which you gentlemen of the North never see in their full perfection—the robin. This gay little bird never, to my knowledge, builds in the South. That it breeds by many thousands in Kentucky I well know, for they are found in that State (the young birds) about the time of the ripening of May cherries, fully able to fly and take their share of the dainty fruit. They are very fine eating, chiefly because they are young birds; but to find them in their full perfection—fat, tender and juicy—you must come south. They feed, at this season of the year chiefly upon the berries of the black gum, or the berries of the China tree, and become robust, burgher-like citizens, with large corporations. But poor robin often pays full dear for his gluttony; for after gorging himself to repletion with China berries, he becomes drunk, and falls an easy prey to the juvenile darkies, who lie in wait for him when he falls. Whether the intoxicating properties of the China berry lies in the seeds, or in some alcoholic fermentation which the juice inclosed in the skins may have undergone, I am unable to say. I know that the birds are not poisoned, for they recover from the effects of their debauch in a few hours, and again look upon the China berry and rejoice in another *symposium*. They can be killed by hundreds, for they are gluttonous feeders, and look with great indifference upon their slaughtered companions.

Of all the birds that I have named the jay is the only one that breeds among us. An occasional woodpecker, forgetful of his family traditions, or seduced by pleasant surroundings, will establish himself and rear a small family. But the crow, the bobolink and robin redbreast, all fly back to their Northern homes on the approach of spring. No one who has ever traveled through our vast pine forests in the summer can help noticing the almost utter absence of bird life in their silent, sombre shades. I attribute this to the absence of insects and worms: I know no other cause. ST. CLAIR.

NOTES ON THE CARIBOU.

EDITOR FOREST AND STREAM:

This interesting animal has three marked peculiarities, which distinguish it from its cousins, the moose and deer—the prevalence of horns on the head of the females, the disposition to remain in herds, or rather families, throughout the year, and the total absence of any propensity to "yard." To these might be added, perhaps, a fourth—the ability to either trot or bound, according to the state of the snow or character of the ground, and to keep up either gait for an almost indefinite length of time. Its trot, when viewed at right angles to the animal's course, is, to a true sportsman, a soul inspiring sight. There is a springiness and appearance of absolute freedom in it, as if the creature spurned the earth it trod on, and could, if it chose, mount into space. When viewed from behind it has an awkward appearance, the animal lifting its hind legs in a manner difficult to describe.

The caribou's roving propensities render still-hunting it the most uncertain of all pursuits, the hunter often patiently unwinding the net-work of tracks where the herd had been feeding for a few days, for hours, only to find at the conclusion that it had departed for another field of operations, perhaps twenty miles away. When the animal is moving there is very little dallying between the points; a convenient twig is sometimes plucked, or a tempting bunch of moss hastily swallowed, but it is a hopeless task to attempt to overtake them if they have a few hours' advantage in the start. One of their favorite bogs presents a curious spectacle when covered with two or three feet of snow, after a visit from a family of caribou. It is completely honeycombed with innumerable pits, which they shovel out with their broad fore-feet with the greatest facility, and the surface of the snow is covered with moss which they tear out in tufts, and from which they select a small portion, leaving the remainder to be scattered over the snow by the wind. The whole ground looks as though an army of laborers had been at work with spades.

It is not to be inferred that all the females bear antlers. In my experience, antlered does have been the exception rather than the rule; still they are sufficiently common not to excite surprise. When present the horns are much smaller than those of the male, mostly without prongs, and frequently unequally developed. The antlers of the male resemble those of the elk in their general formation, except that the ends are palmated instead of pointed. Each family has a leader—invariably the strongest and ablest male. When from old age or any other cause, he is unable to maintain his supremacy, and is defeated by an ambitious rival, eager to gain the leadership, he is at once ignominiously expelled, and never thereafter re-enters the herd, but always remains in their vicinity, hardly ever coming nearer than a quarter of a mile, and sometimes remains a day or two on the old feeding-ground after the herd has left it.

These individuals are so exceedingly watchful and wary as to render still-hunting them successfully an almost hopeless task. It is very seldom that all conditions are favorable for catching caribou on snow-shoes When the snow is sufficiently firm to give good footing, then it will also bear the caribou, whose immense feet and ability to lay down their hinder legs from the gambrel joint, like a rabbit, enables them to shuffle off on a crust which will hardly bear a dog. And when the snow is deep and soft, they relieve each other regularly, the leader when exhausted stepping to one side and falling in the rear, the next taking the lead, and so on, in regular succession. When overtaken by dogs they go to each other's assistance, and woe to the luckless canine who has the hardihood to attack a herd of caribou. I have seen several which paid dearly for their temerity. The only time when they can be said to be completely at the mercy of the hunter is when the snow being very deep and light, a hail and rain storm comes on, freezing on the surface as it falls, and forming a "glass crust." Then they are completely helpless, and may be slaughtered at leisure; but this does not occur once in a decade, and many years' observation has satisfied the writer that they need no protective enactments, but are abundantly able to take care of themselves, and will increase and multiply in spite of all the men, dogs and guns that can be brought to bear upon them. The flesh of the caribou is somewhat coarse and dry, is seldom fat or in very poor condition, has a crisp, mossy flavor, seldom offensive to "city chaps," while the peculiar flavor of "moose meat" can be tolerated by about one in four of those unaccustomed to its use. PENOBSCOT.

DOMESTICATION OF QUAIL.

STANFORD, Ky., March 1, 1879.

EDITOR FOREST AND STREAM:

Within the past few months I wrote you an account of the domestication of quail in our county by a family whose assurances, to the writer, need no corroboration. So far as I have heard expressions from individuals who have never seen it, the domestication of quail is pronounced an absurdity—an impossibility; but I have seen it within the last ten days, though I have had no doubt as to the facts furnished FOREST AND STREAM upon the authority of my friend, Frank Howard, whose mother succeeded in her first attempt at their domestication. I spent the night of the 20th ultimo at Col. Howard's, fifteen miles southeast of this place, and after dark was conducted by the light of a lantern to the hen-house, where I saw the surviving brace of cock quails comfortably and contentedly perched upon the roost erected for the chickens. They were in the midst of the bantams, beside the parent hen. At 7 o'clock next morning, after the chickens had flown from their roost and were feeding about the yard, the quails remained. What sportsman ever thought of a quail roosting elsewhere than on the ground? Mrs. Howard told me that she set the hen in a box, out of which the little fellows were unable to dart before they had become accustomed to her presence and attentions, and had learned the language of their foster-mother. Afterward they were no more trouble than the ordinary barn-yard fowls. Three of the five raised to full growth were seized and carried off by hawks, the family thinks, as Mrs. H. witnessed the carrying off of the third by a villainous blue-winged hawk—next to foxes, the greatest destroyer of our quails. Mrs. H. did not deny that tears involuntarily followed a realization of her pet's unhappy fate. It is her intention to attempt raising one or more broods the following season, if successful in procuring eggs, and she hopes to find the nest of a partridge, as a flock frequents the farm. I have been promised a report of progress, and the readers of FOREST AND STREAM may expect to be advised, *Deo volente*. Col. Howard is connected with the firm of R. L. White & Co., of Louisville, Ky., and his genial countenance is as familiar to the frequenters of Main street as is the Custom House to importers. Any skeptical reader can have the foregoing verified by interviewing the Colonel. J. T. BONON.

THE FISHER AND THE "BLACK CAT."

EDITOR FOREST AND STREAM:

Your correspondent, "S.," in his entertaining story, published in your issue of the 13th inst., speaks of a full grown fisher in Michigan as weighing only twenty pounds, while those in Maine weigh forty pounds. The hunters and trappers of the latter State, as a general rule, speak of two varieties—the fisher and the black cat, the latter usually weighing about twenty pounds, and the former about thirty pounds. The smaller animal is much the darker in color, there being usually a considerable admixture of dark gray about the fore-shoulders and neck of the fisher. They also travel very differently, the black cat showing only two feet in its jumps, precisely like the weasel and mink, while the fisher invariably shows three—the rear and forward track being in the line of its course, and the middle one placed two or three inches outward, alternately to the right and left. Their skins are frequently quoted separately on the fur lists, one bringing a third more than the other; but notwithstanding all the points of difference, as I never in my life saw a female fisher, nor a male black cat, I have naturally come to the conclusion that they are merely male and female of the same species. Some trappers strenuously combat this idea, while others are disposed to admit its truth, but I think investigation will prove it to be correct. In regard to the 8½-lb. animal spoken of, no such a variety exists either in Maine or Canada, and it is probably a mistake or a misprint of one writer's works, copied by others. As far as its name, which "S." thinks such a misnomer, there is ample reason that it should bear it. It is not a water animal in the sense that otter and mink are, it is true; but when the smaller trout streams are so shrunken by drought that their inhabitants are forced to collect in the deepest pools, it is then that the fisher is exceedingly active and destructive, almost as much so as the animals named above. Luckily, they are not very plentiful, owing to the facility with which they are trapped, advantage being taken of their well-known habit of always crossing streams or roads at certain points, and when these become known to trappers, a well-baited trap in the immediate vicinity is sure, sooner or later, to intercept them. PENOBSCOT.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN FOR THE WEEK ENDING MAY 3.—One water snake, *Tropidonotus leberis*; one lizard; one brown snake, *Storeria dekayi*; two bald eagles, *Haliœtus leucocephalus*; two great blue herons, *Ardea herodias*; one black snake, *Ecsenion constrictor*; one hog-nosed snake, *Heterodon platyrhinos*; one corn snake, *Coluber guttatus*; one garter snake, *Eutœnia sirtalis*; one chain snake, *Ophibolus getulus*, var.; one gray squirrel, *Sciurus carolinensis*, all presented; one loon, *Colymbus torquatus*, purchased; one little brown bat, *Vespertilio subulatus*, captured in garden.

ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR WEEK ENDING MAY 4.—One thrush, *Turdus musicus*, hab. Europe; one one-colored solitaire, *Myadestes unicolor*, hab. Central America, presented by Mr. John Sutherland, N. Y. City; one Florida gallinule, *Gallinula martinica*, presented by Mr. Chas. Cashman, N. Y. City; two polar bears, *Ursus maritimus*, placed on exhibition; one collared pecary, *Dicotyles tajacu*; two brown capuchin monkeys, *Cebus fatuellus*; one bonnet monkey, *Macacus radiatus*; six bullfinches, *Pyrrhula rubicilla*; all purchased. W. A. CONKLIN, Director.

—We have received a copy of a book, "All about Washington Territory, published at Seattle, Wash. Ter., by M. Choir. Price, $1. We are informed by the publisher that he answers all letters of special inquiry about that country, reliably, free of charge, to all subscribers.

"A Week in Lapland" does not deal with a certain country in Europe. It is descriptive of a six days' go-as-you-please match at Gilmore's Garden.

The Kennel.

BOSTON DOG SHOW.

BOSTON, May 6, 1879.

THE Second Annual Dog Show of the Massachusetts Kennel Club opened at the Music Hall, in this city, this morning, under the most flattering auspices. There were 523 enteries and the list comprises very many celebrities. The interest in the show appears to be widespread, and the prospects are that the show will be a financial success. Many prominent breeders and sportsmen are present from various parts of the country. The judging is being done in public in Bumstead Hall, underneath the main hall. No such judging ring has ever before been seen, as the hall is almost circular in shape with seats rising tier above tier, so that a large audience can be present and witness the judging. The gentlemen filling these responsible and usually thankless positions are: For the sporting classes—Mr. Chas. H. Raymond, of Morris Plains, N. J.; Dr. Wm. Jarvis, of Claremont, N. H., and Maj. Jno. M. Taylor, of Lexington, Ky. For non-sporting, Mr. Jas. B. England, of Philadelphia. The judging was commenced about noon, and we give below the list of awards made up to the time of sending this dispatch. All of the open classes have filled well, but the champions are not numerous, there being only Mr. Smith's brace, Leicester and Paris, in the English setter dogs and the same gentleman's Dart, with Mr. Forsaith's Di in the bitch class. In the champion Irish setter classes there are 9 entries, but of these Elcho, Berkely, Loo II. and Duck are not competing. Of champion Gordon setters there are 4, and of pointers 7. To be in a champion class at this show, however, a dog must have won two first prizes or have competed in a champion class. The following is an abstract of the number of entries in each of the open classes:

Imported English setters, dogs 15, bitches 17, puppies 6; native English setters, dogs 40, bitches 20, puppies 20; imported Irish setters, dogs 15, bitches 7, puppies 9; native Irish setters, dogs 14, bitches 7, puppies 5; Gordon setters, dogs 16, bitches 11, puppies 10; pointers, dogs over 55 lbs., 14, bitches 8; under 55 lbs, dogs 10, bitches 11; pointer puppies 10; Chesapeake Bay dogs 2; Irish water spaniels, 3; other retrieving water spaniels, 5; cocker spaniels, 9; other field spaniels, 7; foxhounds, 11; beagles, 4; fox terriers, 18; greyhounds, 2; Scotch deerhounds, 3; mastiffs, 3; St. Bernards, 26; Newfoundlands, 4; Ulm, 2; coach dogs, 5; collies, 17; bull dogs, 3; bull terriers, 17; pugs, 11; black and tan terriers, 4; Skye terriers, 4; rough-haired terriers, 2; Dandie Dinmonts, 1; Yorkshire terriers, 17; toys, 1; Blenheim, King Charles or Japanese, 9; Italian greyhounds, 8; miscellaneous, 6; trick dogs, 3; yard-broken dogs, 16.

For the special prizes there are 161 entries. Among the principal exhibitors are Mr. L. H. Smith, of Strathroy, Canada, who has Leicester, Paris and Dart; the St. Louis Kennel Club with the pointers Bow, Faust and Clytie; the Toledo Kennel Club with a kennel of Gordons headed by Grouse; the Baltimore Kennel Club with Derg and other red Irish setters, etc., etc. The entries in the English setter classes are, as a rule, very fair; so are the pointers and Gordons. The Irish setter classes do not contain many fine specimens, although there are some very handsome puppies exhibited. Some of the non-sporting classes are very good, but the judging of these did not commence until evening.

The following awards were made this afternoon: Champion English Setters—Dogs, Paris, L. H. Smith; bitches, Dart, same owner. Imported English Setters—Dogs, first, Dash III., Harvard Kennel Club; second, Coin, J. E. Long; v. h. c., Royal Duke, H. S. and S. C. Magraw; h. c., Hamlet, Harvard Kennel Club; Lelaps, F. Sumner; c., Warwick, H. C. Ganse. Bitches—first, Countess II., Harvard Kennel Club; second, Ollie, H. W. Ganse; v. h. c., Belle, H. W. Ganse; h. c., Rose, J. N. Dodge; Vesper, H. J. Terry; c., Gipsey Girl, A. D. White. Puppies—first, Nix, W. E. Sessions. Native English Setters—Dogs, first, Ray, E. Orgill; second, Fred, A. W. Gore; v. h. c., Daniel Webster, G. A. Thayer; h. c., Grouse, D. P. Waters; c., Jocko, E. King. Bitches—first, Moll, L. F. Whitman; second, Abbey, E. C. LaMontague; v. h. c., Bessie, H. B. Richmond; h. c., Fannie, H. Elliot; c., Freeze, P. S. Roberts. Puppies—first, Beacon, Baltimore Kennel Club; h. c., Blast, H. W. Ganse; c., Gipsey, A. W. Gore.

ENTRIES.

DIVISION A.—ENGLISH SETTERS.

Class 1—Champion English Setter Dogs—Leicester and Paris, L H Smith, Strathroy, Ont; Lark, P H Morris, New York.

Class 2—Champion English Setter Bitches—Dart, L H Smith, Strathroy, Ont; Di, Fred A Forsaith, Kittery, Me.

Class 3—Imported English Setter Dogs, or their progeny of the first generation—Drake, Dash III. and Hamlet, Harvard Kennel Club, Cambridge, Mass; Wagner, Frank L Barnes, Auburndale, Mass; Royal Duke, H S & S C Magraw, Colora, Md, Lelaps, Franklin Sumner, Milton, Mass; Pontiac, John C Higgins, Delaware City, Del; Jake, Capt A L Emerson, York, Me; Fenn, Irwin & Waddell, Topeka, Kan; Frank H, Lincoln & Hellyar, Warren, Mass; Thunder, J J Snellenburg, New Brighton, Penn; Ranger, A E Godeffroy, Guymard, N Y; Coin, John E Long, Detroit, Mich; Warwick, H W Gause, Wilmington, Del; Star, John A Loring, Boston.

Class 4—Imported English Setter Bitches, or their progeny of the first generation—Countess II., Harvard Kennel Club, Cambridge, Mass; Pearl, Isaac Fiske, Worcester, Mass; Cornelia, L Schuster Jr, Philadelphia; Nell, Paul Temple, Boston; Zell, A W Cushman, South Braintree, Mass; Gipsy Girl, A D White, Boston; Bute, H F Deane, Boston; Petrel and Petrel II., John C Higgins, Delaware City, Del; Mollie, H M Quimby, Worcester, Mass; Pearl, L H Smith, Strathroy, Ont; Rose, J N Dodge, Detroit, Mich; Peeress, J J Snellenburg, New Brighton, Penn; Rhoebe, John A Loring, Boston; Belle and Ollie, H W Gause, Wilmington, Del; Vesper, H J Terry, Palmer, Mass.

Class 5—Imported English Setter Puppies, under 12 months—Gladstone II, Isaac Fiske, Worcester, Mass; Countess Lill and Count Dan II., John C Higgins, Delaware City, Del; Nix, Waldo E Sessions, Worcester, Mass; Fanny, Meer Marsh, Boston; Waep, W Talman, Providence, R I.

Class 6—Native English Setter Dogs—Royal Ben, T T Sawyer Jr, Boston; Duke, Edwin N. Haines, Lynn, Mass; Fred, Avery W Gore, Boston; Dandy, Attia Hardy, Brookline, Mass; Ned, W S Draper, Boston; Daniel Webster, George A Thayer, Boston; Buff, John J O'Brien, Boston; Mars, S Kneeland Jr, Boston; Rex, Charles W Copeland Boston; Tort, N L Lafrenure, Boston; Don, David O Ives, Salem, Mass; Spy, J F Head, Boston; Sancho, Frank Fallon, Boston; Beppo, J D Williams, Boston; Marquis, Franklin Nourse, Lawrence, Mass; Dash, Isaac W Thrasher, Fall

River, Mass ; Vila, Amion O Cheevers, Providence, R I ; Colonel, J D Gould, Boston ; Dash, Charles M Carleton, M D, Norwich, Conn ; Boss, J F Brown, Chelsea, Mass ; Dan (formerly Sam), D F Wilbur, Brockton, Mass ; Terry, Ward McAllister Jr, Newport, R I ; Marina, Charles E Cunningham, Boston ; Grouse, David P Waters, Salem, Mass ; Sport, J J Scanlon, Fall River, Mass ; Dash, Everett M Erskine, Boston Highlands ; Delta, J E Eveleth, Brookline, Mass ; Nat H, W Tallman, Providence, R I ; Stanley, Alfred Schnaebel, New York ; Duke, Sport and Jeff, T M Aldrich, Providence, R I ; Put, S T Hammond, Springfield, Mass ; Fred, Andrew S Mitchell, Haverhill, Mass ; Shot, F M Ware, Boston ; Jeff, G H Lyman, Boston ; Jocko, Edward King, Taunton, Mass ; Ray, Edmund Orgill, New York ; Sulk, Bayard Thayer, Boston ; Spy, Miss Alice P Bedlow, Newport, R I.

Class 7—Native English Setter Bitches—Fly, George H Hitchcock, Quincy, Mass ; Jenny, Edwin Roswell, Lynn, Mass ; Abbey, E C LaMontagne, New York ; Freeze, Paul S Roberts, Natick, Mass ; Fanny, Robert Elliott, North Andover Depot, Mass ; Betsy, George Dale, Fall River, Mass ; Sart and Meg, Samuel Scranton, Olneyville, R I ; Daisy Lincoln, John C Higgins, Delaware City, Del ; ——, Walter F Peck, Salem, Mass ; Jessie, J E Eveleth, Brookline, Mass ; Bessie, Homer B Richmond, Lakeville, Mass ; Smut, T M Aldrich, Providence, R I ; Jennie, W Tallman, Providence, R I ; Mell, L F Whitman, Detroit ; Cosette, Robert Long, Boston ; Cleopatra, T H Flinn, Dorchester, Mass ; Pet and Bess, Stephen G. Currier, Beverly, Mass ; Luna, E H Lathrop, Springfield, Mass.

Class 8—Native English Setter Puppies under 12 months—Gipsy, Avery W Gore, Boston, Prink and Rags, Ethan Allin, Pomfret Centre, Conn ; Cremorne, E C La Montague, New York ; two puppies, Edward J Forster, M D, Boston ; Busy Body, Mrs M F Deane, Boston ; Shot, F A Daniels, South Boston ; Floss, S H Briggs, Boston ; Grouse Dale, John B Goodwin, Norwich, Conn ; Geneva, M K Cowing Jr, Providence, R I ; Smoke, Wm Borrowscale, Boston ; Rufus II., Henry Smith, Boston ; Prince, J W Webb, Boston ; Bevis, T W Eastman, Portsmouth, N H ; Clio, Jno S Sides, Portsmouth, N H ; Beacon, Baltimore Kennel Club, Baltimore, Md ; Buddhist, H F Deane, Boston ; Blast and Brant, H W Gause, Wilmington, Del ; Lord Beaconsfield, E H Gilman, Detroit, Mich.

DIVISION B.—IRISH SETTERS.

Class 9—Champion Irish Setter Dogs—Berkley, John Fottler Jr, Boston ; Elcho, Dr Wm Jarvis, Claremont, N H ; Rory O'Moore, W N Callender, Greenbush, N Y ; Ben, G W Ogilvie, Des Moines, Iowa ; Race, E C Waller, Chicago, Ill.

Class 10—Champion Irish Setter Bitches—Loo II. and Duck, John Fottler Jr, Boston ; Red Rival, Lincoln & Hellyar, Warren, Mass ; Fly Fly, H W Gause, Wilmington, Del.

Class 11—Imported Irish Setter Dogs, or their progeny of the first generation—Jo, Toledo Kennel Club, Toledo, Ohio ; Kite, W C G Salisbury, Boston ; Smuggler, J W Sprong, Albany, N Y ; Sligo, George P Anthony, Providence, N J ; Elcho III., A Nelson, Portsmouth, N H ; Startle, Wm Munroe, Boston ; Dick, James O Knapp, Newburyport, Mass ; Pat, W Tallman, Providence, R I ; Snap, Charles Carpenter, Providence, R I ; Dash, Lincoln & Hellyar, Warren, Mass ; Shot, J S Cunningham, Dorchester, Mass ; Derg, Baltimore Kennel Club, Baltimore, Md ; Bob, E F Stoddard, Dayton, Ohio ; Don, H W Gause, Wilmington, Del.

Class 12—Imported Irish Setter Bitches, or their progeny of the first generation—Doll, Toledo Kennel Club, Toledo, Ohio ; Ruby, Capt A L Emerson, York, Me ; Flora and Phantom, Lincoln & Hellyar, Warren, Mass ; Friend, E F Stoddard, Dayton, Ohio ; Moya, A E Godeffroy, Guymard, N Y ; Kelpie, H W Gause, Wilmington, Del.

Class 13—Imported Irish Setter Puppies, under 12 months—Elsie, John H Dussault, Somerville, Mass ; Claremont, Alexander Pope Jr, Boston ; Doc, Malcolm C Green, Boston ; May, J A Rockwood, Boston ; Dash Elcho, Joseph L Lock, Portsmouth, N H ; Rover, Capt A L Emerson, York, Me ; May, J W Bell, York, Me ; Acho, James Carroll, Portsmouth, N H ; Brockton, W Tallman, Providence, R I.

Class 14—Native Irish Setter Dogs—Richard Casho, G W Townsend, Philadelphia ; Dandy, T F Smith, Boston ; Pat, W E Davis, Boston ; Tom Moore, E T Flanagan, Boston ; Don, A L Tribble, Plymouth, Mass ; Duke, Stephen J Salmon Jr, Boston ; Guy Mannering, Miss Viola Ryan, Dorchester, Mass ; Frank, Thomas M Marshall Jr, Cambridge, Mass ; Cole, Everett Smith, Portland ; Shot, R C Sargent, Boston ; Dick, Adolph Nelson, Portsmouth, N H ; Larry, C S Keller, Washington, D C ; Birch, L Frank Drake, Stoughton, Mass ; Arlington, Lincoln & Hellyar, Warren, Mass.

Class 15—Native Irish Setter Bitches—Nell, J A Davis, Boston ; Kate, H B Plumer, Boston ; Cora II., Everett Smith, Portland, Me ; Flirt, Baltimore Kennel Club, Baltimore, Md ; Mag, Geo Van Wagenen, New York ; Fanny, F L Torrey, Malden, Mass ; Fan, H H Mosse, Boston.

Class 16—Native Irish Setter Puppies, under 12 months—Saxe, J P Barnard Jr, Boston ; Tip, Wm Borrowscale, Boston ; Florence II., Baltimore Kennel Club, Baltimore, Md ; Ned, Walter O Pember, Walpole, Mass ; Clyde, Thomas M Marshall Jr, Cambridge, Mass.

DIVISION C.—GORDON SETTERS.

Class 17—Champion Gordon Setter Dogs—Trump, Chas M Pond, Hartford, Conn ; Rupert, Goldsmith Kennel Club, Toledo, Ohio.

Class 18—Champion Gordon Setter Bitches—Nellie, S W Rodman, Boston ; Beauty, A E Godeffroy, Guymard, N Y.

Class 19—Gordon Setter Dogs, Either Native or Imported—Grouse, Judy, Dock and Bob, Toledo Kennel Club, Toledo, Ohio ; Jim, G G Gibson, Boston ; Dan, F B Stafford, Newton, Mass ; Duke, Lemuel Stanwood, Boston ; Duke of the East, Henry A Davis, Providence, R I ; Sam, Arthur C Mudge, Boston ; Dash, W H Leighton Jr, Marlborough, Mass ; Shot, Edward H Pierce, Boston ; Dorr, Fred A Taft, Dedham, Mass ; Duke and Dash, Charles T Brownell, New Bedford, Mass ; Bang, Francis E Boyd, Boston ; Billy, H Truean, Dorchester, Mass.

Class 20—Gordon Setter Bitches, Either Native or Imported—Bess, Lawrence Curtis, Boston ; Bee and Bell, Toledo Kennel Club, Toledo, Ohio ; Bess, Waldo E Sessions, Worcester, Mass ; Dinah, Frank B Fay, Boston ; Bitch and Litter, James Wright, Rockland, Me ; Bessie B., Henry L Kinsley, Stoughton, Mass ; Fashion, E Harnber, Framingham, Mass ; Pansy, Frank L Gay, Providence, R I ; Nellie Horton, Dr Henry F Aten, Brooklyn, L I ; Maud, G J Lewis, Boston.

Class 21—Gordon Setter Puppies, Either Native or Imported, under 12 months—Flirt, J P Barnard Jr, Boston ; Tom, Ellerton Lodge Dorr Jr, Chestnut Hill, Mass ; Dolly, G W Arms, Quincy, Mass ; Duke, H W Huntington, Brooklyn, L I ; Mac, Frank L Gay, Providence, R I ; Jeff, Charles E Hunt, Boston ; Nimrod, M G Chapman, Central Falls, R I ; Shot, Allie H Clapp, Worcester, Mass ; Fred, Goldsmith Kennel Club, Toledo, Ohio ; Buech, Albert P Burnham, Lynn, Mass.

DIVISION D.—POINTERS.

Class 22—Champion Dogs—Rush, Edmund Orgill, New York ; Bow, St Louis Kennel Club, St Louis, Mo ; Sefton, E A Willard, Jonesborough, Ill.

Class 23—Champion Pointer Bitches—Rose, Edmund Orgill, New York ; Gillespie's Fan, George G Barker, Boston ; Clylie, St Louis Kennel Club, St Louis, Mo ; Queen, A E Godeffroy, Guymard, N Y.

Class 24—Pointer Dogs, over 55 pounds weight—Leo, Geo F Davenport, Boston ; Rake II., J W Coffin, Providence, R I ; Shot, Wm H Garrett, Providence, R I ; Gold Dust, Isaac Campbell, Providence, R I ; Rex, Fisher Howe Jr, Brooklyn ; Faust, St Louis Kennel Club, St Louis, Mo ; Commander, Frenchy A Johnson, Boston ; Ned, E M Stoddard, East Marshfield, Mass ; Shot, John C Lewis, Providence, R I ; Spango, Wm H Lee, Boston ; Brock, S T Hammond, Springfield, Mass ; King, M C Fuller, Worcester, Mass ; Rattler, Luke Corcoran, Springfield, Mass ; Mars, L Arschiman, Boston.

Class 25—Pointer Bitches, over 50 pounds weight—Princess, Geo C Barker, Boston ; Juno, Chas M Schieffin, Mt Vernon, N Y ; Peg, E C Alden, Dedham, Mass ; Prudence, Geo E Brown, Dedham, Mass ; Maud, Walter E Miller, West Meriden, Conn ; Bell and Queen, Jno C Lewis, Providence, R I ; Psyche II, Fuller & Lyman, Springfield, Mass.

Class 26—Pointer Dogs, under 55 pounds weight—Dash and Tramp, A M Tufts, Lynn, Mass ; Shot, W E Foot, Cambridge, Mass ; Pete Jr, E C Alden, Dedham, Mass ; Hector, Ivers W Adams, Boston ; Kit, M K Cowing, Providence, R I ; Snipe, Homer B Richmond, Lakeville, Mass ; Jack, James H Fullen, St John, N B ; Pilot, Wesley P Balch, Boston ; Chiswick, Thos H Terry, New York.

Class 27—Pointer Bitches, under 50 pounds weight—Jenny, A M Tufts, Lynn, Mass ; Miranda III, J W Coffin, Providence, R I ; Juno, C F Jordan, Winchester, Mass ; Loo Lu, Christopher Roache, Natick, Mass ; Crystal, H S Magraw, Colora, Md ; Ruby, Edmund Orgill, New York ; Fly, Jas S Barbank, Cumberland, R I ; Lassie and Zeal, St Louis Kennel Club, St Louis, Mo ; Fanny, Miss Ellen T H Swan, Hyde Park, Mass ; Dutchess, George Van Wagenen, New York.

Class 28—Pointer Puppies, under 12 months—Frank, Ned and Lola, J W Coffin, Providence, R I ; Countess and Mac, E C La Montagne, New York ; Ponto, Chas M Schieffiin, Mt Vernon, N Y ; Dash, Richard Eaves, Providence, R I ; Venus, J W Coffin, Providence, R I ; Smoke, E P Mottley, Boston ; Pet, C R Haradon, Boston.

DIVISION E.—SPORTING DOGS.

(Other than Setters and Pointers.)

Class 29—Chesapeake Bay Dogs—Foam, Charles T Curtis, Boston ; Rover, Baltimore Kennel Club, Baltimore, Md.

Class 30—Irish Water Spaniels—Brownie, George J Harris, Boston ; Brownie, George L Fisk, New Bedford, Mass ; Mack and Judy, Daniel D Lawlor, Mt Vernon, N Y ; Don and Juno, G B Paddock, West Meriden, Conn ; Tubby and Sport, R W Waterman, Athol, Mass.

Class 31—Retrieving Water Spaniels, other than Irish—Jingo, W S Curtis, Boston ; Lady, A J Colburn, Newton Highlands, Mass ; Gypsy, A W Tuckerman, Hyde Park, Mass ; Sport, T M Aldrich, Providence, R I ; Fuss, William E Wall, Cambridge, Mass.

Class 32—Cocker Spaniels—Carlow, W E Shedd, Waltham, Mass ; Grip and Rabbit, Charles Allen, Worcester, Mass ; Gip, D P Bosworth, New York ; Judy, Olin M Drake, M D, Ellsworth, Me ; Punch, Henry Whiting Jr, Ellsworth, Me ; Charlie, George P Cushing, Hingham, Mass ; General, Al Watts, Boston ; Gip, Chas Allen, Worcester, Mass.

Class 33—Field Spaniels of any other breed—Prince, Wesley Pearce, Boston ; Fido, Chas McCrassen, Boston ; Ben, Frank Dwinan, Somerville, Mass ; Charlie, W H Canterburry, Boston ; Jill, Mrs W H Lee, Roxbury, Mass ; Trimbush and Fairy, William M Tilston, New York.

Class 34—Fox Hounds—Jack and Ben, L P Bartlett, Arlington, Mass ; Hector, Bugler, Hunter and Piper, Chas Brown, Boston ; Sankey, Wm H Beggs, Danvers Centre, Mass ; Spot, E Link, Boston Highlands, Mass ; Snooks, John Hankey, Boston Highlands, Tyler, Henry Puvogel, New York ; Ino, E B Tinkham, New Bedford, Mass.

Class 35—Beagles—Rattler and Bell, Dodge & Baker, Detroit, Mich ; Driver and Charm, Peter B Bradley, Boston.

Class 37—Fox Terriers—Turk and Vixen, Al Watts, Boston ; Paulo and Nettie, Prescott Lawrence, Groton, Mass ; Lovely and Turk, A Winsor Jr, Providence, R I ; Rattler, Vixen, Minnie and Tyrant, Thomas D Burke, New York ; Tort and Deacon Rasper, Frank B Fay, Boston ; Tinker, Francis Welch, Boston ; Nettie, Walter G Cotton, Boston ; Young Trap and Nellie, Walter J Comstock, Providence, R I ; Nim, William H Lee, Boston ; four pups, George B Inches, Boston ; Taps, George B Elliott, Keene, N H.

Class 38—Greyhounds—Skip, Al Watts, Boston ; Gizela, E W Cushing, Boston.

Class 36—Scotch Deerhounds—Msida III., Sigourney Butler, Quincy, Mass ; Cid and Lupus, J R Webster, East Milton, Mass.

For Forest and Stream and Rod and Gun.

DOGS—No. 6.

SENTRY had an inveterate dislike to strange cats, but was always on the best of terms with the house cat, allowing her to eat out of his dish. On one occasion he chased a cat in the street, which naturally made for home. The master of the house, who was unfortunately standing in the front door, was most unceremoniously laid flat on his back. Puss, running up-stairs to take refuge in her mistress' bedroom, the door of which not being closed, the good lady, who was at her toilet, was nearly frightened into a fit by the sudden appearance of the ill-bred animal. A window, opening on some out-buildings in the rear, enabled puss to make good her escape, the dog regaining the street before the man returned with his gun. Under the circumstances, I thought it prudent to make good my retreat. But I called the next morning, minus Sentry, to explain and apologize—a gratuity to her ladyship restoring her equanimity.

On another occasion, when taking a stroll in the outskirts of the town, I met a gentleman—a stranger—accompanied by a large mastiff, evidently a quarrelsome brute. I therefore called my dog off. On my doing so, the stranger observed: "Your dog is big enough to take his own part; why not let them fight? Are you afraid of yours being hurt?"

"Far from it, my good sir; but I have a decided objection to men or dogs fighting, when it can be avoided."

To which a most contemptuous Umph! was the rejoinder. The man's sneering look annoyed me, I am sorry to say, and I observed that if he was fond of brutal exhibitions, he was at liberty to set his dog on. He would soon be glad to call him off. No sooner said than done. The mastiff flew at Sentry, but was at once seized by the throat and pinned to the ground, where he remained perfectly helpless. His master looked on for a few moments, but seeing that his dog was powerless, he raised his cane to strike the victor.

"Stop!" I exclaimed: "whoever strikes my dog strikes me, and if you dare to hit him I will floor you!" brandishing at the same time what my friend Paddy would call "a raal tidy shillelah." This somewhat cooled my opponent's ardor, and he respectfully observed that my dog would kill his.

"That is exactly what I anticipated; but if you will seize your dog by the hind leg to drag him away, I will make mine relax his hold and follow me. I have him perfectly at command." I accordingly grasped Sentry's collar, and with a gentle tap on his fore paw, made him let go—our opponents departing somewhat crestfallen, the mastiff evidently not in a fighting mood.

My aim in relating this incident is not with a view to vaunt Sentry's fighting abilities, but for the purpose of expressing my abhorrence of dog-fighting, cock-fighting, bull-baiting and fighting, and all similar disgusting, cruel and unmanly sports, which are a disgrace to any civilized and Christian country. The men of England, I am sorry to say, were once noted for their encouragement of the three first, which have been put down by the strong arm of the law. I was always fond of field sports, of athletic exercises of all kinds, but am thankful to have it in my power to boast that I never encouraged nor witnessed boxing in the shape of a prize-fight, bull-baiting, dog or cock-fighting, etc. What can be more disgusting than the following specimen of refined brutality, related to me by an eye-witness, a half-pay officer in the British Lancers, one who fought with Wellington at Waterloo, having served throughout the Peninsular Campaign:

"Staffordshire, the great English county for pottery, was also noted for its bull-dogs, bull-baiting and dog-fighting being favorite sources of amusement with the pottery men. A heavy bet was made by the owner of a celebrated bull-bitch—having then a litter of puppies—that she would pin a bull, and allow her two hind paws to be cut off without relaxing her hold. The bet was won by the owner of the bitch, the puppies having been brought on the field in order to excite the poor brute to defend her young."

I believe a record of this quintessence of barbarism exists in the "Sporting Annals." At all events, I have seen it in print.

Now some young roisterous sportsman reading this may possibly conclude that the writer, if a sportsman at all, must have been, to say the least, a milk-sop: one of your chicken-hearted men who would quail at the sight of danger. But the man who has rushed through the flames to the top of a four story house to save a boy, who has twice joined to man a life-boat to save others at the peril of his own life, besides a few other ventures, can have been no coward! My experience has taught me that a truly brave man is always possessed of no common share of the milk of human kindness, and that a bully, a braggadocio, is invariably an arrant coward. A man who is cruel to dumb animals cannot be a kind husband or father.

Leaving Jersey, I resided in London several years before coming to Canada, living at Peckham Rye, where Sentry was universally admired. He always accompanied my wife and self when we took a summer evening's stroll, and I have often known a carriage pull up and the footman politely ask me to stop and allow his master and mistress to get out and examine the dog. On one occasion I was offered one hundred sovereigns for him. So well could I depend on the dog that I never carried a latch key, the servants going to bed and leaving him in the hall reposing on the front door mat. When he heard me on the portico steps he would get up to allow me to open the door, but he never barked or made the least noise. I never knew him give a false alarm. If any one opened the front gate he gave one loud bark. Often when my wife has fancied she heard a noise I have been roused from my peaceful slumber with "Phillip! Phillip! Get up, I hear some one about." The invariable reply being, "Has Sentry barked, my dear?" "No." "Then go to sleep."

I always took Sentry for a run in the road about nine in the evening. On one occasion I fell in with the policeman, who, after admiring the dog, inquired if he was a good watcher, and being answered in the affirmative, observed that he never heard him bark. "Open the gate some night when you are passing and the lights are out," was the rejoinder. A few nights later a loud bark awoke me about midnight, and as the dog did not leave the front door I knew there must be some one in front. Opening the bedroom window the policeman spoke immediately: "It's me, sir; our Superintendent is with me, and I wished him to witness the dog's watchfulness. I have not opened the gate, but merely raised the latch. No robbers can harm you, sir. Sorry to disturb you; good-night!"

We had the dog several years before my eldest son was born, and for eight or nine months he was jealous of the child, growling and going off in high dudgeon the moment he saw him. One Sunday afternoon, the mother having laid the child in his cot, went up-stairs requesting me to call her or the servant if he awoke. Sentry was taking his siesta on the front door mat. Hearing the child cry I went to him, and to my astonishment I found the dog at the side of the cot, wagging his tail and licking the boy's hands as though he wished to pacify him. From that hour he became his friend, and when the lad began to toddle he would lie on the carpet and allow him to maul and pull him about without the least sign of annoyance. He would put his little hand in his mouth, pull at his tongue, poke his fingers in his eyes or nostrils, etc. I have known lady friends come in, and being alarmed lest the dog might hurt the child, they would rush to the rescue, but a growl from Sentry caused a precipitate retreat, and the loving pair would continue their game in peace.

Sentry had a decided objection to tradesmen's calls, even the butcher's boy was stopped, after delivering his meat, if he attempted to leave unaccompanied by the servant.

Percé-Gaspé, Feb. 18, 1879. PHILLIP VIBERT.

(To be continued.)

THE IRISH WOLF-HOUND.

THE exhibition at the late Bench Show of a noble specimen of the Irish wolf-hound, valued at $5,000, by Mr. Lester Wallack—a notable attraction among the kennels—makes the following article especially interesting at this time. We copy from *Land and Water*:—

The question whether it is possible to resuscitate this ancient breed of dogs has for some little time been attracting the attention of a certain section of the dog-loving world.

Of course the great obstacle in the way is the difficulty of obtaining pure specimens of a breed for which there has been no use for many years, which, as a distinct variety, has, in consequence, almost, if not entirely, ceased to exist. This drawback, however, cynics might be inclined to say, is a trifling difficulty in the way of "a consummation devoutly wished for" by dog breeders. There seems to be rather a craze about resuscitating old, or introducing new, breeds of dogs of late years, which generally really means little other than a dog-dealing plant. Some nondescript animal or other makes its appearance at a dog show, is awarded the prize on account of its size, ugliness, or other peculiarity, as the best foreign sporting or non-sporting dog, as the case may be, by a judge who, most likely, has never seen a specimen, and does not know whether or not there is such a breed as that to which it is reputed to belong. The award gives the animal a *locus standi*; then letters appear advocating the great desirability of bringing out the breed. Generally speaking the animals are thoroughbred mongrels, possessing no good qualities other than those which are to be found in much greater perfection in our own breeds. Such, in all probability, is the Leonberg, about which so much has of late been written; I believe he is simply a big mongrel, a combination of Newfoundland, mastiff, and deerhound, or some other such incongruous mixture.

It must not be understood, however, that in drawing attention to the question of the Irish wolf-hound the aforegoing observations are meant as imputations as to the genuineness of those who are making the endeavor to resuscitate what was no doubt a magnificent variety of the dog. On the contrary, Captain G. A. Graham, a gentleman who has been interesting himself in the Irish wolf-hound question, seems de-

termined to accept none of the "spurious imitations" of the breed which others less particular than he are bringing forward ready at his hand. Like genuine antiquities, such ancient breeds of dogs as the Irish wolf-hound are interesting and valuable, if only as memorials of early times. The early Britons were, it is well known, celebrated for their breeds of dogs, and of these the most remarkable were the mastiff and the large, rough wolf or gaze hound. The mastiff, it need scarcely be said, has been resuscitated, in fact, "very much" resuscitated, for there are two or three sections of mastiff breeders, each equally certain that the other's mastiffs are no mastiffs at all, and that they only themselves possess the genuine, unadulterated article. If one is to put any faith whatever in what history says, however, about mastiffs, the modern animal, magnificent a creature as he is, must be but a puny descendant of a breed, two of which were, in early times, more than a match for a lion or a tiger.

No organized attempt, however, has, as far as I am aware, been made to reproduce the Irish wolf-hound until the present. The Irish wolf-hound is of as undoubted antiquity as the mastiff, and, although his primogenitors were the breed of *celer es* of the early Britons, it was in Ireland that he retained most of the characteristics of that ancient breed for many years after he lost his identity elsewhere in the British Islands. The Scotch deerhound, beyond doubt, is descended from the same source, but climate and other influences have had the effect of producing the modifications now presented in the modern animal.

The Irish wolf-hound, however, as long as he was known to exist, even under the appellation of the great Irish greyhound (*Canis gratus hibernicus*) retained his size and other characteristics of the wolf-hound, with which he really was synonymous. The Irish wolf-dog existed in the third century, and having in addition to his power of speed, great size, strength, agility and courage, was exported to Rome for fighting with the wild beasts in the arena. It has been held by some writers that it was the British mastiff alone that was sent to Rome for this purpose, but there is strong evidence that both the Irish wolf-dog and English mastiff were fought in the arena against wild beasts in the third and fourth centuries. Scrope, writing at the beginning of the present century, says that the gigantic Irish greyhounds or wolf dogs "at one time existed in Ireland," but "are now extinct." The Sligo family are mentioned by some authorities as having retained the breed in purity up to a comparatively modern date; but as I believe several large German boarhounds were imported and crossed with them, it seems doubtful whether that family actually has ever possessed the breed in its unadulterated state during the past century or more. H. G. DALTRY.

THE DOG AS A SHEEP DESTROYER.—If the statistics which we find in a late number of the Baltimore *Sun* are accurate, legislation regarding the hordes of dogs infesting certain districts is imperatively needed. Here, for instance, is Maryland, with her 4,000,000 acres of uncultivated land and 1,000,000 acres of wild pasturage, and yet only 151,200 sheep; and all because sheep farmers know that seven per cent. of their sheep must annually be destroyed by dogs. The Southern States have summer pasturage for 150,000,000 sheep and winter keep for over 60,000,000, but in 1878 there were only 6,887,000 sheep, and of these over half a million were destroyed by dogs. Of course we cannot lay the whole blame of the non-developement of this pursuit alone upon the dogs. But the voice of the farmers is very unanimous in designating the danger of destruction by curs as the most powerful deterrent from any extensive participation in sheep culture. No one is willing to expend time and capital upon mutton to see it go to the dogs. There are millions and millions of curs in the South which are altogether worthless and worse than good-for-nothing—a positive nuisance. It is a curious spectacle, this nursing of a domestic wild beast to prey upon the flocks of husbandry. The cur-dogs should be put out of existence. If their owners do not see the necessity of such action farmers and capitalists may find the remedy in legislation. To sacrifice a profitable industry to the fostering of these droves of canine pests is simply monstrous. We shall always uphold most strenuously all law-making tending to protect the owners of valuable breeds of dogs; but when in any section of the country the dog becomes a pest we shall advocate with equal force the only remedy, extermination.

A GOOD MOVE.—The Monroe County Sportsmen's Club, of Rochester, N. Y., at their last meeting adopted the following resolutions:

Whereas, The absence from the statute books of New York of a law defining the rate of compensation per mile at which railroad companies shall carry dogs in baggage cars is a source of great annoyance to thousands of persons annually, who are in consequence subject in many cases to extortionate charges by irresponsible employes of the railroad companies; therefore,

Resolved, That the Monroe County Sportsmen's Club request the representatives of Monroe County in the Legislature to procure, if possible, and without delay, the passage of a law that shall compel railroad companies in this State, under a penalty of twenty dollars for refusal, to carry dogs in baggage cars, when the owner, or other person having such dog or dogs (not to exceed two) in charge, is a passenger on the train to which the baggage car is attached, the compensation to the company for carrying a dog not to exceed half a cent a mile.

This is an eminently sensible way of correcting the much-complained-of abuse and imposition met by sportsmen with their dogs. Monroe County is strong in sportsmen, and we may confidently expect good work from her representative at Albany. If they succeed in carrying the bill through, they will have placed the sportsmen of the whole State under obligations to them.

DOGS FOR THE SOUTHERN STATES.—*Mr. Editor:* My experience has been that the Gordon is hardly so hardy as the Irish or English, and at the same time, from his excessive nervousness, hardly so staunch. But the Gordon will amply repay all the time that is devoted to him. The Irish I think the finest natural ranger in the world, but more headstrong and almost as excitable as the Gordon. The English setter is by far the easiest to train, and in truth it would be hard to find a better dog for the service, or for service. I have a theory, however, that the harder a dog is to train the better he is after that consummation has been reached. My own fancy, therefore, inclines most to the Irish setter. But may my right hand forget its cunning, and may I never again bring down another bird, if I pass unnoticed the glorious pointer. The first dog I ever owned was a pointer—peace to his ashes—and many a day's sport have I had with him. But he long since rests with his fathers, and I do hope that in the happy hunting-grounds, set apart for dogs in the hereafter, he has the place of honor. But they cannot stand the warm climate as well as setters. Something seems to disarrange the stomach and liver, and one rarely meets a healthy pointer.

I found by reading "Hallock's Sportsman's Gazetteer," that on the dog question we were entirely congenial, and I want you to see what we call at the South a broken dog. Let me summarize a little. To drop to shot or command whenever given, if on a point; controlled by motion of hand to range right or left or front, or to come to heel, and as I walk up my own birds never to flush under any circumstances; trained to range out or hunt close, as occasion requires, and always to go with head up, for deliver me from a dog who potters over a ground scent. NEMO.

Cairo, Georgia, April 10.

FOX HUNTING IN GEORGIA—*Editor Forest and Stream:* We have raised a lot of pups to have ready and seasoned for next fall fox hunting. We like to have them one and a half year old before putting them down to hard work, as they stand it better and last longer. They are ten months old, and, as Jim Johnson said of the bear, "as fine as split silk." On the last day of March we got word from John R. to meet him at the cross roads below the ferry next morning, an hour before day. The place was ten miles away and the season off; some one suggested that to-morrow was April 1. Well, so it was; but although neighbor John enticed Bill Smith into a swimming hole, we didn't believe he would try to April fool us, and as our old friend P. was over from Alabama and wished to see the puppies perform, we were off next morning on time, determined to perpetrate the joke on Master Reynard or a goodly sized pack of hounds. But when we arrived, there was John armed and equipped as the law directs—with horn, horse and hounds—and along with him our old comrade, Ben, just up from his orange grove in Florida and spoiling for a chase. We had eighteen dogs, with the puppies thrown in, and everybody present, except the man who put on his best suit once for a similar occasion. There was an old fellow, with a "monstrous" track that led across the straw fields of the plantation, that had been chased by other dogs enough to give him a reputation, and we decided to try for him. The track was soon struck, and after a long and exciting trail, he was routed from cover just at sunrise. The morning was calm and the ground firm, and we knew he was up for his final run. But who can describe a hunter's feelings as the pack go thundering over the hill? The puppies were all in and square up, and off they struck for the hills, five miles away, but taking a turn near Chokee, led out for the piney woods, and then we were in for it. He was a sharp scholar in tactics, but a foolish effort to cross an open field ruined his plans and forever ended his sport of being chased by coon dogs. We have hung his brush high on the wall and fastened it with a vow not to place any more there until some frosty morning in October, when we know our "purps" will round up for the old dogs in handsome style.

Our Ben tells me that in going to Florida last fall by private conveyance, he carried a hound from his father's, in Dooley County. He lost the dog in Lake City, Florida, one hundred and fifty miles from home, and in just one day (24 hours) from the time he lost him he was back in Dooley.

Americus, Ga., April 20, 1879. SHOT.

JUDGING AT PHILADELPHIA.—*Editor Forest and Stream:* I notice in your paper of May 1 the remarks about the Philadelphia Dog Show, and am pleased to learn that some one besides myself is dissatisfied with private judging. I know that some of the dogs when taken before the judges were scarcely looked at, let alone examined as to their points of breeding. There was a gentleman who had a very fine Irish setter that he expected would carry off first prize, but when the colors were tacked up over the kennel next door to his own, he gave vent to his feelings in a way not calculated to please the judges; but they, hearing how much disappointment was occasioned by this little mistake, slipped around and gave the dog a third prize almost twenty-four hours after the first prize had been awarded to his neighbor. This can be proven by the attendant who had the dog in charge. Again, they gave a v. h. c. to a Gordon setter that the owner had entered to find out of what breed he was. There was also much dissatisfaction about Petrel winning over Rhoda, and I speak the truth when I say that nineteen out of twenty that drew comparison between the two bitches gave Rhoda the preference. As one dog-man remarked, "Rhoda had committed the unpardonable sin of having taken the first prize at the New York show in 1878." You are at liberty to publish this, as I can prove every word. H. G. JENNINGS.

West Philadelphia, May 2.

AN INTELLIGENT CUR.—*Mr. Editor:* Not long ago one of the doctors of Michigan University related to his class a little incident about a dog of his. He thought of trying an experiment, so he made an incision into the stomach of the dog and placed a silver tube into the orifice, and plugged it up with a cork. At first it was doubtful whether the animal would survive, but he came around all right, and was seen running around the streets in a very healthy condition. Now comes the story. Well, in running around one day he caught the plug on a shrub and pulled it out. The doctor seeing this, and having become much attached to the dog, tried to save him by sewing up the orifice; but after every meal the gastric juices would flow into the wound and irritate it so it could not heal. The doctor gave him up for lost, but in a few days the dog grew better; and the doctor watched one day, and found that after every meal the sagacious animal would run to the barn and there lie down on his back for an hour or so till the juices of the stomach had acted on the food, and then get up. The dog was running around in a healthy condition for a long time. Can any one say that a dog is not almost human now.

Ann Arbor, Mich., April 27. TIRO.

—A litter sister of Malcom, out of Zilley's Green by Munn's Duke of Gordon, was poisoned at Orange, N. J., by a gentleman who styles himself a nerve doctor.

National Pastimes.

RIFLED ARROWS.

EDITOR FOREST AND STREAM:

In response to the query of "A. B." in your issue of the 24th of April, permit me to say that the feathers of all good arrows are "rifled," not by any spiral position of the rib of the feather on the arrow shaft, but by the natural curvature of the vanes, which causes a rotary flight of the arrow. Long before I had ever seen an English arrow I feathered my hunting arrows by "rifling," giving a one-fourth turn to each feather. I found this much the best way, where one has to feather his own arrows, for the reason, that not being able to do the nice and perfectly accurate work necessary to cause a straight feathering to shoot well, he can perform the less difficult task of "rifling" very satisfactorily. Even a considerable deviation from regularity will not materially affect the flight of an arrow feathered spirally with broad feathers, for the strong whirling of the broad vanes will necessarily keep the flight straight. For short distances—60 yards and under—the spiral feathers are much the best; but for long-range shooting, the trajectory of such arrows are not flat enough, and they are useless. This "rifling" of the feathers is no new thing, as I supposed it was when I feathered my hunting arrows thus, and even removed the feathers from Highfield's best footed arrows last season and re-feathered them spirally for my own use, all my matches last season being shot with such arrows. Conceiving that I was the inventor of a "good thing," I began proceedings for securing a patent, and had partially bargained with a leading archery house in your city for the right of making such arrows, when lo! I received the following printed letter from the venerable Peter Muir, of Edinburgh, Scotland. It is a copy of a letter sent to the editor of the London *Field:*

SIR—If you will allow space in *The Field* for the insertion of following remarks on that most important part of an archer's equipment, the arrow, you will oblige the writer, and, it may be, do an acceptable service to archery:

At present there is some discussion among archers as to the merits of an arrow said to be invented, and certainly patented, by Dr. Croft of London. The only difference in this arrow from those in general use is that the feathers are twisted round the arrow like a screw. This is no new invention, and, therefore, can have no patent rights. I made and experimented with such more than thirty years ago. I have no remembrance in what those experiments resulted, but believe they must have been unsatisfactory, inasmuch as the screw was not adopted. I have in my possession arrows with the feathers twisted round the stele in the same way, which, there is reason to believe, were made and used before the beginning of the present century. I shall therefore continue, as heretofore, to make arrows to any shape, weight or style of fledging which my customers, with their many tastes, may choose to order. But, to test the truth of the assertions in favor of this would-be "patent arrow," I made a few exactly the weight and style of the contents of my own quiver, fledged one straight, as an ordinary arrow, one with a slight twist, and one each fledged with the right and left wings, and with as much screw as would allow the arrow to pass over without striking the bow, thereby obviating an objection which will be referred to afterward; then another arrow with only two wings and as much screw as would allow it to pass over the bow. With these I took one of my own arrows, whose qualities I knew and could trust, making in all six arrows in my belt, with which I went to the field to test them for distance and straightness of line. I did not consider the target as the best mark to try these qualities, but stuck two pieces of white wood (like the "Willow Wand") in the ground, at about 100 yards distance, doing my best to give each arrow the same direction as to line, and the same draw, elevation and quit, for distance. They were taken from the belt at random, and used as they came to hand.

The line was well maintained, with rarely a deviation of more than a foot to either side, and sometimes striking the wand. To record the distances, I ruled a sheet of paper into six columns, one for each arrow, and twelve lines for the ends I shot each day. The arrow which was found in the ground furthest from where it had been shot was recorded in its own column as 1; the next, which might be only a few inches shorter, was recorded as 2; and so on to the shortest arrow, which was 6. On several days I shot the same number of arrows (six dozen) with various results, any of which days might be taken as a sample; but the day I considered the most favorable for an impartial test showed, when summed up; My own arrow, 23; two wings, 24; with slight twist, 36; screwed arrow, left wing, 44; straight fledged arrow, 44; screwed, right wing, 62. I came to the most distinct conclusion that a screw fledged arrow has no advantage whatever over the ordinary straight-winged arrow. These arrows were generally so near each other that the disc of a four-foot target would have received them. The arrows were so different in the conformation of their wings, the steles being in every respect equal, I was surprised at the result, as it seemed of little consequence how an arrow was fledged, provided the shaft was properly made of well balanced material, straight and stiff. I intend on the first occasion, when shooting a match, to use one arrow straight winged, one with three wings spiral, and another with two wings spiral, believing that the same hitting can be made with all the three. It has long been a settled conviction with me that an arrow fledged with feathers of the same wing of a turkey or peacock acquires when flying as much rotation, without impeding its flight, as it needs, which rotary motion is caused by the air impinging on the curved inside of the broad part of the feather nearest to the nock. The same arrow fledged from different wings has its rotation spoiled, the one wing counteracting the other. A rifle ball receives about a half or three-quarter turn when passing through the barrel, and it receives its first lesson in rotation with the propelling power applied. Not so an arrow; it leaves the power that sends it with a straight forward motion, and only begins to rotate by the resistance it meets from the atmosphere impinging on the curved faces of the feathers, and thereby, in the first instance, retards the flight; *the more twist the more retardation;* the natural curve of the feather is enough, and fully as much twist as a rifle ball gets.

In a recent publication of Messrs. Howell, James & Co., opinions in favor of this arrow are given from Mrs. Hornblow, Miss Betham, etc., etc. Mr. Edwards, on the other hand, writes me: "Have you seen Dr. Croft's arrow? He has sent me three for trial. The invention, such as it is, is not new. The Doctor says they have steadiness of flight, with extreme lowness, making them invaluable at 100 yards, etc. After giving them four hours' trial, I pronounced that they had neither the one quality nor the other. The effect of the spiral feathers, as he puts them on, is that it hits the bow so abruptly as to throw the arrow off, mostly to the left, with a kick and a jump."

I would conclude by remarking that had Dr. Croft known something more of an arrow, its use and history, he might have saved himself the expense of a patent.

Yours respectfully, PETER MUIR.

Edinburgh Archers' Hall, Dec. 24, 1864.

Since this season began I have been experimenting with arrows of various makers, and I am now thoroughly convinced that the natural curvature of the vane of the feather is exactly enough for the proper rotation of the arrow. Many archers suppose that their arrows do not turn in their flight, but if they will stand near the target, and let another archer shoot the arrows from 100 yards distance over the target, they will notice the beautiful rotary motion of each arrow as it passes.

Some of your correspondents—notably "N. K. D."—in your issue of April 24 advise the archers who are practicing for the August Meeting at Chicago to shoot only at short ranges—40, 50 and 60 yards—"until scores of 200 at 40 yards, 175 at 50 yards and 125 at 60 yards can be regularly made," before beginning the longer ranges. I fear if archers should follow this advice that very few would get any practice at 80 and 100 yards before the meeting, as the attainment of such scores as the above regularly will be rare, even among the twenty first shots in the country this season. Here are two propositions which will be doubted by few archers: First, practice at long range will improve one rapidly at short range; second, practice at short range will injure one's shooting at long range. It follows as a corollary that the "greatest good to the greatest number" (of ranges) will result from practice at the long ranges. I might with propriety illustrate this by my own experience this season. During last summer I averaged in public matches from 170 to 236 with 30 arrows at 40 yards; this year I have so far shot only two scores of 30 arrows at 40 yards. The first, which was shot in a contest with Mr. McMechan, when I had yet done no shooting at long range, yielded me 166 score. The second, shot on the 23d of April, after I had been shooting for two months only at the long ranges of 80 and 100 yards, yielded me 228. To one who begins practice at 100 yards for the first time there is something exasperating in the monotony of thirty or forty straight misses; but I have yet to find the archer, who clung to the range for a month, who would not rather have the pleasure of one afternoon's shoot with a friend at that distance than a whole week of battering the gold and red at 30 yards. The freedom of movement, the strong draw, the great flight, the exhilaration and matchless joy of archery culminate in the long range shooting. Not only the greater pleasure, but the greater improvement will always be found in the careful attempt upon the distant mark. I do not pretend to be an "authority" on archery, but it requires no gift of prescience to foretell that the ten highest scores made at the Chicago tournament will stand opposite the names of ten votaries of long range practice.

Crawfordsville, Ind. WILL H. THOMPSON.

EDITOR FOREST AND STREAM:

I have tried rifled arrows; so has my father and my grandfather. Whether Adam after his fall did or not, I don't know, but do know that there are old Indian arrows of fine workmanship which have on them two spiral feathers, each so placed as to be opposite the other, on opposite sides of the arrow, though they may be at different distances from the ends of arrow; and such are of more accurate flight than those of the ordinary feathering, precisely in the same way and for the same reason that the rifle ball is more accurate than the straight-bore. The feathers should be small and have a slow twist, as otherwise the flight is retarded; and two feathers should be used, as one would not answer, unless it could pass several times around the arrow, which is not practicable. Three feathers are better than two. Use wing or tail feathers of the yellow-hammer. Start the feather from the quill with a sharp knife, near point, and tear it downward to the large end. This brings off a thin skin, which admits of being nicely glued or cemented to the arrow. They may then be trimmed to suit the weight of arrow or strength of bow. I think 3-16ths of an inch is high enough for the feather to rise from the surface of the heaviest arrows. A good point for the feathers is about 6 or 8 inches from small end of arrow, and they should be distributed around the arrow as are grooves on a rifle ball. The amount of twist and feather will be learned by a little experimenting. There is more gained in accuracy than is lost in range by this mode of feathering. H.

Enfield, N. C.

NATIONAL ARCHERY ASSOCIATION.

The great inaugural meeting of archers, under the control and management of the National Archery Association of the United States of America, is appointed to take place at Chicago, on Tuesday, Wednesday and Thursday, August 12, 13 and 14, 1879. Following is a synopsis of the programme of the meeting:

FIRST DAY.—Competition for National Medals.

Ladies—48 arrows, 30 yards; six special prizes for best six scores; also special prizes for most hits, most golds, most reds, most blues, most blacks, most whites, best end of three arrows, poorest score.

Gentlemen—48 arrows, 60 yards; 96 arrows, 80 yards. For best six gross scores, prizes of $70, $60, $50, $40, $30 and $20; also special prizes for best score at 60 yards; best score, 80 yards; most hits, 60 yards; most hits, 80 yards; most gross hits, most golds, reds, blues, blacks, whites; best end, 60 yards; best end, 80 yards; poorest score, 60 yards; poorest score, 80 yards.

Ladies' Handicap—30 arrows, 20 yards. Special prizes for best three scores; also for most hits, golds, reds and blues.

Gentlemen's Handicap—30 arrows, 40 yards. Prizes same as in ladies' handicap.

SECOND DAY.—Competition for National Medals:

Ladies—48 arrows, 40 yards; prizes as in previous day's Medal Competition.

Gentlemen—Prizes for six best scores same as in previous day's Medal Competition; also prizes for most hits, golds, reds, blues, blacks, whites, best end, poorest score.

Ladies' Handicap—30 arrows, 20 yards; prizes for best three scores; also for most hits, most golds, most reds, most blues.

Gentlemen's Handicap—60 arrows, 50 yards; prizes same as preceding competition.

THIRD DAY.—Competition for National Medals:

Ladies—48 arrows, 50 yards; prizes same as in other Medal Competitions.

Gentlemen—72 arrows, 100 yards; prizes same as in second day's Medal Competition.

Ladies' Handicap—30 arrows, 30 yards; special prizes for best three scores; also for most hits, most reds, most blues.

Grand Team Shoot—For teams of four members from any society, at the American Round; 30 arrows, 40 yards; 30 arrows, 50 yards; 30 arrows, 60 yards; four prizes for best gross scores, $100, $80, $60 and $40; special prizes for most team hits, golds, reds, blues, blacks, whites; also individual scores for most hits, golds, etc., and for best and poorest individual scores.

No archer will be allowed to shoot unless a regular member of a society belonging to the National Archery Association. The winners will be declared and prizes awarded at the Sherman House, Chicago, on Friday A M., August 15. The winners of "score" prizes in the competitions for the National Medals, will be handicapped in competing for other money or special prizes, in accordance with the provisions of the Constitution of the National Archery Association. The special prizes consist of bows, arrows, quivers, belts, tassels, finger tips, arm guards, targets, gold brooches, gold arrows, silver arrows, vases, jewel cases, albums, tea sets, student lamps, flower stands, *Harper's Weekly* one year, *Harper's Monthly* one year, *Scribner's* one year, *Atlantic* one year, Dickens' works, Irving's works, etc., etc., etc. The Champion and Championess Medals are of gold, beautifully designed.

Executive Committee—Hon. Maurice Thompson, HENRY C. Carver, Esq., W. A. Russell, Esq., Edward L. Brewster, Esq., James H. Watson, Esq., Will. H. Thompson, Esq., Albert G. Spalding, Esq

THE SEASON OPENED.—A large number of out-door games on Saturday last fairly inaugurated the spring campaign. The Columbia College Athletic Association held their fourteenth annual field meeting at Mott Haven; the Staten Island Cricket Club enjoyed a game of cricket with their characteristic festivities on their beautiful grounds over-looking the Bay, and the Stevens Institute Athletic Association held their sixth annual meeting on the St. George Cricket Grounds at Hoboken.

THE O'LEARY BELT.—Programmes have been published of the contests for the belt to be given by Daniel O'Leary, the match to be held in Gilmore's Garden, this city, Oct. 6 to 11. O'Leary has leased the Garden for the whole month of October. The programme of the different meetings to be held there comprises contests in distance and time walking and running, bicycling, wrestling, sparring, etc.

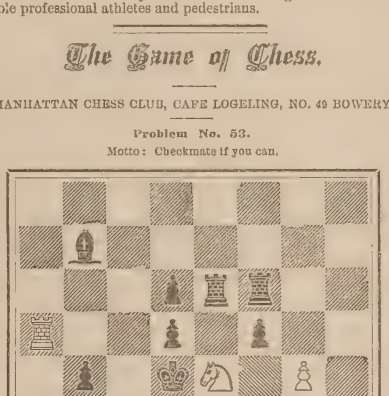
—Brodie, the New York Newsboy, won the six-days' walking match at Philadelphia last week. His record was 390 miles. The seventeen-year-old New York gamin defeated able professional athletes and pedestrians.

The Game of Chess.

MANHATTAN CHESS CLUB, CAFE LOGELING, NO. 49 BOWERY

Problem No. 53.

Motto: Checkmate if you can.



White to play and give mate in two moves.

2—Q, B or B mates

CURSORY JOTTINGS.

—The clergy have a peculiar fondness for chess. Among Catholic ecclesiasts we find the names of Cessolis, Lopez, Vida, Ponziani, Sacchieri, Carera, Pope Leo X. and St. Francois de Sales as chess players and chess writers. Among Protestant ministers the names of Sagitarius, D'Arblay, Lambe, Koch, Atwood, Bowdler and Bolton are well known.

Caissa.—The heroine of Sir William Jones' poem on chess (1763), and since generally regarded as the Muse, or goddess, of chess:—

O'er hills and valleys was her beauty famed,
And fair Caissa was the damsel named.

—Among other festivities held to celebrate the entrance of Queen Claude into Paris, 1517, a game of Living Chess was played; the white pieces being directed by the King, and the opponents by the Count Saint Paul.

—The game of chess existed, in its primitive form, during a period of three or four thousand years before the sixth century of our era then came the mediæval stage, occupying one thousand years, to the sixteenth century; and, lastly, the modern period to the present time covered by an exuberant chess literature.

—Napoleon the Great was an ardent chess player during his entire life: chess was his solace in Egypt, in Russia, in Elba and at St. Helena.

—Damiano, the Portuguese writer on chess, was an apothecary; Ruy Lopez the Spaniard, Carrera the Sicilian, Vida the Lombard, and Koch the German, were priests; Salvio of Naples, Del Rio of Modena, Piacenza of Turin, and Azzio of Fossombrone, were lawyers; Ponziani of Modena, was both a priest and a lawyer; Allgaier of Austria, Bilguer of Prussia, and Bertin of England, were soldiers.

—Rabelais describes, in Book V., chapters 24 and 25, three games of chess played with men and women clothed in gold and silver; the nymphs (pawns) being attired as in company with Diana at the bath.

—Henry Thomas Buckle, the author of "History of Civilization," was one of the very foremost of English chess players.

—Fragments of the beautiful set of chessmen sent by the Caliph Haroun al-Raschid to Charlemagne (A. D. 810) are still extant.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

—We cannot attempt to comply with the requests of persons who write for the full names and addresses of the correspondents whose initials appear in this column.

J. M. D., San Francisco.—Teach your dog to retrieve and by this means you can probably induce him to go into the water. Otherwise we fear there is no remedy.

C. E., New York.—To waterproof cotton drilling boil a mixture of 6 oz. hard yellow soap, 1¼ pint water, ½ lb. patent driers, 5 lbs. boiled linseed oil. The new law has not yet passed.

J. C. T., New York.—Will you be good enough to give pedigree of Sperry's setter bitch Flora? Ans. Do not know it. Give some further particulars as to what Mr. Sperry and the breed of setter, and we may find it.

SUBSCRIBER, Montgomery, Ala.—For a book on guns and gun making buy Greener's "Modern Breech-Loader." Price $2.50. We can mail it to you. For a list of over thirty books relating to the gun consult the "Bibliography," page 663, fifth edition of "Hallock's Sportsman's Gazetteer."

BEAUMONT, New Hope, Penn.—Is there a machine in successful operation for hatching fowls' eggs? Do you know of a Frenchman on Long Island who has one? Ans. Eugene Freterre, dentist, 159 Bowery, formerly had one in successful operation at his place on Long Island, and we believe has now.

DANE, Cincinnati, Ohio.—Where can I obtain a good book treating on making of fishing rods, and at what price? Ans. There is no work extant which treats distinctively of the technology of rods and tackle. You will find all the information that is attainable in back numbers of this paper and in Hallock's "Sportsman's Gazetteer."

DOCTOR, Brooklyn, N. Y.—Are dew-claws in a setter puppy a sign of good or bad strain? Should they be removed if connected by an articulating joint? Puppy about three months old. Do they actually interfere in hunting, or is it only a prejudice? Ans. They are an accident of nature and, although they do not interfere with the dog's work, should be removed as a eyesore and deformity.

GERMANTOWN, Philadelphia.—I have a setter pup one year old which weeps, having the eyelids very much inflamed and always wet. Have been using sassafras pitch dissolved in water, but without success. Ans. Give your dog a mild aperient, avoid light and apply warm fomentations to the eye. If this does not reduce the inflammation bathe the eyes with an infusion of poppy heads. The diet should be low and unstimulating.

P. S., Baltimore.—I am thinking of buying a boat for pleasure and hunting. When used for pleasure I expect to take my family with me. Do you think one of Osgood's canvas boats suitable, or would you prefer a Rushton? Ans. For lake use we would prefer a Rushton. For broken water and rapid streams the Osgood would be preferable. To buy a boat of all work is as difficult as it is to get a combination horse for the plow, the coupe and the sulky.

MC, Oskaloosa, Ia.—Will you please inform me what kind of a fly to use for bass and salmon on Iowa rivers? Ans. The ordinary bass flies can be obtained at any tackle shop on request. Your "salmon" (wall-eyed pike) often take a fly which must be gaudy and larger than a bass fly and shotted with a buckshot as near the head as possible. They are really a bottom fish, however, and are generally taken with a minnow. Bass like rocky shores; pike perch avoid them.

C. N. S., Deposit, N. Y.—Will you kindly inform several readers of your valuable paper here what is meant by "Bismarck" dog, and what affect a cross between such a dog and a red Irish would make? Ans. Bismarck was a very fine native English setter, owned by a Mr. Brooks, of Philadelphia. "Bis." had a great reputation as a field dog, but, unfortunately, in the fall of 1875, while being returned from the West, he was smothered to death in an express car. Such a cross might make very good dogs.

A. G., Ft. Riley.—Is the Greener $150 hammerless gun sold by H. C. Squires, of your city, a good one? Is a gun of 12 or 28 inch 7 pounds weight, both barrels full choke, good for duck shooting? I don't mean the best one for the purpose, but good enough to answer the same, as I believe in light guns. Ans. Yes, excellent. 2. Oh yes, but sportsmen prefer barrels of different ranges, one for close shooting, and the other for long distances. A choke-gun would be apt to blow the gravel out of a duck at close quarters.

P. S. S. F. C., San Francisco, Cal.—To brown your gun barrels: Tinct. of muriate of iron, one ounce; nitric ether, one ounce; sulphate of copper, four scruples; rain water, one pint. Plug barrels, using plug as handles. Clean with soap and water, cover with thick coat of slacked lime; remove when dry with iron wire scratch brush. Apply coat of above preparation with a rag. Let stand twenty-four hours; then immerse in boiling water and scratch with brush. Repeat until color suits. Then let them soak in lime water a short time. Don't touch barrels with your hand during the process.

G. L. A., Bryan Co., Ga.—I send to-day a pair of deer horns that I picked up on Ossabaw Island some weeks since. They have evidently been gnawed by some rodent. Having seen some discussion in "our paper" I think these horns may interest you. Ans. There is nothing remarkable about your horns. Horns and bones are not only licked and gnawed by all kinds of wild and domestic animals, as well as squirrels, mice, and rodents of all sorts, ants, etc., but they are usually wholly destroyed in the course of about four years. This fact accounts in part for shed deer horns not being more frequently found. The rain and sun as well as the natural process of decay, very much assist in destroying them.

A. R. H., Boston.—The contemporary you quote is not posted in such matters, nor has it any standing in the community. In admitting certain English schooners to be "naval gems," it is simply steering by our wake. Bouger did not determine the position of the meta-centre at all. He only found its height for an inuinitely small angle of heel—in other words, for the upright position of a vessel. The shifting meta-centre, or the theoretical point of suspension of a vessel for finite angles, was investigated long after Bouger's death by Atwood, Dupin, Rankin, Canon Mosely and others. It is situated on the evolute of the involute of the centre of buoyancy, though no precise theoretical formula for deducing its exact location on that curve has yet been devised, nor are the definitions and nomenclature of the different *savants* mentioned identical. We cannot enter into the subject further at present, as we must limit the consideration of theo[illegible] these columns to its applicability to practical yacht design.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, MAY 8, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

☞ Trade supplied by American News Company.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, May 9.—Homing Pigeon Flight, at Troy, N. Y. Intercollegiate Athletics, at Mott Haven. Tournament of Texas State Sportsmen's Association, at Waco, Tex.

Saturday, May 10.—Columbia Rifle Association Meeting. Tournament at Waco, Tex. Base Ball: Troy vs. Chicago, at Chicago; Star vs. Cincinnati, at Cincinnati; Boston vs. Cleveland, at Cleveland; Providence vs. Buffalo, at Buffalo; Manchester vs. Capital City, at Albany; New Bedford vs. National, at Washington; Springfield vs. Holyoke, at Holyoke.

Monday, May 12.—Opening of Stockton Rifle Range, Philadelphia. Base Ball: New Bedford vs. Albany, at Albany; Springfield vs. Holyoke, at Holyoke; Worcester vs. National, at Washington.

Tuesday, May 13.—Nebraska State Sportsmen's Association Convention, at Omaha. Tournament at Louisville, Ky. Base Ball: Providence vs. Chicago, at Chicago; Boston vs. Cincinnati, at Cincinnati; Star vs. Cleveland, at Cleveland; Troy vs. Buffalo, at Buffalo.

Wednesday, May 14.—Convention at Omaha, Neb. Tournament at Louisville, Ky. Yale Spring Regatta, Lake Saltonstall. Base Ball: Worcester vs. National, at Washington; New Bedford vs. Albany, at Albany; Manchester vs. Utica, at Utica.

Thursday, May 15.—Convention at Omaha, Neb. Tournament at Louisville, Ky. Bicycle Tournament, American Institute, N. Y. Base Ball: Providence vs. Chicago, at Chicago; Troy vs. Buffalo, at Buffalo; Manchester vs. Albany, at Albany; New Bedford vs. Utica, at Utica.

A WONDERFUL REGION.—We print this week a description of one of the most remarkable phenomenal regions known, which will be found under the caption of "The Great Medicine Lake." It is from the pen of Col. N. A. Taylor, author of the valuable book on Texas, printed last year by A. S. Barnes & Co., of this city, and entitled "The Coming Empire; Or 2,000 Miles Through Texas on Horseback." The central attraction of this strange locality is "Sour Lake," a body of water of wonderful medicinal virtues, as will be learned upon perusal of the sketch. There is a hotel with cottage accommodations at this place, an advertisement of which will be found elsewhere in our columns. It has already attracted many distinguished visitors from all sections, and will hereafter become prominent among watering places sought by invalids. The subject is worthy of the most considerate attention.

☞ FOREST AND STREAM will be sent for six months for $2; for three months for $1. To clubs of five or more, $3 per year.

WOMEN IN ARCADIA.

CHARLES E. WHITEHEAD, in that delightful book, "Camp Fires of the Everglades," says: "Did it ever occur to you, fair reader, that if that gentler grace that wins and governs man's young love should accompany him to his scenes of pleasure, his out-of-door pursuits and natural studies, it would always exercise the influence over him that it did when he was a boy? Do you not believe that each would gain—the one a wider field of opportunity and a more experienced taste, the other the restraint of a presence whose absence is never for good?"

It is folly to say that the "gentler sex are not imbued with the true sporting instinct," and that the pleasures of the field are but for the so-called "lords of creation." It would seem that the aim of the schools and drawing-rooms of to-day was to perfect woman in artificial accomplishments, and so crowd out her natural longings and tastes. The conventional, accomplished woman of America, with a few exceptions, is never heard of for her skill at fishing, archery, rowing or shooting; to be accomplished means to possess a far different line of graces. But the tide is destined at no distant day to set in the right direction. Although opposed to "woman's rights" in an Anthonian or Walkerian sense, we are willing champions for her rights to health and happiness. If man can go into camp, and with dog and gun and fishing rod live in an enchanted world for weeks, his soul so filled with sylvan delights and exquisite ecstacies that time flies by unheeded, and, coming forth at last with bronzed face and stalwart frame into the world again, the past seems like a pleasant dream from which he has been awakened with a start to resume his old life with renewed vigor;—if man can do this, why should not woman? The argument that the difficulties to be surmounted in the way of rough travel and the hardships of camp life offer an effectual barrier to woman participating in these things, falls to the ground in this age of railroad facilities, guides and good hotels. There is no place, be it ever so remote, that offers inducements in the way of fish and game to the sportsman, that cannot be easily reached; and once reached there will be found the inevitable comfortable hostelry smiling a hearty welcome from the shores of the woodland lake. About this establishment will be waiting, trusty guides, ready to pilot the party farther into the wilderness if desired, their graceful little boats, tastefully furnished, drawn upon the beach, forming a vehicle at once elegant and comfortable for threading the water ways leading to quiet camping sites inland. And what an added charm to camp life does woman's presence lend? After a hard day's work at those heroic sports in which she cannot participate, how pleasant to return and find that brightest ornament of the home, whether wife, sister or mother, waiting to receive you? Ah! the ministrations of the hands man loves are better than the studied attentions of trained lackeys, and never so appreciated as in the far-off camp. But don't let our lady readers imagine that this article is written with selfish motives in view. It is their companionship man wants, not their skill at compounding from the "Sportsman's Cook Book" tempting dishes, nor the deft display of their orderly natures in brightening up the camp. Far from it, although a willing exercise of their culinary or æsthetic taste is no detriment to their womanhood, and, if possible, lends an additional grace to their presence. Be that as it may, there is a place in the true sporting field for woman.

In fly casting, than which no more delicate operation graces the sportsman's category, a skillful hand and supple wrist are necessary to bring about satisfactory results, and woman possesses both these attributes to a much finer degree than man. So, having them, why should she not foster and exercise them, and become a partaker with man of the glories of trout fishing? Is there any good reason why she should not become familiar with the "rise," the "struggle" and the "capture?" Would it not add a new joy to her life, fresh roses to her cheeks; something to dwell upon with pleasure when back again to the old life; something to hope for in the years to come? Would woman lose any of her womanliness to go into the field with a brother, husband or father, and armed with a suitable double barrel and dressed for the occasion, tramp o'er hill and dale quail, snipe or grouse shooting? No; ask any of the noble few who indulge these pastimes if they are not the gainers by it physically and spiritually? Ask them which is preferable, the field or the german, and which season they look forward to with the liveliest anticipation—the winter with its balls, parties, and empty conventionalities, or the quiet summer in the pleasant camp? But aside from the health and pleasure to be derived by woman from a moderate indulgence in field sports, there is another reason, and a weighty one, which should make her consider the subject seriously, and that is, "The restraint of a presence whose absence is never for good." Oftentimes the good which might accrue to man from far-off out-door life is sadly warped by the lack of a tempering influence, and it is a disagreeable fact that young men have been known to abuse their privilges in a disgraceful manner while ostensibly camping for health and recreation.

Woman's influence is proverbial. From the cradle to the grave, man, although claiming superiority, is always bending to her gentle will. First the mother holds the sceptre, then perhaps a sister, who abdicates the throne in favor of the wife. None of these are tyrants, for their rule is one of love, and stalwart man, who will not give an inch to another of his kind, becomes a willing slave when woman speaks. Therefore, exerting as she does this powerful sway, how much of good she may accomplish by diverging a trifle from her regular line of action. The joy and restraint of her presence, coupled with the consciousness of doing good, are enough to assure her that there is a welcome place for her beside every camp fire, where a sphere of usefulness, happiness and health will be opened up to her, the like of which she never dreamed.

INEVITABLE DEATH TO INSECTS.

IN the *American Naturalist* for March, 1879, Lt. W. L. Carpenter, U. S. A., has an article which proves from experimental tests the efficacy of the *Pyrethreum roseum*, or Persian insect powder of commerce, in destroying all manner of insects, bugs, beetles, flies, spiders, grasshoppers, etc., whether thin-skinned, hairy, or hard-shelled. Absolute contact with the powder is necessary to destroy life. It is not the odor of the powder, but the fine particles breathed into the lungs or swallowed which kill. Years ago we recommended the use of this powder in killing fleas on dogs, and we have never ceased to advocate its use, for we have had abundant evidence of its efficacy from personal application, and from numerous tests in divers ways. We have cleaned an old garret where fleas swarmed in a single hour by sprinkling the powder liberally all over the apartment, and into the cracks and crevices. The great value of this blessed remedy is its absolute harmlessness to animals and men. It can be used with fatal discrimination as to vermin, and charming immunity as to the persons or animals to which it is applied. When used on hairy or fur-bearing animals, it should be blown into the roots of the hair, so as to reach the skin, with a rubber injector, such as are sold at those shops which advertise insect powders at exhorbitant rates. The *pyretheum roseum* is the base of all these insect powders, but it is very much adulterated to make its sale profitable. Of course increasing its quantity by the admixture of foreign ingredients diminishes its efficacy, and purchasers are therefore often disappointed in results expected from its use. It is wisest to buy from first-class druggists the genuine pure powder, and so apply it. Travelers should never be without it. A little of it sprinkled in beds of doubtful character will insure comfort and rest. A larger quantity will cleanse a dirty cabin or deserted shanty. Every old forecastle should use it liberally. Housekeepers should sprinkle it on their carpets. Having made these observations unreservedly, we are pleased to substantiate them by the testimony of Lt. Carpenter which follows, resulting from several trials with different orders of insects. He says:

"The insects were placed under a tumbler, which was slightly raised to admit fresh air, and a small quantity of the *Pyrethreum roseum* introduced on the point of a pen-knife. The movements of the insects brought them in contact with the powder, which readily adhered to the body; in attempting to remove it from their appendages a few particles would be carried to the mouth, and thus incorporated in the juices of the stomach with fatal effect.

"A honey-bee became perfectly helpless in fifteen minutes, a mud-wasp in eight minutes, a small species of ant in five minutes; a small species of *Pyralidæ* became helpless in twenty minutes; the large *Papilio asterias* resisted the effects of the drug for over one hour, and upon being released seemed to recover, but died next day. A larva of the *Noctuælitæ* did not seem susceptible; its jaws were repeatedly filled with the powder, which it invariably ejected by throwing out its juices. At the end of two hours it was still able to crawl feebly. A house-fly became helpless in ten minutes, a mosquito in fifteen minutes, a flea in three minutes.

"In experimenting upon the *Coleoptera*, an insect as nearly the size of the carpet-beetle as could be found was secured in *Diabrotica duodecim-punctata*, an abundant species here. It was easily affected, and became helpless in twelve minutes. A small pinch placed in the jaws of a large *Carabus* stopped locomotion in thirty minutes. The *Hemiptera*, owing to their peculiarly shaped mouths, were enabled to vigorously resist the baneful influence. A species of *Coreus* was active at the end of two hours, but was ultimately overcome. A large-sized katydid was deprived of motion at the end of ten minutes; *Caloptenus spretus* likewise in eighteen minutes. A dragon-fly (*Libellulidæ*) died in one hour. Spiders succumbed in one hour and fifteen minutes. The scent from the powder did not produce any bad effect upon insects subjected to its odor where actual contact was not possible. But when carried to the maxillæ or mandibles, the effect is to produce complete paralysis of the motor nerves. The legs are paralyzed in regular order, commencing with the first pair. Insects will sometimes live for days in this condition, but death ultimately results from the introduction into the mouth of the smallest quantity. These experiments prove that all insects having open-mouth parts are peculiarly susceptible to this powerful drug. And as a result, the writer does not hesitate to recommend the powder to housekeepers as an infallible agent in destroying the carpet-beetle and preventing its ravages. Twenty-five cents worth of powder liberally sprinkled upon the floor before putting down a carpet, and afterwards freely placed around the edges and never swept away, will suffice to preserve a large-sized carpet. No ill effects from its use need be feared by the household, since if applied in this way, it will be only poisonous to all kinds of insects."

We take pleasure in recommending the long established and reliable drug establishment of Wm. H. Schieffelin & Co., Beekman & William streets, who advertise this powder in our columns.

TO CONTRIBUTORS.—We beg our good friends who add so much to the interest of our journal by voluntary sketches of sport, to have patience with us. We have now on hand 38 unpublished miscellaneous contributions of the character usually found on our first reading pages. Many of these are from very best professional writers at home and abroad. At our closest calculation it will require about two months to work off the accumulation. All will appear in due time. We

trust this explanation will suffice to serve those who are anxiously inquiring why their articles do not appear.

Should the pressure continue, we shall be compelled to be more critical in our discrimination, thereby raising the standard of our literary merit at the expense of disappointment to many faithful friends whose contributions it would grieve us to decline. In the acceptance of stories and sketches of adventure, it has been our custom to estimate them by the value of the information which they contain, rather than by scholarly composition. To combine hereafter the qualities of novelty, elegance, and useful information will place a severer test upon our future selections. But we shall print all of the accepted articles now on hand.

Another consideration which we may mention in connection with the closer criticism proposed, is the time and labor which we shall be spared in preparing illiterate and ungrammatical articles for the printer, as well as the reduction of contributions of tedious length to the limit of space at our disposal, by cutting out extraneous or redundant portions. Pruning an article often calls forth severe remonstrance and sometimes abuse; these flagellations we shall also be spared. We find it safer to decline an article outright than to attempt to doctor it, although we have hitherto applied the adage of "half a loaf better than no bread," hoping to spare our friends any feeling of dissatisfaction that might result from having their manuscripts returned outright.

THE FLOWER MISSION.—The ladies of the New York Flower and Fruit Mission opened the doors of their rooms at 239 Fourth avenue for the season's work last Monday. We published last year an extended account of the purposes of this charity, its method of work and the admirable results attending it; and we again take occasion to heartily endorse the Mission and to commend it to the good will and co-operation of our readers. More than 150,000 bouquets were distributed last season. Contributions of flowers, wild or cultivated, fruits, vegetables, etc., are always acceptable no matter how humble they may be. Individuals, church societies, schools and towns send in their floral gifts, and whether it is a single bud or a huge wagon load, each is received with thankfulness.

Most of the express companies will take charge of contributions addressed to the Flower Mission, and deliver them free of charge.

If one would know with what hunger eyes may look upon a flower, let them take a wild violet plant from its nook in the woods, and walk with it through some of the New York streets and alleys. We tried it the other day, but we did not go very far with the blue treasure. First one flower was plucked, and then another, and another, until nothing but the plant with its native bit of earth and unopened buds was left; and finally this went too It is blooming now.

COLLEGE EQUESTRIANISM.—Any one who has ever driven his horse over a dangerous road, in a pitchy-dark night, knows that the safest way is to resign the reins and let the creature follow his own nose. Nowhere is this implicit trust in equine sagacity more touchingly illustrated than in the sublime faith reposed by the college student in his steed. In the classic parlance of academic halls, to "horse" or to "pony" Greek and Latin texts means to employ a translation of the same. To be borne on flowery saddles of ease over the ruts of the Greek and through the puddles of the Latin, by an intelligent beast which has been over the road before, is far more satisfactory to certain dispositions than to grope unguided in the mud and fog. But now that the Harvard students have adopted the bicycle, we may naturally expect a change in the collegiate idiom. If he keep abreast of the fashion the Sophomore must discard his "horse" for the faster bicycular steed. To "bicycle" Greek sounds awkward at first, but it will become natural enough by-and-bye. The new expression will be useful in another way; for the ingenious bicyclist wheeling his way with giddy speed toward the Commencement sheepskin may truthfully assure his prof's that he never—no, never—uses a horse.

THE GREAT MEDICINE LAKE.

HEALTH TO MEN AND ANIMALS—DEATH TO FISH AND INSECTS.

EDITOR FOREST AND STREAM:

I think this place can pass for one of the most remarkable places in the world. It is the most celebrated watering place in Texas; it is a curiosity, indeed. It consists of a pool or lake as round as a well, an acre to two acres in extent, from two to six feet in depth, and its waters are sour. The bottom of the lake is for the most part hard asphaltum, making a splendid floor for bathers. The lake is continually bubbling and boiling, caused by currents of gas escaping from the bowels of the earth. This is readily proved by taking an old fruit or oyster can, open at one end and with a small puncture in the other; then plunging the can half way into the water where it is bubbling and applying a lighted match to the puncture. It burns like a gas jet, and unless blown out by the wind will continue to burn as long as you hold the can in that position Nothing lives in this lake except a small bug. It is almost instant death to fishes, or snakes that may enter or be put into it. Even a mosquito does not fly over it. If he attempts it and breathes the issuing gas it will fetch him down certain—kill him as dead as a boiled mackerel. Sometimes the lake in the morning is quite covered with the carcasses of adventurous mosquitoes who came to take a drink, or disport themselves over the water. But this gas has not that effect upon man. Instead of killing him it makes him feel good all over and gives him new strength and life. It is delicious to plunge into the buoyant water and feel the gas jets streaming against you. Neither is it hurtful to ducks to float upon this water. Every morning since I have been here I have scared a flock of wild ducks off the lake.

But now comes the singular part. This lake is surrounded by a multitude of wells or springs, nearly all in a great state of ebullition, and these wells, though but a few feet apart, differ remarkably in the taste and properties of their waters. Here you will find a group of wells that are as sour as a crab apple, and right next to these comes another group which has no sour at all, but are strongly alkaline. Floating on these alkaline wells is a substance that looks like crude petroleum and gives the waters a strong taste of tar. I no not like these alkaline and tar wells; they affect my bowels too much. But commend to me the sour wells. Their tumultuous waters are delicious. I sometimes drink a whole quart at a swig. They affect the kidneys greatly, and cause one to throw off globules of air from his stomach at a great rate. These waters are of a milkish color, caused by the abundance of white sulphur they contain. They produce a ravenous appetite. I really did not know what grand pleasure a man may have in his stomach until I came here. At the table I sit in the midst of a group of ladies and sometimes feel ashamed of myself, but when I look around and see that the ladies eat just as heartily as I do I take new courage and eat on. There are also springs of iron, magnesia, alum and many others whose properties are not well defined, but all full of mineral. There have been thirteen distinct varieties of water discovered so far, and I have no doubt that many more may be discovered yet; for go where you may around the lake you will find many jets of gas and water issuing out of the ground, and it is only necessary to dig a hole at such places to secure a fount of mineral water. How easy it would be to light all these premises at night with gas pouring out of the ground! Isn't such a place worth visiting? To him who is a little infiltrated with the love of nature it is a place of never ceasing wonder. How did all these different waters get here, and for what purpose were they thrown together? I propounded these questions this morning to Hon. R. C. Downing, of New York city, who is stopping here. Said he, "Undoubtedly they were placed here by the living God for the healing of the nations." And I believe so too. It is undoubtedly the drift of the scientific mind of to-day to doubt all things of a religious nature, and even to reject the God himself. But as for myself the more I see of nature the more I see of the God. It looks to me that one must be blind who does not see Him here. And I have seen many other places where He seemed as distinctly manifest in special interpositions to do something for man's benefit.

I hear many wonderful tales told of the healing virtues of the waters. They are undoubtedly a sure cure for dyspepsia and chronic diarrhœa. They are also a certain cure for many skin diseases, and I have known some remarkable cures of rheumatism. A lady was brought here last summer who had not walked a step in fourteen years. After using the waters a few weeks, drinking and bathing, she could walk very well. She is still not strong, and probably never will be, but her condition is certainly a vast improvement on what it was. For venereal taints I am told the waters are an absolute specific.

The country around here is mostly prairie, but there are wide belts of timber, and the lake is in the midst of a grand old grove of oaks. It is a level region, of the Pliocene formation. The country swarms with game, from a jack-snipe to a monstrous bear. The prairies are filled with ducks even yet. We have bear meat, venison and wild turkey at nearly every meal. No one should come here in the fall and winter without bringing his gun. The fishing is supplied by Pine Island and Little Pine Island bayous, about two miles from the Lake on either hand. The latter has clear water and is fine for black bass, about a pound in weight, and numerous varieties of perch. The other is turbid and affords monstrous cats and no end of perch, but has very few bass. It is delightful to get up a fishing party with ladies and spend a day on either of these streams, as I did yesterday. There were a dozen or more of us in the party and we had great fun. Afternoon we had a "fish fry" in the woods. I thought I never ate fish which tasted so well. Perhaps the biggest portion of our "catch" was a perch called here the "warmouth," from his great mouth, and I can sing his praises loudly as a pan-fish. They run from a quarter to three pounds weight and make very nice sport. The most successful fisherman we had in the party was a Mrs. Olmstead, lately of western New York. She had been on many expeditions after grayling and trout in Michigan and is an enthusiastic sportswoman. She understands the ways of the finny tribe completely. I dare say she is a reader of FOREST AND STREAM.

Those who come to Sour Lake expecting marble palaces and hotels will be disappointed. The lodging accommodations consist of two long rows of cottages and one large house called the hotel, but all are very plain. The comforts, however, are about all that one need ask for, if he be not too fastidious. When I go to watering-places I care very little for marble palaces, and so on. I want absence from city restraints and city life. Our eating here is excellent, but comes largely out of the forest and streams. To reach this place you get off the New Orleans railroad sixty-three miles east of Houston, where you will always find a line of hacks ready to convey you to "the Lake," eight miles distant over the prairie. Call for old Jo. Butterfield, and I'll warrant he'll make the trip pleasant for you. If you want to attack an alligator by the way, or a flock of ducks, or plover, or turkeys, he will give you ample time and take a hand in the sport. The charge from the depot to the lake is $1.50. N. A. T.

Sour Lake, Texas, April, 1879.

—In our Natural History department the discussion of one question brings out communications from six different States as widely separated as Massachusetts, Virginia, Texas and Ohio. This illustrates the wide-spread attention aroused in any subject of interest broached in these columns. Our readers are mutally indebted to one another for the contributions of knowledge furnished by each, whether the discussion be one of science, or of practices and methods in the field. By such mutual interchange of opinion, observation and information the value of the FOREST AND STREAM is incalculably advanced. One gratifying feature of all this is that however misty the discussion is at the outset it is soon cleared up and the truth arrived at.

GAME PROTECTION.

PENNSYLVANIA.—*Catawissa, April* 25.—An organization for the protection of fish and game, and to advance the interests of the sporting fraternity generally, has been effected in our town, and, by a constitution adopted, pledged ourselves to work earnestly in the cause. The title is "Catawissa Fish and Game Protective Club." President, H. B. Aldrich; Vice-President, Abel Thomas; Treasurer, T. P. Cherrington; Secretary, G. W. Reifsnyder. Any item of interest to the club will be gladly received from any and all who are elsewhere enlisted in the cause. C. F. and G. P. C.

FLORIDA.—*Editor Forest and Stream:* The game law in this State is dead—repealed last session of the Legislature. The only reason I have heard for it was that certain settlers here and there more or less felt terribly aggrieved that the deer should jump—no, not jump, for there wasn't anything to jump—but eat up or down at their own sweet will the aforesaid settlers' "crops" of corn or peas. Of course the settlers couldn't build fences. I don't see any force in such complaint, for any one by the terms of the law could shoot game on his own land. It will be admitted that the law was badly framed, for the close season for deer was April 1 to September 1. Rutting begins in November. If they had made the close season from December 1 to July 1, it would have been better. But now game will be shot the year round. Already I have known of does shot with fawn (very small) by their side, and turkeys shot while laying and sitting. Not many years will elapse until game will be as scarce as at the thickly settled portions of the North. But what's the odds to a native? Sufficient unto the day is the game thereof. Let the future take care of itself.

I suppose the most potent reason for the repeal was that many settlers depend altogether upon game for fresh meat, and felt it a hardship to be deprived by law of necessary sustenance. O. O. SMITH.

Orange County, April 23.

UNIFORM CLOSE SEASON.—New York FOREST AND STREAM recommends the making of seasons uniform with respect to all kinds of game, and there is a general expression of concurrence in its opinion. That would assuredly be the best way to protect game. The opening of the season might be a few days earlier or later; but about the 1st of September would be the proper period. Game cannot be effectively protected without uniformity of seasons. A variation might be considered wise with reference to the different sections of the country, but we doubt whether there is much room for variation. The young birds cannot be properly killed earlier than the 1st of September anywhere, and some States (Alabama, for instance) fix the commencement of the close season at September 15. There can hardly be a division about closing the season on the 31st of December. There is some shooting of woodcock deemed allowable in August. But the danger then is that under that pretext partridges and other birds are slaughtered. There is no great sport in the woodcock line, then, and it would be far better to include that bird in the close season. The rich in the lands where titled lords live can have no better preserves than our people all will have by the general protection of their game. Our republican conservatism, gathering the little chickens under its wing, will shelter them for poor and rich, and when they are ready for the table every man should spread before his family a commissariat that will include the most delicious game of the American "preserves." Exactly! That is it. If we but honestly enforce honest laws—laws that are equal and have no tincture of favoritism or exclusiveness—the whole country will be abundantly supplied with enough for all, notwithstanding the exploits of the "national arms-sporting clubs." The whole country should unite in passing and enforcing proper game laws as well for fish as birds, deer, etc. There would be secured an amount of subsistence and comfort for the people of which there is now but a faint conception. We hope all good people will give their exertion and influence to the cause.—*Richmond Dispatch, April* 25.

PROTECTION OF FISH IN RIVERS.—We have laws enough to protect our rivers, but not "bailiffs" enough in most sections. Sometimes preventive measures quite as efficient may be employed. We copy some hints from the London *Fishing Gazette*:

In a river much used by anglers, and affording employment to many professional fishermen, it is desirable that every means should be adopted to ensure complete preservation of the fish. I would mention several methods of preventing poachers from netting the river. In the first place, the sinking of old punts in the deeps is a very excellent plan, as it is not only a great hindrance to the working of a net, but gives protection and harbor to the fish. The punts, previous to being laden with stones and sunk, are well bound with straps of iron, and covered with tenter hooks. In my opinion, no plan is better than this where it can be done without possible detriment to the navigation. Mr. Frank Buckland, not very long ago, suggested to me the desirability of purchasing a quantity of oyster barrels, filling them up with stones, then

driving tenter hooks all over each barrel, and finally throwing them in the preserves, or, indeed, any of the swims with which the river abounds. In the shallows, the putting in of tin-cuttings is a great preventive, and where it can be done without injury to the row-boats, the placing in of brick-burrs is exceedingly effective. During a certain period of the year —say from July to September the weeds are a safe and natural protection of the fish. There is another plan of protecting fish, and that is driving in stakes in every portion of the river where it can be done; but good as this method undoubtedly is, I have known the netters to draw the stakes out before they begin their work of destruction. Now, as a supplement to all these methods of protection, an efficient staff of water-bailiffs is also essential to the complete governance of a fishery. Very few anglers are aware of the power the Thames river keepers possess in their deputations granted by the Board of Thames Conservancy. I will give, accordingly, the following extracts:—"They may enter any boat, vessel, or craft of any fisherman, dredgerman, or other person or persons fishing or taking fish, or endcavoring to take fish, and there to search for, take, and seize, all spawn, fry, brood of fish, and unsizeable, unwholesome, or unseasonable fish; and also all unlawful nets, engines, and instruments for boat, vessel, or craft, in and upon the river, all such spawn, fish, and also all unlawful nets, engines, and instruments for taking and destroying fish as shall there be found." In addition to this, they have power "to seize all unlawful nets that may be found on the shore or shores adjoining the said river of Thames." The latter was done on one of the inspections made by the Committee of the Thames Angling Preservation Society at Staines; the net was then destroyed by order of the Hampton bench of magistrates, and, being the first offence of the owner, upon the recommendation of the Society's solicitor he was only nominally fined in addition to the loss of his net. I have thought it desirable in the interests of the fishery to show the power of the watchers, especially as it has been in my presence so frequently disputed by anglers, and their visits considered an unjustifiable interference.

The Rifle.

MASSACHUSETTS—*Boston.*—The Massachusetts Rifle Association has announced its programme for the spring meeting, to take place on the Walnut Hill ranges on the 21st and 22d instants. There are five matches, aggregating $500 in prizes. The first is for the Directors' gold medal, shot for annually at 200 yards. It is now held by E. B. Souther. All the other matches are open to all-comers, and in these Creedmoor should be represented by some of her excellent off-hand men, though they will find it hard work to overcome the rare skill which the Walnut Hill men have developed. The Boston *Herald* cup, valued at $50, will form the principal prize in another match, also at 200 yards, in addition to fourteen other prizes. Any rifle may be used. The military match is very similar, but confined to military rifles. At 600 yards there will be a carton match, any rifle and position, the leading prize to be the gold medal of the M. R. A. Another carton match will take place at 900 yards with a $45 Winchester rifle as first prize, and a total prize list of $101 for the match.

The Walnut Hill range was well patronized on Saturday last, with off hand shooters, but the weather during the forenoon was not quite up to the mark in affording opportunities for a display of rifle skill, the wind blowing freshly and carrying before it several rain and sleet squalls, which had full sweep across the range. As the shooting progressed, however, the breeze lulled somewhat, gradually settling down. The light, too, became better, and scores were improved in consequence. The 2:55 P. M. train brought a delegation from the Roxbury City Guards, who practiced at 200 yards with excellent results. The best scores, with military rifles, five rounds standing:

Eddy, 21; Everett, 21; Rockwell, 20; Gardner, 20; Matthews, 19; Brownell, 18; Lithgow, 18; Andrews, 18.

The "Winchester rifle" match, had 47 entries. Of this number, the best scores are given in the appended summary, fifteen rounds per man at 200 yards. Capt. Jackson takes first place, he having made three capital scores of 69 each, only two of which are given:

W H Jackson	5	4	5	4	4	5	5	4	5	5	4	4	5	5	5—69
W H Jackson (re-entry)	5	5	5	5	4	4	4	5	4	5	5	4	5	4	5—69
J N Frye	4	4	4	5	4	4	4	5	5	4	4	5	4	5	5—66
O M Jewell	4	4	4	5	5	5	5	5	4	4	4	4	5	4	4—65
W Charles	4	4	5	5	4	4	5	4	4	4	5	4	4	4	5—65
H F Smith	4	4	5	5	5	4	5	5	4	4	4	4	4	4	4—65
E F Richardson	4	4	4	5	5	4	4	4	4	4	4	5	4	4	5—64
C A Meiggs	4	4	4	4	5	4	4	4	4	4	5	5	5	4	4—64
J Borden	4	5	4	4	5	4	4	4	5	4	5	4	4	4	4—64
E Whittier	5	4	5	4	4	4	4	5	4	5	4	5	4	4	4—64
J B Parker	4	5	4	4	4	4	4	5	5	4	4	4	4	5	5—63
C R Griffing	5	4	5	4	4	4	5	5	4	4	4	3	5	4	5—61
A A Babbidge	4	3	4	5	5	4	4	5	4	4	3	4	3	4	4—60
H E Lord	4	4	4	4	5	3	4	4	3	4	4	4	3	4	4—58

The long range practice last week at Walnut Hill secured a poor day on the 30th ult., and in a drizzling rain the 4th contest of the *Spirit of the Times* match was called. The wind was tricky and the smoke hung low over the range, but with such experts as the Massachusetts men have gotten to be there was not much trouble in doing passable; that is, turning the 200 total with possible 225. The leaders standing:

J. S. Sumner.

600	4	5	5	5	5	5	5	5	5	5	5	5	5	5	3—69
900	5	5	5	5	5	5	5	4	4	4	4	4	5	5	5—70
1,000	5	5	5	3	5	5	5	5	4	5	3	4	5	5	5—69—208

Capt. W. H. Jackson.

600	5	5	5	5	5	5	5	5	5	5	5	5	5	4	—74
900	3	4	4	5	4	5	5	5	5	5	5	5	5	5	—68
1,000	5	5	4	5	4	4	4	5	4	5	5	5	5	3	—63—205

J. F. Brown.

600	5	5	4	5	5	5	5	5	5	5	5	5	5	3	—72
900	4	5	5	4	5	4	3	5	5	5	5	5	5	5	—70
1,000	5	4	4	5	4	5	5	4	5	5	4	0	3	4	5—62—204

W. Gerrish.

600	4	5	4	4	3	4	5	5	4	4	5	4	5	5	4—65
900	3	5	5	5	5	4	5	5	3	5	5	5	5	5	5—70
1,000	4	4	5	5	5	4	5	4	5	5	5	5	5	3	4—68—203

Salem Wilder.

800	3	5	5	5	5	5	5	5	3	4	5	5	3	3	5—62
900	3	5	5	5	5	4	5	0	5	5	4	5	5	5	5—64
1,000	3	4	3	5	5	4	5	2	5	5	5	5	2	5	5—64—190

Medford, April 30.—The winter shed was very convenient for the shooters at the Bellevue Range to-day. Before the day was over the clouds broke, and good scores were accomplished in the classified match, as follows:

W Charles	47	E S Piper	43
E W Hayes	45	J H Eames	42
H Wilmington	45	J R Teele	42
C H Russell	43	J Grady	41
H S Harriss	43	E W Whittier	4
W G Tousey	45	A Babbidge	4

The prize winners for the month are: First class, first prize, H. H. D. Cushing, 47; second, W. Charles, 47; third, H. K. Richardson, 47; fourth, C. H. Russell, 46; fifth, J. B. Osborne, 46. Second class, first, H. S. Harriss, 45; second, J. H. Eames, 43; third, W. G. Tousey, 45; fourth, E. T. Hayes, 45; fifth, E. S. Piper, 43. Third class, first, E. F. Kenrick, 44; second, M. Garden, 43; third, W. Gills, 38; fourth, G. Gill, 38; fifth, F. Tucker, 36.

Boston, Mammoth Rifle Gallery, April 30.—The regular April prize shoot has ended. Mr. Frank Hollis was successful in making a clean score of eight bulls-eyes. Mr. Wm. Bradford has made 39 three times, each time improving his score. Mr. George Lamb has made 39 twice.

The scores stood:

Frank Hollis	5	5	5	5	5	5	5	5—40
Wm Bradford	5	4	5	5	5	5	5	5—39
Geo Lamb	5	5	5	4	5	5	5	5—39
U A Pollard	5	4	5	4	5	5	5	5—38
C Edwards	5	5	4	4	5	5	5	5—38
D B Raymond	5	4	5	5	5	4	5	5—38
E S Tobey, Jr	4	5	5	5	5	5	4	5—38
H J Sargent	5	5	5	5	5	4	4	5—38
Edwin M Archer	4	5	4	4	5	5	5	5—37
A L Eames	4	5	4	4	5	5	5	5—37
E Shumway	5	4	5	4	4	5	5	5—37
Wm H Restarick	4	4	5	5	5	4	5	5—37
A P Holman	4	5	4	5	5	4	5	5—37

Gardner, May 1.—The following are the scores of the rifle club at Hackmatack Range last week, the wind blowing a gale at the time:

	R.	C.	R.	C.	Totals.
I N Dodge	74	45	72	42	146—87
G F Ellsworth	72	44	69	42	141—86
F E Nichols	69	44	70	44	139—88
G R Pratt	68	44	68	44	136—88
Wm Austin	72	44	62	42	134—82
Carl Zerahn	58	40	60	42	118—88
M Steinway	57	33	29	40	126—79

South Framingham, May 1.—The weekly shoot of the rifle club occurred last week at the Everit Range. The badge was again taken by W. A. Swan. The following is the score:

W A Swan	4	4	4	4	3	4	4	4	4	4					4—39
W H Trowbridge	4	4	4	4	4	4	4	3	4	3					3—38
F H Fales	4	4	4	4	5	2	5	4	3	3					3—38
C O Trowbridge	4	4	3	4	4	4	4	4	4	3					3—37
F L Oaks	3	3	4	4	4	4	4	5	3	3					3—37
C H Clark	2	3	0	4	4	3	3	3	4	4					2—29
F Twichell	3	0	3	3	4	3	3	R	R	4					4—23

CONNECTICUT—*Collinsville, May* 2.—Canton Rod and Gun Club, Riverside Range. At the regular weekly meeting the following scores were made, 10 shots, 200 yds.:

	Mass.	Creed.		Mass.	Creed.
Pfister	79	38	Moore	96	43
Andrews	76	39	Bidwell	90	40
Hull	103	41			

The club made a new departure in the matter of prizes for the ensuing year. Two badges are to be contested for—one, the champion badge, for the member making the best average for the year; the other, the improvement badge, for the member who at the close of the year has made the most improvement. We are also promised one to be given to the member making the highest single score during the year.

SEC.

NEW YORK—*Garnerville, May* 2.—Great excitement has existed among the riflemen here for the past ten days over the expected rifle match between Washington Broas, of the Garnerville Rifle Club, who was challenged by E. J. Peck, of the Samsondale Rifle Club, of Haverstraw. The match was at 200 yards, 2 sighting and 15 scoring shots, at Rockmoor (G. R. C.'s grounds) on May 1, 1879. The day was bright, but the wind blew furiously. Mr. Broas was the victor by 3 points. The following is the score:

W Broas	4	5	4	4	4	4	4	4	5	5	5	4	4	4	5—59
E J Peck	4	4	4	4	4	2	4	4	3	4	4	3	4	3	4—56

They are to meet again on the 14th at the Samsondale range. ROCKMOOR.

—The Empire Rifle Club opened its Creedmoor season yesterday with the match at 200 and 300 yards, off-hand, 10 rounds each range; on the 14th firing will be at 300 and 500 yards, off-hand; on the 21st the bronze medal, N. R. A., will be competed for at long range, and on the 28th a class match will open for all-comers, 10 rounds at 200 yards, military rifles, are allowed 3 points. The first class includes all those who have won first place in any monthly or other off-hand competition on any range, and those making 44 in this class are debarred from the second. All others may enter the second class.

—The United Schuetzen Association opened yesterday their regular practice shooting at Union Hill. The practice will be kept up on the first and third Wednesday of each month. Shooting each day to extend from one to six o'clock. G. A. Kundahl is the shooting-master.

CREEDMOOR—MAY PROGRAMME.—The following competitions are announced to take place on the N. R. A. range during the current month:

Saturday, 10th, Remington Match.—Sixth Competition—Prize of $300 in gold; all comers, any Remington breech-loader; must be loaded at the breech, with cartridges as furnished from the factory; 900 and 1,000 yards, 20 at each distance, any position.

Wednesday, 14th, Champion Marksman's Badge of 1879.—Second Competition—Open to all members N. R. A. and all members of the N. G. S. N. Y. in uniform, 200 and 500 yards, 5 shots at each, rifle N. Y. State model, standing position at 200, any with head toward the target at 500 yards.

Saturday, 17th, National Guardsman Match.—Third Competition—Open to members of the National Guard of any State, 300 and 600 yards, position at 300 yards standing, any at 600 yards, with head toward the target; 7 shots at each distance; weapon, the authorized military rifle.

Same Day, Skirmishers' Badge Match.—Twelfth Competition—Offered by Gen. Hiram Duryea; open to all members of the N. R. A. and members of the National Guard of any State in uniform; distances, from 500 to 200 yards, advancing and retreating; second class targets.

Saturday, 24th, the Dimond Match.—Second Competition—Open to all members N. R. A. and all members of the N. G. S. N. Y. in uniform, 200 and 500 yards, 5 shots at each, rifle N. Y. State model, standing at 200, any with head toward the target at 500 yards.

Wednesday, 28th, Secretary's Match.—Second Competition—Open to life and annual members N. R. A., and active members of any regular military or naval organization in the United States; 200 and 500 yards, standing at 200, at 500 yards any without artificial rest (as allowed in N. R. A. Regulations, governing position in any rifle competitions); weapon, any military rifle (excluding specials); 5 rounds at each distance; two entries in each match, but only the highest score to take a prize.

Saturday, 31st, Remington Rifle Match.—First Competition—Prize, a Remington Creedmoor rifle, value $100; offered by Messrs. E. Remington & Sons; open to members N. R. A.; 200 yards, standing position, 10 rounds, any rifle. Handicap—1. Any competitor using other than a military rifle, four points; 2. Competitors who have in any N. R. A. monthly or other match at Creedmoor made at 200 yards: A. With a sporting rifle, two points over an average of centres (if using such a rifle in this match), two points; B. With a military rifle, over an average of centres (if using such a rifle), two points.

Same Day, Handicap Match.—Open to all comers, 200 yards, standing, 10 rounds; competitors allowed two entries, but only the highest score to take a prize; any rifle. Handicap—1. Rifles, other than regular military, three points; 2. Winners of any first prize or place in any monthly or other match of the National Rifle Association, shot at Creedmoor, two points.

BRINTON RANGE—*Elizabeth, N. J., April* 29.—"Winchester Match." Fourth competition for a Winchester repeating rifle, 200 yards, standing, 10 rounds, any rifle.

Score:

J T B Collins	4	4	4	4	5	4	4	4	5	4—42					
D F Davids	4	4	4	5	4	5	4	4	4	4—42					
H D Blydenburgh	4	4	4	4	4	4	4	5	4	4—41					
J M Darr, M D	4	4	4	4	5	4	3	4	5	3—40					
Col C H Houghton	3	5	4	4	5	5	4	3	5	4—40					
R K Buckman	5	4	3	3	3	4	4	4	4	3—38					
J Johnson	5	4	2	3	3	4	4	4	4	3—36					
J W Todd	4	4	3	4	5	4	0	4	3	4—35					
Capt A Anderson	3	4	3	3	2	4	4	3	0	4—30					
J P Jones	3	5	2	3	3	0	4	4	3	3—30					

Won for the third time and finally by Mr. Collins.

—On Monday next the Stockton (N. J.) Rifle Range will be formally opened. There will be a reception to Governor McClellan, of New Jersey, and Governor Hoyt, of Pennsylvania, and the escorting of the two statesmen to the grounds by the Sixth Regiment, commanded by Col. E. Burd Grubb. Arriving at the range, there will be brief ceremonies and speeches by the Governors. The range will be opened at nine o'clock in the morning, and about ten o'clock the contests will begin. There will be three matches.

—The Amateur Rifle Club, of New York city, announces its prize matches for 1879. Open only to club members. The season opened with contest for the bronze medal, N. R. A., at Creedmoor yesterday at long range. It has been decided by the Executive Committee that professional riflemen shall be handicapped 5 per cent. of their total score in each match, but the Executive Committee fail to define the class thus handicapped.

ILLINOIS—*Chicago, April* 27.—200 yards, off-hand. Wind strong at 4 o'clock. Score:

Cram	4	4	5	4	5	5	4	5	4	5—45					
Bradley	4	5	4	3	4	5	4	5	5	4—43					
Tift	4	5	4	4	5	4	4	5	4	4—43					
Macauley	5	4	4	4	5	4	4	5	4	4—42					
Catlin	4	3	5	5	5	4	4	4	4	4—42					
Colehour	4	4	5	5	4	4	4	3	4	4—41					
Burns	5	4	4	5	5	4	4	5	4	3—41					
Henrotin	4	4	5	4	4	3	5	4	3	5—41					

—On the Canton (Ohio) Rifle Club grounds on the 26th ult., Mr. John Bour gave an exhibition of rapid target shooting with a Winchester repeating rifle, '73 model, shooting 15 times and discharging the gun successively the moment the gun touched the shoulder; the distance was 200 yards, and he made a score of 43 out of a possible 75, after which he broke in the air, with a .22 Ballard rifle, 18 out of 20 glass balls.

MILITARY POSITION.

NEW YORK, April 28, 1879

EDITOR FOREST AND STREAM:

Now that the discussion of position with military rifles is waxing warm, I am constrained to add a little fuel. What shooting I do with the military rifle must be done on my back, as I have lost my right arm. Perhaps no man in this country, not a professional of long standing, has done more shooting of this kind, or had more practice in teaching others, than myself. In this statement I include Gen. Wingate and Mr. Farrow, not as a challenge for controversy, but as a citation of authority. In October, 1876, I wrote "Modern Observations on Rifle Shooting," and I refer to pages 23 and 24 for my views at that time:

> With breech-loaders, troops should be allowed to lie down, even at 200 yards. * * * The front position is demanded in military shooting. The author thinks this demand erroneous. When the enemy is retreating a dazed rest and certain aim, even at the cost of an instant of time, is better than supporting the body as well as the rifle on the arms. When it comes time for retreat the rifleman can turn over from his back and run twice as quick as he can gather himself from the prone position. When he turns over from the back position his face is in the direction whither he desires to ramble.

In experimenting with sights I have had to shoot in the front position, putting the rifle over a stool, and after firing a number of shots I have found it absolutely indispensable to comfort and decent shooting, in that position, to sit up straight to get rested. It has also been my study to notice in my own person, and the persons of others, all actions and words that tended to exhibit the effect of position or steadiness (in fact, every detail), and I find it almost universal for men arising from the prone position to show by some sign or expression that they have been uncomfortable. It is this which induces men, when permitted, to take off their belts, unbutton their coats, etc., etc., when assuming the prone position. Capt. Jackson alludes to the tiring of the neck in the back position. I contend that such tiring soon wears off (the same as a boy's legs get used to jumping), and *per contra* the neck becomes soonest tired from the front position, some men becoming almost purple in the face from choking in the front position. The Captain's claim of a natural breastwork formed by the feet and fore-legs is very material, while in the manipulation of the piece there are two hands to work with—one to unlock the mechanism while the other finds the cartridge.

I was in the field throughout the war in a regiment of regular infantry where discipline was never abandoned except under stress of necessity or reason, and my observation was that no man tried to shoot with his knapsack on his back. We discarded knapsacks early in the war, and many did their fight ing on ammunition, water and what they expected to get from their dead comrades after the battle was over, if perchance they lived to want anything. So much for my friend who thinks we ought to have a position which will accommodate a pack-mule soldier. We should not forget that our style of arm is changed. We shoot with breech-loaders now. When we had muzzle-loaders there was danger in drawing the gun up to reverse it for firing, of catching the hammer and discharging the piece, possibly shooting a comrade behind if using the back position. Now the muzzle is to the front, and (if the same

amount of coolness is used as in our last war), the more accidental discharges, the more liability of hitting an enemy.

To show my earnestness and belief in my observations, made solely with a purpose to make the manual of "Perry's Green Book" unassailable, I hereby claim that I can make more points in a given time from the back position with a military rifle, at any or all ranges, including the time of assuming position and recovering therefrom, than any two-armed man can from the front position, and I do not claim to be even an average shot. My suggestion for such a match would be to commence at 200 yards, and fire 7 and 10 shots at all ranges up to and including 1,000 yards. I offer this test in what I believe to be the interest of science, and although I am willing to accept professionals as competitors, money and bluff are not ingredients of my purpose. Rifle to be any adopted military, not a repeater; place, Creedmoor. Time, one month notice. In case of more than one acceptance, General Wingate to choose my competitor at being the best representative of the prone position. EDWIN A. PERRY.

Game Bag and Gun.

MAY IS A CLOSE MONTH FOR GAME.

LYMAN'S GUN-SIGHT.—Mr. Wil. Lyman, of Middlefield, Conn., has just devised a farther improvement in his patent rear sight for sporting and target rifles. The new feature is the adjustable peep-sight, the size of which may be altered at the option of the shooter. The use of the Lyman sight possesses peculiar advantages for quick aim, shooting at moving objects and night shooting.

THE "AVERAGE" SPORTSMAN.—A correspondent urges that the hammerless gun will be a very dangerous weapon in the hands of the "average" sportsman. If by that term he means the careless sportsman, who lodges his shot in his own and other people's legs, we fully agree in the opinion. The weapon is dangerous when handled by such a person. He has no business with anything at all except a dummy. But the "average" sportsman is not careless with his firearms. If he were, we should hear of a great many more amputated limbs than we do now. The foolish sportsman delighteth the heart of the surgeon.

A HANDSOME CATALOGUE.—The most elaborate catalogue of fire-arms ever published in this country has just been issued by Mr. H. C. Squires, No. 1 Cortlandt street, New York. It is a pamphlet of some seventy pages, with handsomely illuminated cover, and is profusely illustrated with cuts of the various guns, rifles, etc., in Mr. Squires' stock. Special attention is devoted to the choice imported breech-loaders and the hammerless gun, the construction of the latter being fully illustrated. Practical directions are given for the selection of fire-arms, and sensible rules laid down to be observed in the care and use of the same. Several pages are devoted to a description of the various processes in the manufacture of a fine gun. To the wonderful store of valuable information which Mr. Squires has compressed into his catalogue, he has added a judicious selection of reading matter pertaining to field sports. The pamphlet should be in the hands of every man who already owns a gun or contemplates purchasing one. It is sent upon receipt of twenty-five cents.

AMERICAN GUNS.—One of the most striking proofs of the estimation in which American-made guns are now held is shown in the selection by Mr. Schuyler, the senior partner in the house of Schuyler, Hartley & Graham, of a Parker gun for use on a recent Western trip. There were two sets of barrels, one of Damascus and the other of laminated steel. The 12 gauge pair weighed 7¾lbs. and the 10 gauge 8¼lbs. The guns were made, lock, stocks and barrels, at the works of Parker Bros., at West Meriden, Conn. Not an once of the material was imported either in the raw or semi-finished state. The value of the piece was $400 and no finer bit of workmanship could have been produced in any of the Birmingham shops.

LOOK TO THE CAMP FIRE.—Unless some measures are devised to check the decrease of timber, the forestry question will soon be one of grave importance to the United States. The annual rate of decrease of forest lands in this country is about 8,500 square miles. Besides, the legitimate drains made by the timber industry, wood for fuel, etc., a large percentage of this decrease is caused by the great conflagrations which sweep over vast areas each spring and fall. These fires often start from the camp fire of the careless hunter or fisherman. Sportsmen should use all possible precaution, especially at this season of the year. Care should be taken to render spreading impossible, and every spark should be carefully extinguished before the spot is deserted. It does not savor of the eternal fitness of things that a land-owner should be burned out of thousands of dollars worth of timber by the shiftlessness of an unthinking trespasser upon his domain. Put out your camp fire.

—Several members of the Canadian Artillery and School of Gunnery have recently organized a gun club at Kingston, Ontario. The officers for the year are Lieut. Col. Van Straubenzie, President; Dr. Mackenzie, Vice-President; Major J. E. Holmes, Secretary and Treasurer.

MASSACHUSETTS.—Mr. Wm. R. Shaefer, of 61 Elm street, Boston, has ten live fox cubs on exhibition at his store. They were all captured in one den.

LONG ISLAND—*Canarsie, May* 3.—Friend and self left Brooklyn at 11 P. M. on the 29th instant; reached a small island about 1:15 A. M. off Canarsie, and slept until 3:40 A. M., at which hour the ducks began to fly. Put out stools and shot until 6:30 A. M., when we packed up and started for New York for business. Bagged six ducks and two winter yellow-leg snipe. Trip cost seventy-five cents each. W. L. H.

Shelter Island, April 28.—The fowl have nearly all left the waters of eastern Long Island, and for an extent of forty miles of the Peconic and Gardiner Bays scarcely a wing can be seen. ISAAC.

ARKANSAS—*Jacksonport, April* 29.—The past winter's sport in this region was a failure. Dry and cold weather kept the geese and ducks moving; very few stopping with us. The spring rains have been so late that we have had no snipe shooting worth mentioning. A sufficient number of quail have been saved to insure good shooting next fall; wild turkeys are breeding in the woods in rather unusual numbers, and the season so far is favorable. A number of "smart Alecks" think it is nice to call up gobblers at this season and murder them. If they had as much sense as the average turkey the latter would soon be exterminated; but so far in the trial of wits the bird is ahead of the beast. In fact, a well-educated wild turkey is a "mighty smart bird." May his tribe increase. YELL.

IOWA—*Pomeroy, April* 30.—I have just returned from a trip to Dubuque and other eastern points; met a cordial reception from all resident sportsmen; did some shooting at the trap, and made in the different matches at that place the top score of 27 straight, most of which were at 21 yards rise. The 25th found me facing the traps at Ford Dodge, in company with your old-time correspondent, "Wahkonza." We shot a match at 20 single rises apiece; score, 20 to 17, in favor of your humble servant. By way of revenge, the Doctor decided to try and beat me on my own ground on game. So, half-past eight Monday morning found us in the field near this place, intent upon slaughtering the snipe. By ten o'clock the Doctor had 25 and I had 23, so I gave it up, and we ceased to count separately. By eleven o'clock we had 60 together, and by a little after twelve we went home, tired, satisfied and happy. There are plenty of all kinds of waders here this spring, also plenty of golden plover, curlew, etc. Ducks are all nesting. As the most of the prairie near here was burned off last fall, there will be very few prairie chickens' eggs destroyed by that means this season, and as a very large breeding stock is left in the country, it is safe to suppose that we will have an extra number to shoot from this fall. When any of my Eastern friends may favor us with a call, they will not fail to meet with a cordial reception and most excellent sport.

ABE DACOTAH.

A POOR PLACE TO CAMP.—Last week Wm. Lallance and Geo. Rhodes, who were on a hunting and fishing trip, crawled into the drum house of the coal works of New Haven, near Pomeroy, Ohio, to sleep. The house caught fire and was burned to the ground, the sleeping men being consumed in the flames. Their bodies were found charred beyond recognition.

PIN-ATE-D TURKEY.

CLAREMONT, MINN., April 23, 1879.

EDITOR FOREST AND STREAM:

I inclose herewith a brass pin or wire, which was taken from the gizzard of a wild turkey, shot last year near Fort Ogden, Florida. I am at a loss to determine what the article is. It is evidently not complete in itself, but a part of something else. Can you shed any light upon the subject?

G. H. HOUGHTON.

This pin or wire is two and one-half inches long, as large around as an ordinary knitting-needle, and has a head one-eighth of an inch in diameter. Having in our boyhood seen in our Grandfather's Revolutionary trappings something like this, we bethought us that it might be some part of the old-time soldier's outfit. We accordingly sent the letter and the pin to Maj. H. W. Merrill, who, our readers will recollect, served in the Florida wars, and in response we received the following letter:

NEW ROCHELLE, April 30, 1879.

EDITOR FOREST AND STREAM:

I have examined the pin you sent me, and pronounce it a "priming wire," used to open the touch-hole of the old-fashion flint-lock musket, etc. You will see that it has been used evidently for that purpose, for the point of the pin is yet dark and corroded from the effects of the powder and gas. The vents of these guns were large, you will recollect, and the pin has a reamer at the end to cut out the dirt, etc. It was suspended to a string of wire I think. H. W. MERRILL.

And thereby hangs a tale, if only any one could be found to unfold it; a woof of poesy and romance, if only some one could weave it.

Away back in the days of Osceola and Coacoochee, a sentry pacing at dead of night beneath the stars, startled by the sudden shriek of owl or foe, dropped this shining pin.

Peace came. The camp which had resounded with the *reveille*, the clash of arms and all the pomp and circumstance of war, now deserted and silent, lapsed into its primitive wildness; the turtle-doves billed and cooed, and the spotted, large-eyed fawn sought its grateful shade unabashed.

But the pin lay glittering in the sun. Then it was that a wild turkey beheld the bright bauble, and—death loves a shining mark—scooped it up. Setting at naught the classic precedent of the rooster in the famous story of "The Diamond, the Cock and the Kernel of Corn," this *Meleagris gallopavo* no sooner saw the jewel than he took it in.

And now behold him peregrinating through the wilderness, an animated pin-cushion, a peripatetic, bipedal, fire-water-and-burglar-proof Safe Deposit. Did he not perchance throw his shoulders back and expand his chest—or, more precisely, his gizzard—and strut about in the proud consciousness that his was the only old original Floridian *Pin-a-fore?* Or, perhaps, a gaunt phantom of the Red Man's hopeless cause, did he suffer those forty years of pain, his breast—we mean gizzard—fired by the memory of the dusky old King Payne? Or, again, did he regard the bit of copper in his keeping, *i. e.*, gizzard, a sacred trust not lightly to be surrendered? and did he go stalking all those years through swamp and hammock and piny barren hunting for a white man at whose feet he might lay it down with his own life?

We pin our faith to this last: it is the only one worthy of the noble bird which Ben Franklin said ought to have been honored instead of the eagle as the national emblem of our country. Moreover, we have the pin; a pin is three-fourths of a pint; a pint is four-fifths of a point; and that is a point in our favor. Stick a pin there.

We regret that we have not more minute particulars regarding the outward appearance of this bird when shot. Was the coppery hue of his plumage especially fine? Was there any unusual metallic lustre without to indicate the copper mine within? Were the pin feathers remarkable in any way? These points, important as they are in a scientific view, it is now too late to determine. One fact in natural history is established: a wild turkey can live at least forty years—if properly spitted.

The skin, too, should have been preserved. A bird that made such heroic efforts to mount itself before death, should certainly have been mounted by others after death.

Several of the Seminole War veterans are among our subscribers. If the soldier who lost that priming-wire should chance to see this paragraph he may recover his property by proving ownership and paying pin-money. What if he should prove to be the forty-ninth cousin of the man that shot the turkey! Wonderful, wonderful!

For Forest and Stream and Rod and Gun.

WHEN TO HUNT TURKEYS.

WILLIS, Texas, March 4, 1879.

THERE appears to be great diversity of opinion with regard to the time and season in which the "wild turkey" (*M. gallopavo*) should be hunted. I have no experience, except in the extreme southern States, between—say 33 deg. and 29 deg. N. latitude from Florida to west of the Colorado River, in Texas. Within these limits, and from the closest observation, I find the general characteristics and habitat of the turkey all the same. Further west, on the Concho, Pecan Bayou and other streams, is another variety of turkey—the Mexican, I presume—and I only know this from bones that have been sent me by friends out there, being much smaller and shorter than those in our kind here and in the States east of the Mississippi. In our variety the male, or "gobbler," when at the age of four years and upward, and in good order, weighs from 20lbs. to 26lbs., but specimens of the latter weight are exceedingly are; 21lbs. a big average. The hens under like conditions will register 11lbs. to 14lbs. The tuft or beard of the "gobbler" attains a length of ten to thirteen inches, and never grows shorter or sheds out.

Sportsmen hunt them in various ways—various according to the geographical and climatic conditions of the country where found. On the streams west of the Brazos River, this State, where there is but a narrow strip of timber of short growth on either side, some hunt them by riding on horseback; some on either side, and with dogs drive the turkeys into the trees and shoot them out with shotguns, six-shooters or rifles, as the taste of the hunter may suggest, thereby often killing what their horses or wagons can carry. East of this in Texas, and in the older States, they are hunted during the fall and winter months by some with dogs to tree them, and are thus shot, principally with rifles; some hunt them by stalking, or still hunting, in the day time, on their feeding-grounds, and when fired into and flushed they are then sought out and shot in the trees where they have taken refuge; or the hunter sits down by a tree or old log and yelps or calls them up and shoots them. Another, and the most exciting and interesting method, is in the gobbling season, in February, March and April. But I would get excited over this, and want to say too much about it. They are hunted at this season by creeping to the tree where one is gobbling, before it is yet daylight, and shooting him off his perch; or one may sit down behind an old log or in front of a tree, and "yelp" him up as he is gobbling and strutting. But to do this successfully requires a great deal of experience, combined with an uncompromising patience, a thorough knowledge of all the characteristics of the bird, his whims, his hopes, his fears, and his eternally vigilant eye; for one glance of that button on your cap, or the wiggle of your finger to disturb that mosquito on your nose, is enough. Put! put! and a mile is between him and you instanter. You can go there again the next morning; he will be within a few hundred yards of the same place. Try and call him up again; you will have better luck next time. Your cap snaps! There—he's gone again! Throw that old gun away and get a breech-loader. Try him the next morning. He will persist in coming until you kill him, at this season—*sometimes*.

In the spring, or gobbling season, is the time that turkeys are mostly hunted here and east of this, all through the timbered portions of the country, as the old gobblers are mostly sought after, the hens seldom being killed by sportsmen. And it is only at this season that the old gobblers can be found easily, as they are as shy as wolves, and go in separate flocks by themselves, and seldom associate with the hens at all. The young gobblers go in gangs with the hens from the time they are hatched until the gobbling of the old males begins in the spring, at which time they scatter off by ones and twos by themselves, leaving the hens entirely, from fear of the older birds, of whom they have a mortal dread. The old birds now become bellicose toward each other, have a few fights, and separate one from the other till the gobbling season is over. Audubon says "they kill one another." I have never seen one thus killed, or even hurt, only a few spur pricks about the breast and back, and scratches or pecks and wrings about the head. They do not pair. One day he is polygamous, the next a widower or bachelor, and that is why I insist that it is not necessary to prohibit shooting turkeys here until the 15th or last of April, because the old gobblers are the only specimens or individuals that we do shoot, and one old gobbler will serve, or attend to all the hens within two miles of him anyhow, and we never more than decimate the old males in any one locality; so the stock thereby is not materially impaired. If you make a law to close on turkeys the 1st of January or February we would never kill another turkey, and I would leave a State in which there was such a law.

The time for shooting turkeys is peculiarly different from that of any other game bird we have. It is not a game like the quail, grouse, woodcock or snipe, that you can use dogs on, and spring from covert and shoot at pleasure. The peculiar modes of hunting them in the different parts of our State

alone will preclude a possibility of shaping a law to suit the country over, except that the open season be from October 1 to April 1 or 15. Turkeys are too young September 1, and full of vermin and lean. Turkeys are only fat and in good condition say five months of the year—November to April. They usually get fat on mast, and you know that in this latitude the mast does not fall to any extent until in October, and then the turkeys only have one month to eat enough mast, get the ticks off and get fat by 15th December. Turkeys are at their best condition in January, February and March in all the Southern States in which I have hunted them, and it would be a ruinous law to prohibit their being killed in the very months that they are in best keep.

They have scarcely done moulting by December 1. I have often killed them with pin feathers at that date.

Wild turkeys do not begin the period of incubation as early as the domestic bird. It is true they gobble here in February, and sometimes January; but that signifies nothing. I have yet to see a wild turkey egg before April. The hen never allows the cock to accompany her to her nest of eggs; if she did, he would make a meal of them at once and bring her to grief: he will even destroy her young after they are hatched. Where there is one cock bird left in a radius of two miles, all the hens in that scope will possess unto themselves each a happy family. As an instance: Some years ago, in the State of Alabama, my brother and I lived and hunted in a portion of Clark County, that State. We had full sway of a region whose radius was some ten miles, and full of turkeys and deer. Every spring we began on the old gobblers, and by the 1st of May had them pretty well decimated, leaving about one or two in each locality. The result was that the next fall the woods everywhere were full of turkeys. We had a sportsman friend, Mr. Jim Sleptes, who lived on the west side of the river, who often joined us in our hunts.

In conclusion, I can but think that the seasons for shooting wild turkeys, as they are fixed in some or most of the States, are not in keeping with the natural seasons "made and provided." However, I expect to catch thunder from somebody on this score; but I don't care for all their thunder, so they don't stop me from shooting old gobblers in March and April.

C. L. J.

A DITTMAR POWDER USER.

VAN BUREN, Ark., March 13, 1879.

EDITOR FOREST AND STREAM:

At some of the individual correspondence respecting Dittmar powder, I have felt much astonished, while all admit that there is less recoil and less residuum than that in use of black powder. Now, I am an old sportsman of Western Arkansas. Have been thoroughly conversant and associated with guns of all kinds used by sportsmen, shot-guns and rifles, both muzzle and breech-loading weapons. I have from time to time used different brands of powder, Dupont's, Hazzard's, Curtis & Harvey, English, Laflin & Rand, Lightning 5, 6 and 7 (canister), also American Powder Co.'s Dead Shot, etc., etc., all of which I have used on game and at the target, and have found no very great difference in the use of either one over the other. All foul the gun and all make big smoke, and all produce more or less recoil according to quantity used. But I have been using lately pretty extensively the Dittmar powder and desire to add my experience in using some five or six canisters of A, B and C, designated slow and quick. I use a 12-gun, W. & C. Scott & Son, double-bolted, laminated 8-lb., 30-inch barrels, invariably using 3 drams Dittmar for quail, 1 1-8 oz. shot, and for duck and turkey $3\frac{1}{2}$ drs and 1 1-8 shot, with little or no recoil, so little smoke as not to be noticed, and no residuum in any number of shots. At the target, a 30-inch circle, 40 yards, with central pod, find pattern about same as with best black powder, but penetration decidedly greatest with the Dittmar, loading with both equally by Dickson's measure, using both soft and chilled shot, and this singular fact is a puzzler to me, as action and reaction being a fixed principle in mechanical force. But while there is decidedly less recoil or back force there is most unquestionably a greater force given to the shot, as from 15 to 18 sheets of Scribner's old magazines, showed in favor of Dittmar powder, every shot made with equal loads of each. I am so thoroughly convinced of the many advantages in favor of the Dittmar powder for sporting purposes that I shall never use any other kind when I can get it, and have no hesitancy in recommending its use in all kind of shot-gun shooting at game or target. There are others of our club having used the Dittmar who are ready at any time to add like testimonials, among which are C. D., D. B., and J. A., of Van Buren, the first, C. D., the best shot in Western Arkansas.

RICHD. THURSTON.

A DITTMAR CONVERT.—*Springfield, Mass., April* 17.—I have been very much interested in reading the reports from some of your correspondents of the results arising from the use of the Dittmar powder. In your issue of Maach 6 "C. J." gives a good report of it, also Mr. Farnham, Bait and Walker. Some five years ago I purchased and tried to use some of the powder in a muzzle-loader. I could do nothing with it. I emptied the contents of my flask on the ground and set fire to it. From that time until this spring I have not tried it, but have been watching the reports of those who have. The first of March I purchased some of the C brand from Lovell & Son, Boston, and used it in an eight-pound Fox gun. My charges on the first trial were $3\frac{1}{4}$ drs. of powder and $1\frac{1}{8}$ oz. No. 2 shot. With this charge, at forty-seven yards, I put fifty five inside a 30-inch ring, and nearly one-third of that number passed through an inch pine board. The recoil was nothing, so I increased my charge to $3\frac{1}{2}$ drs. powder, which will be my standard. I find no trouble in using the Dittmar powder. I put two pink-edge wads (No. 11 for 12 shell paper, No. 10 for brass) over powder; common cardboard over shot. I press the wads well down on the powder, but don't pound them in loading; then turn the shell down well. I shall always use the Dittmar powder as long as Mr. Dittmar continues to give as good an article as this I am using. I find it quick enough to suit me. I have used powders that cost more, both Hagard's Electric and Orange Lightning, but none equals the Dittmar. Being wholly disinterested, I merely give my experience for the benefit of those wishing to use this powder. I will inform Mr. Birt that if he will get the C brand of Dittmar powder and load his shells with $3\frac{1}{2}$ or $3\frac{1}{4}$ drs. and $1\frac{1}{8}$ oz. shot, he will stick them in a board at forty or even sixty yards.

S. N. JONES.

DITTMAR POWDER.—*Philadelphia, March* 27.—*Editor Forest and Stream:* I have observed such a variety of experiences, and read so many different opinions concerning Dittmar powder, that, with your permission, I will give my own. First, then, I have not found it to lose strength by age or to injure the barrels, using the C brand, made, as Mr. Dittmar states, to meet the views of Bogardus. My experiments have been made with a $7\frac{3}{4}$ lb. 12-bore gun, using the $2\frac{5}{8}$ paper shells. We have never seen any of it that seemed to ignite quickly enough, and to obviate this I use first $\frac{1}{2}$ dr. black and place on this 3 drs. of the Dittmar, bringing the charge to $3\frac{1}{2}$ drs., which I consider enough for any field shooting. I use on the powder three wads—one Eley waterproof No. 12, and two Eley pink edge No. 11. They should be placed perfectly even and solid, but no necessity of hard ramming. On the shot I use either a 12 Baldwin or cardboard wad. I shall be pleased if some brother sportsman will try this formula and report, particularly if he has not been able to use the Dittmar satisfactorily. I fear the new kind will be too slow, but we will see and not condemn it beforehand.

H.

DITTMAR POWDER.—Would "Wood Duck" give the exact plan upon which he loaded the shells with Dittmar powder, which gave him such good results as stated in FOREST AND STREAM of the 13th ult.? I think every shooter of any experience has his own mode, which in his eyes is the best.

M. B.

—See Bogardus' advertisement.

PIGEON MATCHES.

NEW YORK GUN CLUB—*Bergen Point, N. J., May* 3—Sweepstakes shooting at the opening of the club grounds; 80 yards boundary, five traps, two barrels. Club rules (amended Hurlingham):

W Tell, 28 yards	1 1 1 1 1—5	W Stone, 24 yards	0 1 0 0 1—2
H Reblin, 24 yards	1 1 1 1 1—5	G B Greer, 23 yards	0 0 1 1 0—2
C Butler, 28 yards	1 1 1 1 1—5	Dr Zellner, 30 yards	0 1 1 0 w
E Salmon, 24 yards	1 1 1 0 1—4	S Armstrong, 28 yards	0 1 1 0 w
J Logan, 24 yards	1 0 1 1 1—4	L Wright, 28 yards	0 1 1 0 w
Dr Barton, 25 yards	1 1 0 1 1—4		

Ties divided first, second and third.

Classified sweepstakes, 80 yards boundary:

*Armstrong, 29 yards	1 1 1 1 1—5	*W Tell, 29 yards	1 1 1 1 0—4
*Manning, 28 yards	1 1 1 1 1—5	*L Johns, 23 yards	1 1 0 1 1—4
*Salmon, 24 yards	1 1 1 1 1—5	*C Butler, 29 yards	1 1 1 1 0—4
*Stone, 24 yards	1 1 1 1 1—5	Logan, 25 yards	0 1 1 0 1—3
*Dr Zellner, 31 yards	0 1 1 1 1—4	H Reblin, 25 yards	0 1 1 1 0—3
*Dr Barton, 25 yards	1 1 0 1 1—4	F H Lee, 24 yards	0 1 1 1 0—3

Unknown and Warner withdrew.

* Left first and second money to next shoot.

SHREWSBURY GUN CLUB.—*Red Bank, N. J., May* 5.—Ninth match for gold club medal; Parker revolving traps, screened; 18 yards; ties, 21 yards:

G H Wild	1 1 1 1 0 1 1 1 1 1 0 1 1 1 1—13
G F Marsden	1 1 0 1 0 1 1 1 1 1 1 1 1 1 1—13
L B Campbell	1 1 1 1 1 1 1 0 0 1 1 1 1 1 0—12
H C White	1 1 1 1 1 1 1 1 1 1 1 1 1 0 1—14
J B Bergen	1 1 1 1 1 1 0 1 1 1 1 0 1 1 1—13
C H Stillwell	1 1 1 1 1 1 1 1 1 1 1 1 1 1 0—14
A R Coleman	1 1 1 1 0 1 1 0 0 1 1 0 1 1 0—10
S W Morford	1 1 1 1 1 1 1 0 1 1 1 1 1 0 0—13

Ties on fourteen.

White	1 1 1 1 1—5	Stillwell	1 0 1 1 1—4

MINNESOTA—*Beaver Falls, April* 25.—Redwood Falls Sportsmen's Club; match for the champion badge held by Horace Daniels; all matches shot from Bogardus pivot screen trap; 18 yards rise, Bogardus rules:

H Daniels	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1 1 1 1—24
G Bohn	1 1 1 1 1 0 0 0 1 1 1 1 1 0 1 0 1 1 1 1 0 0 1 0 1—17

Second match.

H Daniels	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—25
G Bohn	1 1 1 1 1 1 1 1 1 1 1 0 0 0 0 1 1 1 0 1 1 1 1 1 1—20

Third match.

H Daniels	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—25
T M Paine	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1 0 1 1—23

Daniels, you will see, broke 74 out of 75. He has only shot a short time at trap. Is this not better than the average?

T. M. P.

WISCONSIN—*Baraboo, April* 27.—Score at glass balls; Bogardus trap and rules, 18 yards rise:

Brewer	1 1 1 1 1 1 1 1 1 1 1 0 1 1 1—14
Kartack	1 1 1 1 1 1 1 1 1 1 1 1 1 1 0—14
Saare	1 1 1 1 1 1 1 1 1 0 1 1 1 1 1—14
Metcalf	1 0 1 1 1 0 0 1 0 1 1 1 1 1 0—10
Whistance	1 1 1 1 1 1 0 1 1 0 0 0 1 0 1—10

ED. H.

THE GLASS BALL MATCH.—The medal now held by Master Eugene Bogardus, and for which he has received no challenge, is to be put up under the same conditions as before—100 glass balls, Bogardus rules—and to be shot for at Kleinman's Shooting Park, Chicago, Ill., May 20.

Yachting and Boating.

YACHTING NEWS.

PRACTICAL BOAT SAILING.—It is with pleasure that we can announce the appearance before long of a little work on practical boat sailing by an esteemed contributor to our columns, Gen. Douglass Frazar, of Boston, whose letters over the signature "Fusil" our readers will, no doubt, recall with pleasure. Literature of a nautical character is something so scarce in America that any addition to the same will be welcomed by all who desire to see us take rank with our British cousins in this respect. English works are excellent in their way, but are not always applicable to the different circumstances under which the sport is carried on with us, and this new book on boat sailing will fill a gap long existing, as we know from the many inquiries received for just such a work. Further notice will appear in our book reviews.

SOUTH CAMDEN (N. J.) YACHT CLUB.—The officers of this club are as follows: Com., W. Harper, yacht *Feeney;* Vice-Com., J. R. Sweeney, yacht *Sweeney;* Rear-Com., W. Howell, yacht *Gnang;* Pres., W. Harper; Sec'y, G. Davis; Treas., W. Weaver.

CLEVELAND (OHIO) YACHTING ASSOCIATION.—Officers elected for the year: Com., G. W. Gardner; Vice-Com., F. R. Merchant; Rear-Com., W. Shipman; Sec'y, W. P. Fran, cis; Treas., H. G. Phelps; Measurer, H. Gerlach; Executive and Regatta Committee, F. H. Smead, Chairman; R. E. Gill-W. Gerlach; R. D. Mix and B. Lyman.

BUFFALO YACHT CLUB.—A committee has been appointed, composed of Messrs. P. C. Doyle, F. E. Nettleton, G. G. Smith, E. E. Benedict, C. M. Cordell and Clarence L. Bryant, to consult with the Fourth of July Committee of the Common Council in regard to getting an appropriation to assist in making the proposed regatta a success.

We are glad to see the establishment of an annual municipal regatta in Buffalo. Other cities might follow this example to advantage, New York among them.

MAINE ITEMS.—Mr. T. H. Wyman, of Sebec, Maine, has built a sharpie 28ft. over all, 7ft. beam, with a 7ft. centre-board and two masts 25ft., with leg-of-mutton rig. Robert Bottomly has launched his catamaran, and Mr. F. M. Ford has put a 31ft. mast and 18ft. boom in his cat-boat. Boating matters are reported brisk in that neighborhood.

THE QUESTION OF TYPE.—A "practical" yachtsman—if life-long sailing can make one such—has this to say on rig and hull: "I have the lines of a ten-ton cutter ready, and will build next winter. With her under my feet I would sail to New York to see you; but you won't catch me trying those larks even in a twenty-ton sloop. My new design is yawl rigged—next best to cutter; some think better." We are evidently not alone in our preferences, but have the indorsement of all who have had experience in the sloop and cutter type in rough water.

ANOTHER CUTTER.—A handsome cutter is being laid down in Greenpoint to the order and from the plans of Mr. Roosevelt Schuyler. She will be 32ft. over all, 26ft. 6in. water-line, 7ft. beam moulded, and 5ft. 2in. draft; displacement, 7 tons; hull, 2 tons; 3 tons lead on keel and 2 tons lead inside; flush deck, with 5ft. cabin height, and 5ft. 6in. under sky-light. When finished she will be a fair representative of the type.

THE OLD UNA.—The "old *Una*" is still at Portsmouth, N. H. She has been thoroughly overhauled and her sloop rig changed to a schooner. Competent judges say that since her new rig has been put on her speed has decreased very materially, so much so that there are a number of fishermen in port that can outsail her. The steam yacht *James Samson*, of Dover, N. H., has changed hands. She now belongs in Kittery, and runs as ferry between that place and Portsmouth. The different parts of the new light on York Nable, Me., have arrived and are being put in position.

W. A. G.

LE YACHT—Our French contemporary, with its usual commendable enterprise, publishes a series of plans of the Herreshoff catamaran. This kind of craft should "take" on the waters of the Seine, especially about Argenteuil and the lower reaches of the river.

ROWING AT BINGHAMTON, N. Y.—The ice in the Susquehanna has broken up, according to the *Morning Republican*, and the rowing clubs have a clear course.

BEVERLY (N. J.) YACHT CLUB.—This is the name of an organization effected last fall, at Beverly on the Delaware River. Officers for the year: President, C. H. Peast; Commodore, E. D. Cooke; Vice-Commodore, L. C. Osmond; Treasurer, Seth W. Holt; Secretary, C. C. Warner. The club owns twelve small yachts.

EASTERN YACHT CLUB.—In the proposition made to the Light House Board, April 10, the committee of the Eastern Yacht Club has undertaken a real service to yachtsmen and coasters alike. The committee, consisting of Messrs. Ed. Burgess, Herbert Wadsworth, T. Dennie Boardman and S. Nicholson Kane, Commodore N. Y. Y. C., suggests that for better distinguishing at night between the buoys and beacons certain differences in shape be adhered to besides difference in color, "that all (say) red spar buoys might bear at the top a cask, ball or some similar object, which, as far as the buoy could be seen at all, would at once make known its nature. In this case the absence of such marks would equally distinguish all black buoys. Where "nun" or "can" buoys are now used the same system could be carried out by confining the 'nuns' to one side of the channel and the 'cans' to the other."

BOSTON YACHT CLUB.—In the "open to all" match to be sailed under the auspices of this club on June 21, the following classes will be adhered to: Schooners—First class, 38ft. and over; second class, 26ft. and under 38ft. Sloops—First class, 38ft. and over; second class, centreboards, 26ft. and under 38ft.; third class, centreboards, 20ft. and under 26ft.; third class, keels, 20ft. and under 26ft.; fourth class, all under 20ft. In the second and third classes of sloops, the keels and centre-boards are separated, and in all others no distinction is made. Measurements will be one-third of the overhang added to the length on the water-line. Allowance will be made according to the Herreshoff table. Here we have a fine prospect of a race between keels and boards in the schooner classes and among the first class sloops without allowances to the keels.

EASTERN ITEMS.—The famous sloop *Viking*, of Boston, one of Lawlor's best models, noticed in previous issues of this paper, will have a new house with 6ft. 3in. headroom. She is also to have heavier sticks than formerly. *Esperance*, 39ft. water-line, has had 4in. more free-board given her, and a mast 46ft. long, boom 39ft., gaff 21ft., topmast 20ft......Mr. Thos. Armstrong's new schooner *Moneymusk*, is said to be a powerful ship. She is 40ft. long with spars as follows: Mainmast, 45ft.; foremast, 44ft.; topmasts, 16ft.; bowsprit, 14ft. outboard. Seven tons of ballast will help her keep her legs......The venturesome Louis G. Goldsmith, who has nothing else to do in life but to try and get the cramps in a trip across the ocean in the little boat built for him by Smith, of South Boston, has named his boat the *Uncle Sam*.

SAN FRANCISCO YACHT CLUB.—The new club-house of the S. F. Y. C., near the ferry landing at Saucelito, was formally opened April 18 with a ball and festivities of a most enjoyable kind, two hundred members and their guests being present. Nothing but 3,000 miles of rail prevented our being present upon the occasion, and we must therefore draw upon our correspondents for an account of the sailing events with which the occasion was suitably supplemented. The fleet mustered fairly strong, and lay to their moorings in close order off the club-house. The evening looked so dirty that only the schooner *Consuelo* (Vice-Commodore Spreckels) and the yawl *Red Cross* (*nee Sappho*), Captain Crittenden, got under way as per original programme, at $7\frac{1}{2}$ P. M., for a run to Vallejo, a distance of 28 miles. The wind was quartering and blowing stiff from the SE., accompanied with rain. The *Consuelo* and the *Cross*, however, made good work of it with the flood tide, fetching in after a spirited run of a little over two hours, the little yawl doing most of the distance under jib and "driver"—as our San Francisco friends designate the yawl's "mizzen." The yawl *Frolic*, with Commodore Harrison's flag at the masthead, got underweigh next morning, bound on a week's cruise to Suisun Bay, with a party of ladies on board. Our correspondent writes enthusiastically about the handiness of the yawl rig, now the favorite of all in Pacific waters. The *Red Cross*, while sailing under her old name *Sappho*, and in the hands of her present skipper, having once carried away her rudder, was upon a previous occasion worked 30 miles, from the southern end of San Francisco Bay to Oakland Creek, with only a pull now and then at the sheets. "This, with only two men in a 40-foot craft and a stiff breeze, I call seamanship! This could not be done with any other rig. Our San Francisco yawl is the best rig in the world for any boat

inside of 30 feet keel." Such is the opinion of one who has had long experience with craft of all descriptions.

All hands broke ground from abreast the Club House during the morning at short intervals, and made for Vallejo. That place was left in the afternoon, the squadron then comprising *Frolic, Cousins, Magic, Clara, Zarefa, Consuelo, Fleur de Lis* and the *Mattew Turner*. When "the straits" were reached the work commenced, for a regular nose-ender was met. Among the schooners, *Consuelo,* "as usual," led her class with *Fleur de Lis* a good second, *Cousins* and the *Turner* in her wake. *Cousins* went in stays and lost ten minutes lacing the bonnet to her jib. How much time would she not have saved if rigged with headsails set flying. She might have shifted to a larger jib before getting around on the other tack. The Brothers were passed with *Consuelo* still leading among the schooners, *Cousins* having dropped to third, the rest the same. The sloops *Mollie, Clara* and *Magic* had their own business to attend to all this time, *Clara* finally getting the best of it; The catamaran *Zarefa* came to grief off Point Pissol, running ashore. From the Brothers to the city, sheets were eased and the schooners set flying jibs, with the exception of the *Fleur de Lis,* the latter doing finely in spite of a lack of muslin. Union St. wharf was finally passed as under, the cruise being brought to a close thereby:

Name.	Dimensions.	Time of Run. H.	M.	S
Consuelo ..... C B.....	60x18	2	53	30
Fleur de Lis.....C B.....	60x18	2	53	55
Cousins.....K	6Sx20	3	00	30
Emerald..... C B	41x16	3	49	30
Clara..... C B.....	32x14	3	14	15
Magic..... C B.....	36x14	3	23	15

The *M. Turner* and *Mollie* were not timed. The cruise is not to be regarded as a sailing, match, but only as a friendly spin.

CHANGED HANDS.—The fine steamer *Adelaide,* formerly of the Baltimore Bay Line, has been sold through Mr. Sam'l. Holmes, steamship broker, 120 Front street, to Messrs. Martin & Kaskell, of this city. She will be used as an excursion boat during the summer, and will make an excellent craft to accompany the yacht matches in rough water.

STILL ANOTHER.—The lines and specifications for a new five-ton cutter are now being got out for New York parties. She will resemble the famous *Freda,* before noticed in these columns, and will probably be built in Boston. About 30ft. water-line, 6ft. 2in. beam, and 5ft. 6in. hold.

WHAT EXPERIENCE TEACHES.—"I am getting to know what is wanted for work, and the sloop is not the rig for anything but smooth water play. In anything of a breeze and seaway you must have weight and power, a boat capable of turning to windward without jumping herself to pieces; a rig that can be easily handled, and a cabin in which you can turn in without fear of drowning." So writes a gentleman whose experience covers years. There is plenty of "practical" proof that the stand we have taken in these columns is bound to bear excellent fruit in the near future.

THE INTREPID.—This schooner has returned from her Southern cruise, and now lies at the foot of Twenty-third street, E. R.

NOTICE TO CANOEISTS.—A general meeting of canoeists will be held at room 74 Morse Building (corner of Nassau and Beekman streets, N. Y.,), on Thursday, May 8, at 4:30 P. M. It is proposed to take measures for combining the interests of canoeists, and to make arrangements for a regatta, in which all, irrespective of clubs, will be invited to participate. The New York Canoe Club will charge itself with necessary details. Addresses of canoeists are respectfully solicited, and suggestions as to the regatta and other matters likely to come before the meeting will be thankfully received. Address Dr. E. B. Bronson, Secretary N. Y. C. C., 208 West Thirty-fourth street, New York city; or Charles L. Norton, Commodore N. Y. C. C., box 4,552 New York city. The above call should be responded to by all devoted to the fascinating and romantic pastime of canoeing, bearing in mind that *L'Union fait la force.*

HANLAN'S VICTORY.

THE international sculling match between Hanlan, the champion of America, and Hawdon, of England, was finally rowed on the Tyne, England, May 5, resulting in an easy victory for Hanlan. The course was straightaway from the Mansion House, 156 yards above the High Level Bridge, to Scotswood Suspension Bridge on the river Tyne near Newcastle. Total distance three miles and 570 yards. The course has several easy bends in it, but on the whole offers fair opportunity for making good time. Betting had been two to one in favor of Hanlan at the start. Dr. Luke Armstrong acted as referee. Hanlan won the toss and selected the right hand station. At 1h. 46m. P. M. the two were sent away, making a good start, Hawdon getting best hold of the water and going off with 42 strokes to the minute, against Hanlan's long swing of 34. This soon sent him to the front, and from that time he kept the lead to the finish, rowing well within himself. Hawdon settled down to 36 and Hanlan to 32. The Englishman did some wild steering and quickened up occasionally, but to no effect, as Hanlan was playing with his man as he had done in many a former race on this side of the Atlantic. The first mile was made in 9m. 4s., with Hanlan leading by two lengths and taking his ease, looking over his shoulders at the crowd and keeping an eye ahead occasionally to see the course clear. The water was a little lumpy at this point, but the Canadian managed to hold to a long, clean stroke of 30. King's Meadow Island was reached in 20m. 15s., and the Toronto man dropped to 26, shortly afterward proceeding deliberately to bale out his boat. Near the finish a mild spurt of 28 sent the gallant Canadian four lengths to the front, winning his victory with the same ease and coolheadedness that has characterized him in all his races on American waters. Time, 32m. 2s. Hanlan's weight, 153 lbs.; Hawdon's, 152 lbs.

Little remains to be said about this race beyond that Hanlan has shown himself a sculler of such power and finish, that it is doubtful if any living man can hold his own with him either at home or abroad. The race justifies all we have said about the wonderful stock of "reserve" Hanlan possesses, something that has never yet been drawn upon to its fullest extent, and it is not likely to be, unless Elliott or Trickett are a good deal better men than their record so far shows them to be. Of course Hanlan's modesty and generous conduct made him popular among the hardy Northumbrians, and he won for himself the good will of all.

IS THE SLOOP UNHANDY?

ROSLYN, L. I., April 24, 1879.

EDITOR FOREST AND STREAM:

I noticed in your paper recently a letter signed "Lubber," under the heading "The Sloop's Unhandiness." Now, with all due deference to the views of the theorists I must repeat, that although theories are good enough, so far as they go, the trouble is that they are but theories after all. There are a few of us old boating men who, with years of practical experience, have learned from our lesson that the sloop, if honestly modeled, built and rigged, is not so unhandy, under any circumstances, as the cutter or yawl; while at the same time our sloop will beat your pets ninety-nine times in the hundred.

In another of your issues "Martin Gale" ventilated his views by some remarks, and I will take this opportunity of reminding him, and others generally, that I have a little boat, a sloop drawing twenty-two inches, with thirty-five feet length of water line, that is ready at any time, when there is wind enough, to show practically which is the better boat—sloop, cutter or yawl; and that the question of handiness may be definitely settled, we will limit our crews to two men for each craft and lay our course around Long Island. We believe in our theory; if you have faith in yours, "trot out" your cutter. T. C.

Our correspondent, for whose opinions and experiences we have high respect, can hardly call any one to account for "theorizing" on the cutter or yawl vs. the sloop, for the sufficient reason that we have no yawls as yet in the East and but few cutters from which to cite actual experience. A day will come when there may be no necessity for resorting to theory alone, as at present.

We deprecate the tendency to force an issue between "theory" and "practice." Theory implies a course of reasoning, and no "practical" man would willingly allow that in securing his ends, he does not reason, or in other words "theorize." So called theory seeks simply to apply to the practical man's reasoning the crucial test of figures, and should be the handmaid of experiment. There exists no basis for an issue between the two. Each is excellent in its way; both together far better than either alone.

CANOES AND THEIR RIGS.

(*Continued from page 256.*)

The sharpie rig is very pretty, and it certainly is a fine rig for fancy sailing. The sprcet keeps the sail as flat as a pancake. Then there is no yard or gaff to bother you, and you can jibe the mainsail till you're black in the face and not come to grief; and, when the halliard is let go, the mere weight of the mast rings brings the sail down in a trice. But I don't think it by any means the best rig for cruising, for to carry a mainsail large enough for general use alone the mast must be very high, and a lofty mast does not add to one's comfort in rough water, or, indeed, under any other circumstances. Of course, if you chose, you could do with a smaller mainsail, and perhaps make the jib and dandy somewhat larger, but then these two extra sails must needs be set more often, which means considerable additional trouble.

The manner of reefing, too, by lowering the head of the sail and hooking it to a mast-hoop, is bad, for it leaves the leach slack, when the end of the spreet naturally drops, sometimes far enough to dip into the water. It has also another fault as a cruising rig, due to the use of mast-hoops, and that is that the sail can't well be attached to or taken from the mast when afloat. I don't mean to say that this is a matter of very great moment, but I have always found it pleasanter to stow sail entirely when paddling far; and in foul winds it is really an advantage to be able to do so.

Next in order comes the standing lug. This is very well adapted for cruising for these seasons: With a mast not over high you can have a large mainsail; the sail reefs on the boom, and it can be set, taken in and stowed with the greatest ease. Some people object to the yard, but a six-foot piece of bamboo is not such a ponderous spar after all.

The Chinese lug is another capital sail. You will find a drawing of it in "Canoe Traveling." It is not as simple as the standing lug, but is better in some other respects. A great deal of canoeing is done in China and Japan by the English and American clerks in the tea houses, and this is a favorite rig with them. About a quarter of both yard and boom project forward of the mast, and there are battens running horizontally from luff to leach of the sail, and held to the mast by parrals. These battens keep the sail flat, and are a great aid in reefing, for you need only lower the sail into the brail as far as you wish, hook any one of the battens to the boom, and there you are. The necessity for having a brail and batten parrals is a drawback, to be sure, but this is a matter of minor importance.

There is still another sail, called the revolving lug. It is like the Chinese lug, except that it lacks battens, and, in reefing, the points must be tied down in the usual way; but then, of course, the brail and batten parrals are not needed. On the whole I think I prefer it to either of the other two lug sails.

In the smaller details of rig let me give a few hints: For a dandy use a leg-of-mutton sail; lace it to the mast and let it have a boom. Rig a brail for it in this way: Make fast a light line near the mast-head; lead it down through a screw eye on the boom, then up again through a sheave in the mast and down to the deck. With this you can top up the boom against the mast, and brail up the sail in an instant. Don't lead the dandy sheet through a block or ring on the stern-post, or it will keep continually fouling the rudder yoke, but through a screw-eye or hook in the deck, a foot or so from the stern.

The jib is an invention of the Evil One, anyway. Perhaps the least inconvenient fittings for it are a loop at the head, a boom with an eye at the tack end, and two sheets. It can then be attached to a hook on the stern-post by hand, and the loop placed over the mast-head with the boat-hook; but if the mast is high this plan will not do, and you must use a halliard. If you carry a sharpie mainsail make the "snorter" or becket for the spreet fast to a mast-hoop, so that the spreet may come down to the deck with the sail.

A good toggle for the lug-sail booms is formed by two loops of cord on the mast and boom. One of these is passed through the other, and held in place by a piece of wood. For the dandy-boom use a brass collar on the mast and a pin in the end of the boom, held together by a bolt in such a way that the boom can be raised as if on a hinge.

In cutting lug sails give them a short luff and a pretty high peak, for if the head is cut too square the yard will sag off to leeward considerably; and don't forget to rope the luff very strongly or it will stretch. To the booms of these sails attach hooks, one at the tack end and one or two at the after end, so that in reefing you can hook the reef-cringles down quickly, and then tie the points at your leisure.

The main yard must be hooked to a mast-traveler. This is generally a ring, with a hook below and an eye above, for the halliard; but as a simple ring frequently jams on the mast, it would be better to make it of two semicircles, linked together at the ends.

Unbleached cotton sheeting is as good material for sails as I know. It is light, but plenty strong enough, and comes so wide that the mainsail can be made in one piece.

The plaited cord used by window-shade fitters makes good rigging, because it never "kinks" nor gets hard when wet; but if you prefer heavier stuff than this, get No. 8 bawser-laid cord, which will not "kink" either, though a wetting will stiffen it.

Spruce I think the best wood for masts and boom—and also, by the way, for the paddle. It is strong and tolerably light, and looks well, but the yard must be just as light as possible, as well as strong, and for that a bamboo stick answers rather better. The mainmast and paddle should be jointed with strong brass ferrules. Don't use blocks for the halliards and brails; let sheaves into the masts. Some object to this plan because it weakens the spar; but no strain of moment ever comes on the head of a canoe mast, except in the sliding gunter rig, and sheaves look far neater, and are more convenient than blocks.

The mainsail halliard and, if you use one, the jib halliard too, had better lead aft through single or double fair-leaders with wheels. I once fitted a side-block, low down on the mast, for this purpose, but it didn't work well. Every time I hoisted sail the mast turned in its tube, and then, of course, the halliards jammed in the block. If you ask any old canoeist what jibs are good for, it's ten to one he'll say, "Well, they are useful for tacking, and they counterbalance dandies, and they look pretty." But, except as a racing sail, I find a jib is a humbug. What with the labor of setting and taking it in, and tending the sheets, in addition to handling the other sails and paddle, I grew at last so disgusted that I discarded it entirely. Have two tubes for the mainmast—one in the usual place, the other as far forward as you can conveniently reach from the well. When sailing under mainsail only, carry the mast in the after tube, but step it in the forward tube if the dandy is to be set. Then, if properly proportioned, the sails will balance, and with the Chinese or revolving lug sails, the part forward of the mast will give you all the head sail you need.

In running you would find the extra mast tube of great service, as for that work the further forward the mast can be stepped the better. You might then be unable to reach the tack-cringles of the Chinese and revolving lugs by merely reaching forward, but to reef, you could untoggle the boom of the revolving lug, and get at the tack in that way; while, if you let go the sheet of the Chinese lug, the sail would fly around till the luff came inboard, abaft the mast, within reach. There may be as yet undiscovered faults in this plan, but it will certainly rid you of the jib.

W. M. C.

THE LEE RAIL.

PERCE, DISTRICT OF GASPE, Canada, April 1, 1879.

EDITOR FOREST AND STREAM:

As an old sailor I naturally take a pleasure in reading the articles on yachts and yachting that appear in your valuable and well-conducted journal, the weekly arrival of which I always hail with pleasure. It reminds me of my younger days, of adventures by land and water, and oftimes makes me feel as though I could again take the helm, or with my well-tried cocker spaniel beat the cover for woodcock, or the marsh for snipe. Both have their fascinations, and as I write I think of that beautiful and exciting song:

"The sea—the sea—the open sea!
The blue, the fresh, the ever free!"

The "Lee Rail Under Water" is the purport of the present, and my remarks may possibly be useful to some young yachtsmen.

I commenced my career in life as a sailor, and at twenty years of age I found myself second mate of a brig of 185 tons, in the Mediterranean and Baltic trades—taking oranges and lemons to St. Petersburg for the special gratification of those worthies, the Russian Boors or Bears—no offence, I hope, thou mighty Czar of all the Russias!

Well, sir, I was always a close observer of all that came under my notice, and exceedingly anxious to become a thorough seaman. When heaving the log on various occasions, it struck me that the vessel made less headway when close hauled under a heavy press of canvas than when we shortened sail. I accordingly discussed the matter with our worthy captain—who was a man-of-war's man, and fought at New Orleans—and we agreed that my arguments should be tested when a good opportunity offered. This soon presented itself. At the commencement of a stiff breeze, with topgallantsails set and lee rail buried, we hove the log twice—5½ knots. "Let go the topgallant halliards! Clew up and hand them!" With a smart crew of fourteen hands, a few minutes sufficed, and the brig was plowing it on an even keel. "Heave the log!" Six and a half knots. This was repeated with the same result. The breeze still freshening, the vessel again heeled over. The log then gave us five knots. A reef taken in the topsails, and the log gave six knots. The experiment was repeated on several occasions, with the same result. A vessel is not intended to sail on her side, but on a even keel as much as possible, and when her lee rail is under water, her chain plates, rigging, etc., must impede her progress.

The following is another curious experiment to which I was a party: In days of yore, two small steamboats performed the postal service between Weymouth, in the English Channel, and the Channel Islands. They were Government vessels, and commanded by two brothers, Frederick and Robert White—as thorough

seamen as ever paced a ship's deck. Business calling me to London, I took my passage with the latter. It blew fresh we when started from Jersey, but it gradually increased to a smart gale, dead in our teeth, when we left Guernsey. We steamed very slowly until we reached the Great Russel—the passage between the other islands and Guernsey. Here we not only had a heavy sea—dead on—but a strong tide on our starboard bow. The *tout ensemble* was far from pleasant, as our little craft was making no headway, merely holding her own; but the tide was gradually setting us in shore, and I saw plainly that there was danger ahead. A glance at the weather-beaten countenance of our brave old captain, at that of his chief officer, showed that we all saw things in the same light. A Providential thought struck me, and joining Mr. Roberts, the chief officer, who was pacing the deck on the port side, I plainly stated my opinion of the state of affairs, to which he readily assented. I then told him that there might be a chance of escaping by trying to beat out—as with a sailing vessel, as she would then make headway, and the tide being less felt, would rather help us on one tack. He approved of my suggestion, and wished me to speak to Captain White without delay. To this I objected on principle. Captains do not like their passengers to interfere with the sailing of the ship, and though Captain White and I were great friends, the suggestion would come better from the chief officer. Mr. Roberts walked over to the captain, who no sooner heard his reasoning than he ordered the man at the wheel to alter the course, and in four or five tacks we cleared the ledge and were free from danger.

Falconer, in his "Shipwreck," says:

> "Oh, were it mine with tuneful Maro's art
> To wake to sympathy the feeling heart;
> * * * * * * *
> Then might I with unrivall'd strains deplore
> Th' impervious horrors of a leeward shore."

From the "Lee Rail" to the "Lee Shore." A queer transition, some of your readers may possibly consider it, Mr. Editor. But as I said before, FOREST AND STREAM reminds me of my younger days. Once on that tack, shortening sail is no easy matter. I only hope that none of your many readers will have to encounter those "impervious horrors" as I have had on two other occasions, to which I may revert hereafter.

Stop! I hear the merry voice of my grandson—"a true chip of the old block"—who is shouting, "Gran'pa, First of April!" "All Fools' Day," sure enough. Memory, can't thou recall to mind some youthful anecdote? We have it!

In the early part of the present century, there lived in the Island of Jersey a remarkable, self-educated man, known as Philosopher Le Feuvre—a good mathematician, well versed in Latin; one who might have been a shining character, had he not become the slave of the demon of intemperance. The Royal Square—the present lounge—was once the market-place, and the spot now occupied by the guard-house was then devoted to the numerous donkeys on which the country dames brought their farm produce for sale—hence it acquired the name of "Asses Corner." In a certain First of April, a group of notables had assembled on this very spot to discuss, for aught I know, the probabilities of ocean steam navigation or railroad traveling—myths in those days—when their conversation was suddenly interrupted by the appearance, in the offing, of friend Le Feuvre (we knew him well), and some one suggested that he should be invited to join them, in order to send him on some fool's errand, if possible. Mr. Amiraux, the banker, was deputed to decoy him, and they soon joined the group, all welcoming the Philosopher most cordially. He, suspecing their intention, dryly asked: "Gentlemen, is this not what is vulgarly termed 'Asses Cornor?'" "Certainly, Mr. Philosophor," was the ready response. "Then, gentlemen, allow me to say adieu! There will be at least one ass less!" And off he walked, leaving the would-be wits somewhat crestfallen.

> "True wit is nature to advantage dress'd
> What oft was thought, but ne'er so well express'd;
> Something whose truth convinced at sight, we find,
> That gives us back the image of our mind."—*Pope.*

PHILIP VIBERT.

Sea and River Fishing.

FISH IN SEASON IN MAY.

Trout, *Salmo fontinalis.*
Salmon, *Salmo Salar.*
Grayling, *Thymnallus tricolor.*
Salmon Trout, *Salmo confinis.*
Shad, *Alosa.*
Land-locked Salmon, *Salmo gloveri.*

FLIES IN SEASON IN MAY.

BLACK MAY, NO. 10.—Body, black; fect, black; wings, grayish hyaline

COW DUNG, NOS. 10 AND 11.—Body and feet, brownish yellow; wings, yellow gray.

GREAT DUN, NOS. 9 AND 8.—Body, purple brown; feet, gray brown; wings, dark gray hyaline; setæ, dark brown, annulated with gray.

RED SPINNER, NOS. 10 AND 9.—Body, bright claret, ribbed with gold tinsel; feet, brick color; wings, gray hyal; setæ, paleine brick color

YELLOW MAY, NO. 10.—Body and feet, pale yellow; wings, pale yellow, mottled with brown; setæ, yellow.

COACHMAN.—Body, peacock herl;] feet, dark red backle; wings, white.

KING OF THE WATER.—Same as queen of the water, with scarlet body instead of orange.

GOLD SPINNER.—Body, orange, ribbed with gold tinsel; feet, pale red backle; wings, bright gray.

CAPTAIN.—Body, posterior half, peacock herl, anterior half, gray; white feet; red backle; wings gray; setæ, scarlet green and wood-duck feathers mixed.

SOLDIER.—Body, crimson; feet, red backle; wings, gray.

KINGDOM.—Body, white, ringed with green; feet, peacock herl, and red backle; wings, gray, mottled with brown.

Black Palmer, Brown Palmer, Red Palmer and *Gray Palmer* are made respectively of the colored backles that distinguish them.

—Mr. Imbrie, of the firm of Abbey & Imbrie, sailed in the White Star steamer *Adriatic*, May 1. He goes on a regular tour of inspection to visit the enormous fish-hook and needle factories at Redditch, England, controlled by his firm.

—If anglers who wish really good fishing and can spare the time will go to Sebec, Maine, this week, so as to take the early salmon in the lake when the ice breaks up, (which it is expected will occur at any day,) they will have the grandest fishing in their experience—and no flies. Take railroad from Bangor, and put up with Frank M. Ford.

ANOTHER.—The pickerel that swallowed another pickerel, the pike that swallowed a small iron foundry, and the catfish that swallowed the eel that had swallowed the minnow that had swallowed the hook may now retire to a back seat. Their glory has faded; their bones have been picked. The darkey's fish-hook is in the ascendant just now. It was near Roanoke, North Carolina, that a small African, lying on the river's bank, baited his hook with a roach, tied the line to his left great toe, as all model Southern darkey fishermen invariably do, and then—another characteristic piscatorial custom—fell fast asleep; at least it is so conjectured by his sorrowing family—no one will ever know for certain. The dwellers in the vicinity report a startling aerial spectacle. Their attention was first attracted by a terrific clamor in the air, a confused mingling of the croakings of a catfish, the squawking of a duck, the hooting of an owl, the shrill cry of an enormous eagle, and above all, agonized human shrieks. The vision passed too rapidly over their heads to admit of any definite comprehension of what took place, and indeed the scores of beholders who caught a momentary glimpse of the apparition give very diverse accounts of what they really did see, or thought they saw. The two particulars agreed upon by all were an eagle and a boy, the latter apparently suspended by one foot some distance below the bird. The vision disppeared among the clouds Nor'-cast by Nor'. One thing is certain: the boy never came home again, nor has anything since been heard of him. The prevailing local opinion, and which has been adopted by the bereaved family, seems to be that the roach was swallowed by a catfish, the catfish attacked by a duck, the duck in turn seized by an eagle,—and the duck, fish, roach and boy all borne off by the bird. The only weak part of this theory might be the string. The boy, however, it must be remembered, has been distinctly stated to have been a small one. It is to be regretted that this glorious opportunity for a fish-story has been neglected, when a slight increase of avoirdupois in the boy would have swelled the tale to respectable dimensions. But such a tampering with facts would have shorn the incident of its obvious moral, which is, that little darkey boys who fish for catfish should never tie the line to their toes and go to sleep.

MOVEMENTS OF THE FISHING FLEET.—Two more arrivals have been reported from Western Bank the past week, bringing 190,000lbs. split codfish. The number of Grand Bank arrivals has been 14, but the fleet have averaged small fares. The total receipts for the week have been 380,000lbs. Nine Georges arrivals have been reported, bringing 135,000lbs. codfish and 9,000lbs. halibut. Three arrivals have been reported from Shore trips with 60,000lbs. codfish. Whole number of fishing arrivals for the week, 22.—*Cape Ann Advertiser, May* 2.

NEW YORK—*Shelter Island, April* 28.—The fishing steamers and sailing vessels—a very numerous fleet—are now all ready for the bunker fishing season, but very few of the fish have as yet appeared. The fishing was so remarkably good last year that the fishermen have been encouraged to make great preparations for this season. New factories have been built and old ones repaired and extended, and several new steamers have been built and are all ready for their cruises. These steamers have been built at Portland, Maine, and at neighboring ship yards, but their engines and iron-work are all constructed at Portland. These steamers cost from $10,000 to $15,000 each; but if the season is as good this year as it was last the outlay will prove a good investment. These steamers, besides captain, engineer, fireman and cook, carry a crew of eight men, sufficient to man two fishing boats. There will be, of course, a great loss as well as disappointment if the fishery should this year prove to be a failure. It is said that the men of Massachusetts complain that our fisheries are on the decline. The Governor of that State has called the attention of the Legislature to the alarming condition of the fisheries. Reports and statistics go to show that there is not by one-half the number of vessels belonging to the fishing fleet hailing from the States as formerly; and, on the other hand, the Provincials have started up and have done more the past year to extend this branch of industry than for the ten years previous. McL.

NEW JERSEY—*Kinsey's Ashley House, Barnegat Inlet, May* 3.—Flounders are plenty, catching some fifty per boat. Dad Parker caught the first blackfish yesterday. Bluish—A school was seen off the bar yesterday by crew of life saving station here while out rendering assistance to the schooner *Blakley*, aground on the bar. I also hear of two bluefish taken in net at Waretown same day. Last year the first was taken April 29. B.

PENNSYLVANIA.—The trout season in Pike County opened last Thursday, May 1. Great numbers of anglers, many of them from New York City, were on hand. The day was cold and the water high, but the fish were biting ravenously. The Sawkill flies found most effective were small, with body and wings lead color; also red backle and coachman. Experts say that really good fishing may be looked for about a week from to-day.

KENTUCKY'S QUOTA.—*Mt. Sterling, Ky., April* 27.—Dr. Williams, of Powell Co., went fishing in Red River for suckers in company with Dominic Peeples. They had caught a fine string and secured them to a bush near the edge of the water. Hearing a slashing in the water of rather unusual vigor, and suspecting that some turtle was making too free with the fish, they went to see and found a large pike had swallowed one of the suckers, and in trying to get away had become entangled in the string. The doctor called for the Dominic who came and jumped in waist-deep, not being afraid of a little water (he being of that persuasion). He heroically assisted the Doctor in successfully landing the pike, which measured 39 inches and weighed 14 pounds 3 ounces. Upon another occasion, Mr. B. Boon (not Daniel), of Beattyville, caught a pike in Kentucky River that measured 6 feet and weighed 52 pounds. The fish has long been known in that locality as "Old Spott." VAN.

BIG FISH.—Six sturgeon were caught at Kanawha Falls on Saturday, the heaviest, weighing eighty pounds, being sent to the hotel in Huntington. Will somebody explain how these sturgeon got there?—*Richmond Dispatch.*

The fish probably turned into the Ohio River while on their way to the upper Mississippi, and thence into the Kanawha. Nothing remarkable about that. The upper Mississippi, especially that wider portion known as Lake Pepin, abounds in sturgeon of both varieties.

ARKANSAS—*Jacksonport, April* 28.—The angling fraternity have been unusually happy. Fine strings of black and striped bass have rewarded their efforts. Peter Bach opened the season with a string of 50 pounds, taken on the bar opposite town in a little less than two hours. Black and striped bass, Ohio River salmon, and crappies are almost constantly in market. YELL.

OHIO—*Painesville, May* 1.—The close season for fish commences to-day. I wrote you some time since in regard to the new fish law, and have seen no reason to change my mind in regard to it. The river is just in good condition to fish, and were it not for the law we would enjoy the best bass fishing known for years. Owing to the ice in the lake drifting to this shore, the pound fishermen have been unable to place their pounds at the mouth of the river, and the bass have been able to come up the river, where they are now in great numbers. We must not catch them, the law says, but allow them to return to the lake, there to be caught in the pounds this fall. Now, if our Legislature is so anxious to protect the bass, why do they let these pound men place their pounds on both sides of the river for miles into the lake, thus intercepting all fish that try to ascend the river to spawn? I give you a few strings that have been caught this week: My brother on the 28th instant caught 13 that weighed 18 pounds, and on the 29th caught 12 more that weighed about the same. Yesterday Mr. C. A. Harding caught 4 that weighed 8¼ pounds, and Mr. Edward Gilmore caught 8 that weighed 22½ pounds. I have caught as good strings for the past three days. We could catch just such strings for a month to come; after that they will not bite, as they begin spawning. NANIT.

WISCONSIN—*Baraboo, April* 27.—The warm weather for the past few days has started the black bass up the Baraboo River, and some fine strings have been caught, among them a bass that weighed 5½ pounds. ED. H.

A TRULY BLACK BASS.—*Editor Forest and Stream:* It not unfrequently happens that, in reading the experiences of your correspondents as they appear in your columns, I come across things I have observed so often as to regard them as quite common. That may be the case with the following, which I relate simply because I never saw anything like it before: Last summer, while crossing the "Devil's Fork" of Little Red River, on the Batesville Road, I observed, on stopping near the bank for my horse to drink, a considerable number of sun-fish, *Pomotis vulgaris*, watching their little circular nests, and apparently greatly disquieted. Soon from under a bush, a little above, came a fish of large size, carefully patroling the ground and returning to his station, apparently disturbing nothing. My attention was attracted by the unusual size, great symmetry, and extremely dark color of this fellow, and I rode ashore and dismounted and carefully observed his movements for some time, during which he made his rounds among the perch nests several times. The little *Pomoties* stood their ground, made no attacks upon the larger fish, however near to their homes he might approach, but seemed by no means to like his presence. I could plainly see that the fish was a black bass, of a uniform deep, dark, glossy black. I crawled to the bush in whose shade he had his nesting-place and got a nearer view of him. His back, sides, fins and tail all were black, and when he turned upon his side his belly seemed to be of the same color—solid black. The black bass—there called trout—are abundant in the stream, and I have seen specimens of the usual color there often. The one I have attempted to describe was of good size, over a foot long, and of fine shapely appearance. SAMMON ROE.

Jacksonport, Ark., April 28.

HOW FISH ASCEND FALLS—*Mr. Editor:* An illustration entitled "Trout Jumping the Falls," published in Frank Leslie's *Illustrated Newspaper* of April 19, suggests a few remarks upon a popular fallacy—that fish when ascending a stream, pass the falls by "jumping over" them. In the illustration alluded to there are two trout depicted, one high in the air at the brink of the fall, with nose pointed heavenward, and the other upon its side on the surface of the rapid water, immediately above the brink. This is a fair representation of the manner in which fish *do not* usually pass falls, although popularly supposed to make a clear leap from the pool below to the smooth water above. The general prevalence of such an erroneous belief was especially brought to my attention last summer during a time that I was engaged in designing fish-ways for some of the rivers in Maine. In company with our Fish Commissioner, Hon. E. M. Stilwell, I visited various localities with the above object in view, and many times did we listen to such remarks as this:

"Perhaps you may doubt it, gentlemen, but I have seen a salmon make a clear jump over falls eight or ten feet high, and fall into the smooth water above."

As these statements are made by persons of intelligence and undoubted veracity (even as to fish stories), they are entitled to some attention. A few inquiries, however, invariably elicited the fact that in all such cases the observer was above the falls when the salmon was seen. This explains the deception. If the individual who believes that salmon pass such falls by a clear leap through the air or "sail over like a bird," even though he may have "passed his whole life on a salmon stream, and seen it with his own eyes," will stand below the falls and see a salmon pass them, he will be practically convinced of his error. He may see a salmon go up in the water of a fall, but fail to pass over. But many failures will not deter the fish from making further attempts, day after day, and perhaps for many weeks, at intervals. Supposing that it finally succeeds. The observer below the falls may see the fish pass up in the water of the falls with such speed and impetus as to shoot into the air at the brink of the falls, and upon falling is seen no more. The observer above the falls only sees the fish in the air, and very naturally infers that he has seen the last part of a "jump" made from the pool below. I have yet to learn of any reliable person who has seen a fish leave the water and by a single jump pass through the air and clear a sheer fall eight or ten feet in height.

By the enforcement of our recent laws and the construction of practical fishways, Maine rivers will again teem with salmon, and an income such as Canada receives may yet be received in Maine for rod licences, in addition to that de-

rived from the sale of the food yielded by her waters. That fishways can be constructed so that salmon can and will pass through them, has been practically demonstrated in Maine.

EVERETT SMITH.

REMARKS.—We suppose that a sheer fall of even six feet is practically impassable for salmon or trout. The force of the water falling in unbroken volume over a ledge or dam cannot be overcome by the impetus of the most energetic leap. In most natural falls, or more properly cascades, the face of the ledge is broken by protruding rocks, which afford the fish a temporary holding-ground, and serve as stepping-stones to aid their ascent. The momentary pause in passing is so trifling as to be imperceptible, yet the relief afforded is sufficient to insure success. Investigation will show that wherever the passage is effectually barred, the obstruction has a truly perpendicular face, or more frequently a jutting escarpment. Should the pressure of water above be too great, however, as in case of a freshet, that the overflow is projected obliquely in the character of a chute, then the ascent would be practicable and accomplished with comparative ease, the angle of resistance actually aiding instead of retarding the leap. This can be easily accounted for on philosophical principles.

For Forest and Stream and Rod and Gun.

OUR HOBBY.

YES, we have a hobby! and we are far from being ashamed to acknowledge what our hobby is. Any one could easily discern its nature had they observed us taking from its winter resting-place, thus early in the season, the case of rods and the "kit," and examining them carefully to learn the needed amount of repairs to put them in trim for the coming season of sport. How the angler's heart will warm, and how the slumbering recollections of the happy—oh, how happy!—hours spent last season by the brook, by the river, by the lake; of the pleasant acquaintances formed with those whose generous natures brought them to the same fields in pursuit of the same joys; how all these memories throng and cluster around that worn and ancient rod-case as we handle it fondly and draw from its recesses the agents of our pleasure. What a history is connected with each individual rod! This is the one with which we fought and captured the forty-pounder; this other was the weapon which made us conqueror of our first, which carried with it, if it were possible, more joy than all others which paid tribute to our skill and gaff. And thus, as each rod is marshalled, memories are touched which all the wealth of penurious misers cannot purchase from us. Prominent upon "memory's tablet" are emblazoned also the names of the friends who accompanied us; and poor though we may be in that which constitutes wealth in the eyes of the world, we feel we are the possessors of another wealth, which money, without the heart, can never possess.

But our subject is "Our Hobby," and although it may be a simple matter to guess what our hobby is, yet it was our intention to touch not wholly upon ours, but upon the class of "anti-hobbists" (?) and prove if possible their inconsistency. Have you not, among your acquaintances, and perhaps your friends, some one person, who, the moment you become enthusiastic in the slightest degree upon the subject of angling, immediately ejaculates, "Hobby!" who insists upon the *ex parte* evidence of his own feelings and inclinations being the only proper guide for pleasures of any kind? Have you not even had a "mild species" in camp with you? We have. He never has a hobby himself, but how he gulps and strangles when, in the course of an argument you discover one—which may be the manufacture of butter from soap, or the sending of heathen missionaries to Washington, or some other equally amusing subject. Who is there, in possession of his full senses, who has not a hobby? Sooner or later the unpoetic souls of these "anti-hobbi" will make their arguments ridiculous by their unwilling confessions. We have been told by one that nothing but the fact of "its being fashionable" would ever lead us to endure the hardship (?) of a four-weeks' trip. Yet we, at this moment, find him deeply imbued with the conviction that he will find gold on Nan—— Well, we have too much reverence for hobbies ourselves to expose him. We would rather watch with a friendly interest the progress or failure of his hobby—will he ever pardon us for calling it that?—and by a sympathy with him in either result, lead him to the path we poor mortals tread, and the full power of enjoying a sensible hobby.

Now there are "business hobbies" and "pleasure hobbies." Allowing that the possession of wealth is the natural hobby of every man, and business of some nature the path to his hobby, it must be conceded that everybody has "one of them things in the house," the anti-hobbi to the contrary notwithstanding. We will therefore consider the "business hobby" as disposed of. Now who wouldn't have a pleasure hobby of some kind, if he could, though its nature may differ from ours. Please do not consider us egotistical because we speak mainly upon angling, for, though that be our choice, out of the long list of "pleasure hobbies" we do not desire to claim any superiority of judgment, and we frankly own that each must choose for himself. But we ask again, who would not have one if he could? We pass upon the street the man of wealth, distorted with rheumatism and sighing for that comfort and pleasure which his money is powerless to procure; we meet the friend whose feeble wife or mother demands his whole attention at home; we recall to mind the man whose hardened heart forbids the entrance of those softening feelings to which the gentle angler must hold title; we think of these, and then we realize the great gift of health and heart, which enable us to go forth in the beautiful spring, when the air is heavy with the perfume of the peach and apple blossoms, and the spring of nature's turfy carpet adds to the buoyancy of our spirits and hopes. Yes, we have a hobby! and when old age steals noiselessly upon us, may the kind Father above, who has carried us safely through so many of our favorite excursions, keep the heart within us green to its inspirations, and the flesh strong to continue its enjoyments.

For Forest and Stream and Rod and Gun.

THE STRIPED BASS.

THERE is to a lover of the pursuit of this fish a charm not found in that of others of its species, more especially, perhaps, because it includes life on the seashore, which in wildness, owing to a rocky coast, upon which bass are generally found, is incomparably interesting. This most truly applies to Massachusetts' more remotely located islands, where are presented all the attractions of a sea voyage without its inconveniences. An incident in this sort of life is illustrated by an extract from the "log" of a club there located, to wit:

"A large full-rigged bark foundered in front of the clubhouse, lost her way in the fog; heard her signal, but could not see her—look for her to break up before morning—crew saved." This is but incidental to a pastime which affords greater diversity than does the pursuit of any other fish.

Striped bass are found along the coast from the Potomac to Maine, and even among the salmon in Canada. But, like those of all other inhabitants of the sea, its habits are much a matter of conjecture, though it seems to be conceded that it principally subsists near the mouths of rivers, up which it runs as high as possible. At the approach of winter, instead of seeking the deep water of the open ocean, the bass seek the still arms of the sea, where, if undisturbed, they remain until the return of spring. But here the fishermen find them and make great hauls. From the Potomac, where they are called "rock fish," they have been taken weighing 140 pounds. This, of course, with the net; while by the primitive line method, or as it is called, "heaving and hauling," which consists of a stout line, not attached to a rod, hastily drawn through the water, they have been caught weighing nearly 100 pounds. Its pursuit with rod and reel, however, is the growth of but recent years, perhaps not more than thirty-five, and the pleasure of this method is greatly augmented by the delicacy of the tackle used. In selecting a rod, one of plain bamboo of about 12 ounces is the best, and, if possible, it should be quite round, though this is a mere whim, yet still a part of some bass fishermen's creed. Not too long, as should it be the reel is thrown too high and makes it awkward to handle. The reel must be of the best, as it would be if selected by a bass fisherman; for herein is centred his affection; and though expensive, the delight experienced by its perfect and reliable working is compensation. It should be large enough to hold six hundred feet of linen line, twelve thread is fine enough, but should it be fifteen, more security will be felt with a large fish. But in reeling it on have a care for the kinks, and wind it through the fingers' ends, running the last one hundred and fifty feet through the grass. No. 9° hooks, in size, are the best, though some use them smaller, but the risk of not hooking the fish is increased by too small a hook. With a leathern belt to rest the butt of the rod in after securing a fish, and a pair of thumbstalls, knitted and of heavy worsted, by which the thumbs are protected in regulating the revolutions of the reel, by which the course of the fish to some extent is controlled, equipment is complete.

That portion of the coast where bass are generally found is very rocky, beyond which it is well to cast. Casting can't be taught, it being rather a knack suddenly acquired, and its object (that is, "to get out") is only necessary to be remembered. Avoid too much strength, for it causes the reel to revolve with greater rapidity than the bait is projected, causing it to overrun and producing a snarl, which weakens the line, frequently breaking it. But rather continue its practice and avoid long casts, for the fish in search of food are to be found in very shallow water.

So great has been the development of a fondness for this pastime, that the most desirable points in Eastern waters are now occupied by clubs, the more westerly and earlier of which—"West Island," not far from Newport—was formed about thirty years ago. Though before this innovation (?) under King Wilbur, many pioneers in this sport used there to assemble and enjoy an abundance of it. Some years later—about twelve—Cuttyhunk, the more westerly of the chain of Elizabeth Islands in Vineyard Sound, became the rendezvous of a number of gentlemen, whose good cheer has made this perhaps the best known of all the clubs. Out of this grew the purchase, some three years later, of Pasque Island, comprising about one thousand acres, one more easterly of the same chain, where much sport has been found. In one instance by a single rod, on the early tide before breakfast, two hundred and eighty-six pounds were taken, the largest weighing forty-four pounds. But the search for new fields discovered Squibuocket Point, the southern extremity of Martha's Vineyard, which name was assumed by an association of ten New York gentlemen, thorough lovers of the sport and successful fishermen, whose record shows, as the result of one week's fishing by two rods, fourteen hundred and forty-six pounds, which perhaps has never been excelled. There are many places, however, where but little fishing is done, and of these No Man's Land is less visited, owing to its inaccessibility, though there the largest fish are found, of which one caught last summer, weighing seventy-six pounds, was the largest ever taken by rod and reel. Occasionally such large ones are hooked that everything is carried away. The inhabitants of this island are sponsors for the story in which a native, who, in "heaving and hauling," fastened one end of his line around his waist, leaving the other in the water, and fell asleep, from which, however, he was suddenly startled by being hurried over the sand, until his progress was stayed by coming in contact with a rock, which enabled him to cut the line and thus escape.

While fishing last summer just at nightfall, the tide having already made, perhaps a little on the ebb, while the receding rays of the sun creeping over the hills were caught by the breakers and cast a reflection upon the water, which arouses always the enthusiasm of a fisherman, for under such conditions the presence of fish is always felt, my line became suddenly drawn out, and as the slack was exhausted by a sudden and strong effort, I felt that I had hooked a large fish. He rushed toward deeper water; onward he sped, his efforts to reach the open ocean being gently checked by the pressure of my thumb upon the reel, the rapidity of the revolutions of which assured me that he was a large one, and filled me with anxiety lest I should lose him, or that he should seek a rock. Turning now to the right, when being caught by a breaker, he was carried near the surface, and as his progress was thus stayed, I obtained a glimpse of him, proving that he was a large one. With anxiety intense I shuddered for the result of the slack occasioned by this resistance to his efforts, but I had underestimated his strength; he was off again, and with hopes raised by a turn in his course, which revealed his growing weakness, but which were as suddenly depressed by his renewed determination to continue, I gently whispered a prayer that he might not escape. The rapidity of his flight was fast carrying away my six hundred feet of line, and as I saw less than one hundred feet of it remaining, I began to despair. But his struggle had been an exhausting one, and as the visible portion of my line in turn increased, I knew that he had abandoned his intention of seeking deep water and was fast approaching the surface, where, as he broke, by relieving my line from the strain and placing it upon the rod, I turned him toward shore. Slowly he came along, my fears being much allayed by my making more line, until he was within a few feet of the strand, when upon seeing me his exhausted strength aroused itself for another effort, which culminated in a short run of about fifty feet. He then submitted, and without further resistance was gaffed and landed, and turned the scales at fifty pounds. There can be no more pleasurable excitement than this pastime affords, and an indulgence in it produces a beneficial recreation.

D. M., Jr.

TROUT AND SALMON SEASON IN CALIFORNIA.

SAN FRANCISCO, April 19, 1879.

EDITOR FOREST AND STREAM:

Trout fishing generally, as far as the open time has advanced, is good. There was plenty of rain during the greater part of the breeding months, which enabled the fish to ascend the rivers and creeks in abundance, and although the rains have been very unusually late and made many of the streams very rolly, the showers being gentle and not very copious, the majority of the creeks have been pretty clear.

The Sportsman's Club of California initiated the season by offering excellent young salmon fishing in Lake Merced, within an hour's drive of this city. This fine lake, of about 2,000 acres, has been leased by the club for ten years. The great abundance of grilse which it now contains were bred by the association and placed in the lake twelve months ago when they were very small. Their average weight is now three-quarters of a pound each, which is a pretty good growth, considering that this is a fresh-water lake. On the 12th of April, the opening day, 165 fish were captured, bait angling, by twelve members of the club. "Your humble servant to command" bagged fourteen. Since that time up to date, upward of 700 of these healthy, game and silvery beauties have fallen captives to the anglers' alluring baits of either worms, boiled shrimps, or pieces of the small catfish or "bullheads" to be taken in the lake. A few of the old Lake Tahoe trout, which were planted in these waters some four or five years since, are occasionally taken, weighing from three to seven pounds.

The leases to the society of two other large and beautiful lakes within twenty-five miles of this city—San Andreas and Pilarcitos—have expired. These fine sheets of water belong to the Spring Valley Water Company. The first lake above named is now literally swarming with young salmon (mingled with a few brook trout) from three-quarters to two and a half pounds weight. These can generally be most successfully captured by trolling for them from a boat with a small silver or copper spoon. The last lake mentioned above is well supplied with brook trout weighing from one to four pounds. These, late in the season, take the fly freely, or can be had by trolling from a boat as well as by bait fishing. The water company are quite liberal in giving permission to fish in these lakes to the members of the club and other friends, although I am told it is probable that in a short time they may charge something for fishing tickets.

This year, and also last, but few young salmon have come into our bay, or up the rivers a short distance above or below the city (three years before that they were very plentiful), consequently there has been no grilse fishing on Oakland Long Wharf, three miles from, and opposite, the city.

Last summer, in August, I enjoyed some capital fly fishing and trolling in Lake Webber, in the Sierras. The fish there are a splendid species of brook trout, put in the lake from a branch of the Feather River. Their weight is from a pound and a half to two pounds and a half. This small but lovely lake, surrounded by pines and shrubbery, is distant twenty-seven miles from the city of Truckee twelve hours' journey from here. Webber Lake is reached from Truckee by stage, which runs three times a week. There is a neat hotel close to the water, well kept by A. Jay Anderson, who, with his amiable and industrious wife, is incessant in his endeavors to make visitors feel at home and comfortable. Here can be had penty of the richest cream *ad libitum* and the sweetest and purest of milk and butter. They milk eight or ten cows, which feed on the rich and most abundant grasses in the vicinity. The boats, fishing tackle, saddle horses and wagons are furnished the guests free of charge. The trout in this lake are of the finest flavor, and the flesh is of a light pink color. They are very game also.

New Publications.

BRENTANO'S AQUATIC MONTHLY AND SPORTING GAZETTEER.—The first number of the new series of this magazine has made its appearance. It is neatly printed, and contains records of the turf, base ball, pedestrianism, and also boating. Mr. Peverelly, the Editor, brings large experience to the arduous task of floating this new sporting chronicle, and will certainly attract a portion of the public at the outset by the similarity of the title adopted with that of the standard work for sportsmen—Hallock's "Sportsman's Gazetteer"—of which the Editor of FOREST AND STREAM is the author.

—"The New Long Island: A Handbook of Summer Travel" is the title of a superbly illustrated pamphlet prepared by the Long Island Railroad, as a guide to the summer resorts within access to New Yorkers. The score and more of illustrations which are taken from recent issues of *Lippincott's* and *Scribner's*, are gems of magazine illustrative art. There are descriptions of places, prices, means of coming and going, and all the other information sought by the thousands who turn their faces from the heated streets of New York. To such the Long Island shore offers superior attractions.

—A Granger residing near Morris, came up to Chicago the other day and purchased a 38-calibre revolver, and two or three boxes of cartridges. The latter were wrapped up in a paper. When he got to his room in Burke's Hotel, he opened it and gave the boxes a careful inspection. On each he read '38 short.' 'The d—d thieves!' he ejaculated, jumping up and starting off at a pace that would have done credit to Ennis or Rowell for the store where he purchased the ammunition. Entering it, he shouted out, 'Damit, some of you has tried to cheat me out of 114 cartridges. I paid $1.50 for these cartridges, and I find that each box is 38 short! I won't be cheated. You'll have to make up the number or, damit, I'll see if the law won't make you." The cartridges in each box had to be counted over, and explanation given as to the "38" meaning calibre, and "short" size before that Granger would be satisfied.—*Ex.*

SAPANULE!

TO SPORTSMEN—"THE ONE THING NEEDFUL!"

SAPANULE—Nature's ally—the best friend to man and beast. A preparation that is antagonistic to Inflammation. Congestion, Soreness and Fever cannot exist where this popular lotion is applied. For animals that are hard worked it is a sure restorative. For wounds, cuts, bruises, sprains, contusions, sores, new or old, it is a prompt and infallible cure. For all skin diseases and abrasions its healing and cleansing power is wonderful. SAPANULE is an admirable article for the bath and toilet. Used in foot and sponge baths, it will bring immediate relief from all pain or soreness in feet or limbs. SAPANULE takes all soreness out of bunions and corns, and is a sure cure for chilblains. Owners of dogs will find that by washing their dogs in Sapanule and water will remove any unpleasant odor, leaving the coat clean and silky.

SOLD BY ALL DRUGGISTS, 50c. and $1 per bottle.

LAZELL, MARSH & GARDINER,
WHOLESALE AGENTS, NEW YORK.

SAMUEL CERRY & CO., Proprietors, Providence. R. I.

THE TRADE WITH BRAZIL.—Unfortunately many American merchants go to Brazil with very vague ideas of the country and its people. Young commercial men imagine that they can secure a footing at once, simply by placing American goods, often of a very inferior grade, on exhibition. Commonly they get discouraged after the first few months and leave the country in disgust. The worst of these abandoned enterprises is that they deter other and wiser men from entering the field. Americans may as well dispossess their minds of all these crude ideas. If we are to secure a commercial foot ing in Brazil, it will be by careful and persistent effort, and by studying the wants of the people, not by wild speculation. It is no wonder that these young clerks, ignorant of the language and the country, are unable to compete with the shrewd Brazilian merchants and with well-established English and German houses. Our American manufacturers should employ experienced agents, and in most cases, probably, they would do well to ally themselves with enterprising Brazilian houses, or with American residents of old standing. Then they must be content with small profits at first; new wares must push their way little by little. Especially must they avoid flooding the Brazilian market with inferior goods, or those that are not suited to the wants of the people. Brazilian merchants, for instance, complain that the patterns of American print cloths do not please their customers. The fault is that our manufacturers have sent them the high-colored, showy goods which are sold to Southern negroes. The more refined Brazilian taste prefers the light striped and flowered French and English prints. Americans, too, must be reconciled to the tediousness of Brazilian commerce. Our active business men are loth to accustom themselves to these endless delays. Custom-house, travel and freight shipments, licenses, all require a large stock of that peculiarly Brazilian virtue—*paciencia*. If you take a note, it is for a year or twenty months, or more; if you are promised a custom-house clearance on Monday, expect it on Thursday.

In large transactions, the Para merchant is governed, perhaps, rather by a wholesome regard for the law than by any abstract moral reasoning.—*Scribner's.*

Charles Folsom, 53 Chambers St., N. Y., Dealer in

FIRE-ARMS, AMMUNITION AND ALL ARTICLES CONNECTED WITH THE SAME AND SOLE AGENT FOR

J. Stevens & Co.'s Celebrated Arms.

PINE QUARTERS, AMELIA C. H., VA., Jan. 22.

Mr. Charles Folsom:

DEAR SIR—I was ignorant of the fact, until I received your letter, that the gun I got from you was "choked," and having been reading Greener's "Book on Choke Bores," I concluded to use your gun and put my others away. I am happy to inform you I have made some capital shooting with it, especially at long shots, and I find it kills the birds much cleaner than the gun I had been using. To give you an instance: To-day I saw from my window two squirrels on the ground, about a foot apart. I put in a paper cartridge loaded with three and a quarter drachms of powder and one ounce No. 4 shot, and killed them both. One was dead before I got to it, the other crawled about three yards and died. I measured the distance with a tape and found it forty-nine yards, one foot. This I think is a good test of the shooting powers of the gun, as I consider a squirrel takes more killing than any game we have here. I shall be much obliged if you will inform me whether the gun is a "full" or "modified choke."

Yours truly, PHILIP H. GOSSET.

A GREAT INVENTION!

Imitation STAINED GLASS.

Patented Dec. 3, 1878.

CURTAINS, SHADES AND BLINDS dispensed with. New, Elegant, Cheap and Durable. It produces all the unique effects of a richly painted or Elegantly Stained Window. It is easily applied to the glass in Windows of Houses, Churches, Public Buildings, Steamboats, Street and Railroad Cars, Libraries, Parlors, Offices, Bath Rooms, Stairways, Transoms, Vestibule Doors, etc., with the full effect and brilliancy of variously colored ground glass. The article has just been patented, and not a single agency has as yet been established.

ONE GOOD MAN in each State wanted, to whom exclusive territory will be reserved for five years.

SAMPLES of three of the most beautiful styles will be sent prepaid with full instructions, WHOLESALE PRICES, etc., on receipt of $1.00.

Agents { L. LUM SMITH, Patentee & M'f'r's. 717 Sansom Street, PHILADELPHIA, Pa. } Apply to (Sole Agt. for U. S. & Canada.

READ the following Extract from the Representative Agents' Paper of the world, THE PHILADELPHIA, PA., AGENTS' HERALD:

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the Herald particularly to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and extraordinary sale. It will offer the best opportunity for coining money that has ever been presented to Agents, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the Agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country free of express or freight charges."

AGENTS' HERALD

THE LARGEST, SPICIEST AND ONLY REPRESENTATIVE PAPER OF ITS KIND.

ACTIVE GIVEN EMPLOYMENT GENTS OOD VERYWHERE

By over 200 responsible advertisers in this month's issue of the AGENTS' HERALD. OLD JUDGE SMOKING TOBACCO.

The Only Tobacco Ever Manufactured that Does not Bite the Tongue.

"OLD JUDGE" CIGARETTES.

Manufactured under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effect of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

FOR SALE BY ALL DEALERS.

GOODWIN & CO., Manufacturers, 207 & 209 Water Street

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R.R.

Mackinaw, Grand Rapids & Cincinnati Short Line)

FOR THE

Trout, Grayling & Black Bass Fisheries,

AND THE

Famous Summer Resorts and Lakes

OF

NORTHERN MICHIGAN

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equalled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.

The TROUT Season begins May 1 and ends Sept. 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE also abound in large numbers in the many lakes and lakelets of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The Climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma

affections.

The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address A. B. LEET.
Gen'l Pass. Agent, Grand Rapids, Mich.

NEW HAVEN, MERIDEN, HARTFORD, Springfield, White Mountains, Montreal and intermediate points. The new palace steamer *C. H. Northam* leaves Pier 25, East River, daily (Sundays excepted) at 3 P. M. A passenger train will be in waiting on the wharf at New Haven, and leave for Springfield and way stations on arrival of boat.

NIGHT LINE—The *Continental* leaves New York at 11 P. M., connecting with passenger train in waiting on wharf at New Haven, leaving at 5 A. M. Tickets sold and baggage checked at 944 Broadway, New York, and 4 Court street, Brooklyn. Excursion to New Haven and return, $1.50. Apply at General Office, on the pier, or to RICHARD PECK, General Agent.

ONE OF THE WORLD'S WONDERS,

SOUR LAKE.

The Great Watering Place of Texas.

This remarkable natural phenomenon consists of a circular pool about an acre in extent, in a continual state of ebullition, produced by escaping gases. Around the lake are a great number of wells and springs, of thirteen distinct varieties of water—sulphur, soda, alum, iron, etc. The waters of the lake and many of the springs are very acid. A specific for rheumatism in its worst forms, dyspepsia, chronic diarhœa, skin, kidney, venereal and female diseases. Fishing excellent and game abundant at all seasons. Open all the year. The tourist, whether for health or pleasure, and the student of nature, can find no place more interesting. Sixty miles east of Houston on New Orleans R. R. Board, week, $10; month, $35. Address

J. A. MERCHANT,
apr24 3mos Sour Lake, Texas.

Gunpowder.

THE

HAZARD POWDER CO'S

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only*.

Hazard's "American Sporting.

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shotguns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration*. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12½ and 6¼ lbs, and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist*. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR *EXPORT*, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office.

88 WALL STREET, NEW YORK.

PURE TIN-COATED & BURNISHED DROP AND BUCK SHOT.

AMERICAN STANDARD--EAGLE BRAND.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM: NEW YORK, Jan. 13, 1879.

Having been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot my 6,000 ball match, Jan. 8 and 9, with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting I used them until they became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

THE LEROY SHOT AND LEAD M'F'G CO., NEW YORK.

The Delaware Shell.

Our Improved Shell Now Possesses the Following Merits:

1st. Perfect Uniformity of Flange
2d. They are Sure Fire and Gas Tight.
3d. The Paper is Superior.
4th. The Primers are Easily Expelled and Replaced, and can be Reloaded a Number of Times.

PRICE AS LOW AS ANY OTHER SHELL.

ADDRESS, **Delaware Cartridge Co.,**
WILMINGTON, DELAWARE.

Dittmar Powder

THE CHAMPION POWDER

OF THE WORLD.

NO SMOKE--NO DIRT--LESS RECOIL

STRONG AND SAFE.

SUPERIOR IN EVERY RESPECT TO BLACK POWDER

6,013 SHOTS WITHOUT WIPING IN A SHOT-GUN.

Captain Bogardus' great feat of breaking 6,000 glass balls has proved that the powder is all that is claimed for it. The barrels, without being wiped, were as clean at the end of the match as after the first shot. The fact of the firing of so many shots in succession, and that the Captain has used about 200 pounds of the same powder during the last year in one gun, shows, without a doubt, that the powder is EFFICIENT, UNIFORM and SAFE.

The rifle powder is also without a rival. The standing challenge to test this powder against any other has never been accepted. Many riflemen throughout the country have been successful with the powder, as, for instance, Mr. E. B. Souther, of the Massachusetts Rifle Association, won last year two gold medals, two silver medals, two revolvers, and four other prizes in using the DITTMAR RIFLE POWDER.

Greater facilities and greater demand have enabled us to reduce the price of the powder considerably, and the fact that the Government Armory at Springfield is making now all kinds of testing machinery for us will enable us to produce always a uniform, and in every way reliable, article.

TRY OUR NEW WATERPROOF SHOT-GUN AMMUNITION. Cheap, and warranted to give satisfaction in every respect. Ammunition for gallery rifle practice always on hand, and all kinds of rifle ammunition made to order.

SEND FOR CIRCULARS AND PRICE LISTS.

For Forest and Stream and Rod and Gun.

THE SEA GULL.

SEA-BIRD! Skimmer of the wave!
Whither doth thy journey tend?
Is it to some southern shore,
Where the meadow-rushes bend,
Where the orange-blossoms blow,
Where the aloe and the palm
Flourish, and magnolias glow,
Filling all the air with balm?

Haply, is thy pilgrim wing
Flitting to some northern bar,
Where the rocky reef runs out
And the sand beach stretches far?
There in hot and silvery sand
All thy pearly eggs to lay,
There to teach thy little brood
O'er the breaking surf to play.

Haply, sailing o'er the brine,
Painted 'gainst the lurid sky;
O'er the gray horizon's verge
Thou dost even now descry
Some lone bark with shatter'd mast,
Bulwarks swept and tatter'd sail,
Fighting with the ocean blast—
Lost and shipwreck'd in the gale!

Restless, roving, lonely bird!
Wanderer of the pathless seas;
Now where tropic woods are stirr'd,
Now where drifting icebergs freeze;
Seldom doth the solid shore
See thy folded pinions droop;
Only waves, that tumbling pour,
Lure thee from thy airy sweep.

ISAAC MCLELLAN.

For Forest and Stream and Rod and Gun.

Pike Fishing in Murderkill Creek, Delaware.

LEST the readers of FOREST AND STREAM should be disappointed in expectation of reading a scientific account of a day's pike fishing, let me say in advance that neither myself nor my darkey friend are scientific fishermen, but, on the contrary, operated in the most primitive fashion.

Bob Brown, the colored huntsman who figured so extensively in my coon hunting sketch (which appeared in FOREST AND STREAM a few weeks ago), had often invited me to go "pikin'" (as he termed it) up the creek, promising me a good day's sport, but I was too much occupied with the birds to give the matter serious consideration. I am very fond of fishing during the spring and summer, when game birds are out of season; but from the 1st of September until the season is out I devote all my spare time to the birds.

I was spending a week with my friend Tom Harrington, on my annual quail shooting excursion in November, and the weather had settled quite warm; so much so, indeed, that it was laborious both for myself and dog, and I concluded to humor Bob and put in a day with him on the creek—not that I expected to catch any fish, but merely for a day's rest. I walked over to Fork Landing in the evening, and meeting Bob, he broached the subject again.

"Fine weather for pikin', sir," said he. "Dey'll bite like dogs to-morrer mornin'; an' dar'll be a white frost in de mornin', an' de sun'll come up warm, an' we'll kotch a turn of 'em. Better make up yer mind to go, an' let de birds an' dogs hev a day's rest; 'sides dat, ye git a day's rest yer own self, sir."

There was sound logic in Bob's argument, for I was pretty well run down, and my dog's feet were cut and sore, and after arranging to meet him at Carpenter's Bridge the next morning, I went home to overhaul my fishing tackle. I always carry a wallet, with an assortment of hooks and snoods, in my shooting coat; it does not occupy much space, and is very handy.

The next morning my little friend Ruth had me an early breakfast, and before seven o'clock I was standing on Carpenter's Bridge, which spans the Murderkill Creek, awaiting the coming of Bob. It was one of those mild, mellow, Indian summer mornings; one of those soft, sweet days which, when cold winter is stealing on, come, like the visits of an angel, between the first sharp white frosts and the stern weather that so soon succeeds them, visiting the last flowers of autumn with more than the balminess of spring, and clothing the woodlands in a robe of more than summer glory.

The old Murderkill Creek makes a broad sweep after it crosses the road under Carpenter's Bridge, and forms a miniature lake, and it lay stretched out beneath the cloudless sky, pure and unbroken as a mirror, with its wooded shores gleaming aloft in unnumbered hues and unrivalled radiance, which autumn nowhere sheds with so lavish a hand as in an American woods, and sleeping below, reflected to the smallest leaf on the calm surface of the water. Attached to the bridge by a long chain was an old waterlogged canoe, which had once been used as a fishing boat, but now it was almost ready to fall to pieces from old age:—

"The stern, half sunk in the slimy wave,
Rots slowly away in its living grave;
And the green moss creeps o'er its dull decay,
Hiding the mouldering dust away.
Like the hand that plants o'er the tomb a flower,
Or the ivy that mantles the fallen tower;
While many a blossom of loveliest hue
Springs o'er the stern of the old canoe.

"The currentless waters are dead and still,
But the light wind plays with the boat at will;
And lazily, in and out again,
It floats the length of the rusty chain,
Like the weary march of the hands of time,
That meet and part at the noontide chime.
And the shore is kissed at each turning anew
By the dripping bow of the old canoe."

The air was breathless, yet so pure and fresh that the briskest breeze that ever fanned the ocean came not more gratefully to the cheek and brow than that delicious calm in which the most delicate leaf alone might be seen to quiver, while all the other foliage hung motionless and voiceless. Away off, on a tall, leafless tree, sat, solitary and alone, a huge fish-hawk, looking down over his demesne of wood and water, an undisputed monarch. It was a lovely scene, and I hope my readers will pardon me for indulging in this reverie; but being an enthusiastic and devoted sportsman and a dear lover of nature, I read "books in running brooks, sermons in stones, and good in everything." I was aroused from the contemplation of the scene by the cheerful voice of Bob, who came paddling along in his dug-out.

"You're on time, sir, I see," said he. "Did ye eber see a pootier mornin'? How dem puppies of mine 'ud run a fox dis mornin'! Ah, ah! wouldn't he leave a red-hot trail! You may just bet on it." And Bob guided his boat to the spot where I was standing, and, stepping aboard, we pushed off up the creek to the fishing-grounds.

He had fine, short, stout rods in the boat, with lines wound around them, and one large, rusty hook on each line. I asked him what he intended to use for bait, and he replied that "pikes are very particular—sometimes I use fat pork an' sometimes cooked meat an' worms; an' sometimes dey don't bite at neither one. An' den I kotch some shiners. Ah! shiners is de boys! I sometimes think pikes must be some kin to shiners; dey loves 'em so." (Bob's shiners were minnows and small roach.)

I took out my wallet and selected a couple of small perch hooks snooded on gut, fastened them with a piece of sea grass, and with a buckshot for a sinker and a small worm on each hook, threw it over the side of the boat just as Bob had come to an anchor.

"What ye gwine to do, sir?" asked Bob.

"I am trying to catch some shiners for bait," I replied; and at that moment I lifted one into the boat.

"Lem' me hev a hook, too," said he, "I'll kotch some."

I opened my wallet to get one for him, and his eyes expanded with delight. "I neber seed de like," said he. "Dem's de nicest hooks I eber laid my eyes on. What fine pints dey've got! Ef a fish comes anywhere nigh 'em he's bound to get hooked."

Bob selected a hook, and I gave him a line, and he went to fishing, and in a short time we had all the small fish we required. Bob greatly admired the small hooks, and said: "Ef I only hed some o' dem next summer I'd kotch a boat-load of white perch any day." I gave him half a dozen, and enough sea grass to make three or four small lines, and the old fellow was happy.

He paddled along up the creek a short distance, and made the boat fast to an overhanging branch of an old oak, and got his pike lines ready.

"Is this our place?" I asked.

"Yes, sir; dis is Rhody's Hole, one o' de best places in de creek for pikin'. I've knowd Mr. Tommy Brown to kotch a dozen yere of a mornin', an' not one of 'em less'n two pounds, an' from dat to six an' six 'n a half. I tell ye, sir, he is a fish'man, shuah.

I took in Bob's six and a half pound pike with a good deal of allowance for shrinkage, and replied:

"Well, if I catch a fish of that size I don't know which will be the most surprised, myself or the fish."

"I know ye'll do it, sir," said Bob, "ef ye only jist do as I do."

We got to fishing. Bob put out three lines; baiting one with pork, another with cooked meat, and the third with a shiner, saying: "I'm gwine to see what sort of appetites dese pikes has got; ye hev to find out fust what dey like." I was satisfied with one line, as I was not over-confident as to our success.

Bob's eyes rolled about unceasingly, gazing first at one line and then at the other, and I was paying more attention to him than to my own line. My sinker was cast in toward the shore, and I was fishing close under the roots of the oak to which our boat was tied, when I felt a smart tug at my line, and giving the rod a flirt sideways, I hooked the fish and brought a beautiful pike of about two pounds weight into the boat. It was the largest pike I had ever caught, and I was highly pleased, while Bob was delighted, and gave vent to his feelings in a loud yah-ha-ha that could have been heard a mile in the calm morning air.

"Don't make such a racket," said I, "you'll frighten the fish."

"Lor, honey, dey don' mind dat a bit. What kind o' bait did you kotch dat feller wid?"

"Shiner," I replied.

"Den I'll use shiner," said he. "Sumfflin' cur'ous 'bout pikes, sir; dey wouldn't bite at nuffin' but shiners to-day, no matter what else we use.

Bob took up his three lines, one of which was baited with a shiner, and re-baited all of them, and I cast mine over the side again, very well satisfied, even though I didn't get another bite. Bob sat like a statue, his great eyes intently fixed upon one rod which extended over the stern of the boat, while he grasped the others, one in each hand, waiting for the least indication of a nibble. I watched him attentively, and his dark features were a study. His thick lips were firmly closed, and the lines around his mouth had deepened into furrows; he had laid aside his hat, and the veins upon his high, broad forehead were swollen and corrugated, while his eyes fairly danced with excitement. He had inclined his body a little forward, his right hand twitching nervously, and quick as lightning, he whirled his right-hand rod around the stern of the boat, and raising it out of the water with a jerk, landed a four-pound pike directly into my lap. The movement was so sudden that I started up and let go of my rod and it fell overboard, but I secured it again, and the fish having fallen into the bottom of the boat lay upon its side flapping the bottom board with its broad tail.

"Lor," said Bob, as he was about unhooking him, "ain't he a bully feller. Does me good to kotch one like dat. Look out fur dat little maple pole, bit's gwine away; dar'sa fish on it." Pull it up!" he shouted.

I reached for the rod, and imitating Bob's jerk as well as I could, hooked a pike that weighed about a pound and a half, and got it safely into the boat.

"You're beatin' me, sir," said he.

"Oh, no!" I replied; "that's your fish, Bob, I caught him on your line, and it counts for you. I think I've caught my share, at all events I've caught more than I expected."

Bob had his hook re-baited, and in the water again in a short time, and it was not long before he hooked another fine pike. We fished until ten o'clock; he caught six and I caught three, when he hooked on to one that taxed all his ingenuity. The fish was under the sunken roots of the old oak, and Bob was afraid his tackle would snap, although it was a stout line and not more than seven feet long. I took in all the other lines, and was ready to loose the boat from the tree when he exclaimed

"By golly, he's loose! ontie dat painter."

I had the boat loose in an instant, and seizing the paddle, turned her head so as to give him a fair chance. (What a glorious moment that would have been for a scientific fisherman with the proper tackle—how he would have played that noble fish—but Bob knew nothing but main strength.) The fish darted up the creek, and I paddled the boat after him, thus relieving the strain upon the line.

Bob had his hands full; he had been a waterman in his younger days, and issued his orders like an old sailor.

"Starbo'd a little," said he; "now rush her fpo, dis line's gittin' mighty tight, an' I'se afeard he'll break loose. Port, now, port, hard, sir. So, steady—now yer right."

"You attend to your line, Bob," said I, "and I'll try to keep up with him. You should have a longer line and play him."

"Dar's no play 'bout dis feller, he means bizness," said Bob, and so it appeared. I had all I could do to keep up with him, until finally he darted for the bank and dived into a deep hole close under the roots of a tree.

"He's tired out now," said I, "and you've got to get him into the boat before he takes a fresh start, or he'll leave you without even saying good-bye. Haul him up now, and I'll help you."

Bob gave a vigorous pull and raised the fish to the top of the water. He was a beauty—a seven-pounder. I was afraid he would cut the line with his sharp teeth, and told Bob to hold on hard, and thus keep his mouth open, which he did. Fortunately there was an old peach basket in the boat, and I used it for a landing-net, by slipping the painter through the hand-holes and sinking it under the fish, while Bob managed to get him into it, and we drew the pike into the boat.

The old darkey was in ecstacies. "Did you eber see de like?" said he. "Lor' bress my soul! dat beats de biggest pike eber I seed. Jes' look at 'im, hain't he a rouser? I wish you had dat feller in Phildelfy. How de folks 'ud look. Nobody would eber b'leeve he were kotched on a little bit of line like dis. Look at 'im floppin'—bain't he powerful? Flop away, ole feller; do yer best—ye can't bust dis ole boat. Yer safe 'nuff now—yah! yah! Won't he be good biled, with pa'sley an' drawd butter? My, oh!" and Bob smacked his lips in anticipation of his feast.

It was now nearly noon, and we had ten fine fish, and I concluded that we had had glory enough for one day, and told Bob that I believed I should stop and go up to the house, as Tom and I were going rabbit hunting after dinner, and he rowed the boat back to the bridge. I stepped out and was about to start up the road when Bob said:

"Hold up, sir; ain't ye gwine to take no fish? Lor, I want ye to take dese free biggest fellers—an' more ef ye want 'em—but dese free, anyhow."

He insisted so strongly that I had to take them, and as it was only a little more than a quarter of a mile across the fields to the house, and he had slipped a string through their gills with a piece of stick to take hold of, I started off with my load to the house.

Bob shouted after me, saying: "I'll see ye up de branch dis ebenin, sir, an' fotch my two puppies (his puppies were about six years old, but they were always puppies), an' we'll find lots o' rabbits."

"All right," said I, "come along."

Bob met us as he had promised, and Tom and I killed eight rabbits and three gray squirrels, of which Bob got a goodly share.

CHAS. COHILL.

For Forest and Stream and Rod and Gun.

THE FEATHERED GAME OF NORTH AFRICA.

TANGIER, Morocco, Feb. 25, 1879.

TO nearly every one this seems such an "out-of-the-world" kind of a country, that perhaps few of your readers would care to know or hear of it; but sure I am, that if they could once enjoy its glorious sport, see its beautious landscapes, enjoy its glorious climate, and partake of the kind hospitality of the Christian portion of its inhabitants, they would feel that this portion of the "dark continent" is one of light and enjoyment. This city, so well described by Mark Twain in his "Innocents Abroad," is a pleasant place for the invalid, the lover of nature, or the tired man of business, whose hard-worked brain needs a recuperative season of rest and entire change from the scene of his hurrying life; and it is so easy of access, being but three hours from Gibraltar by steamer, from which point one can get a direct steamer to almost any part of the world, including our beloved New York. Many of the wealthy residents of Gibraltar have handsome country houses here, where they pass the summer, and delightful it is in that season, the thermometer rarely ever rising above 80 degs. Fahrenheit, and there is nearly always a cooling breeze from either the Atlantic or Mediterranean. These country seats are for the most part on high lands, bordering the Straits of Gibraltar, and one of the highest points is called Mount Washington. The view from these residences is grand beyond description, having at one side, toward the west, the mighty Atlantic rolling its foaming billows far toward the setting sun; and you feel, as you look upon the vast expanse, a satisfaction, knowing there is naught between you and the "land of the free and the home of the brave." On the north there is a beautiful view of the Spanish coast, from Trafalgar, the scene of Nelson's victory, to Taufa, the southernmost cape of Spain, and to Gibraltar, that mighty monument of the pride and prowess of England, and thence out upon the blue Mediterranean, stretching as far as the eye can reach to the east; toward the south the green hills and rich valleys of Morocco delight the eye, and beyond them the Atlas Mountains, whose hoary heads have looked down upon the fleets and armies of the Phœnicians, Greeks, Romans, Carthagenians, English, French, Spanish, Moors, etc.; have seen them each occupy their little niche in the chronicles of time, and fade away into the past as shadows, while they remain firm and immovable, "monarchs of all they survey."

But I am drifting away from the subject of sport, which was the incentive of this rambling letter.

In the autumn and winter months, parties of three to ten persons are made up, and, taking with them tents, camp equipage, and all necessary appurtenances to delight and make comfortable, make a day's march into the interior and find an Elysium for sport, where the African partridge (a bird similar to the partridge of the Eastern part of the United States) is to be found in great numbers, and affords most excellent shooting, as they lie well to the dog and the undergrowth is thick; also the migratory quail abounds, and in its biennial journeys they are almost too numerous for pleasure. Woodcock, snipe and plover are also to be found in large quantities in the marshy lands of the valleys, while on the lakes, within thirty miles of this place, several varieties of ducks are to be found and good sport obtainable. All these, together with the countless thousands of rabbits and hares, will keep the sportsman busy during the days of the encampment, while the nights will be passed in slumber that would do credit to a healthy two-year old baby; so that at the breaking-up of his habitation in the wilderness, when his Arab servants "fold their tents and silently steal away," he will many a time, on the return journey, turn his eyes back upon the scenes of his recent exploits and long for "the next time" to return soon. There is also fine wild pigeon shooting to be had on the coast from Tangier to Cape Spartel, in the rocky caves which abound, and it is very agreeable, after a day spent in that sport, for the party to go to the light-house at the Cape for lunch, if they are fortunate enough to be friends of the Foreign Ambassadors in Tangier—for you must know that that light-house is under the control of the Foreign Ministers and Consuls, although paid for by the Morocco Government,—and after the inner man is appeased, then ascend to the tower, and while the keepers "trim their lamps as the sun goes down," feast his eye and soul upon the view over the "wild waste of waters" and think how many anxious eyes have looked upon that light, away up on that rock-bound coast. To some it has been the beacon of destruction, but to millions it has been the guiding star of hope.

There is another diversion here in the way of sport, which, while it has a spice of danger in it, becomes all the more savory to almost all who love the gun and the attending sports thereof. It is boar hunting. The hunt is conducted by the formation of a large party of the Foreign Ministers and their families and guests, who go to the interior and encamp, taking from one hundred to two hundred Moors with them, who beat the forests in a regular manner, the huntsmen on horseback with spears being posted on the opposite side of the forest, and at the appearance of the boar, give chase and spear him if possible. Sometimes he turns upon his pursuer, and the horse, in his movements to protect himself, unseats his rider, who may have a tough time with his Swinish Majesty if assistance be not close at hand. In a hunt last month Sir J. Drummond Hay, the resident British Minister, was severely wounded in the calf of the leg. The ladies are generally witnesses of this sport, and there ensues great rivalry among the sterner sex to secure the boar's head and to receive the encomiums of the fair ones.

There is a capital hotel here—"The Alhambra"—clean and comfortable, and kept by as pleasant and accommodating a proprietor as I have met in a long and varied traveling experience, Mr. Dearden by name, and I feel that I owe him a word for his kindness and attention to me, my friends and my dogs.

Americans who come here they have a treat in store—viz., the acquaintance of our Consul-General, Col. Felix A. Mathews, of California, and his most estimable family. The Colonel is a gentlemen in every sense of the word, and not only does he make himself popular and agreeable to his own countrymen, but he is loved and respected by every one who knows him, and English, French, Spaniards, Jews and Moors all unite in his praise. He is a worthy and able representative of our great Republic. If General Grant had visited here, as he thought of doing, the Colonel had in preparation a reception and a boar hunt, which would have "put in the shade" many of those "gold-laced" affairs that have been forced on the General in Europe.

Mr. Editor, as the Spaniard says, "I kiss the hand to you."

ORTYX.

A SPRING CAMP ON PICKEREL LAKE.

COLUMBUS, Ohio, April 8, 1879.

EDITOR FOREST AND STREAM:

We took passage on board the *Valley Queen* on her trip from Cheboygan to the head of Crooked Lake—the landing-place for Petoskey stage—with our tent, hunting and fishing traps and eatables, with a good-sized clinker skiff in tow. Passing through Burt Lake, Crooked River, and into Crooked Lake, the steamer took us near to the mouth of the small stream leading to the lake, and which is its outlet, when we started on our cruise. One of the first things we did was to fill to over-flowing all vacant spaces in our boat with dry marsh hay from a flat piece of land near the mouth of the creek for our spring mattress.

This body of water is reached from a point about half a mile from the lower end of Crooked Lake; on the south side by a narrow, shallow creek, barely deep enough to pole through, and on account of the high marsh-grass and reeds, it is impossible to see far ahead. Winding through a small piece of woody swamp-land, you are suddenly surprised to find before you a deep, blue pool of clear water, covering, I should think, about three acres. Crossing this pool, we find another small creek, similar to the first one, but not quite so long, when you come upon Pickerel Lake, a beautiful sheet of water, about three and a half to four miles long, and from one to one and a half mile wide, full of fish and quite deep. The shores of this lake are skirted on all sides by dense forests which are almost impassable.

We found a very pleasant camping ground about midway from each extremity of the lake, on a point projecting into the water on the east shore, commanding a full view from one end of the lake to the other, with a spring of water, very cold and slightly tainted with sulphur, within twenty-five feet of our tent, and another, not quite so palatable, within ten feet; the latter being in the shade all day answered our purpose remarkably well for a refrigerator.

To the left of our camping ground we found very fine bass fishing, catching quite a number of black bass weighing four pounds each, and from that down to two pounds. This was the only place where we had been able to catch what I call regular black bass; at all other places we caught nothing but the green bass, some of them quite dark, and in this country as well as elsewhere, bass, it matters not to what family they belong, are black bass.

To the right of the point we had excellent pike and pickerel fishing. Here my friend, Mr. E. G. Savage, captured a pickerel weighing five pounds on two hooks at one time, the fish picking up the two minnows attached to his line, which must have been between three and four feet apart, swallowing both. We caught none weighing over six pounds, and being, for pickerel, quite lively, they made it excellent sport.

For bait we used minnows, which we had no trouble in securing in the edges of the lake, and in the stream on which we entered, the greater part of the time having them of good size and lively. Angle worms are something almost unknown in northern Michigan, a party from Indianapolis, Ind., having the only "fish worms" we saw while in northern Michigan. I would advise all who wish to fish with that kind of bait to take them along with them, as they cannot be found at all in the sandy soil there. They are very convenient, no trouble in keeping fresh water on them, and are excellent bait, all kinds of fish taking them greedily; even the bass seem to have an appetite as voracious for fish worms as the perch have. Any one having an opportunity to visit this lake and enjoy its fine sport I am sure will never regret it.

While investigating the shores of this lake about a quarter of a mile above our tent, just in the edge of the woods, we discovered the remains of a bear trap, which had been constructed by the Indians by building a pen of cedar posts from four to six inches in diameter and five to six feet long, driving them securely in the ground close together, forming a V-shaped inclosure about five feet deep and four feet wide in front, with an opening like a door, the balance and top being secured with similar cedar posts, with a figure 4 spring trap on the inside, connecting with a long heavy tree trunk suspended just above the entrance to catch the bear across the back when he should make a raid on the free lunch set for him inside. The bear had been there, and had evidently gotten his carcass too far in before springing the trap, so that instead of the tree trunk catching him across the back, it had evidently struck him on the rump just enough to drive him in and cage him. Finding himself in such a fix, he had deliberately set to work and gnawed the entire pen all to pieces. Such a mass of pumiced pine I never saw. He had not been satisfied to merely gnaw his way out, but had chawed the entire pen all to shreds. There was certainly a good-sized cart-load of splinters, not one of them over two feet long, which convinced us that as a kindling maker a bear would be a success.

FRANK N. BEEBE.

THE GIRONDIN DISINFECTANT.—The following letter, shows the appreciation in which the Girondin Disinfectant is held by the Westminster Club, it having been used at the dog shows in this city for the past two years:

WESTMINSTER KENNEL CLUB
New York, May, 1879.

Mr. James Meyer, Jr.:

Dear Sir—We take pleasure in acknowledging our entire satisfaction with the purity of the atmosphere at Gilmore's Garden during our Third Annual Bench Show. We had 953 dogs on exhibition and an average attendance of 6,000 daily, and the purity of the air was maintained to the end by the liberal use of your Girondin Disinfectant. Saturday morning we ceased using it, and by noon the air had become very disagreeable and offensive. Yours, etc.,

W. S. WEBB, C. DU BOIS WAGSTAFF, H. WALTER WEBB, ROBT. C. CORNELL, and others.

Fish Culture.

A CARD.—We are very glad that Mr. Stone has decided to print the following disclaimer against the gossip-mongers who are so numerous nowadays. If those who carp and criticize would work more and talk less, they might possibly render some service to the interests of Fish Culture:

COLD SPRING TROUT PONDS, CHARLESTOWN, N. H., May 7, 1879.

EDITOR FOREST AND STREAM:

In several newspaper articles and State reports, I have been quoted as saying that "All California salmon die after spawning." At first I thought I would not mind anything about it, but the matter has been alluded to so often lately that I will now be greatly obliged to any one interested in the subject who will have the kindness to tell me when and where I made the statement in question. LIVINGSTON STONE.

NEW YORK.—The shipments from the State Hatchery House at Mumford, N. Y., are now about completed, there still being 400,000 brook trout fry which are destined for distribution in the vicinity of Mumford. The shipments for the season have been as follows: Salmon trout eggs to Lake George and Green County hatching houses, 310 600; salmon trout fry to Otsego, Franklin, Putnam, Hamilton, Clinton, Orange, Livingston and Herkimer counties, 350,600; whitefish eggs to Lake George, 100,000; California salmon fry to Green, Monroe, Ontario and Cayuga counties, 86,000; California mountain trout eggs to *Société d'Acclimatation*, Paris, France, 400; to tributaries of Fulton chain of lakes, 4,000; brook trout eggs to Orange, Ulster and Herkimer counties, 194,000; to McCloud River, Cal., 5,000; to France, 8,000; brook trout fry to more than twenty counties, 1,130,000.

CODFISH HATCHING.—The cod hatching experiments at Gloucester, Mass., last winter were so satisfactory that Prof. Baird is now constructing a steamer especially for the further prosecution of the work.

OYSTER CULTURE IN FRANCE.—The culture of oysters in France dates from the year 1853, and has now—after many attempts and failures—become an important branch of industry in that country. Immense masses of young oysters and oyster-spat are now caught yearly, especially in Auray and Arcachon, and deposited into the artificial breeding beds and fattening ponds. They are considered fully developed and fit for consumption as soon as they reach a diameter of five centimetres, or about two inches.

The improvement and the successful results of the oyster culture since the year 1867 are due principally to the energetic and intelligent endeavors, and the inflexible perseverance and obstinacy of the oyster-bed proprietors, who, making good use of previous expensive experiments and experiences, have turned valueless and marshy soil into oyster-beds yielding immensely rich harvests. The oyster-beds of Arcachon alone produced during the season of 1876-77 the enormous number of 202,292,225 oysters, of the estimated value of nearly four millions and a half of francs, whilst Auray yielded during the same period nearly one hundred and two millions of young oysters and oyster-spat, of the value of half a million of francs. Most of the produce from Auray is consumed in Normandy, or exported to Belgium and England.

The young oysters derived from the Arcachon and Auray oyster banks do not require any artificial process for attaining their full development, while the artificial breeding beds and fattening ponds are made use of principally at Courfeulle, Lahouge, Caucale, Vannes, Sables d'Olonne, the Island Oléron, La Tremblade and Marennes.

The following figures denote the progress made at Arcachon during the period of six years: In 1871, only 724 oyster-beds, with an extent of 1,470 acres were in existence; in 1872 the number rose to 1,133 beds, with an extent of 2,650 acres, increasing by the end of 1874 to 1,706 beds, with an extent of 4,350 acres; and at the end of '76 to 3,427 oyster-beds, with a total area of 10,000 acres. About 1,400 fresh beds were laid out and established in 1877.

During the season of 1876-1877 (September 1 to April 30), Vannes produced sixteen millions of oysters; Courfeulle, thirty millions; Caucale, fifty millions; Oléron, seventy millions; and Marennes, eighty millions. The oyster fishery upon various nearly exhausted banks have also—in consequence of the energetic measures taken by the French Government respecting the close time and for the protection of the oyster culture—improved to a surprising extent. From the official returns, it appears that the value of the artificially cultivated oysters has in six years increased sixfold, the value of the oysters withdrawn from the oyster-beds being thirteen millions and a quarter during the season ending in 1877, as against two and a half millions in 1871. The total of the oyster production during the same period has increased to nearly tenfold the number, viz., from nearly thirty-four millions in 1871 to three hundred and thirty-five millions and three-quarters in 1877. The total of young oysters deposited in the artificial beds amounted in 1877 to two hundred and thirty-six millions and a half, as against forty-four millions and a half in 1871. The consequence of the immense increase in the production of oysters has been a natural decrease in the price of them; the oysters which were valued at 74fr. 40c. per 1,000 in 1871, and 106fr. 33c. in 1872 are now sold at 84fr. 39c. the thousand.

The *Messager de Paris* announces the number of French oyster-beds to be 35,500 at the present. These are distributed over an area of 10,600 hectares, and have during the last season produced six hundred and fifty-one millions of oysters at the estimated value of above twenty-three millions of francs.

TROUT FRY—*Ludlow, McKean County, Pa., May 8.—Editor Forest and Stream:* We have sold all of our trout fry, thanks to your advertisement of the same. N. FRIEBURG, of Ludlow Trout Co.

—The first steamer that ever plowed the waters of the Delaware as high as the Delaware Water Gap passed up on the 9th instant. She is a side-wheeler, 60 feet in length, and will carry about 75 passengers, and will ply between the Delaware Water Gap and Port Jervis.

—Trains for Meriden, Hartford, Springfield, White Mountains, etc., connecting with the New Haven steamers leaving Pier 25, E. R. (Peck Slip), at 8 and 11 P. M., will begin running to-day. The New Palace Steamer *C. H. Northam* is now running, and the *Continental* (11 P. M. boat) is being refurnished, carpeted, painted and thoroughly overhauled,

Natural History.

THE BIRDS OF NEW YORK.

MOST of your ornithological readers are doubtless already aware that the undersigned has, for some time past, been engaged in the preparation of a work on the ornithology of this State, but since they are probably unacquainted with its character and scope, and perhaps also with the fact that the assistance of resident collectors is desired, the present opportunity is taken both for requesting their co-operation and for presenting an

OUTLINE OF PLAN OF ORNITHOLOGY OF NEW YORK.

The work shall consist of three distinct parts:

(A.)—*Introduction.*

(B.)—*Systematic Review of Species.*

(C.)—*Bibliography.*

(A.) The first, or *Introductory*, chapter, is to be devoted to the consideration of the *Distribution of Species*, and will be subdivided into two portions:

1st. *General Distribution*, under which head the *Faunal Areas* will be discussed, and the precise limits of the *Canadian*, *Alleghanian* and *Carolinian Faunæ* within our borders, will be defined with as much exactness as the data on hand will permit. Moreover, the *causes* which have to do with, and exert a controlling influence over, the distribution of characteristic species will here be considered at length, and to bring the results more clearly before the eye it is proposed to publish several charts of the State which shall show, in different colors, the position and *limitations* of the *Faunal Areas*, and the *conditions governing* these limitations—such, for example, as the *temperature* during the breeding season, *humidity*, *altitude*, etc.

2d. *Local Distribution*, treating of the influence of topographical and other minor physical conditions (mountains, river basins, swamps, deep forests, hard-wood groves, open fields, etc., for example,) upon the local distribution of the various species *within* the Faunal Areas to which they severally pertain, including lists of species so influenced.

(B.) The second portion of the work will consist of a *Systematic Critical Review of all species known to occur within the limits of the State of New York.* In treating of each species it is proposed to adopt the following scheme:

(a) *Name of Species.*

(b) *Vernacular name*, or names, by which it is known in different parts of the U. S., and in other countries also, if occurring beyond our limits.

(c) *Synonomy.* This will be limited to the original describer of the species, the authority for the name adopted, the older and standard works on North American Ornithology, and complete only so far as concerns this State.

(d) *Description of Species.* This shall consist of: 1. The *Diagnostic character* of the species—will be brief. 2. The *Sexual*, *Seasonal*, *age-al* and *Abnormal* variations in plumage.

(e) *Habitat* (universal and local).

(f) *Biography.* This will consist of a popular account of the natural history of the species, and will be subdivided into several minor sections, treating of the migrations, general habits, nidification, etc.

(C.) *Bibliography.* This shall be complete so far as it pertains to the birds of New York State, and will be limited to this State.

So much for the nature of the work. Its completion will require at least three years. A large amount of material has already been collected, and many local lists have been received from various parts of the State. Many more, however, are desired, especially of the birds found breeding about the point of which the list treats. The author is also desirous of obtaining information concerning the time of arrival and departure, time of nesting, period of incubation, time young remain in nest, time required for completion of nest, and time elapsing between its completion and deposition of first egg, periods of song, food, etc., etc., of all our birds, and from as many localities in, and contiguous to, this State as possible. For all such information made use of in the work due credit will be given.

C. HART MERRIAM, M. D.,
Locust Grove, Lewis Co., N. Y.

DRUMMING OF THE RUFFED GROUSE.

PINEY FALLS, April 15, 1879.

EDITOR FOREST AND STREAM:

If the grouse question is not entirely exhausted, permit me at least to express an opinion, founded on observation. There seems to be a slight difference of opinion among some of your correspondents concerning the nature and habits of the partridge, or ruffed grouse. I know that this bird has many curious and interesting traits, only one of which I propose to mention here, and that is concerning his drumming. During my boyhood days in Western New York, I spent much time creeping through brush, and crawling under logs, and worming my way through briers and thorns, for the purpose of closely observing the partridge while drumming. I succeeded in getting front, side and back views, and frequently at a distance that would enable me to observe accurately the manner in which he performed this marvelous feat of drumming, the sound of which I believe cannot be imitated either by man or bird. It is immaterial whether he is on a hollow log, or a sound log, or a rotten log, the sound is just the same. He generally selects a mossy log or a log with rough bark. He begins by taking two or three steps, neither forward nor backward, spreads his tail to about half the full size, stretches his neck upward and backward—similar to a barn-yard cock in the act of crowing—inflates his crop or air-sac, and strikes three or four measured blows, with short intervals between, and then begins again, repeating the same measured strokes, only a little harder, and continuing more and more rapidly, until it ends off in a miniature thunder. During this feat his head has been gradually drawn down to his body, with his eyes nearly or quite closed, and the whole time occupied may be twenty seconds, more or less. The wings do not strike the breast, as some have supposed, but the wings strike with such a curve that I think it compresses the air in such a manner that the inflated sac serves as a sounding-board. In all the partridges that I have killed while drumming, I invariably found little, if any, food in the crop, and I am of the opinion that he never drums on a full crop of food. Have occasionally heard partridges drum all times in the day and all times in the night; but as a general rule he mounts his log at dark and commences drumming about three o'clock in the morning, and keeps it up until ten or eleven A. M. ANTLER.

AN ARMADILLO IN TEXAS.

NEW ROCHELLE, N. Y., March 23, 1879.

EDITOR FOREST AND STREAM:

I inclose you a clip from the San Antonio *Express* concerning the armadillo:

"One of the greatest curiosities ever opened to the free gaze of the San Antonion public was an armadillo, which was hauled about the streets a few days ago on a countryman's wagon. The gentleman found the animal while cutting wood in Atascosa County, about thirty miles from San Antonio, a few days ago, and brought it in upon a load of wood, with the intention of selling it to some curiosity seeker. The price demanded was fifty dollars. Hundreds surrounded his wagon in different parts of the city to get a view of the strange animal, whose business in this part of the world, and how it came here, being questions excitive of wonderment. The armadillo derives its name from being armed with a bony shell, into which, when attacked or in fear, it draws itself in the form of a ball, presenting an impenetrable armor to any assailant. The proper home of the armadillo is South America, though in some portions of Mexico it has been found. Burrowing in the earth, like most animals which do so, its travels are in the night, when it goes forth in search of food, subsisting chiefly on fruits, roots and insects. Ants are a delicacy to its taste. The people of South America, in those regions where the armadillo abounds, use the flesh of the animal as food, and hunt it for this purpose. The specimen brought to this city was the first ever found in Western Texas, so far as we know of."

In so far as I know, he is the first stranger of the kind which has been found within the limits of the United States. I never heard of one in Texas during the many years I roamed over her territory, nor in Florida while scouring that country after the "red-skins." I think this lonely armorclad Don Quixote deserves a nook in your columns. Query: How did he or his ancestors cross the Rio Grande? *Quien sabe?*

H. W. MERRILL.

HERRINGS.—"There are two species of alewives which we have been confusing under the names *Pomolobus pseudoharengus*," said Prof. Goode to us lately. The branch herring of the Potomac, the alewife of New England, the gaspereau (probably) of the Provinces, distinguished by its large eye, high body, high fins and the white lining of the belly; the *Clupea æmalis* of Mitchill (*Pomolobus æmalis* (Mitchill) Goode & Bean) is quite different from the glut herring of the Potomac, the blue-back, kyack or saw-belly of New England, the *Clupea æstivalis* of Mitchill (*Pomolobus æstivalis* (Mitchill) Goode & Bean), which has smaller eyes, lower body and fins and black peritoneum. The former comes before the shad; the latter a month or six weeks later.

DR. MERRIAM'S PROPOSED WORK.—We take pleasure in calling the attention of ornithologists and ornithological collectors to Dr. Merriam's proposed work on the Birds of New York, the plan of which we publish in our Natural History columns. There is eminent and pressing need of just such an ornithology, for, since the time of Dekay, no general work on the birds of this State has been published. We are glad too that the work is to be in such competent hands. Dr. Merriam, who has long been known to working ornithologists, gained a wider circle of readers when he published his admirable "Review of the Birds of Connecticut" in 1877, which is a veritable model of its kind. We are sure that all who are interested in birds will be glad to offer what help they can in a matter of such general interest.

THE LAST SNAKE STORY.—Newspaper men, we believe, always regard snake stories with a considerable degree of suspicion—and rightly so. It seems, however, as if there must be some foundation for the most recent one which appeared, some time since, in the columns of "our esteemed contemporary," the *World*. According to the account, as it appears in the daily papers, a gigantic snake, over twenty feet in length, had for several years previous to 1875, inhabited a swamp near South Canaan, Conn., and by its frequent appearances had greatly excited the inhabitants of the vicinity. One or two attempts were made to capture it, without success, and about four years ago it disappeared. On Saturday, February 15, however, its remains appear to have been found, and if they have been preserved, as is said to be the case, there will be no difficulty whatever in deciding to what species the monster belonged. We should be glad to know where the bones were sent for identification. The account of its discovery is as follows:

On Saturday last two men named Kelly and Smith, both well and favorably known in the neighborhood, went into the swamp with a sled to get a load of wood. After a little while they came to a large buttonwood tree which had fallen to the ground. They discovered it was hollow, and in order to handle it easily they attempted to saw it up. They had sawed nearly through one part when suddenly the saw grated as though it had struck a stone. Thinking that it was a curious place to find a stone they at once went to work to investigate. They plied their axes, and by dint of hard labor split the tree, when to their astonishment the obstacles which the saw had struck proved to be bones. Then they opened the tree as far as they could find bones, some twenty-one feet, and the remains proved to be those of the monstrous reptile so often seen but never captured. The tail of the snake was found imbedded in the upper part of the tree, and both men believed he went in backward. It is believed that the last time he was chased, some four years ago, he sought refuge in this tree and never came out again. The bones and other remains have been preserved and will be sent to the Society of Natural Science, together with a history of the case.

FOX LITTERS—*Amsterdam, N. Y., May* 6.—One day last week I dug out, and have them now, eight young foxes from one burrow. Is not this an unusually large litter? They are for sale. CHAS. L. FERGUSON.

ANS. Yes, the litter is large, but our old friend Wm. R. Schaeffer, of Boston, showed us last week a litter of 10 fox cubs which he had dug out of a hole. The little fellows were very playful and cunning, and attracted much attention at the Dog Show. She foxes usually bear four or five cubs at a litter.

NEBRASKA BIRDS.—I send you to-day a couple of heads for classification. The long-billed one, which I take to belong to the curlew family, was the most beautifully marked bird that I ever saw. Its wing primaries were a lovely bronze green; coverts, green, purple and damask; its back was a mixture of black, green and purple, with an indescribable bronze sheen when viewed in the sun; its breast and whole under parts were about the color of the head and neck of a canvasback; and, to conclude, it was delicious eating. The other bird was the same color as the head sent—slate on the back; under parts white. They were shot by Mr. Bruntou, superintendent of the mill and mines in this place, who is an enthusiastic and an experienced sportsman; but he is unable to name them, and it is chiefly at his solicitation that I forward them to you. Hoping that you may "live a thousand years and your shadow never grow less," I remain,

Silver Peak, Nevada, April 26, 1879. D. S. LIBBEY.

The head first mentioned is that of the glossy ibis, apparently, (*Ibis falcinellus var. ordii*), the other that of a night heron (*Nyc-tiardea grisea var. navia*).

UNUSUAL IN VERMONT.—*Ferrisburg, Vt., May* 5.—*Editor Forest and Stream:* One of our trappers, R. N. Preston, caught in one of his muskrat traps in Little Otter Creek, on the 28th of April, a Florida gallinule, answering exactly to the description given in Wilson and Buonaparte's ornithology, except that it was two inches shorter, had not the conspicuous white on the flank, nor the frontal plate so wide, it being less than ½ inch in width. As it seems rather uncommon to find this bird so far North, I thought this instance of its capture here might be of interest to some of your ornithological readers. I heard of one similarly taken here a few years ago, but never saw one before. The purple gallinule is not uncommon here. The work above named says that the Florida gallinule (*Gallinula galeata*) is sometimes found as far North as Albany, N. Y. R. E. ROBINSON.

ANTS AS WEATHER PROPHETS.—*Editor Forest and Stream:* This country is wonderfully productive of insects, especially red or brown ants, and in many places the ground seems to be full of these indefatigable little workers. Near our residence is a small piece of low, boggy ground, which is generally dry except during heavy rains, and I have frequently seen these little bogs literally swarming with ants. While passing over this ground one warm, pleasant morning, I observed what appeared to be a reddish streak or stripe, not unlike a two-inch wide ribbon, lying close to the ground, having several crooks and curves, and leading from the bog to higher ground, ending in a heap of rubbish a distance of perhaps twenty feet. On a close examination this dark stripe proved to be a moving mass of small red ants, all hurrying one way and making all possible speed; no stragglers seen out of this uniform strip, which seemed to contain millions. After watching this extraordinary exodus for half an hour, the rear end began to shorten until the last travelers disappeared in the heap of rubbish, at which time large drops of rain began to fall, although a half-hour before the sky was clear and no visible signs of rain. But it had now become clouded, and the rain soon fell in torrents, and in two hours the bog was mostly submerged. ANTLER.

Piney Falls, Tenn., April 13.

A PTEROPOD.—I have found specimens on the beach at low water of a curious marine animal, shaped like a violet leaf; rather thick, and covered with small tubercles; it is rooted to the mud by a stalk, like that of a plant, but it has evident animal life; size, from one to two inches in diameter; color, reddish brown. The most curious quality, however, is that the creature, while alive, possesses the power of giving out in the dark when touched or irritated, flashy or phosporesent light, like that of a fire fly. Perhaps some of your scientific correspondents can give the name of this animal. S. C. C.

Halifax Inlet, Fla., March 28.

The Kennel.

THE BOSTON DOG SHOW.

THE time of our going to press last week permitted us only to allude briefly to the opening of the second annual dog show held by the Massachusetts Kennel Club. The show was in many respects superior to that of the previous year. In the first place, instead of a building intended for business purposes, and reached through a dingy alley, the committee had secured the Music Hall, one of Boston's favorite places of resort. The building itself is well adapted for the purpose of a dog show, having a wide stage and galleries for the display of sportsmen's goods and small dogs, and a hall beneath, where the judging was done in public. The judges for sporting dogs were Messrs. Chas. H. Raymond, J. M. Taylor and Dr. Wm. Jarvis, and for non-sporting dogs, Mr. Jas. D. England, of Philadelphia. Of course there was the usual amount of dissatisfaction at some of the decisions made, particularly in the sporting classes, but this is a matter inseperable from dog shows. In some cases our sympathies were with the exhibitors, and in some they were not, as will be seen by our synopsis of the judging. We think the practice adopted at this show of ignoring a dog's European record, and confining the champion classes to previous winners of two first prizes in this country, a wrong one, as was shown in the fact that in no champion class were there more than three competitors, and in most of them only two. The details of the show were

most admirably managed, Mr. Lincoln's long experience being all brought to bear, and his corps of assistants of an exceptionally able character and appropriately uniformed. The committee of the club were exceedingly active, and at the same time very attentive to visitors, and our own thanks are due to them for many courtesies extended. One event, which was a damper to the spirits of many, was the unfortunate illness of Dr. E. J. Forster, the Secretary of the Massachusetts Kennel Club, who was taken with a severe attack of pneumonia on the Saturday previous to the show. We are happy to say, however, that at last accounts the Doctor was improving. The exhibition of guns and sportsman's goods was an excellent one, and appeared to fairly divide with the dogs the attention of visitors. Mr. W. R. Shaefer had a very fine supply of guns of his own manufacture, and also had a cage containing ten fox cubs, all of one litter, a most remarkable and unusual occurrence, and one possessing, perhaps, more interest for the fox hunter than the farmer. Messrs. Wm. Read & Sons, Parker Bros., and the American Arms Co. all had fine displays.

THE DOGS.

Lark being absent, Mr. Smith had a walk-over in the class for English setter dogs, the prize being given to his Paris over Leicester. Paris was in the pink of condition and looking handsome as a picture. Mr. Smith also won in the bitch class with Dart, her solitary opponent, the orange and white bitch Di, being wrongly entered, as having one first at only one recognized show, she was entitled to compete in the open class. The imported English setter dog class was, as it always is, a remarkably fine one. We believe that not even the most bitter opponent of the "blues" will deny that they possess beauty of coat and form in this respect, and the ten dogs brought before the judges in this class would be hard to beat. The contest was soon narrowed down to Dash III. and Coin, the former, after much consultation and tape measuring, receiving the award. We gave our impressions of Dash in the report of the Philadelphia show. Coin pushed him very close, but was in better show condition, his coat being almost perfect, and he carried himself much more gaily in the ring. Another very handsome dog in this class, and one not unlike Coin in color and appearance, was Royal Duke, who received a V. H. C. Handsome little Lclaps, who won first here las year, was H. C., and Warwick, a dog with a remarkably bad stern, was C. The bitch class was not as good as the other, the Harvard Kennel Club being again successful in winning first with their imported Countess II. Second went to Mr. Gauses Ollie, and the same owner's Belle received the only V. H. C. The only prize in the puppy class went to Nix, a black, white and tan, by Gladstone out of Pearl.

The native English setter class was a very fair one, yet the judges were very chary of notices, nor can we say that we agreed with their decisions. First went to Mr. Orgill's Ray, by Pride of the Border out of Dinnity, and second to Fred, an undersized black, white and tan dog, by Rink out of Mollie. Daniel Webster, last year's winner, and a magnificent specimen of an English setter, was only V. H. C. We preferred him to either of the others. Another excellent dog unnoticed was Mr. Hammond's Put, bred from Ethan Allin's old stock. If Dash III. is the type of an English setter Put should be also, as in general conformation, measurement, etc., he is almost his counterpart, whereas Ray is totally different, being lighter, longer coupled and with a narrower head. In the bitch class first went to Mell, a handsome blue belton, owned by Mr. L. F. Whitman, of Detroit. The handsome Abbey took second. In the puppy class three were noticed out of the twenty entered, and strange to say, each one of the three were sired by Gladstone out of different bitches.

In the champion class for red Irish setters, as Berkley and Elcho were not competing, the contest lay between Rory O'Moore, Ben and Race. All three looked superbly, but Ben had the best of it in coat and color, and, we think, deservedly won. In the bitch class Fire Fly had but one competitor. In the open imported class Derg was again victorious, as he could not well help being, second going to a new candidate, Don, owned by Mr. Gause of Wilmington. Little Flora was first in the bitch class, and a beautiful bitch she is for a small one, with a neat head and capital shoulders and chest. Second went to the Toledo Kennel Club's Doll by Rufus. A very handsome bitch in this class was Captain Emerson's Ruby, purchased from Mr. Macdona. There were some very handsome puppies shown, the winner, Dash-Elcho, and his litter brother, Claremont, belonging to Mr. Pope, being remarkably promising. There were also a brace by Mr. Macdona's Rover, exhibited by Capt. Emerson—hardy, workmanlike dogs, possessing the peculiar head of their sire. It might be worthy of note that, with the exception of this brace and a puppy by Pat, every entry in the class was sired by Elcho.

With one or two exceptions, the native Irish class was a poor one. The first prize winner among the dogs, Arlington, is well coated and colored, but struck us as being rather light behind. Mr. Everett Smith's Cale, who took second honors, was a better built dog, but lighter in color. We are inclined to think that judges lay too much stress on color—which, in "Stonehenge's" scale, scores but 5 points—and ignore form. In the bitch class the Baltimore Kennel Club's Philadelphia purchase, Flirt, was again first, and Mr. Everett Smith's grand bitch (again beaten by color) Cora II. was next. The Gordons were good. In the champion classes, Rupert, whose tan is altogether too dark and not well defined on the muzzle, beat Trump, and Nellie, the New York winner, had a walk-over, as Mr. Godeffroy's Beauty was absent. In the open class Grouse, of course, won; but the winner of so many prizes seemed out of place in an open class. The winner of the second prize, Duke of the East, is out of champion Lou by Mr. Webb's Duke, and is a fine, rangey dog, with an excellent head and well defined markings, although his coat is not quite what it should be, being a little too wavy behind. He is owned by Mr. Davis, of Providence. Among the dogs in this class which attracted our attention was Mr. Brownell's Dash (Doane's Tom-Chloe), and also Sam, of the same litter, we believe, owned by Mr. Mudge, of Boston. In judging Gordon setters, particularly since "Stonehenge's" standard has been adopted, we believe that sufficient stress is not laid upon the markings, a point upon which great stress is laid by the authorities. In the bitch class Mr. Lawrence Curtis' beautiful bitch Bess was deservedly first, and Pansy, bred from the stock of Mr. Howe, of Princeton, N. J., second.

There were but three entries in the champion pointer class, and the two little lemon and whites, Sefton and Rush, had but small chance against the great, slashing Bow, a dog who has improved very much since we saw him in New York in '78, and who is now a magnificent specimen of the large pointer. It is hardly fair to judge large and small pointers together, even in champion classes. Three bitches contended, and the award went to Rose over her half-sister, Clytie, and the black, Gillespie's Fan, the New York winner, and now the property of Mr. Barker, of Boston. Rose is a beautiful bitch, and so is Clytie; but judged strictly by points, we believe Fan the equal of either. In the open class for large dogs the St. Louis Kennel Club's Faust, recently imported, excited general attention and, we may say, admiration. He is a grand dog, very much like Bow in appearance; not so good a head, being rather throaty, but better in the loin and hind quarters. They are a grand brace of dogs, and one that any owner might feel proud of. It was scarcely right, however, we think, for Faust, a winner of first prize at Birmingham, Crystal Palace and Alexandra Palace, to compete in an open class. Rex, the New York winner, was second, and deservedly so. There were a number of good dogs in this class. Mr. Coffin's Rake II., Mr. Hammond's Brock and Mr. Corcoran's Rattler were all fine specimens of the large pointer, but only the first named was noticed. In the bitch class the black Princess, big with whelp, but with a coat like satin, was first, and Maud, one of the get of Strong's Pete, was second. In the small dog class Pete, Jr., a black dog by old Pete, was placed first, but we could not concur in the decision. We thought Snipe, by Sensation out of Belle, a much more deserving dog, and also Chiswick (Flake-Lilly), and also superior to the second prize winner, Dash; but only the winners were noticed. In the bitch class, another of the St. Louis Kennel Club's importations, Zeal, a liver and white, was first, and Fly, a bitch we thought inferior to either Mr. Orgill's Ruby or Crystal, was second. Absentees reduced the puppies to half a dozen, the best of which was the New York winner, Lola (late Beauty), by Sensation out of Juno (the dam of Flake and Whisky), who repeated her victory. A very handsome lot of puppies not competing, and by Snapshot out of Queen, she by Sensation out of Juno, were shown by J. C. Lewis, of Providence.

There were but two Chesapeake Bay dogs shown, the Baltimore Kennel Club taking first with Rover. The Irish water spaniel class was quite a large one, but the judging, we think, erroneous. First prize was well placed when it went to Mack, the prize winner at New York, but second went to a dog with a white breast and poor coat and top-knot. A much better selection would have been Judy, who has been a winner, we think, for two years in New York, and is orthodox as to the required points. In the retrieving spaniels, other than Irish, first prize was well bestowed on Sport, exhibited by T. M. Aldrich, of Providence. Cockers were a fair class, and first went to a little beauty, with straight coat and perfect ears, Gip, exhibited by D. P. Bosworth, of New York. In the class for field spaniels of any other breed, Trimbush was the only Clumber exhibited, and took first, second going to a black dog, rather too large for a cocker, yet a workmanlike fellow. Many of the dogs in this class belonged with the cockers, if they had any status at all. Foxhounds were not good, although Ethan Allin pointed out to us one dog that he said was his for choice, but it only got second. The first prize winner only wanted a few wrinkles to make him a fair English bloodhound, as depicted on the cover of "Stonehenge's" new book. There were but four beagles, and Dodge & Baker's (of Detroit) pair again won.

Fox terriers made a very handsome show, and we think were well judged. Rattler was again first, and Vixen would probably have been second had she not been protested against as having the mange, a protest which, being supported by the veterinary surgeon, could only be sustained. The second prize winner, Deacon Rasper, is a good little dog, with a better jaw than we usually see. Mr. Lawrence's Paulo was also a good one, and so was Mr. Winsor's Turk. Taps, one of Gamester's get, has a good body and head, but is too far from the ground. The mastiff class was a small one, and judging from stall appearances alone we should have changed the positions of the first and second. The St. Bernard class was a very large one, comprising 26 entries of good quality. Mr. Haines' pair, Don and Harold, were again changed about, Don taking first while Harold was content with a V. H. C. The mixing the rough and smooth-coated together is a bad plan, and increases the difficulties of the judge. In the bitch class, first went to Fanny, a yellow and white, and second was withheld. There were four Newfoundlands, three of whom were fair. The "Siberian or Ulms" we leave no sympathy with, and we believe the biggest and ugliest brute took the prize.

The collies were fair. In the bull dog class there were but four entries, and the unfortunate Jennie having again been rescued from the bull terrier class, where she usually finds herself, was placed first. The bull terrier class was a large one, and contained some very fine dogs. The contest lay between Al. Watts' Grab, and Ned, a capital dog shown by E. C. Davis, of Providence, R. I. We fancy it must have been the slight brindle patch on the side of Ned's head which caused the judge to put him second, as in other respects he seemed to us to be slightly ahead of Grab. The terriers and toys were about as usual, the only noteworthy thing being the changing of places (Philadelphia) of the Yorkshires Charlie and Ben.

The judging of the specials, especially the one in which the prize was $500, attracted considerable attention. As we imagined would be the case, this was divided into four prizes with the consent of the exhibitors, and $125 each went to the English setter Dash III., the Irish setter Ben, the Gordon setter Grouse and the pointer Faust. A list of the other winners of special prizes will be found below. The following is a full list of the awards:

THE AWARDS.

Champion English Setters—Dogs—1st, Paris, L H Smith, Strathroy, Ont. Bitches—1st, Dart, L H Smith, Strathroy, Ont.

Imported English Setters, or their progeny of the first generation—Dogs—1st, Dash III., Harvard Kennel Club, Cambridge, Mass; 2d, Coin, John E Long, Detroit, Mich: V h c, Royal Duke, H S & S C Magraw, Colora, Md; H c, Hamlet, Harvard Kennel Club, and Leisps, Franklin Sumner, Milton; C, Warwick, H W Gause, Wilmington, Del. Bitches—1st, Countess II., Harvard Kennel Club; 2d, Ollie, H W Gause, Wilmington, Del; V h c, Bele, H W Gause, Wilmington, Del; H c, Rose, J L Dodge, Detroit, Mich; Vesper, H J Terry, Palmer, Mass; C, Gipsy Girl, A D White, Boston. Puppies—1st, Nix, Waldo E Sessions, Worcester, Mass.

Native English Setters—Dogs—1st, Ray, Edmund Orgill, New York; 2d, Fred, Avery W Gove, Boston; V h c, Daniel Webster, George A Thayer, Boston; H c, Grouse, David P Waters, Salem, Mass; C, Jocko, Edward King, Taunton, Mass. Bitches—1st, Nell, L F Whitman, Detroit; 2d, Abbey, E C LaMontagne, New York; V h c, Bessie, Homer B Richmond, Lakeville, Mass. Puppies—1st, Beacon, Baltimore Kennel Club, Baltimore, Md; Blast, H W Gause, Wilmington, Del; Gypsy, Avery W Gore, Boston.

Champion Irish Setters—Dogs—1st, Ben, G W Ogilvie, Des Moines, Iowa. Bitches—1st, Fire Fly, H W Gause, Wilmington, Del.

Imported Irish Setters—Dogs—1st, Derg, Baltimore Kennel Club, Baltimore, Md; 2d, Don, H W Gause, Wilmington, Del; V h c, Pat, W Talman, Providence, R I; H c, Bob, E F Stoddard, Dayton, Ohio; Elcho III., A Nelson, Portsmouth, N H. Bitches—1st, Flora, Lincoln & Hellyar, Warren, Mass; 2d, Doll, Toledo Kennel Club; V h c, Ruby, Capt A L Emerson, York, Me; H c, Friend, E F Stoddard, Dayton, Ohio; C, Kelpie, H W Gause, Wilmington, Del. Puppies—1st, Dash Elcho, J L Lock, Portsmouth, N H.

Native Irish Setters—Dogs, Arlington, Lincoln & Hellyar; 2d, Cale, Everett Smith, Portland, Me; V h c, Frank, Thomas Marshall, Jr, Cambridge; H c, Don, A L Tribble, Plymouth. Bitches—1st, Flirt, Baltimore Kennel Club; 2d, Cora II., Everett Smith, Portland, Me; V h c, Kate, H B Plumer, Boston. Puppies—1st, Florence II., Baltimore Kennel Club.

Champion Gordon Setters—Dogs—1st, Rupert, Goldsmith Kennel Club, Toledo. Bitches—1st, Nellie, S W Rodman, Boston.

Gordon Setters—Dogs—1st, Grouse, Toledo Kennel Club; 2d, Duke of the East, H A Davis, Providence; V h c, Dash, O T Brownell, New Bedford; H c, Dash, W H Leighton Jr, Marlborough, Mass; C, Sam, A C Mudge, Boston. Bitches—1st, Bess, Laurence Curtis, Boston; 2d, Pansy, F L Gay, Providence; H c, Bessie B., H L Kinsley, Stoughton, Mass; C, Dinah, F B Fay, Boston. Puppies—1st, Tom, Ellertan Lodge Dorr, Chestnut Hill, Mass.

Champion Pointers—Dogs—1st, Bow, St Louis Kennel Club. Bitches—1st, Rose, Edmund Orgill, New York.

Pointers, over 55 lbs—Dogs—1st, Faust, St Louis Kennel Club; 2d, Rex, Fisher Howe, Brooklyn; H c, King, M G Fuller, Worcester, Mass; C, Rake II., J W Coffin, Providence, R I. Bitches—1st, Princess, George G Barker, Boston; 2d, Maud, Walter E Miller, West Meriden, Conn; C, Psyche II., Fuller & Lyman, Springfield, Mass.

Pointers, under 55 lbs—Dogs—1st, Pete, Jr., E C Alden, Dedham, Mass; 2d, Dash, A M Tufts, Lynn, Mass. Bitches—1st, Zeal, St Louis Kennel Club; 2d, Fly, James S Burbank, Cumberland, R I; V h c, Ruby, Edmund Orgill, New York; H c, Crystal, H S Masgraw, Colora, Cecil Co, Md. Puppies—1st, Lola (late Beauty), J W Coffin, Providence, R I.

Chesapeake Bay Dogs—1st, Rover, Baltimore Kennel Club; 2d, Foam, Charles T Curtis, Boston.

Irish Water Spaniels—1st, Mack, Daniel D Lawlor, Mt Vernon, N Y; 2d, Sport (formerly Jerry), R W Waterman, Athol, Mass.

Retrieving Water Spaniels, other than Irish—1st, Sport, T M Aldrich, Providence; 2d, Fuss, William E Wall, Cambridge, Mass; H c, Tubby, R W Waterman, Athol (entered by mistake in class 50).

Cocker Spaniels—1st, Gip, D P Bosworth, New York; 2d, Judy, O M Drake, Ellsworth, Me.

Field Spaniles of any other breed—1st, Trimbush, William M Tileston, New York; 2d, Charlie, W H Canterbury, Boston; H c, Prince, Wesley Pearce, Boston.

Fox Hounds—1st, Ino, E B Tinkham, New Bedford, Mass; 2d, Tyler, Henry Puvogel, New York.

Beagles—1st, Rattler, Dodge & Baker, Detroit; 2d, Bell, same exhibitor; H c, Charm, Peter B Bradley, Boston.

Fox Terriers—1st, Rattler, Thomas D Burke, New York; 2d, Deacon Rasper, Frank B Fay, Boston; V h c, Turk, A Winsor, Jr, Providence; H c, Nettie, Prescott Lawrence, Groton, Mass; C, Paulo, same exhibitor; Taps, George E Elliott, Keene, N H.

Greyhounds—1st, Gizela, E W Cushing, Boston; 2d, Skip, Al Watts, Boston.

Scotch Deerhounds—1st, Cid, J R Webster, East Milton, Mass; 2d, Lupus, same exhibitor; V h c, Maida III., Sigourney Butler, Quincy, Mass.

Mastiffs—1st, Jack, Robert Gage, Boston; 2d, Rome, George A Salmon, Dorchester, Mass; V h c, Duke, Waldo E Sessions, Worcester, Mass.

St Bernards—Dogs—1st, Don, J P Haines, Mamaroneck, N Y; 2d, Boxer, G F Geer, Concord, Mass; V h c, Tiger, P W Walker, Exeter, N H; Harold, J P Haines, Mamaroneck, N Y; H c, Lion, B Armstrong, Allston, Mass; Martin, J P Haines; C, Carlo, H Sleep, Cambridge, Mass. Bitches—1st, Fanny, C Hillbach, Boston; 2d, withheld.

Newfoundlands—1st, Rover, N Herthel, Boston; 2d, Rover, G B Witler, Worcester; H c, Bachelor, same owner.

Siberian—1st, Nero, Al Watts, Boston; 2d, Flora, C Muller, Cambridge.

Dalmatian—1st, Sport, G Curtis, Boston; 2d, Zach, J Cambell, Providence.

Shepherd Dogs or Collies—Dogs—1st, Jack, H S Crowell, Marlborough; 2d, Scott, A A Fowler, Danvers; V h c, Bruce, F A Taft, Dedham; H c, Pedro, F P Dearborn, Boston; C, Rob, F D Montgomery, Boston. Bitches—1st, Jessie, Mrs E Ward, Cambridgeport; 2d, Gipsy, E Ward, Cambridgeport; H c, Fanny, R Foster, Boston; Gamey, same exhibitor.

Bulldogs—1st, Jennie, Thomas D Burke; 2d, Daisy, Edwin C Bates, Boston.

Bull Terriers—1st, Grab, Al Watts, Boston; 2d, Ned, E C Davis, Providence, R I; H c, Paddy, Prescott Lawrence, Groton, Mass; C, Steel, James Burns, Boston.

Pugs—1st, Bijou, Henry W Kendall, Newton, Mass; 2d, Punch, Miss Alice P Bedlow, Newport, R I.

Black and Tan Terriers—1st, Ida, M Gumming, Boston; 2d, Rip Van Winkle, W E Thirlwall, Boston.

Skye Terriers—1st, Sancho, Al Watts, Boston; 2d, Ben Butler, G W Borrowscale, Boston; C, Flossie, Mrs G M Gale, Boston.

Rough-haired Terriers—1st, Nellie, Daniel D Lawlor, Mt Vernon, N Y; 2d, Tease, F M Ware, Boston; C, Fannie, Meer Marsh, Boston.

Yorkshire Terriers—1st, Charlie, T D Burke, N Y; 2d, Ben, T Kallagher, N Y; C, Mab, J P Barnard, Boston.

Toy Terriers—1st, Prince, T Kallagher, N Y; 2d, Chi Chie, Mrs T D Boardman, Boston.

Bleuheim, King Charles or Japanese Spaniels—1st, Daisy, S K Hindley, Worcester; 2d, Charlie, same exhibitor, V h c, Jumbo and Lady (with five pups), same exhibitor; C, Yokhia, Capt Gruff, East Boston.

Italian Greyhounds—1st, Neppy, Mrs Annie M Kramer, Philadelphia; 2d, Tiney, James R King, South Boston; H c, Fawn, A Victorson, Boston; Dandy, George W Poor, Boston; C, Beauty (with three pups), C Beary, Somerville.

The prize for the best exhibit of yard-broken dogs for field purposes was awarded to the English setters Victor Hugo, Antoney, Roxey and Desdemona, exhibited by D C Sanborn, of Baltimore, Mich.

SPECIAL PRIZES.

For the best setter or pointer, $500 cash—Divided between English setter Dash III, Irish setter Ben, Gordon setter Grouse and pointer Faust.

For the best setter or pointer (dog or bitch), a handsome oil painting of a sporting subject, value [$350—Paris, L H Smith, Strathroy, Ont.

For the best native or imported English setter dog, a fine breech-loading, double shot-gun, value $200—Coin, John E Long, Detroit, Mich.

For best native or imported English setter bitch, 25 pounds of powder, value, $25—Dart, L H Smith, Strathroy, Ont.

For best brace of English setters, a pair of gold-mounted revolvers, pearl handles, value $50—Dash III. and Countess III., Harvard Kennel Club, Cambridge.

For best native or imported Irish setter dog, Fox's breech-loading double shot-gun, value $150—Race, E C Waller, Chicago.

For best native or imported Irish setter bitch, case of powder, value $25—Firefly, H W Gause, Wilmington, Del.

For best brace of Irish setters, Bancroft's "History of the United States," value $40—Bob and Friend, E F Stoddard, Dayton, Ohio.

For best Gordon setter dog, Daly breech-loading shot-gun, value $100—Rupert, Goldsmith Kennel Club, Toledo, Ohio.

For best Gordon setter bitch, collection of "Upland game birds and water fowl of the United States," value $25—Nellie, S W Rodman, Boston.

For best brace of Gordon setters, silver vase, value $75—Grouse and Judge, Toledo Kennel Club, Toledo, Ohio.

For best pointer dog, W & C Scott & Sons breech-loading double shot-gun, value $150—Bow, St Louis Kennel Club.

For best pointer bitch under 50 lbs, a portrait head of the winner, to be painted and presented by F W Rogers, value $100—Clytie, St Louis Kennel Club.

For best brace of pointers, a collection of thirty heliotype engravings, in portfolio, of Sir Edwin Landseer's paintings, value $35—Faust and Bow, St Louis Kennel Club.

For best brace of pointer dogs under 18 mos, case of ornamental birds, value $20—Dash and Tramp, A M Tufts, Lynn.

For best spaniel, dog or bitch, any breed, a Mole's glass ball trap—Charlie, W H Canterbury, Boston.

For best fox terrier, dog or bitch, portrait head of winner, to be painted and presented by F W Rogers, value $50—Rattler, T D Burke, New York.

For best St Bernard, dog or bitch, a gold and silver medal, value $25—Don, John P Haines, Mamaroneck, N Y.

For best bull terrier, dog or bitch, a cash prize of $25, contributed by fanciers of this breed—Grab, At Watts, Boston.

For best Yorkshire terrier, dog or bitch, a handsome silver collar, value $25—Charley, T D Burke, New York.

MR. VON LENGERKE'S KENNEL.—Mr. Justus Von Lengerke, of Hoboken, N. J., shipped on Saturday last per steamer Mosel the native English setters Jersey Fly and Jersey Hawk. They go consigned to Mr. W. Caron, Rauenthal, Germany, and are to be exhibited at the international dog show, which opens at Hanover on the 22d inst. Mr. Von Lengerke has favored us with a very handsome series of photographic portraits of these two setters, and also Jersey Duke and Jersey Dash. They are capitally done, and represent the dogs in good position. Jersey Duke is a magnificent specimen of the native English setter, and we regret that he was not at Boston to compete with some of the blue-bloods.

This kennel claims the following names: Jersey Hope for an orange and white setter bitch whelped December 9, 1878, by Jersey Dash, sire of Jersey Duke out of Jersey Belle, sister to Jersey Fly; Jersey Lightning for a black and white dog puppy, and Jersey Maid and Jersey Idol for two bitch puppies, all whelped February 21, 1879, and by champion Jersey Duke out of Jersey Fly. Little Hope, five months old on the 9th inst., pointed her first snipe (a wounded one) on the Wednesday previous, her *debut* on the meadows.

RAILROAD CHARGES ON DOGS.—Now that the following order has been issued on the New York Central and Hudson River Railroad, it would be well for owners of dogs who have to travel by that line to bear it in mind:

"Complaint is made that train baggagemen overcharge passengers for taking care of dogs. This company makes no charge for transportation of a dog when accompanied by a passenger with a passenger ticket, and as dogs are not permitted in passenger coaches, baggagemen are at liberty to receive a gratuity for their attention to them (at request and risk of owner), but will not be permitted to *demand* more than $1. J. TILLINGHAST, Gen. Supt."

THE LEONBERG DOGS.—Regarding these dogs *Land and Water* has the following:

Generally speaking the animals are thoroughbred mongrels, possessing no good qualities other than those which are to be found in much greater perfection in our own breeds. Such, in all probability, is the Leonberg, about which so much has of late been written. I believe he is simply a big mongrel, a combination of Newfoundland, mastiff and deerhound, or some other incongruous mixture.

Mr. Sterling, the owner of the only specimens of this breed, as far as we are aware, in this country, comments upon it in a letter to us, as follows:

The allusion made by the writer of the above article to the Leonberg dog is so manifestly unjust that I should be pleased to have you correct it. My dogs were imported direct from the kennel of Baron Essig, and, I can assure you, are the admiration of the best judges in Philadelphia. Should the writer in *Land and Water* favor us with an article on men instead of dogs, he might express himself as follows: "Such, in all probability, are the Americans. I believe they are simply mongrels, being a combination of Irish, Dutch and Italian, or some such incongruous mixture." W. E. STERLING.
Philadelphia, May 9, 1879.

FOREIGN SUBSTANCE IN DOG'S STOMACH.—Mr. F—— had a fine setter dog. While playing in a hen-house the dog swallowed a china nest-egg. Since then (three weeks) the dog has frequently attemped to expel it by vomiting, and the foreign body still remains. Question: What shall be expected? Will it pass per via *naturalis*, or remain encisted, or will the dog die? A surgeon in the vicinity has proposed gastrotomy, as in vivisection, supposing the egg to remain in the stomach as an irritating body. GREENWOOD.

If the egg remains in the dog's stomach or intestines he will probably die. Our correspondent should have stated whether the dog continues to eat and digest his food as usual.

THE LAVERACKS—*Sunderland, April* 18.—I am afraid that you Americans will ruin your breed of setters by the way in which you are crossing. You seem to be gradually falling into the same error as many of the English breeders, and it will, I have no doubt, end in disappointment, depend upon it. The experience and advice given by the late E. Laverack is worth following. No man here has had the same amount of experience nor a tithe of the success as he. He understood the subject better than all the writers and so-called authorities put together. We have no breed of setters here worth much, outside of the Laverack blood; in fact, it is said that but for Mr. Laverack the English setter would have been extinct. I am surprised at the high prices given in your country for half and three-parts bred Laverack. The Laverack never has yet been improved by a cross. Quite the contrary, they don't require crossing, merely judicious selection; and you can breed them large if you please, but large dogs are never so good, fine or handy as the small or medium-sized ones. I have Bayley's Victor here now to use to my Daisy (dam of Fanny II., etc.). I have also a brace of young dogs, seven months old, a blue and a lemon, and could spare one, as I have a litter of five same way bred—viz., by Emperor Fred out of the late E. Laverack's Nellie (sister to Blue Belle), by Blue Prince-Cora. Price for young dog, £21.
JOHN R. ROBINSON.

BOSTON DOG SHOW.—Among the absentees at the late Boston dog show were the dogs entered by A. E. Godeffroy, Esq., of Guymard, N. Y.; J. C. Higgins, Esq., Delaware City, Del.; Mr. Morris' English setter Lark, and Messrs. Lincoln & Hellyar's Frank II.; Mr. Snellenburg's English setters Thunder and Peeress; Mr. A. Schnaebel's English setter Stanley; Mr. E. C. La Montagne's setter puppy Cremorne, and pointers Countess and Mac, and Mr. Van Wagenen's pointer Duchess.

DOG STOLEN.—Mr. Wm. Tallman, of Providence, R. I., had the misfortune about six weeks since to have his bitch Mettle stolen. She is of medium size, black and white-ticked, black head with a little white at end of nose, and white stripe nearly to top of head, about three years old, and in whelp to Dan W. (Leicester-Peeress), and was due to whelp about April 1. Sportsmen will please look out for her, and, as the puppies will show their breeding, it should be easy to find some trace of her. Any one knowing of her whereabouts will confer a great favor and be generously rewarded by communicating with Wm. Tallman, corner South Main and Planet streets, Providence, R. I.

BEAGLES.—We are frequently in receipt of letters, asking for information as to where beagle puppies can be obtained. Dr. J. W. Downey, of New Market, Md., has some for sale at the low price of $15 per pair. See his adv.

GORDON SETTER "SHOT", JR.—Mr. Richard W. Rogers has purchased from uncle Tom Jerome, the well-known old sporting gentleman of Locust Valley, Long Island, the young Gordon setter, Shot, Jr., who is the only pup out of August Belmont, Jr.'s Gordon setter bitch Norah (imported by Mr. Copeland, of Boston, and sold at show of 1878 to Mr. Belmont), by Copeland's (late Jerome's) Shot, winner of 1st Gordon prize at Minnesota show, etc. Shot was imported by Mr. Carroll Livingston. Mr. Rogers is to be congratulated, as the dog is highly bred, and is a fine ranger and good retriever, showing good nose, and well worth the high price paid.

DAVE HARTT'S MIXED BREED OF DOGS.—Every old sportsman knows Dave Hartt—down at Northport, Long Island. Dave often takes "quality" dogs to board and educate, and always gives satisfaction, we believe. When the dogs graduate, they are returned to their masters wiser and better dogs—better in flesh, disposition, deportment, and all those qualities which make hunting dogs valuable. Dave will take a five-dollar pup, and in six months make him into a $75 dog. Last spring he received into his reformatory two dogs belonging to Hon. John E. Develin, popularly known as Molly and Moyar of the Plunket strain. Molly had a fine litter of pups; about that time Dave's prize sow also littered eight well-favored and promising pigs. Dave's mouth often smacked in anticipation of roast sboat. But, as luck would have it, something like old Pharaoh's experience happened to him. Pharaoh dreamed that his lean kine ate up his fat and well favored kine; but Dave's dream was a positive reality, for the old sow actually devoured all the little pigs save one! In a brief time the sow began to suffer inconvenience because the appetite of the surviving pig was unequal to the copious supply of maternal nutriment. Whereupon, for some unaccountable reason, Molly's pups forsook their dam and commenced to suckle the sow. Perhaps it was from pity for the old porker's forlorn condition, or because their own maternal supply was inadequate. These are mysteries in nature which yet remain hidden.

Well, the pig and the puppies grew apace, consorting together and occupying the same kennel, until at the end of six weeks the pig had attained a weight of 50 pounds, and a size out of all proportion to his companions, so that the puppies became pigmies, as it were, in comparison. Indeed the monster not only so crowded the kennel with his great bulk as to make it uncomfortable, but began to assert his superiority by abusing the pups and usurping their prerogatives. He was not only hoggish, but bully. Hereupon a new feature began to develop. The two dogs Molly and Moyer came to the rescue—Molly, in spite of the ingratitude of her offspring who had deserted her. The blood of the whole strain of Plunketts was fully aroused, and on one auspicious day, watching their opportunity, they two set upon the base-born, ruffianly pig, and killed him.

Thus did they make their reprisal. The story of this tragic sequence ends here; but who can foresee what will be the result of this strange admixture of dog and hog? Have the puppies imbibed the nature of the beast they suckled? and will it not in time develop? This is what now troubles Dave.

MEASUREMENTS OF CELEBRATED DOGS.—We some time since reprinted from our English contemporary, the *Country*, the measurements of some celebrated dogs. We now copy the measurements and weights of all the celebrated pointers in the kennels of Mr. R. J. Lloyd Price, of Rhoolar Bola, Wales:

Wagg—Age, 8 yrs.; weight, 70 lb.; height at shoulder, 24½ in.; length from nose to set on of tail, 44½ in.; length of tail, 13 in.; girth of chest, 30 in.; girth of loin, 23 in.; girth of head, 17½ in.; girth of forearm, 8 in.; length of head from occiput to tip of nose, 10 in.; girth of muzzle midway between eyes and tip of nose, 10 in. Grog—Age, 3½ yrs.; weight, 60 lb.; height at shoulder, 25½ in.; length from nose to set on of tail, 38 in.; length of tail, 14 in.; girth of chest, 28 in.; girth of loin, 22 in.; girth of head, 16½ in.; girth of forearm, 8 in.; length of head from occiput to tip of nose, 9¾ in.; girth of muzzle midway between eyes and tip of nose, 9½ in. Eos—Age, 4½ yrs.; weight, 65 lb.; height at shoulder, 25½ in.; length from nose to set on of tail, 37 in.; length of tail, 14½ in.; girth of chest, 29 in.; girth of loin, 23 in.; girth of head, 17½ in.; girth of forearm, 10 in.; length of head from occiput to tip of nose, 10 in.; girth of muzzle midway between eyes and tip of nose, 9½ in. Dandy Drake—Age, 2 yrs.; weight, 46 lb.; height at shoulder, 23 in.; length from nose to set on of tail, 39 in.; length of tail, 12 in.; girth of chest, 27 in.; girth of loin, 17 in.; girth of head, 13 in.; girth of forearm, 9 in.; length of head from occiput to tip of nose, 9 in.; girth of muzzle midway between eyes and tip of nose, 9 in. Irrepressible—Age, 2 yrs.; weight, 58 lb.; height at shoulder, 25 in.; length from nose to set on of tail, 36½ in.; length of tail, 13 in.; girth of chest, 29 in.; girth of loin, 21½ in.; girth of head, 17 in.; girth of forearm, 9 in.; length of head from occiput to tip of nose, 9½ in.; girth of muzzle midway between eyes and tip of nose, 10 in. Belle—Age, 9 yrs.; weight, 56 lb.; height at shoulder, 24 in.; length from nose to set on of tail, 38½ in.; length of tail, 14 in.; girth of chest, 29 in.; girth of loin, 21½ in.; girth of head, 13½ in.; girth of forearm, 8 in.; length of head from occiput to tip of nose, 9 in.; girth of muzzle midway between eyes and tip of nose, 8½ in. Bow Bells—Age, 3 yrs.; weight, 52 lb.; height at shoulder, 24½ in.; length from nose to set on of tail, 36 in.; length of tail, 13 in.; girth of chest, 27½ in.; girth of loin, 21 in.; girth of head; 18½ in.; girth of forearm, 9 in.; length of head from occiput to tip of nose, 10 in.; girth of muzzle midway between eyes and tip of nose, 8½ in. Sixpence—Age, 4 yrs.; weight, 53 lb.; height at shoulder, 22 in.; length from nose to set on of tail, 37 in.; length of tail, 12½ in.; girth of chest, 27 in.; girth of loin, 23½ in.; girth of head, 15 in.; girth of forearm, 8 in.; length of head from occiput to tip of nose, 9 in.; girth of muzzle midway between eyes and tip of nose, 8 in. Ben—Age, 3 yrs.; weight, 42 lb.; height at shoulder, 20½ in.; length from nose to set on of tail, 33 in.; length of tail, 13 in.; girth of chest, 26 in.; girth of loin, 20 in.; girth of head, 15 in.; girth of forearm, 8in.; length of head from occiput to tip of nose, 9 in.; girth of muzzle midway between eyes and tip of nose, 8 in. Baston—Age, 2½ yrs.; weight, 53 lb.; height at shoulder, 23 in.; length from nose to set on of tail, 39½ in.; length of tail, 13 in.; girth of chest, 28 in.; girth of loin, 22 in.; girth of head, 18½ in.; girth of forearm, 8 in.; length of head from occiput to tip of nose, 6 in.; girth of muzzle midway between eyes and tip of nose, 9 in. Juno—Age, 2 yrs.; weight, 48 lb.; height at shoulder, 23 in.; length from nose to set on of tail, 37 in.; length of tail, 13 in.; girth of chest, 26 in.; girth of loin, 20 in.; girth of head, 13 in.; girth of forearm, 8 in.; length of head from occiput to tip of nose, 9 in.; girth of muzzle midway between eyes and tip of nose, 8 in. Nimble Ninepence—Age, 6 yrs.; weight, 48 lb.; height at shoulder, 22½ in.; length from nose to set on of tail, 35 in.; length of tail, 13½ in.; girth of chest, 25½ in.; girth of loin, 21½ in.; girth of head, 13 in.; girth of forearm, 8 in.; length of head from occiput to tip of nose, 9 in., girth of muzzle midway between eyes and tip of nose, 9 in. Beau—Age, 6 years; weight, 51 lb.; height at shoulder, 23 in.; length from nose to set on of tail, 34 in; length of tail, 13½ in.; girth of chest, 27 in.; girth of loin, 20 in.; girth of head, 16 in.; girth of forearm, 8 in.; length of head from occiput to tip of nose, 10 in.; girth of muzzle midway between eyes and tip of nose, 9 in.

THE NATIONAL POINTER AND SETTER FIELD TRIALS.—These English Field Trials were held on the Easton Estate, near Chester, over land owned by the Duke of Westminster on Tuesday, April 22, and two succeeding days. The meeting, says the *Live Stock Journal*, was one of the most unfortunate, as far as the weather on the last day was concerned and the great scarcity of birds. Rover, one of the most beautiful movers yet seen at a field trial, a grandson of Armstrong's Kate, the dam Dash II., won first in the Puppy Stakes. Mr. Bibby has every reason to be proud of so promising a Setter. The second prize went to Mr. Brown's Heiress, by Mike, a son of Mr. Macdona's Plunket, a cross that the late Mr. Laverack often expressed an inclination to try, provided he could meet with an Irish Setter of sufficiently pure a strain to put to his wonderfully perfect English Setters.

In the All Aged Setters, the first prize went to Mr. Purcell Llewellin's beautiful show bench winner, Count Wind'em, a dog of fine coat and figure, and very perfect nose. He made a grand point at some birds in a hedgerow, that more than counterbalanced many false points which seemed to result from over-sensitiveness. He won the first prize in one of the most interesting of tussels for this stake that have been seen for years. Mr. Macdona's Champion Ranger, now nearly eight years old, had to come in second to this young competitor; and yet the gallant veteran more than exceeded the anticipations his past brilliant career justified his many friends in expressing during the time he was down, running with the speed of an ostrich and the regularity of a steam-engine. He made what is so much to the public taste at these trials—a sensation point. When running down a large grass meadow with Darkie, he rushed with marvellous speed to the bottom, against which appeared a large embankment. The dog suddenly found himself hurled, by the impetus of his going, into the midst of a twelve-foot river, that ran between the embankment and the grass-field in which he was running. The impetus with which he went threw him to the opposite side. Crawling up the bank, half dazed with the shock, he scented some birds, and immediately coming to life again, dropped. The birds then rising, he plunged back into the river, swam across, and shook himself in face of the judges and spectators. Anything more unique or sensational in the matter of field trials has not been witnessed before, except when he won the all-aged stake at the Kennel Club Field Trials, when, rushing down the hill, he suddenly winded birds, and stopped, and the impetus of his going caused him to make a summersault in the air, when he landed on his back, and as stiff as starch. His four legs were seen in the air, and his neck and head turned round in the direction where the birds were soon put up, about a foot from his nose.

The Duke of Westminster's brace of pointers, Rosa and Minnie, won first prize in the braces stakes, and extra prize as best brace of pointers or setters on the field.

Viscount Downe's Duke and Dan won first prize for best brace of setters. Mr. Barclay Field's brace of pointers, Riot and Nova, won the prize as second best brace of either breed.

On the field were many well-known men who have attended field trials from their commencement, including Mr. Statter, Mr. John King, Mr Purcell Llewellin, Rev. S. East, Rev. W. J. Sergeantson, the Rev. J. Cumming Macdona, Mr. Barclay Field, Mr. W. Arkwright, and many others. But still there seemed to be a vacant "something" about the meeting. The old familiar faces of "dear old Lort," as his friends are wont affectionately to style the generous sportsman of many friends, Mr. Whitehouse, M. Lloyd Price, etc.

"SNAKE" AND "SHIM" FOOLED.—*Newark, N. J., April* 14. *Editor Forest and Stream:* Some years since, near Drakesville Station, on the Morris & Essex R. R., I heard two hound dogs coming up from the NE., and not more than one minute after hearing the dogs saw a fox running up a ditch bank through the meadow, just north of the station. The dogs came up and proved to be two moderate-sized beagles belonging to two German gentlemen who were hunting rabbits half a mile from where we first saw the dogs. Reynard was an old general, and evidently had his head stocked with mischief for such dogs as were in pursuit, since he was used to being aired often by a smart dog owned in the neighborhood, called Melo, with whom he would seldom attempt such simple tricks. His course lay directly for the mountain one sees at

the right, just after leaving the station, westward bound. On the eastern face of this mountain ridge, near the top, there is a perpendicular ledge stretching out some fifty rods, at least twenty feet high in the centre, tapering out until its extremities are lost in the earth. On top of this ledge there is a boulder of the drift period several feet high, so lodged that it overlooks the ledge and the ascent of the mountain. Reynard, after giving the dogs a little close work to figure out his track from the dry dirt on the ditch bank, like a bird sailed over the rail fence at the foot of the hill, made straight for the ledge, ran along its face around the south end and up to this boulder on the top, on which he planted himself to inspect what was transpiring with the dogs below. The beagles were plucky little fellows, and with terrible zeal to get hold of Reynard, got a fresh snuff of the trail on the mountain side, and followed up to where the fox had been sitting on the rock; but just before they got there the fox slipped off and ran around the north end of the ledge and followed around under its face, and by the time the dogs were at the north end the fox was perched on the boulder the second time. This he repeated no less than four times, getting the course well perfumed, when he jumped the track somewhere, leaving the dogs, judging from the way they were going at it, a full day's work to run the old trail around the ledge, while Reynard may have been a quarter of a mile away on another rock, watching and planning another sell. However, after nearly making a beaten path around the ledge, two portly gentlemen came puffing through, hallooing for "Zbake" and "Zhim," evidently from their manner would have consigned the fox to an extremely warm place could they have had their wish, greatly to "Zbake" and "Zhim's" relief, not, however, until they had seen "Zbake" and "Zhim" score two or three laps without once seeing any game. Comment is unnecessary. STRAIGHT-BORE.

BENCH SHOW IN NEBRASKA.—The fifth annual meeting, fourth tournament, and second bench show of the Nebraska Sportsmen's Association, opened in Omaha, May 13. Clubs from Lincoln, Tremont, Nebraska City, Flatsmouth, Falls City and Columbus sent delegations, with three Omaha clubs. About 50 pure-blooded dogs entered. The prizes are the most attractive ever offered in the State.

—Mr. N. E. Elmore's (Granby, Conn.) beagle bitch Lucy has eight very fine pups. Colors, black and tan, black, white and tan, and tan and white—all handsomely marked.

—Mr. J. B. B. Harrington's liver and white-ticked Norfolk cocker spaniel Floss (A'Court's Fan-Nash's Rake) was bred on April 29 to his solid liver cocker dog Roy (Oliver's Don-Prof. Linden's imported Nell.

—The following pointer bitches were last month bred to Messrs. Lincoln & Hellyar's champion Snapshot: Mr. E. Orgill's Rose, Mr. R. Lamb's Eef, Mr. D. G. Hartt's Flash, and owner's Gypsey. Messrs. Lincoln & Hellyar's red Irish setter bitch Flora was bred to their Dash on April 6, and on the 10th their Phantom to their imported Chance II.

—Messrs. Lincoln & Hellyar landed recently the red Irish setter Chance II., imported from Mr. A. F. Nuttall, Wicklow, Ireland. He was awarded V. H. C. at New York. They have since sold the dog, together with the bitch Jennie (Dash-Flora), to Mr. C. C. Damarin, Portsmouth, Ohio, for a large sum.

—Mr. A. A. Sampson, of Troy, N. Y., has bred his red Irish setter bitch Nora (Elcho-Fire Fly), winner of second at New York, to Rory O'Moore.

—Mr. T. A. Havemeyer, Consul-general for Austria and Hungary, has purchased the pair of dachshunde pups, Bergman and Diana, out of Franke by Waldman, from Mr. Wm. T. Goetting, said Waldman and Franke being first and second prize-winners at the late bench show.

WM. T. GOETTING, 406 Third Av.

COCKER SPANIELS IN BUFFALO.

CLIFTON, Canada, May 2, 1879.

EDITOR FOREST AND STREAM:

In your issue of April 24 is a letter on cocker spaniels from "J. B. H.," 20 East Seneca street, Buffalo, inviting "G. M. D.," of Toronto, to call and see some fine cockers from imported stock; and stating also that he could show some black and tan King Charles (so-called) from Canada. In company with an admirer of the above breed, we called at the number in question, but could find no one answering to the description. We afterward went to "Rod and Gun," kept by our esteemed friend and sportsman, S. Roberts, and from him learned that a Mr. Harrington had a couple, but, in his opinion, they were not cockers at all, but half water spaniels, being curly coated. We then went to J. Neill, the largest owner of sporting dogs, I believe, in the East, who told us the same story with regard to "J. B. H.'s" cockers, and showed us the (so called) King Charles referred to, the gentleman in question having been interviewing him on the merits of them. Being a constant reader of your valuable paper, I have merely put this in just as I found it; but I feel sure many of your readers would be as much disappointed as I was, more particularly "G. M. D.," of Toronto. If "J. B. H." does not know what constitutes a cocker, if he comes to Clifton I will show him some liver and white, liver, and lemon and whites.

JOHN HAMMON.

A SINGULAR CASE.

NEW YORK, May 5, 1879.

EDITOR FOREST AND STREAM:

I have recently had the misfortune to lose one of my most faithful workers under such peculiar circumstances that I have taken the liberty of sending you a full report of the case, with a report of the autopsy as made by Prof. J. M. Heard, of the New York College of Veterinary Surgeons. The subject of this letter was the red Irish setter Mack, two years old, out of Mr. Sondheim's Fan and by Mr. Shuchardt's Boz. He was the best setter I ever owned. On Saturday, April 12, about noon, I noticed that he had not his accustomed quiet and sensible appearance, but looked distressed, and was very uneasy. He would lie down, and get up again very quickly. By Saturday evening the symptoms had increased, and he was very restless all night. I gave him an ounce of castor oil, and expected that he would be better by the following morning, as I thought it was only an attack of indigestion. However, early on Sunday morning he commenced to moan and howl at short intervals. On calling him I noticed that he staggered. I examined him carefully, and found that the left eye was blind and apparently wasting away, and when he attempted to rise from the recumbent position, he would lurch and sometimes fall on the left side—in fact, indicating that the whole left side was paralyzed. On offering him a small piece of bread, I noticed that he could not swallow it. At about 11 o'clock I took him to the New York Veterinary College, and consulted with Prof. Heard about him. He gave it as his opinion that there was some affection of the brain, and gave an unfavorable prognosis. I was in favor of having him put out of misery at once, but the Professor insisted on seeing what could be done. He gave him a brisk cathartic, and as he was now howling incessantly, he gave about ten drops of laudanum to quiet the pain. This seemed to relieve him for about an hour, when the symptoms again appeared with increased severity. The laudanum was repeated in increased quantities at intervals of three hours all that afternoon and evening. This would seem to quiet him for a little while, when he would break out again. Monday morning found him alive, but very weak, and the right side was partially paralyzed as well as the left. However, he survived until 11 o'clock, when he died. The autopsy was made that afternoon by Profs. Heard and Fairfield, surrounded by the class, and the following points noted: The thoracic and abdominal viscera were in a terribly congested condition—in fact, were almost black from the presence of stagnated blood. Most pathologists would have stopped here, seeing a sufficient cause for death; but not so with these scientists. They opened the skull and extracted the brain, when they found an abscess in that portion called the *medulla oblongata*. It was situated at the base, and inclined to the left side. This accounts for the paralysis and blindness on the left side. The abscess was found to contain about one-half a dram of healthy, white pus. No cause for the abscess could be found, as the surrounding bones were all in a perfectly healthy condition. However, this is a very peculiar case, and if not taking up too much space, I think ought to be recorded, as I am informed by Prof. Heard that the abscess sufficiently accounts for the above described symptoms.

THOMAS FINN.

Sea and River Fishing.

FISH IN SEASON IN MAY.

Trout, *Salmo fontinalis*.
Salmon, *Salmo Salar*.
Grayling, *Thymmalus tricolor*.
Salmon Trout, *Salmo confinis*.
Shad, *Alosa*.
Land-locked Salmon, *Salmo glaveri*.

FLIES IN SEASON IN MAY.

BLACK MAY, No. 10.—Body, black; feet, black; wings, grayish hyaline

COW DUNG, NOS. 10 AND 11.—Body and feet, brownish yellow; wings, yellow gray.

GREAT DUN, NOS. 9 AND 8.—Body, purple brown; feet, gray brown; wings, dark gray hyaline; setæ, dark brown, annulated with gray.

RED SPINNER, NOS. 10 AND 9.—Body, bright claret, ribbed with gold tinsel; feet, brick color; wings, gray hyal; setæ, paleine brick color

YELLOW MAY, No. 10.—Body and feet, pale yellow; wings, pale yellow, mottled with brown; setæ, yellow.

COACHMAN.—Body, peacock herl; feet, dark red hackle; wings, white.

KING OF THE WATER.—Same as queen of the water, with scarlet body instead of orange.

GOLD SPINNER.—Body, orange, ribbed with gold tinsel; feet, pale red hackle; wings, bright gray.

CAPTAIN.—Body, posterior half, peacock herl, anterior half, gray; white feet; red hackle; wings gray; setæ, scarlet green and wood-duck feathers mixed.

SOLDIER.—Body, crimson; feet, red hackle; wings, gray.

KINGDOM.—Body, white, ringed with green; feet, peacock herl, and red hackle; wings, gray, mottled with brown.

Black Palmer, Brown Palmer, Red Palmer and *Gray Palmer* are made respectively of the colored hackles that distinguish them.

FISH IN MARKET—RETAIL PRICES.—Bass, 20 cents; smelts, 15; bluefish, 15; salmon, $1; mackerel, 12; shad, per pound, 8; weakfish, 15; white perch, 12½; Spanish mackerel, 75; green turtle, 15; haibut, 18; haddock, 6; kingfish, 20; codfish, 6; blackfish, 12; flounders, 8; sea bass, 18; eels, 18; lobsters, 8; whitefish, 12½; salmon trout, 12½; brook trout, Canada, 50; brook trout, Long Island, $1; pompano, 50; shrimps, $1; soft crabs, $1.50.

—Eighteen salmon have been caught in the Connecticut River up to date, averaging 18lbs. each. Yesterday Mr. Blackford received a salmon from Gravesend Bay, caught in a shad net; weighed 10lbs. Whitebait are coming in in small quantities.

—The first bluefish of the season was taken in a net in the Great South Bay on Friday of last week. Some few weakfish have also been taken, and these latter fish are expected in quantities at any day. When they have fairly arrived, "chumming" for them will be in order, and also "jigging," which latter process consists in jerking a small squid just clear of the bottom while the boat is drifting with the tide. A new club-house is being built by Messrs. Shepherd F. Knapp and others, adjoining Uncle Jesse Conklin's (whose house is now open), at Whig Inlet. Mr. Sammis, of the Surf Hotel at Fire Island, makes such frequent visits to the city that it would seem his preparations are far advanced. In fact all indications are that the coming season is to be a long one on the south side of Long Island, and if fish are only as abundant as they were last summer there will be plenty for all. And that reminds us that Messrs. Conroy, Bissett & Malleson are making a new rod for bluefishing, of split bamboo, with ash butt, a fly rod on on a larger and stronger scale, in using which the pleasure of taking bluefish must be greatly enhanced.

A SCRATCH FOR ORVIS.—We print the following note at the request of a Chicago contributor. The confidence he places in Mr. Orvis is certainly well justified, for he is a painstaking and conscientious worker:

CHICAGO, May 5, 1879.

EDITOR FOREST AND STREAM:

While looking over the advertisements of FOREST AND STREAM for something new at the opening of the season, I have been amused at the idea of mist-flying the trout. The mist leaders and snells are not entirely new. I have had some for years, sent me by English friends, and I am pretty certain Orvis, the famous Vermont rod maker, has made them three or four years. Anyhow, he has some fine mist leaders now, with loops for droppers; he will put on snells if wanted. Another thing, I have always found him open to any suggestion from gentlemen who wish to have tackle made up to suit their own ideas. He is a keen trout fisherman, but not so dogmatic as to think, "What he don't know about trouting isn't worth knowing." I made his acquaintance through FOREST AND STREAM, and have always been satisfied with his goods and prices, and cheerfully say—if gentlemen want fine, well made goods write to him; he will satisfy them. W. D. T.

—In another column will be found the advertisement of Mr. John Baird, of Campbellton, N. B., who makes excellent salmon flies for Canada rivers. Mr. Baird's long experience as a practical salmon-fisher has taught him just what will lure the fish of a given stream and season.

CANADA—*Montreal, May* 3.—The close season here for black bass and doré is from April 15 until May 15. Our fishery officer, Mr. John Morris, has lately made some large seizures of both doré and bass, that were shipped here from Ontario, and the writer had a fisherman who was peddling out a wagon-load of these fish in the Eastern Townships hauled over the coals. The ice has long been out of the Restigouche River, and I hope before the end of the present month to report the first salmon of the season taken there.

STANSTEAD.

CAMP KENNEBAGO, *Indian Rock, April* 28.—One year ago to-day every one of the Rangeley chains of lakes were free from ice, and steamboats and rowboats were running. To-day there is from eighteen to forty inches of ice in the lakes, and horses and oxen take the place of steam and oar. The past week has been very warm, and the snow and ice is fast returning to its former state. The ice will probably not leave the lakes this year before the 12th or 15th of May; but good fishing will doubtless commence as early as it did last year.

F. C. B.

MASSACHUSETTS—*New Bedford, May* 7.—Our market is now full to overflow with the various kinds of fish—scup, tautog, mackerel, etc., etc. Among the rarities, four salmon have come to our market weighing from 6½ to 8½ pounds each, caught in the traps in our immediate vicinity.

CONCHA.

RHODE ISLAND—*Newport, May* 5.—The local fishermen for cod and haddock (when the weather permits) get good fares out of Brenton's Reef, and now that the scup has got along the season's fishing may be said to have fairly begun, and with all the fish traps in full blast the fish have to keep their weather eye open after they pass Point Judeth. J. M. F.

NEW YORK—*Greenwood Lake, May* 3.—The severe weather, together with the almost continuous ice gathering which afforded work to many who otherwise would have fished, has secured to the fish an almost undisturbed winter's rest, little or no fishing having been done while the lake was frozen over. The beneficial effect of this is already apparent in the unusual number of large fish frequenting the shores. It is predicted by the knowing ones in such matters that the sport this summer will be very fine.

Larchmont-on-the-Sound, May 10.—The season is about two weeks late here for tautog (blackfish) and flounders; hooked several fine tomcods and one blackfish on Saturday afternoon.

W. W. J.

Bartletts, Saranac Lake, Adirondacks, May 8.—The ice went out of the lakes yesterday, and angling is now in order. The fun has already begun. DOCTOR.

NEW JERSEY—*Kinzey's Ashley House, Barnegat Inlet, May* 11.—Some fine sea bass taken off the stone piles yesterday by Mr. Grant; a few bluefish reported taken in nets. I also hear of some weakfish caught at Waretown by the net-men. Eels are very plenty. I noticed one barrel of fine eels, caught in one night by a pot-fisherman, on Wednesday. No bluefish caught with squid to date. B.

OREGON—*Portland, April* 22.—Two of us spent a day fishing in a favorite creek some twenty miles from the city. After unsuccessful attempts for several hours, finally struck a good spot, where we pulled out 161 fish in two hours.

W. L.

PACIFIC TROUT IN EASTERN WATERS.

DANSVILLE, N. Y., May 6, 1879.

EDITOR FOREST AND STREAM:

I take great pleasure in forwarding to you by mail to-day a beautiful specimen of "California mountain trout," caught yesterday within two miles of this village by a member of the Dansville Sportsmen's Association. I trust it will reach you in good shape.

Our association naturally are quite proud of the success of their efforts in the matter, and are looking forward to rare sport in the future. Unfortunately, the waters selected for stocking are decidedly public, and already the ubiquitous "pot fisher" has nosed out the "game." It was only last Saturday that one fellow brought in forty, running from four to six inches in length. Monstrous! And we are powerless to check the destruction. Pleading does no good, and we have no legal recourse. So it is fair to suppose that our run of California trout fishing will be short.

Very truly yours, H. W. DE LONG.

The specimen received was about six inches long. It is our old friend *Salmo irridea*, the mountain brook trout of California and the Pacific States. We append a description taken from Hallock's Sportsman's Gazetteer. The Dansville Association has certainly every reason to be proud of its success. Such clubs do good. We wish there were more of them.

PACIFIC BROOK TROUT.—Mountain Trout.—*Salmo irridea*. Gibbons.—*Special characteristics*.—Head one-fourth the total length; diameter of eye enters length of head five times, dorsal fin half-way between end of muzzle and insertion of caudal fin; muzzle pointed. Branchiæ, x, xi. *Color*, olive-brown on back with silvery reflections, fins red or orange. Head and gill covers spotted profusely with black; back and sides also spotted irregularly, numerous near the tail. Dorsal, adipose and caudal fins also spotted.

Suckley states it may be distinguished from *S. lewisi* by its large head and more slender form, larger scales, more numerous spots and more forked tail. From *S. virginalis* by its strongly forked tail and spotted head. *Habitat*, California and Pacific States. It has been taken in nearly all the waters of the Pacific, notably at San Mateo Creek, Cal., San Francisco, Chico Creek, Cal., Humboldt Bay, Dallas, Oregon, Fort Steilacom, Nisquali Creek, Cape Flattery, Puget Sound, Kern River, Cal., etc.

This species may be taken with almost any kind of bait. It will rise readily and greedily to the fly or the grasshopper; raw meat is good, the eye of a fish excellent; grubs, larvæ and worms, all seem to be eagerly desired. Suckley has taken them by trolling with the "belly fin of a fresh killed fish." There is a peculiarity of this fish and its Western congeners regarding location, which is worthy of mention. Unlike the

Eastern trout, it seems rather to prefer moderate currents of water, or indeed pools which are absolutely still, and this fact should be remembered by those who fish. This specimen attains a weight of from four to six pounds, and is in good condition for the table from spring until near Christmas, at which time they begin to spawn.

Mr. Henshaw, the ornithologist of the Expedition for Explorations west of the one hundredth Meridian, who has had considerable experience, states that in the rapids of the mountain streams artificial flies can be used with excellent effect, the smaller individuals striking freely. In the pools of such streams, however, they are of less service, grasshoppers or the white larvæ found in rotten pine stumps being there the most killing bait. Dr. H. C. Yarrow states that he has taken seventeen fine trout out of one pool not more than *three feet in diameter*, in quick succession with grasshoppers. In the large mountain streams of Kern River, Cal., where the trout reach a weight of seven pounds, a spoon bait often proves very taking. Early in the season any or all baits suffice, but later, when the trout get thinned out, they are very shy and difficult to tempt with anything. Mice and squirrels cut into strips have succeeded where other lures have previously failed. In Lake Tahoe, where *S. tridea* abound as well as another species, believed to be new, the former are said to reach a weight of thirty pounds. The methods of capture are various, trolling being generally employed, the hook being similar to the one used in the East for catching bluefish; but on the hook a minnow is placed as bait, and the boat is slowly rowed along the line of shallow and deep water, which varies in depth from thirty to seventy-five feet. The fishermen maintain the existence of two distinct species of trout, which they call "Silver Trout," and the "Black or Salmon Trout," and the difference of color is distinctly appreciable. There is also a marked difference in the size of the adipose fin.

AN AFTER-GLOW OF MOONSHINE.—The moon continues to shine on. "Major Sarasota" sends us these rays from Sarasota Bay, Florida:

I sometimes think Florida is a moon-ridden State. You have already called attention to the prevalent belief of old resident hunters that deer only feed at moonrise, moon south, etc.; but the farmers go much further, carrying their belief in the influence of the moon into the planting and caring of crops, killing hogs, and many other common acts. For instance: Cow peas planted on the increase or during the first half of the moon are expected to run to vines, while if planted in the last half will make less vines but more peas. The weather is expected to change on the change of the moon, but when I have tried to pin them down on that point, they edge off by saying that it may happen two or three days before or two or three after. So it would of a Monday or any other particular day just as much. Now, I don't take much stock in the moon, even doubting its influence on the tides—on this coast at least, whatever it may do elsewhere—and I won't occupy your valuable space with a long catalogue of beliefs.

A few weeks ago I took Mrs. X. and another lady on a little marooning trip to Little Sarasota Pass. While they were gathering shells on the outside beach I tried for fish just inside the Pass, and soon secured a fine black grouper, of about ten pounds weight. Part of it was prepared for our late dinner, or supper, and the remainder—the head and shoulders—after being dressed, was hung up in the rigging. No salt was used, and I did not think about the moon until after turning in for the night. It was the night after the last full moon, and moderately warm for the season. I called to mind the discussion going on in your columns, but finally decided in my own mind that it was too much trouble to get out of my blanket and go on deck to put it in the shade. If it spoiled, all right; I should simply have a good excuse for cate ing another. It hung there until time to get dinner next day, when I examined it as closely as I knew how. The eyes were bright and full, and the flesh firm. I should probably eat more of it than any one else, and I would risk it. I made the best chowder I knew how with the materials at hand, and the dinner passed off well. I won't say that I didn't feel a little heavy and sleepy after it; but then perhaps I appreciated my own cooking a little too well, and many of your readers know very well that a sea-coast appetite can't be appeased with much less than two quarts of fish chowder. Still, I was up and busy for the rest of the day, and toward night I asked the others if they had noticed any unusual sensations since dinner. "No, why?" And I told them about the way the fish had been exposed. The final summing up of their opinions was that the best thing I could do, if I wished to please them, was to catch another grouper, hang it up in the rigging over night, and then see if I could make another chowder just as good for the next day's dinner.

As to the effect upon persons who sleep exposed to the moon's rays, I can only say that I have met two gentlemen who could see nothing after dark unless aided by artificial light; used to escort one of them home to his quarters quite often. They accounted for the state of affairs by saying they had been "moon-struck" while bivouacing on the plains. But did not many a one sleep on the ground, exposed to the full force of the moon, during the late war, and when the nights were too warm to pull his blanket (if he had one) over his face? And I have known men who never pretended to carry a blanket on the march; if it was a warm night they wouldn't need it, and if not, they trusted to "borrowing" one from some sleepy victim.

As to myself, I have been coasting in small craft along the Gulf coast, more or less, during the past twelve years, and during eight months of the year it is more comfortable sleeping on deck than below, and there I sleep. The mosquitoes have got to be worse than I have found them yet to force me to pull the blanket over my head; am too fond of fresh air, and if I am "moon-struck" all I can say is, I don't know it. It may be there are many of us in that condition, but, at all events, I never "break out into poetry"—"well, hardly ever"—just a quotation sometimes. MAJOR SARASOTA.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

SUBSCRIBER, Nashville, Tenn.—The gun is a good one.

CIVIS, Matawan, N. J.—The trout season in New York State closes Sept. 1.

E. G. D., Antrim, Pa.—We should recommend for your purpose a setter puppy. You will find them repeatedly advertised for sale in our columns.

T. W. L., South Gardner, Mass.—For instructions how to train dogs consult "Hallock's Sportsman's Gazetteer."

L. R. M., Hastings, Iowa.—Give your puppy a tablespoonful of cod-liver oil twice a day. He will probably outgrow the fits.

W. A. J.—Instructions in swimming are given at the baths, foot of Third street, East River, and at the Battery. Charges moderate. A very few lessons ought to suffice.

A. H. E., Boston.—I have a muzzle-loading shot-gun which has "Pyne" on the lock plate. Can you tell me what reputation this maker has? Ans. Never heard the name.

L. G., Paterson, N. J.—The warm salt pads would answer very well if not applied too often. As he gets older he will probably be stronger. He should be loose as much as possible.

I. C. J., Tuscola, Ill.—Of the birds sent for identification No. 1 is a Wilson's snipe; No. 2, a dowitcher, or robin snipe; No. 3, black tail godwit, Hudsonian godwit, or a marlin snipe; No. 4, a king rail.

W. D. T., Chicago.—Who make those soft wading boots described a few weeks since by a correspondent in your paper? Ans. Abbey & Imbrie, 48 Maiden Lane, or Conroy, Bissett & Malleson, 65 Fulton st., this city.

J., Baltimore.—Give your dogs each a dose of castor oil and after, ward a teaspoonful of cod-liver oil twice a day. Continue the beef tea and see that they are kept warm and dry. When the weather is suitable let them run out.

H. S., Lebanon, N. H.—Please give me through Answers to Correspondents the address of the *Nutall Bulletin*, also the subscription price of same? Ans. Subscription price $2.00 per annum. Address Ruthven Deane, Cambridge, Mass.

G. C., El Dorado, Kansas.—You can get all the information you want in the National American Kennel Club Stud Book, to be had from J. W. Munson, Secretary, St. Louis, Mo.; price $2. We doubt if you can buy such a dog as you want in this country.

C. B. P., Newport, R. I.—There is no book expressly devoted to fly-tying. The best printed instructions were printed in this paper some years ago and may now be found in "Hallock's Sportsman's Gazetteer." For fly making materials send to any leading tackle dealer.

CONSTANT READER, Rutherford, N. J.—If you are feeding your dog from the table make no change in her diet, but when the puppies are born it is better not to give any meat for three or four days, but give her plenty of milk thickened with well boiled oat meal or arrowroot.

J. H.—To waterproof canvas take ½ lb. sugar of lead and ½ lb. powdered alum; dissolve in bucket of rain water, and pour off into another vessel, stepping the canvas into it. Soak well, hang up to dry, but do not wring it. Or, for a boat, simply paint with thin coat, and varnish over.

W. B. R., N. Y.—I tried your recipe for browning gun barrels, but it did not turn out good. The marks of the brush strike through and the barrels are a bright copper color. Please state reason and a remedy. Ans. The process is one usually done by a skilled mechanic and we should recommend you to take your gun to a gunsmith.

C. M., Dauphin Co., Pa.—Will you kindly tell me through paper if I can buy Indian curiosities and works anywhere in New York? Also the name of the split bamboo salmon rod you mentioned in your paper some short time since as being such a good one. Ans. 1. Try J. Wallace, 17 North William st., New York. 2. Leonard rod, Bangor, Maine.

H. T. P. A., New York.—My setter pup, six weeks old, has rubbed herself against a green fence and is thick with green paint. Let me know how I can get it off. Also, what would you advise me to feed her on? Ans. Turpentine applied very carefully so as not to touch the skin would do it. Yet we think the best way would be to let it wear off.

J. A. D, Boston.—How can I break my dog from the habit of killing cats? He will carry them in his mouth after he has killed them. The dog is Newfoundland, two and a half years old. Ans. The propensity to kill cats once indulged in is difficult of eradication. When all the cats in the neighborhood are killed he will probably give up the practice.

A. M. G., Columbia, Pa.—I wish to have a township map of Minnesota, and also a work that describes each county of the State, physical features and climate, a work that gives full information of each county of the State? Ans. Address Merchant's Lithographing Print Company, St. Paul, Minnesota. They have a new map just out. For statistics send for J. W. Bond's Report.

J. A. P., Peoria, Ill.—My dog had a bad case of distemper some time since and it still seems to hold on. He has considerable running at the eyes and some slight trouble with his wind. There is also a slight jerking of muscles at times. Age, about seven months. Ans. Careful nursing is the best thing you can do for your dog, with tonics and plenty of fresh air, keeping him warm and dry.

A. P. V. B., Rondout, N. Y.—Inclosed you will find a rather singular looking animal found partially imbeded under the skin of a setter dog. Can you tell what it is and account for its presence there? Ans. It is what is known as the dog-tick (*Ixodes ricinus*), fortunately not very common, but in hot countries often by their numbers reducing a dog to debility through depletion of blood.

J. B, Jersey City.—1. Are cocker spaniels hard to train? 2. Could an ameteur train one? 3. What kinds of game would I find about 7 miles north of Sing Sing, N. Y.? 4. What is the right load for a muzzle-loading shot-gun 12-80, 7½lbs.? 5. Is Wm. Ellis a gunmaker of any repute? Ans. 1. No. 2. Yes, if he had a talent that way. 3. Possibly woodcock and quail. 4. 3½ drs. powder, 1⅛ oz. shot. 5. We have never seen his guns.

C. S. R., Fulton, N. Y.—What month or months are preferable for salmon and trout fishing in the Matepedia valley? Ans. For trout from May 1 to the middle of July. For salmon from the beginning of the first run until the end of the last run,—at intervals. The first run usually takes place near the 10th of June, the last in September. Any heavy rise in the river is likely to bring up a lot of salmon. When the fish are not running you may as well hang up your rod.

L. and H., Warren, Mass.—Will you oblige several of your readers by saying if Venus' dam of Mr. Price's Judy and grand dam of Snapshot, etc., was imported by Dexter Taft, of San Francisco? and also give her full pedigree, as we have seen seen several different pedigrees lately all claiming to be correct. Ans. Mr. Taft imported a bitch Venus which, we believe, was the dam of Mr. Price's Judy. Mr. Coffin, of Providence, owner of Rake II, has the pedigree tabulated, and we have compared it, as far as possible, with the stud book.

SALMON ROE, Ark.—1. Has there ever been an attempt to acclimate the English pheasant in this country? 2. Would the climate of Arkansas do for this bird? 3. Please give me the address of the man who deals in soldiers' shoes? 4. What is the reputation of A. Francotte as a gunmaker, and to what nationality does he belong? Ans. 1. Yes; several, but with indifferent success. 2. Good climate. 3. Possibly John Claffy, 48 Day st. 4. Liege, Belgium; maker of a great number of guns, mostly of lower grades.

SCHUYLER.—For 22ft. open boat rig as a sloop: Mainsail, 18ft. hoist, 9ft. on head, 19ft. foot, and 21ft. leech; jib, 12ft. 6in. foot, 17ft. 6in. luff, and 12ft. 3in. leech; mast, 5ft. 9in. from bow; tack of jib, 13ft. from mast. Make latter a pole mast, no topmast, 18ft. above rail. This will give a moderate rig, and make the boat able under sail. The centre of effort will be at the middle of the water-line. Arrange keel and skag accordingly. Mast, about 4in. diam. at partners; boom, 3¾in. at centre; gaff, 2¾in. at centre; bowsprit, 4½x1¼in. at stem. Two rows of reefs in the mainsail, 2ft. 6in. apart. You can then furl jib and sail as a catboat under reefed mainsail.

S. E., Ottawa.—1. I have two young pups, one a cocker and the other a brown water spaniel. Now, the hair of some dogs, especially the water spaniel, sometimes gets rusty looking; it gets faded. I would like to know what is good for it? 2. Will it spoil the looks of the water spaniel to get his tail cut? I have heard that they steered themselves in the water with their tail. 3. What is good to bring them up on, I mean the kind of food? 4. Is it right to bring the two up together, I mean let them sleep and play and eat together? 5. Should the roof of their mouths be black? 6. Are pigeons and rabbits good to keep around? Ans. 1. A few capsules of tar occasionally will help the coat. Buttermilk is also good. 2. Yes. 3. Scraps from the table. 4. Yes. 5. It makes no difference. 6. Yes, if they want to.

LIVING CHESS—*Gilroy, Cal., April 21.—Editor Forest and Stream:* We had an entertainment at our place last week on Wednesday, April 16, which, although for the rest of the world was nothing new, for us it was both new and novel. The entertainment consisted of a living game of chess. The game was a genuine game, played between Dr. D. Huber and E. A. Briggs, "a blind man." The pieces were directed by D. A. Dryden, while F. W. Blake (Editor Gilroy *Advocate*) acted as referee. A large chess board was painted on the floor, and the pieces and Pawns were represented by living characters in appropriate costumes—one side dressed in black and the other in white. The Kings and Queens wore crowns and sceptres, the Bishops wore mitres and clerical robes, the Knights wore spurs and swords, standard bearers occupied the rooks' places, while the Pawns were represented by little girls dressed in white and black. After a sharp contest of twenty-two moves, the Doctor resigned, and threw up the sponge. As a suitable *finale* there was a tableau representing the vanquished forces kneeling to their foes, and the defeated Queen crowning the victorious one. I hand you herewith the moves made in the game, Dr. Huber being the white champion and E. A. Briggs the black one. SNAP.

Game No. 115.—FRENCH DEFENCE.

NOTES.

The above game is an old specimen in the way of a French Defence. White should have obtained a decided superiority early in the game. But it is not our intention to criticize the play, and we are at last persuaded to burden our columns, for the first time, with "living chess."

NOTICE TO SOLVERS.—Problem No. 52 is incorrectly printed. Add a White P at Q2 and a Black P at Q3.

CURSORY JOTTINGS.

—Mr. A. N. Cunningham, of Hartford, recently visited New Haven, and there played a match with Mr. Walker, the reputed strongest player of the Elm City, winning by a score of six games to one and two draws.

—In recognition of the untiring zeal of its Honorable Secretary, Mr Minchin, a dinner in his honor recently took place at the Criterion London, which was attended by a large number of the members of the club, with the Earl of Dartney in the chair. Among those who took part in the entertainment and spoke were Prof. Wayte, Major Ross, and Messrs. Steinitz, Gumpel, Francis and Lewis.

—Mr. Blackburne has been playing blindfolded simultaneous against six lady members of the College Club of Holborn, and succeeded in defeating all of them except Miss F. Down, who obtained a draw. Messrs. Steinitz, Mason, Bird, Potter, Macdonnell, and Mr. Ascher, of Montreal, were spectators.

—Ajeeb, the automaton chess-player, has taken up his quarters at the London Royal Aquarium, in the gallery lately vacated by his rival, the famous Mephisto.

FOREST AND STREAM
AND
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, MAY 15, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

☞ Trade supplied by American News Company.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, May 16.—Bicycle Tournament at American Institute, N. Y. Trotting: Suffolk Park, Phila.; Hudson, Mich. Running Meetings: San Francisco, Cal; Lexington, Ky. Base Ball: Springfield vs. National, at Washington. Stockton Rifle Range: Mott Match.

Saturday, May 17.—Bicycle Tournament as above. Pacific Am. Rowing Association Regatta, San Francisco. Harvard Regatta. Rose Tree Fox Hunting Club Races. Cricket: Philadelphia vs. Young America, at Chestnut Hill, Pa.; Dorian vs. University of Pennsylvania, at Haverford, Pa.; Germantown (2d) vs. Philadelphia (2d), at Nicetown, Pa.; Young America (2d) vs. Merion (2d), at Ardmore, Pa.; St. George vs. Staten Island, at Staten Island. Base Ball: Manchester vs. Albany, at Albany; Springfield vs. National, at Washington; New Bedford vs. Utica, at Utica; Providence vs. Chicago, at Chicago; Boston vs. Cincinnati, at Cincinnati; Star vs. Cleveland, at Cleveland; Troy vs. Buffalo, at Buffalo; Harvard vs. Yale, at Cambridge. Running Meetings as above.

Monday, May 19.—Base Ball: New Bedford vs. Capital City, at Albany; Manchester vs. Holyoke, at Holyoke; Albany vs. Utica, at Utica.

Tuesday, May 20.—Iowa State Sportsmen's Association Tournament. Trotting: Providence, R. I.; Amber Park. Running Meetings: Louisville; Baltimore. Base Ball: Albany vs. National, at Washington; Springfield vs. Utica, at Utica; Boston vs. Chicago, at Chicago; Providence vs. Cincinnati, at Cincinnati; Troy vs. Cleveland, at Cleveland; Star vs. Buffalo, at Buffalo.

Wednesday, May 21.—Iowa State Tournament. Trotting: As above, and at Coldwater, Mich. Base Ball: New Bedford vs. Capital City, at Albany; Manchester vs. Holyoke, at Holyoke.

Thursday, May 22.—Iowa Tournament as above. Trotting as above. Base Ball: New Bedford vs. Manchester, at Manchester; Albany vs. National, at Washington; Springfield vs. Utica, at Utica; Holyoke vs. Worcester, at Worcester; Boston vs. Chicago, at Chicago; Providence vs. Cincinnati, at Cincinnati; Troy vs. Cleveland, at Cleveland; Star vs. Buffalo, at Chicago.

ANOTHER EXCURSION TO LABRADOR.—Mr. M. M. Chick, of 113 Franklin street, Boston, is organizing another of his attractive excursions to Labrador. He proposes to charter a first class clipper schooner of about 150 tons, fitted up with modern conveniences, and to leave Boston July 9, proceeding as far north as Hamilton Inlet, in latitude 54-30. The distance is about 1,500 miles, and the average time for the voyage about six weeks. The whole expense of the round trip is $100.

This will be good news to two or three gentlemen who have very recently sent us inquiries whether such an expedition was fitting out.

THE GOLDEN NORTHWEST.—The latest addition to the season's guide books placed upon our table is the handsome manual of one hundred and forty pages and half as many illustrations, published in Chicago by the Chicago, Milwaukee and St. Paul Railway, and sent to us, as it will be sent to all who wish for it, by Mr. A. V. H. Carpenter, the General Passenger and Ticket Agent of the road, at Milwaukee, Wis. The C. M. and St. P. Railway and its branches extend some seventeen hundred miles, and among the points on its schedule are scores of places in Wisconsin, Iowa and Minnesota long famous for their varied excellencies as resorts for health seekers and sportsmen. The trout streams, rivers, lakes and forests, affording abundant employment for rod and gun, the rare natural scenery, to visit which many a sated wanderer in foreign lands might well afford to remain at home one season, have often and again been referred to in our columns both editorially and in frequent letters from correspondents.

There is something suggestive in the annual summer migration of men and women from the East to the West and the Northwest. That much-respected and often-appealed-to village character, the Oldest Inhabitant, usually presents himself to the Eastern mind as a silvery-haired old gentleman, with form not quite so straight as it used to be, who is authority on all matters pertaining to the weather, giving oracular responses thereupon which no one ever yet dared question, and who is withal inclined to be garrulous concerning the days when your mother's father and he went to the old red district school-house together. But did it never occur to the reader that as the Oldest Inhabitant travels Westward he loses his venerable carriage, is accorded very slight distinction for his seniority, and instead of knowing anything about the boyhood of any one else's grandfather, in all likelihood has a grand father of his own? The reign of the Oldest Inhabitant is circumscribed by geographical limits; in the effete civilization of towns founded a hundred years ago he is an autocrat; put him in one of the cities "of the day," and he must jostle a score of competitors for his title of distinction. It is one of the curious features of our national growth that we are now receiving from these vast railroad corporations voluminous pleasure guides filled with illustrations of scores of cities, towns, hotels and summer resorts equipped with every convenience and luxury of modern life, and all in a territory which was not so long ago known only to the surveyor and the devotee of wilderness adventure. The Land Commissioners' pamphlets are succeeded with startling rapidity by the manuals of tourist attractions; and close upon the heels of the frontier settler follow the incursions of the pleasure seeking hordes.

The Northwest—by which term we may include Michigan, Wisconsin, Iowa, Minnesota, and "the region beyond Jericho"—has long since taken its place in the front rank of the recognized summering regions of the continent; and intelligent and efficient action on the part of far-seeing railroad, steamboat and hotel officials is yearly fostering and greatly enhancing this popularity.

This stretch of country has been termed the "Golden Northwest"—not because of the tawny metal hidden in its fissures, nor wholly because of its boundless fields of golden grain; but as well because he who will may here find health of body and peace of mind, which are better than gold.

NEW YORK ASSOCIATION.—The last monthly meeting of the New York Association for the Protection of Game was held at Martinelli's, Monday last, Mr. Roosevelt, the President, in the chair. Mr. Whitehead, counsel for the Association, reported that the game law now before the Legislature was a change in many particulars from the one the Association had tried to have passed. It had passed the Assembly, and was now before the Senate. He thought some one should go to Albany and examine the bill, and bring the defects in it to the notice of the proper committee. Mr. Cuthbert agreed, saying that the proposed law was far worse than the existing one, which, with all its defects, was a pretty good law. Mr. Whitehead was authorized to go to Albany for the purpose mentioned. We are very glad to see that the members of this Association are so rapidly adopting the views which, as a member of the Association, the editor of this journal formerly advocated in open meeting almost single-handed. We sent several weeks ago to the Game Committee at Albany suggestions, already published, for so modifying the existing laws as to secure greater uniformity.

THE SUMMER SCHOOL AT SALEM, MASS.—We learn that the fourth summer course in zoology will be by J. H. Emerton, beginning July 7, and continuing four weeks. Lectures will be given five times a week, and instruction in the laboratory daily, and there will be excursions for collecting and observing living animals at such times as may be found convenient. This course is intended especially for teachers and students of High and Normal schools. Particular attention will be given to practical laboratory and out-door work, which will be arranged according to the wants of individual students. The fee will be $10. In addition to the rooms at the museum, a laboratory at the seashore will be provided this season for the study of marine animals, and part of the regular course will be given there. Students who use this laboratory at other times will be charged extra. It will also be open to other persons from June 1 to September 1, at $5 per week. It is expected that a course in botany will be given at the Academy during the summer. Board can be had in Salem at from $5 to $7 a week. Those interested in this work should apply to J. H. Emerton, Peabody Academy of Science, Salem, Mass.

THE PHILOSOPHY OF FIELD SPORTS.

THERE is scarcely any science, not even medicine or political economy, in which there is so much conflict of opinion among even its most experienced and skillful votaries as the science of the field and flood. There are here few points, no matter how simple or easily settled by experiment, upon which authorities will not at once take opposite sides. For a great deal of this there is no valid excuse, for next to chemistry, physics and natural philosophy in general there is nothing more susceptible of rigorous inductive proof and nothing better entitled to the name of a science than is nearly all that part of hunting, shooting, fishing, etc., that lies outside of pure natural history. And even in those departments of natural history where we are cut off from experiment and confined to observations there is no excuse for one half the confusion and uncertainty that exists.

First among the causes of this conflict of opinion is that which has played such havoc in philosophy through all the ages, and will continue to trip the feet of progress so long as it treads the path of time—hasty conclusions, or induction from an insufficient number of instances. It is almost unnecessary to illustrate a thing so obvious, but I have lately seen in the columns of this paper an illustration so striking that I cannot but allude to it. A correspondent, "Ivanhoe," takes two finely broken Eastern dogs to hunt in the West. On reaching the prairies they run riot, "raise Cain" in general, and are beaten by some native dogs that happen to be lacking in the requisite silken ears, satin finish, the colors and other indices of noble lineage which distinguish the canine aristocracy of "Ivanhoe." From this he jumps to the conclusion (I have to quote from memory and may not get his exact words), not that his dogs acted badly, but that Eastern broken dogs generally act badly in the West. His next leap is still more amazing, to wit, that most any sort of a cur is better for Western hunting than a well bred dog, and that everything is there used from a bullfoundland-poodlehound to a window-mop. And yet "Ivanhoe's" letter plainly shows him to be a man of intelligence Yet none of us need laugh at him, for we all do the same hasty generalization upon some other subject, and very likely I shall tumble into into his tracks myself before I get through this article, for I think no one can altogether help it.

Next to the last is drawing conclusions from instances that would not suffice however numerous. Thus when an eminent rifle authority told us of a tiger being killed with a .40 cal. rifle with 40 grains of powder, the ball hitting the tiger in the eye, he proved nothing at all but the good fortune of the shooter. Fifty such instances would not even tend to prove what he was trying to prove—the efficiency of such a ball and charge for such game—until he can first give us a recipe for making tigers strike an attitude; at a short distance, too, from the hunter. His argument tacitly assumes that one can hit a tiger where one pleases.

Preconceived theory blinding men's eyes to the simplest fact plays here the same part it has played in every branch of inquiry since history was born. Men who are good judges of distance and kill plenty of game are quite sure that their long-range breech-loader "shoots level" for "40 rod," or "60 rod," although the ball drops 6 or 10 feet, or more, at those distances; and are positive that it "holds up" better at 100 or 150 yards than their old muzzle-loader which probably had a much straighter trajectory to 150 yards or so. They think because the breech-loader, with long or mid-range bullet, shoots higher at long distances that it must of course shoot more on a level throughout its whole flight; and that theory once in their heads all future experience models itself to the theory.

This cause of error has a powerful ally in our self-love and pride which, ready armed with weapons from fancy's exhaustless arsenal, always flies to the defence of our own opinions. Theoretically an impartial judge, even reason becomes a pettifogging advocate when some cherished delusion is attacked. Question the opinion of a hunter, especially of the real old type, and instead of stopping to contemplate even the bare possibility of your being right, ten to one his gun is levelled at once to bag your opinion. And it is quite apt to be a mere blunderbuss scattering all over creation and hitting nothing, but so wadded with "experience," "facts," "observation," etc., that it makes a terrific report.

There is scarcely a science which rests so entirely upon experience in which the longest experience is so often worthless. "Experience" is the great war cry with which from the Year 1 *Anno Mundi* every nonsensical notion has dashed into the fight against truth. Imagination's wildest rabble always marches under the imposing standard of "observation;" humbug always flies the captivating banner of "experiment" and error is always headed by a sonorous baud clanging with obstreporous blast the beguiling tune of "facts." Experience is worthless until we know how it has been used; experiment is of no account until we know with what spirit it has been conducted, whether to ascertain truth or prove an opinion. However broad our experience may be it is too often but a shallow pond from which we can scarcely dip a cupful of inference without muddying it. To some, experience is only a kaleidoscope in which facts tumble into new, but systematic disorder; to others, a microscope which only makes clearer and larger the first impression. We have probably all seen a child in a picture-spelling book saying its lesson, "r-a-t mouse," "h-e-n chicken," etc., etc. When one of fancy's pretty pictures is before the mind's eye we are all apt to spell out the words of experience in the same manner.

Imagination generally works through the same instruments that always tripped the feet of the so-called "great philosopher" Bacon whenever he attempted to take a practical step in philosophy, to wit., fanciful analogies. In sporting philosophy we may everywhere see persons running off the track at the ever-open switches of analogy and landing in some ditch of obscurity. Thus, fine shot, according to some, "has better penetration" than heavy shot; a small ball "cuts sharper" than a big one; the twist of a rifle "gives force" to the ball, etc.

Very similar to this latter fallacy is the influence of names and words. Thus a "slow twist" is by many thought to make a "slow ball;" a "quick twist" a "quick ball," etc The number of good, practical hunters who entertain such ideas is wonderful, though of course such very absurd ones as these last few are rarely met with among those who write much on shooting.

Many disputes seem to be entirely verbal, simply a war of words without either disputant being aware of it. This is more often seen in oral disputes, though occasionally such a wrangle gets in print. We should not be surprised to see any day a discussion start upon the question whether or not powder is explosive, and to see four different sides taken, one insisting that it simply "burns," another that it "simply evolves gas," another that it "only undergoes combustion" and the fourth calling all the rest a set of jacks for not seeing that they are all wrong and that "the powder upon ignition is simply resolved into its original elements.

Similar to this last is carelessness or inaccuracy of statement from a hasty and slovenly selection of words. Had each party to the great recoil question taken care at the outset to define his own position and language clearly, the lusty squaller that made such a racket would have been strangled at its birth for want of wind. The same inaccuracy may be produced by neglect to qualify or modify a proposition which is itself correctly enough stated. Thus, those who say "always use coarse powder" are about as badly astray as those who say "always use fine powder;" to say "never follow big game when once started, but look for more, is almost as bad as to say, always follow it; the same with most all attempts to condense any kind of advice about sporting into compact general rules. This is seen to a still greater extent when the common press or persons not familiar with sporting matters attempt to handle them. Thus, several papers a year or so ago gravely announced that "the rifle in the hands of a crack team had been beaten by the long bow," omitting the very important fact which the victor, Mr. Thompson, had been careful to give, and which alone made the fact at all probable, viz., that the rifle had been handicapped at five times the distance shot over by the bow.

Explanations which are only restatements in other words of the fact sought to be explained, are as old as the hills, and still constitute the principal blind under which doctors, sporting as well as medical and political doctors, palm off ignorance for solid wisdom. And they deceive themselves quite as often as they do others. We once propounded to a friend of great intelligence and considerable scientific attainments and knowledge of shooting, the puzzling question why a gun will recoil less and shoot stronger with only an ounce of shot, but so wadded as to require a pressure of thirty or forty pounds to force it through the barrel, than it will with three ounces of shot so loosely wadded as to require only one pound pressure to push it through. He was quite ready with the answer that it was because in the one case the powder had to overcome friction, and in the other inertia. It was for a long time impossible to make him see that this simply restated the fact in two words instead of in several, and that the question why there should be this difference between the resistance, inertia and friction was just as puzzling as it was in its original form.

Even our most careful writers are constantly drifting into inaccuracies by the careless use of words. Thus the words "high" and "low trajectory," "straight" and "curved trajectory" are constantly used about rifles without stating the distance shot over and, as the rifle having the straightest line of flight at 1,000 yards will have the most curved one up to 150 or 200, and *vice versa*, much confusion arises from this carelessness.

On the other hand, too much care in the use of words may carry us into needless and even unphilosophical refinement, so that practical truth may be lost sight of by too close adherence to literal precision. Thus we have been told by some very careful writers that there is "no such thing as a point blank," because the ball commences to fall from the time it leaves the muzzle of the rifle; and we have been told this with an amplitude of philosophic proof and sweeping grandeur of theoretic truth which would lead one who had never tried it to suppose that the drop of the ball at the muzzle was a practical drop. Now, when the eye cannot detect the drop of a properly loaded rifle, even to sixty or seventy yards, when the most delicate instrument cannot detect it at thirty or forty yards, when no different sighting is required to hit a squirrel's head at sixty yards than is required at ten yards, what on earth is the sense in kicking aside a sound, useful, practical truth, to make way for one that exists, if at all, only in theory? But do not these sticklers for exact truth, themselves commit in this case an error as bad as the one they are hunting down? Is not this statement—gravitation is acting upon the ball all the time, but as it escapes from the muzzle it cannot *instantly* overcome its inertia, and after the inertia is overcome and motion downward has commenced, there is a considerable fraction of a second during which its motion is so slow that it does not fall the length of its own diameter—more true, even theoretically as to the first part than the assertion that it drops from the muzzle?

This needless refinement is often pursued to an utterly ridiculous extent about guns, dogs, etc. One who took his ideas from many writers would suppose that a $100 gun was about worthless; that a $75 one was not fit for a gentleman to shoot himself with, and yet was good for nothing else. From other writers he would suppose that an American-made gun was the climax of terrestrial abominations, and that not even an English one could possibly be good for anything unless made by Greener or some other particular magician in the gun line; while a dog that could not read his title in the Kennel Register or lacked the requisite colors, the precise taper of tail, etc., could not, by any possibility, be worth anything whatever for any purpose under heaven.

Very much like this last is the favoritism—often verging on blind absurd love—which sportsmen often entertain for some particular things. This is, perhaps, most clearly seen in rifles. Thus in one section Sharps rifle is all the rage, and nothing else is fit to hunt with; in others, the Ballard or Maynard is the only thing fit to take to the field; and, according to others, none of these are worth a cent, but it's the Remington, the Express, or something else. From the prodigality of praise that has been squirted from a thousand directions, one would suppose that the combined ingenuity of Earth, even assisted by light from on high, could not improve upon that quintessence of perfection for big game hunting known as the Winchester of '73. To all which the company—Ingratitude, thy name is Winchester Company—within three short years replies by issuing the model of '76.

This favoritism often extends to particular guns which the owner seems to think possessed of some occult virtues different from anything else of the same shape. I have seen men who firmly believed that there was as much difference in guns of the same material shape and size as there is in heads of the same size; and there are plenty of men who have paid as much as a new and better breech-loader would have cost to have an old but dearly beloved pair of barrels made into a breech-loader, because there was some special virtue in the metal of those old barrels which no human ingenuity could again secure. I never shall forget the veneration I long had for the little .40 cal. Maynard, with which I killed my first deer, and have in other cases seen the regard a person entertained for the instrument of his first successful exploits run into an affection which no subsequent experience could divorce.

T. S. VAN DYKE.

PERSONAL.—Our long time correspondent R. L. Newcomb, of Salem, Mass., expects soon to join the Bennett Polar Expedition.

Dr. J. A. Henshall, of Cynthiana, Kentucky, has just returned home after a five months' sojourn in Florida. He is now chockfull of information, and when he is ready to spill over promises to give the readers of FOREST AND STREAM a portion of the overflow. No doubt his letters will prove most interesting, as they have always done.

Col. J. B. Oliver, formerly of Florida, who established the Florida *News Yorker* in this city some three years ago, has now settled in Chicago, where he has charge of a "Lightning Ink and Lightning Pen" Company. We have no doubt that the success which has uniformly attended his numerous enterprises hitherto, will continue with him in his familiar converse with the new elements which surround him. He handles electricity like a plaything, and treats pen and ink as harmless things.

The sportsmen of America will regret to learn of the death of Mr. Robert Thomas Vyner, the author of "*Notitia Venatica*," who died at his residence in Uckfield, Sussex County, England, April 6, aged seventy-five years. Mr. Vyner was devoted from boyhood to the sports of the field, and was justly admitted to be the best amateur huntsman of his day.

"NIHIL FIT."—Where? In Russia.

GAME PROTECTION.

HAWKS AND OWLS.—The Pittsburgh (Pa.) Sportsmen's Association have just awarded to Mr. L. S. Everly, of Dunkard, Greene Co., Pa., a handsome breech-loading gun which was offered by them last fall as a prize to the person producing at their rooms the greatest number of heads of hawks and owls killed within certain counties between Nov. 1, 1878, and April 1, 1879. Ever since the publication of this offer great numbers of scalps have been sent in, the aggregate reaching 1,140, of which the winning score contributed 277. The Pittsburgh sportsmen have inaugurated a valuable work, for the hawks and owls killed must represent a vast number of game and insectivorous birds preserved. The result of these efforts is valuable both to sportsman and farmer. So well pleased is the association, that a series of prizes will be offered; a first prize to the person contributing the largest number of hawk and owl heads, no matter by whom, or by what means; a second to the person sending the next highest number; and a third prize to the person sending in the largest number shot or otherwise taken by him or herself. We commend this plan of operations and its workings to other game protective clubs.

INTOXICATED ANSERS.—The servant girl who used kerosene to kindle her morning fires, until one day she blew the house up, confessed that she never knew anything about that delightful way of making the fire burn until she read of it in a Sunday-school book. That only illustrates the danger of trying to correct a pernicious practice by written condemnation of it. It is barely possible that some shift blame when caught feeding whisky to geese may attempt to excuse himself by saying that he learned how to do it from the FOREST AND STREAM. Were this method of goose hunting wholly novel we should hesitate to print this note from an Essex Co., Va., correspondent:

I would call your attention to a new way of destroying game, a dastardly practice that legislators should take in hand. It has lately been introduced on the Rappahannock, and is said to have been brought from Arkansas. Geese are used to a bait; corn is then soaked in whisky and put on; the scamp secretes himself within an observing distance, and when the geese have eaten the bait and become stupefied, he comes out, clubs enough to load a wagon and goes on his way rejoicing. CH. J. SALE.

Essex Co., Va.

—The Central New York Sportsmen's Club, of Utica, is now twenty years old, and some of its members can indulge in very pleasing reminiscences when in the mood. The organization is wide awake to the duties of a game protective society and take intelligent action upon matters pertaining thereto. The officers for the ensuing year are: President, DeWitt G. Ray; Vice-Presidents, J. J. Flanagan, I. C. McIntosh, John D. Kernan; Prosecuting Attorney, Scott Lord, Jr.; Secretary, Capt. Harvey D. Talcott; Treasurer, W. Jerome Green; Delegates to State Convention, Chas. W. Hutchinson, J. J. Flanagan, W. M. Storrs, Dr. Charles W. Shapley.

The Rifle.

MASSACHUSETTS—*Walnut Hill, May 7.*—Variable winds, bad light and chilly air made the riflemen out of sorts at the hill to-day, and by sympathy their scores were down. The match was the long-range class match over the Elcho ranges, the leading scores reading:

J F Brown.															
800 yds.	3	5	5	5	5	5	4	3	4	5	5	5	5	3	66
900 "	5	4	3	4	3	5	5	5	3	5	5	4	4	5	5 3—64

May 10—A charming mild spring day brought out a good company of shooters and spectators to-day. The military men were out, and are preparing to make a more creditable showing for Massachusetts at Creedmoor than has yet been made. The small-bore men were busy at 200 yards in the Winchester match, in which there were 65 entries. At 15 rounds per man the leading scores stood:

E B Souther	4	4	4	5	4	4	4	5	5	4	5	5	5	5	5—6
E F Richardson	4	5	5	4	4	5	5	4	5	5	4	4	5	5	5—6
W H Jackson	4	5	4	4	5	4	5	4	5	4	5	5	5	5	4—6

Medford, May 7.—The first competition of the May series was held to-day, and over the 200 yards range. In the possible 50, the scores stood: W. Charles, 46; H. H. D. Cushing, 46; J. H. Eames, 44; R. Abbott, 44; H. K. Richardson, 44; R. Sawyer, 44; W. Gerry, 44: E. Wyman, 43; H. Whittington, 43; G. H. Howe, 43.

Boston, Mammoth Rifle Gallery.—The regular monthly prize shoot for May has opened with some very fine shooting. Many out-of-town riflemen have visited the gallery this last week to meet our well-known city shots. Summary, 150 feet, rounds 8, possible 40;

Frank Hollis	38	J R Gore	36
Wm Bradford	38	C Sturtevant	35
George Lamb	38	W Henry Preston	35
H W Eager	38	L A Walton	35
M O Johnson	37	E P Dickerman	35
Wm H Restarick	37	A W Holmes	35
H Tyler	37	Adam Dahl	35
Benj H Smith	36		

CONNECTICUT—*Collinsville, May* 8.—Canton Rod and Gun Club, Riverside Range; regular weekly shoot; 200 yds. offhand, 10 shots:

	Mass.	Creed.		Mass.	Creed.
Moore	96	43	Konold	86	40
Hull	96	42	Andrews	83	39
Spencer	91	40	Lewis	82	37
Bidwell	90	40	Pfister	73	37

NEW YORK—*May* 12.—Greener's West Side Rifle Team; weekly score; 200 yds. target reduced; 10 shots; possible 50:

John A Reitweisner	46	John Och	45
S R Campbell	46	George Greener	44
John Roesner	45	John Reitweisner	44
George Roesner	45	E Holzman	44
C Welker	45	A Dory	42

Greener's West Side Rifle Team—Weekly score; 200-yard target reduced, possible 50:

S R Campbell	47	E Holzmann	44
G Greener	45	J R Reitweisner	43
J Roesner	45	P Albert	43
W Heppner	45	C Welker	43
J A Reitweisner	44	M Homanner	

ZETTLER VS. SEPPENFELDT.—A friendly match between the Zettler Club 2d team and the 1st team of the Seppenfeldt Club was shot on the evening of the 8th at the gallery the latter club, and they were victorious by the following

To-morrow evening the return match will be fought at the Zettler range:

Zettler Team, Capt Ward.

Schurman	45	Oehl	44
Zimmermann	45	Faberius	36
Culhane	46	Beates	46
Levy	44	Dutli	42
Treubel	45	Moore	46
Total			414

Seppenfeldt, Capt Garrison.

Holtzmann	45	Keller	47
Garrison	44	Adams	46
Walters	45	Seppenfeldt	45
Keegan	46	Anderson	45
Tachne	43	Brennan	47
Total			453

GALLERY SHOOTING.—Weekly shoot of the Zettler Rifle Club; Creedmoor target, ten shots per man, off-hand, possible 50:

L E Beatse	49	D Miller	46
M B Engel	49	M L Riggs	46
P Fenning	48	L Treubel	46
C Judson	47	J Durlin	45
C G Zettler	47	N D Ward	42
Wm Klein	47	C Bechtel	4
G A Schurman	47	D Culhane	41
H Brown	46	J Levy	41
B Zettler	46	F Faberius	40
R Zimmerman	45		

Conlin's Gallery—Week ending May 3. Time match, 1m.:

	Shots.	Score.		Shots.	Score.
P Lenhard, Jr	17	59	D A Davis	11	43
C E Blydenburgh	14	54	W H Dunlap	10	42
H D Blydenburgh	14	55	T P Wells	10	40
I T Duckworth	14	59	Judge Smith	0	40
T Fitz	11	49	J Q Adams	9	59

Word match:

C E Blydenburgh	47	N O'Donnell	43
I T Duckworth	46	Judge Smith	44
P Lenhard, Jr	43	T Fitz	42
H D Blydenburgh	44	D A Davis	42
W H Dunlap	43	J S Carson	41

SCHUETZEN NOTES.—April practice shootings of the N. Y. Central Shooting Corps, Captain C. F. Gennerich, at Jones' Wood. Distance, 120 yards; weapon, Sharps breech-loader; target, 25 rings of ¾ inches: H. Hablings, 106; J. Wetjie, 104; J. N. Jennerich, 102; G. Brucks, 99; W. J. Klee, 99; Captain C. F. Gennerich, 95. At Hartung's Park, distance, 200 yards: R. Spitz, 97; G. Brucks, 89; H. Luhrs, 87; Captain Generich, 81.

During the past month at the practice shootings of the N. Y. Independent Schuetzen at Hartung's Park, distance, 200 yards, any weapon, the following scores have been made: Captain Diehl, 179; Val Loewer, 149; C. Waldeck, 113; A. Seiler, 108; J. W. Schneider, 187; A. Seiler, 150; A. Geib, 165; E. Goss, 135; C. Stein, 119; Louis Berndt, 145; H. H. Hoenack, 122; W. Gieselberg, 193. Messrs. Diehl, Schneider and Gieselberg were each entitled to a gold medal.

Third practice shooting of the N. Schuetzen Corps, at Union Hill Schuetzen Park, Friday, May 2; distance, 200 yards; weapon, any; target, 25 rings of ¾-inch each: Capt. Geo. Aery, 148; Phil Klein, 188; B. Gottler, 204; J. Radebold, 76; W. Klein, 184; P. D. Volckmann, 153; G. Baier, 165; J. Brummerhop, 180; J. Meyer, 124.

The Morrisania Shooting Association has elected the following officers: President, John Eichler; Vice-President, J. Brunner; Treasurer, Phil. Herd; Secretary, Chas. Geib; Shooting-master, A. Genez.

The Independent German Shooters, of New Haven, have elected the following officers: Franz Doerschuck, Captain; Edward Scharfschwerdt, First Lieutenant; W. Krengel, Second Lieutenant; Chas. Schneider, Secretary; W. Knoth, Orderly Sergeant; F. Ploeger, Treasurer; W. Engelhardt, First Shooting-master; Finance Committee, Chas. Yerner, John Lauth, Carl Schilf.

The following are the officers-elect of the Independent Shooters at Bridgeport, Conn.: F. Dencke, President; F. Egge, Secretary; Conrad Berker, Treasurer; Geo. Quittmeyer, Shooting-master.

The Southwest Chicago Shooting Association has chosen the following officers: Dr. H. Merckle, President; F. Niemeier, Vice-President; H. Schuhmacher, Secretary; Chas. Holzenberg, Treasurer; John Pfeifer and Wm. Bohmer, Shooting masters; M. Gottfried, Jac. Schuler, Chas. Holzenberg, Aug. Soldner, Chas. Fleck, J. Toggenberger, F. Hartmann, Jos. Oswald, Trustees.

The Helvetia Rifle Club, of Highland, Ill., has elected the following officers: President, Henry Hermann; Vice-President, Henry Kiniker; Secretary, F. B. Suppiger; Shooting-master, Hy. Wirp.

The officers of the Shooting Association of Collinsville, Ill., are: Fred Bertram, President; H. Baierlein; Vice-President; A. Mensiadt, Recording Secretary; Louis Hoffmann, Vice-Secretary; Louis Hoffmann, Treasurer; Chas. Wacker, Shooting-master.

Monroe (Wis.) Shooting Association—E. Ruegger, President; G. Spangler, Vice-President; H. Hoehn and R. Frenker, Secretaries; Samuel Schuler, Treasurer; J. Dettwigler, Shooting-master.

Oskosh (Wis.) Shooting Association—F. Hahn, President; Math. Kremer, Vice-President; E. Luden, Treasurer; Chr. Saran, Secretary; Freid. Leitz and Peter Zentner, Shooting-masters; J. M. Beglinger, A. R. Gebauer and John Weimke, trustees.

The first practice shooting of the N. Y. Independent Schuetzen Corps, Captain J. J. Diehl, under the new regulations, took place Thursday, May 8, at Hartung's Park, Morrisania; distance, 200 yards, any rifle, 10 shots:

First Class.

	Rings.		Rings.
W F Gieselberg	187	J J Diehl	147
J W Schneider	163		

Second Class.

A Horn	135	C Waldeck	119
Ch Brun	139	A Seiler	119
H H Hoenack	126		

Third Class.

G Schneider	72	F Wacker	66
P Pisbach	67		

Fourth Class.

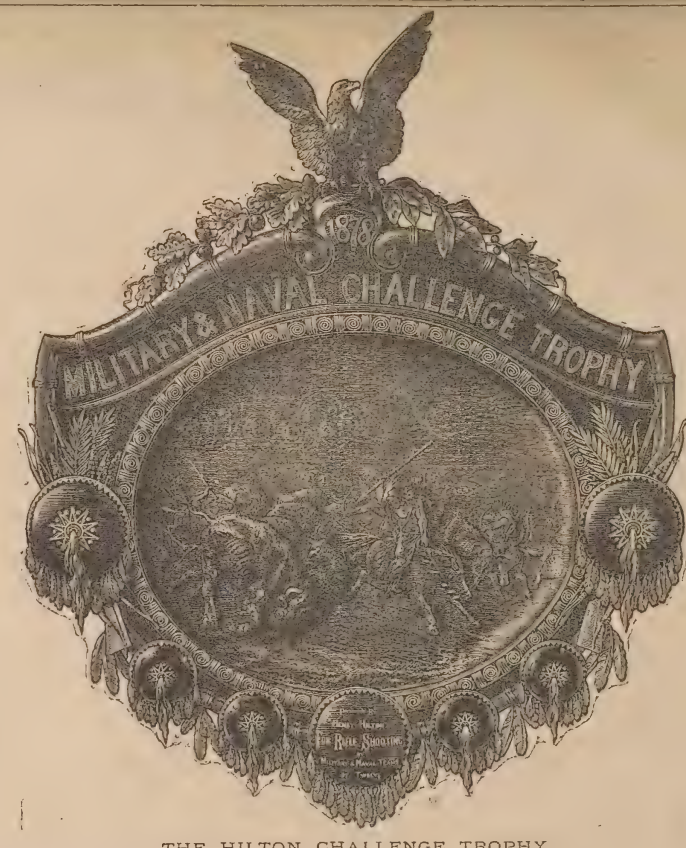
S Zuschlag	63	Hy Clausen	32
John Koelber	42		

The official opening of the Schuetzen Park on Union Hill, N. J., will take place the 29th and 30th of this month. (See advertisement.) The prize shooting is open to all-comers and to any rifle; distance, 200 yards, on targets as follows:

Union Target—Twenty prizes; first $35, last $4; aggregate, $225; entrance fee, $2; re-entry, $1.

Man Target—$10 in 20 prizes; first $35, last $2; entrance fee, $2; re-entry, $1.

Bull's-eye or Point Target—The visual or false centre is 12 inches in diameter and divided into three parts, the bull's-eye 2 2-5 inches, the inner 7 1-5, and the outer full size. Bull's-eye counts 3, the inner 2, and the outer 1 point. For each point 5 cents will be paid, for the bull's-eye an extra premium of 50 cents; 10 shots for $1; number of tickets unlimited; most points during the festival an extra premium of $10. Shooting commences at nine o'clock A. M. each day, closes the first day at six P. M., and the second day at five P. M.



THE HILTON CHALLENGE TROPHY.

Military and Naval Challenge Trophy, designed and executed by Tiffany & Co., of New York, and presented by Hon. Henry Hilton, to be shot for annually at Creedmoor, or such other range as the National Rifle Association may elect, and to be held for a year by the winning branch of the service, and then returned to the custody of the National Rifle Association, until the next competitive meeting.

NEW JERSEY—*Newark, April* 30.—The following is the weekly score of the Newark Amateur Rifle Club:

Wm Hayes	4	5	4	5	5	5	5	5	5	5—48
J Bayer	5	5	4	5	5	5	5	5	5	4—47
W P McLeod	5	5	4	5	5	4	5	5	4	4—49

SHARPS MATCH FOR MILITARY RIFLES—*Brinton Range, Elizabeth, N. J., May* 10.—Fifteen competitions; open to all members of the National Guard of New Jersey or members of the N. J. State Rifle Association, except final winners of first prizes in the monthly competitions of this association. Distance, 200 yards; position, standing; 10 rounds, any military rifle, without cleaning; 20 entries to constitute a match; entrance fee, $1; 16 entries and 8 re-entries:

C M Stimis	5	5	5	4	3	4	4	4	4	4—42
Dr J M Dart	4	4	4	4	3	4	4	4	4	4—39
B A Vail	4	4	4	3	3	4	5	4	4	4—35
W A Mulford, Jr	4	5	4	4	5	5	2	3	3	6—39
D F Davids	5	4	4	4	4	4	3	3	3	4—38
W A Mulford, Jr	5	4	4	4	4	4	2	5	2	4—38

F H Holton	37	L H Greve	34
Col C H Houghton	37	J W Martin	34
F L Sheldon	33	G M Townsend	33
I R Denman	36	J W Martin	33
B A Vail	36	P Bonnett	31
W A Mulford, Jr	36	F H Holton	31
F S Sheldon	35	F M Squier	30

Three competitors retired, or failed to make an average.

ASSOCIATION MATCH—*Brinton Range, Elizabeth, N. J., May* 10.—Open to all members of the N. J. State Rifle Association. Distance, 200 yards; position, standing; 10 rounds, any rifle; entrance fee, 50 cents; 10 prizes, $150. To be shot for each week until the total amount of entries shall equal the value of the prizes, at which time the prizes will be awarded according to the standing of the competitors, as shown by the aggregate of the three highest scores made in different competitions; ties to be shot off; 17 entries and 14 re-entries:

F H Holton	4	4	5	4	4	5	5	4	4	5—44

Dr J M Dart	4	0	F Baker	35
L H Greve	3	9	R M Riddle	34

Three competitors failed to make an average.

Columbia Range.—First spring meeting, 4 contests; first at 100 yards, 7 shots, any rifle, subscription; second at 200 yards, 7 shots, any rifle, first prize a Winchester rifle; third at 200 yards, 7 shots, any military rifle, position with elbow clear of hip or side, 7 prizes; fourth, military match at 500 yards, 7 shots, any military rifle, 7 prizes:

Competition 1—W. P. Wood, 33; J. L. Paulding, 32; S. T. G Dudley, 32.

Competition 2—W. E. Church, 31; S. T. G. Dudley, 30; C. H. Seymour, 28; C. G. Zettler, 27; G. W. Jones, 27; J. L. Paulding, 26; J. Booth, 26.

Competition 3—J. L. Paulding, 28; C. W. Ross, 26; R. C. Colman, 26.

Competition 4—J. Symes, 25; W. P. Wood, 25.

Stockton Range.—The new range near Camden is having a very full initial meeting during the present week, which we hope to report in full in our next issue. The officers of the association are: Directors, Gen. George W. Gile, President; Jacob C. Daubman, Vice-President; Lieut. Col. R. H. Lee, Secretary; Lieut. Col. Samuel Heiftys, Treasurer; Lieut. Col. D. B. Murphy, Commandant; Gen. William J. Sewell, Major William M. Palmer, Capt. Emmor D. French, John S. Lee. *Ex-officio* Directors, Major Gen. Gershom Mott, Major Gen. William S. Stryker, Major Gen. Lewis Perrine, Brig. Gen. Joseph W. Plume, Brig. Gen. William H. Sterling, Col. Daniel Lodor. Among the members are many well-known Philadelphia and Camden gentlemen.

WASHINGTON, D. C.—*May* 3.—There were a good company of visiting riflemen on the grounds at Benning's Range to-day to take part in the short and mid-range matches. Among the the all-comers present were: Messrs. A. G. Alford and A. V. Canfield, of Baltimore; Dr. S. I. Scott, Walter Scott and H. H. Miller, members of the Montgomery County (Md.) Rifle Club. A number of ladies occupied the grand stand and took great interest in watching the targets throughout the shooting. The day was fine, with but a slight breeze, but the very bright sun and consequent mirage, materially interfered with elevations. The leading scores stood:

Short-range Match at 200 and 300 yards, ten shots each; position, standing; off-hand; rifles, any within the N. R. A. rules; prize, a gold badge; open to all comers.

	200 yards.										300 yards.									
H H Miller	4	4	4	5	4	5	5	5	5	4—45	4	4	5	4	4	4	3	3	4	3—38
Dr S I Scott	4	4	3	4	3	5	5	4	4	4—40	4	4	3	5	4	4	4	4	3	5—40
Col Burnside	5	3	4	4	4	5	4	4	5	4—42	5	3	4	3	4	3	4	4	3	3—37

A V Canfield	5 5 5 5 5 5 5 5 5—50	4 4 4 5 5 5 4 4 5—44—94	

WASHINGTON, D. C.—Long-range match, under the auspices of the Columbia Rifle Association, for a handsome Maltese cross badge, Benning's range, on the 10th inst., and won by Prof. Willsam Harkness, of the Naval Observatory. A trying wind, varying greatly in both force and direction, and a smoky light, spoiled the prospect of good scores. One of Col. Burnside's bullets at 900 yards undoubtedly struck the target, but the splash of the lead could not be identified, and he was, under the ruling, credited with a miss. Another contestant was checked in a promising close to his score by the bursting of a worn-out shell in his gun. Barring these mischances, the meeting passed off successfully:

	800 Yards.	900 Yards.	1,000 Yards.	Total.
Prof Wm Harkness	71	67	67	205
J M T Partello	68	67	65	200
Dr S I Scott	70	61	65	196
Col T O P Burnside	67	63	63	193
A A Adee	65	60	63	188
P J Lauritzen	59	57	63	179
Chas H Laurd	70	62	54	176
Walter Scott	49	63	W	

Over the same range last Thursday Mr. A. A. Adee made a creditable intial score of 49 at 600 yards, 46 at 900 yards, and 49 at 1,000 yards: total, 144, out of a possible 150. The spring meeting of the Columbia Rifle Association, which, by the way, is the original association of that name, and not to be confounded with the more recent organization at Brinton Range, which has adopted the same title, will take place early in June, and will last for three days, when prizes to the value of $300 will be contested for by all-comers.

VIRGINIA—*Richmond.*—We will commence work on the lake at Fernmoor (our new range) next week, and when finished intend stocking it with fish. This, added to its other attractions, will make it one of the most beautiful spots around our city. S.

—The German Volunteers, of Savannah, have extended a general invitation to the military and rifle teams of the Southern States to meet at the Schuetzen Park, Savannah, for a two days' shooting meeting, July 3 and 4 next. The park is a delightful place, three and a half miles outside of the Forest City, and the visitors may be sure of receiving a liberal share of old-style Southern hospitality. Shooting is from 200 to 500 yards, using Creedmoor targets and the N. R. A. rules, with a man-target as an extra prize. There will also be a match at glass ball shooting.

—The Board of Directors N. R. A. have resolved to hold all moneys received from life membership as a reserve fund for the repair of the butts and other plant of the range at Creedmoor. Major Fulton reports progress in the negotiations with Sir Henry Halford in the matter of a Palma contest. Sir Henry may be certain that he is coming to a defeat if he will glance from time to time at the Walnut Hill scores. Long-range shooting at Creedmoor has become one of the defunct arts.

ILLINOIS—*Lake View, May* 3.—Following is the score today of the Lake View Rifle Club at regular weekly practice, 200 yards, off hand. Weather cloudy; wind, 2 o'clock:

F Henrotin	4	4	4	4	5	4	5	5	5	4—43
H C Bradley	4	4	4	4	4	5	5	5	4	5—42

AMERICAN RIFLES ABROAD.—*Editor Forest and Stream—Dear Sir:* In your impression of March 6, in "Long-Range and Repeating Rifles," there are some misrepresentations. In Prussia the value of long-range shooting is by no means generally accepted. It was only after the French war in 1870 that they adopted a long-range rifle, and even now they frequently shoot their matches at 170 and 200 metres. In Austria they still shoot at ridiculously short ranges, employing small targets divided into a great number of circles, and with a bull's-eye about an inch in diameter, the hitting of which is of course entirely a matter of luck. England, with her Martini-Henry, need not be very uneasy, as at 1,200 yards it will put all the bullets in a circle 25 inches in diameter, and they certainly never ridiculed the value of long-range shooting, as they always practiced, even with the old Enfield, at 1,000 yards, even when the majority of American rifles shot a very short cartridge with a very high trajectory. The Kropatchek rifle is to be adopted by the Austrians, not the French. Kropatchek was an Austrian lieutenant, and is now promoted to major. The Swiss infantry use the Verterli repeater, which is by no means effective at long ranges, as it has a small calibre and weak charge. The terrible rain of lead at Plevna was not from Winchester repeaters, as those the Turks have of this make are the old pattern with a very light charge, not bigger than a long revolver cartridge. The deadly fire was from Martini-Henry rifles, made in America from the English model, one of which I have from Plevna. Peabody-Martini is stamped on them, but they are genuine Martini-Henrys, nevertheless—that is, the action is Martini and the barrel and bullet are Henry. And this bullet, with its wrapper, has, I believe, been copied in all modern rifles of any importance. I shall esteem it a great favor if you can through your columns give me the following information: Were have a rifle club here and cannot import loaded shells. Now, is there made in America a practical machine which would render the loading of some thousands of shells a comparative easy matter? If so, where is it to be obtained and what is the price? Is there any means of fixing the top wad in brass shot-shells? I find that it is impossible to use them, as, if they do not get loose in the pocket, they are sure to in left barrel upon the discharge of the right. Is there any objection to making a series of centre-punch marks round the end of the shell? I am, sir, an admirer of long-range shooting, M. S. R.

Braila, Roumania, Europe, March 25, 1879.

Our correspondent is possibly in error touching the rifles used at Plevna. It certainly was the report at the time, in private correspondence as in public print, that the "rain of lead" came from "American repeaters," or "Winchester" rifles, of the model of 1866. The Turks had 85,000 from the Winchester Arms Co., and it was of this stock that the Turks fought the first part of the battle of Plevna, when the Russians were piled up in ranks of dead under the continuous fusilade. There were Peabody-Martini rifles there, for 600,000 have gone out from the Providence Tool Co.'s works. But they are not the weapons referred to in the reports as "American repeaters."

Touching the loading of long range cartridges, it will be better for our correspondent to have them loaded at home as wanted. This plan should certainly be adopted, if he wishes for satisfactory work at the butts. He will notice by our advertising columns that the Union Metallic Cartridge Co. offer a brass shot-shell perforated as he describes.

A "PROFESSIONAL'S" VIEW.—*Editor Forest and Stream:* I can but be gratified at the compliment paid to my skill with the rifle in the letter of "Amateur," published in a recent issue. His desire is to call me a "professional," and "bar" me from competing in the "All-comers" matches at Creedmoor and Brinton. The fact that I have charge of the rifle department of Messrs. Schoverling, Daly & Gale's, general agents for the Ballard rifles would not be sufficient, perhaps, in Mr. "Amateur's" opinion to "bar" me from the matches; but being brought into contact with other riflemen, who are as enthusiastic as myself, am induced to find time and visit the different ranges, and am successful in practice, our Newark amateur is greatly chagrined. Now, if this gentleman will give us his name through the columns of FOREST AND STREAM, and the matches he wishes me to remain out of, I will try to oblige him.

Our athletic clubs designate as a "professional" any one having competed for a cash prize.

New York, May 6. WILLARD MILTON FARROW.

YACHTS UNDER TWENTY TONS.

THE subject of yacht's papers, particularly in regard to vessels of small tonnage, has always been involved in more or less doubt. The local authorities of different ports have put upon the general instructions of the Treasury Department such interpretations as seemed to them most suitable, and it is needless to add that their views were anything but harmonious. Yachts of over twenty tons were less liable to the harassing interference of red tape, and were seldom summarily dealt with, unless, indeed, they so far forgot themselves and set at naught the majesty of the law as to spell their names in gold instead of the democratic whitewashed letters of the regulation mammoth standard prescribed for the whaler and the lumbering trader with a counter as big as a store front. Terror was wrought among the fleet by the sudden prickings of the official consciences located in Newport town and other places where yachts most do congregate. With the power of a continent to back them, the argus eyes of the revenue officer spied gold instead of white lead, and mercilessly swooped down upon the yachtsman, fastening upon him the sharp claws of the law's stern grip, causing many an amateur sailor to turn out in the midwatch with a piece of chalk in his hand, and mark in yard-long letters the name of his pet craft, upon her pretty stern. The move now pending to have the laws relating to vessels over 20 tons simplified to the satisfaction of all parties concerned, will no doubt result in the enactment of a concise and comprehensive yet liberal law covering what now is beyond the reach and interpretation of most members of the community. At present we are dealing with the status of yachts under 20 tons. The following communication from the Treasury Department gives all the information needed, and is clear in all its bearings. From it we gather that yachts measuring less than 20 tons, Custom House Measurement, are not required by law to take out papers or licenses of any kind, nor are they required to be enrolled. In short, such yachts occupy the same status as open boats, skiffs, scows etc. They have to comply with no general or special legislation of any kind or character, other than not to engage in the transport of passengers or merchandise for pay or profit. We trust the matter has now been made so plain that owners of craft under 20 tons will not permit themselves to fall victims to overscrupulous revenue officials, too apt to venture stopping leaks at the spiggot and allow losses at the bung.

Yachts under 20 tons sailing without any documents at all render themselves liable, however, to visits and reasonable detention from revenue officers until their exact tonnage and status can be ascertained or accounted for. We append the letter from the Treasury Department:

WASHINGTON, D. C., May 1, 1879.

EDITOR FOREST AND STREAM:

The general rule of the statutes, as regards all vessels engaged in the coasting trade or fisheries, is to be found in Sec. 4,311, R. S. The rule is, that to be entitled to the privileges of the coasting trade or fisheries, and to be deemed at the same time vessels of the United States, they must be either enrolled and licensed, or licensed only, according to their tonnage. If vessels do not engage in the coasting trade or the fisheries, they are not obliged by law to be either enrolled or licensed. On the other hand, if vessels engage in the coasting trade or the fisheries without enrolment or license, they become liable under Sec. 4,371, R. S., on arrival at any port of the United States, to an alien tonnage tax, or if their cargo consists of foreign goods or distilled spirits, to forfeiture.

A vessel, therefore, under twenty tons burden, whether a yacht or any other kind of vessel, is not required by law to be licensed unless she engages in trade or the fisheries. As to what constitutes trade under Sec. 4,371, R. S., the Department holds that at least the actual transportation of commodities as freight, or of passengers for pay, is essential in order to bring a vessel within the scope of the penalties prescribed in that section. While the law is thus liberal, it at the same time requires and allows an inspection of all vessels plying in navigable waters of the United States, in order that it may be known whether they are engaged in trade in any proper sense of the word. This liability to inspection carries with it a possible detention of any undocumented vessels by officers of the revenue marine so long as may be needful for a reasonable search. To avoid protracted inspections or repeated examinations upon a vessel's passing from one district to another, it is always advisable, even for a yacht of less than twenty tons burden, to take out a license as a coasting vessel, as the law recognizes no vessel as a yacht unless it be of twenty tons burden or more, under enrolment as such.

Very respectfully, H. F. FRENCH, Ass't Sec.

YACHTING NEWS.

SEAWANHAKA YACHT CLUB.—All yachtsmen in and about New York should begin to organize and train their crews for the Corinthian race which takes place Saturday, June 21. A change is about to be made by the Seawanhaka Yacht Club in the classification of the smaller yachts so as to bring yachts of about the same size together. The change will be as follows:

CABIN SLOOPS.

Class.	Sq. ft. area.	Prize.
4th	400 and under.	$ 65
3d	400 to 650	85
2d	650 to 900	150

The first class sloops and the schooner class remain as before. It is thought this subdivision will make the event very interesting especially to small Corinthian cruisers. The Seawanhaka rule for measurement for time allowance is as follows: Add the length over all to the length on the water-line, and divide the sum so obtained by two. This gives the "mean length." Multiply the mean length by the extreme beam, and the result will be the area in square feet. Length over all will be measured from the after end of the planksheer at the middle of the stern to a point perpendicular to the forward end of the water-line at the upper line of the planksheer, or a point corresponding thereto if the planksheer does not extend so far. The requirements for entering the Corinthian race are as follows: Entries from yachts of other clubs must be filed with the Chairman of the Regatta Committee (Mr. James H. Elliott, 19 Tribune Building,) by 3 o'clock P. M. of the 2d day before the race, and must be accompanied by the measurement according to Seawanhaka rules of the yacht entered, certified to by the owner, or by the measurer of the club from which she enters. If this measurement be called in question through protest, the yacht will be remeasured by the measurer of the Seawanhaka Y. C., and if found right the measurer's fee ($10) will be collected from the party protesting, if wrong from the owner. Yachts must be manned by amateurs exclusively; a sailing-master, cook and steward may be carried who shall in no manner assist in sailing the yacht. Before starting in a race each yacht must file with the Regatta Committee a list of the names comprising her crew with the occupation and address of each. This list is subject to the revision of the Regatta Committee, whose decision shall be final. Every yacht winning a prize must allow the measurer of the Seawanhaka Club to take off her lines, the fee for which will be $15. Yachts paying this fee will not be subject to the measurement fee. The Treasurer can in no case deliver a prize until this rule is complied with. The lines shall remain the property of the club, and no copies or tracings will be allowed unless with the consent of the yacht owner. The light sails allowed will be working gaff topsails, jib topsails and spinnakers. To add to the interest in the race a prize will be given to each member of every winning crew. The 4th class sloops will not be obliged to turn the Light Ship, a shorter course will be set apart for them, probably to the Gedney Channel buoy, making about 23 miles. The inducements offered in this race are such as should secure a very large entry, and as Corinthian sailors will become very scarce later on, owners of yachts should prepare now and engage their friends to join with them for this event.

The following letter from the club's Secretary will explain itself:

SECRETARY'S OFFICE, May 8, 1879,
28 Pine Street, New York.

Dear Sir—On Decoration Day (Friday, May 30), there will be a review of the fleet in the lower bay, after which the yachts will proceed to the Beach House at New Dorp, where the club will provide refreshments.

It is desired that all members should participate, and invi-

tations will be sent to non-yacht owners by the captains of those yachts expecting to take part in the review.

Should you wish to join us, please notify the Secretary by the 15th inst., when the necessary details will be sent you.

By order of the Vice-Commodore.

CHAS. H. GRUNDY, Sec.

INTREPID AND NORNA.—The owners of both of these schooners, now that they have been thoroughly tried, express themselves highly satisfied with their performances. Mr. Contoit says of the *Norna*, that she could not be improved upon in any direction, while *Intrepid* is said to have shown such fine seagoing qualities during her very extensive cruising in the West Indies, that topmasts were hardly ever housed, the vessel was so easy in a seaway. All that we have written in favor of deep draft and moderate beam has been fully borne out by these two successful schooners. If such a thing were necessary in the minds of intelligent persons, they may also be cited as vindicating the value of scientific design. *Intrepid* is said to be even too able as it is for her present spars, and Mr. Lloyd Phœnix is sorry he did not hold on to the longer ones, for the schooner could have carried them in all weathers with ease.

DETROIT YACHT CLUB.—Several new members have been added to the club, and two new yachts. A schooner built by Ed. Gordon for Mr. S. H. Ives, 54ft. long, 16ft. 6in. beam, with a cabin 15x10ft. She will carry 1,000 yds. of canvas, the balloon jib alone containing 300. The other craft is a sloop 30ft. long and 10ft. beam, by Wm. Steinbrecher for his own use. The Chairman of the Regatta Committee has entered into correspondence with the other Lake yacht clubs with a view to holding a union regatta at some convenient port.

MARBLEHEAD (MASS.) REGATTA.—The Citizen's Regatta will be held June 17, and promises to attract a large list of entries. For information address L. G. Pitman, Secretary of the Regatta Committee, Marblehead, Mass.

SOUTH BOSTON YACHT CLUB.—A union regatta will be given by this club May 30, at 3 P. M., open to yachts of all clubs. First class, 26ft. to 40ft.; second class, 20 to 26ft.; third class, under 20ft. Yachts will be started from to leeward to prevent blanketing down the wind. Entries to be made to Mr. Van Pond, 361 Washington st., or to Mr. Jas. Charnock, 596 Sixth st., So. Boston.

COLUMBIA YACHT CLUB.—This club, preceding on the Corinthian principles recently adopted, is on the high road to success. Seven new members and three sloops have lately joined. A union regatta in connection with the New Jersey Yacht Club is in contemplation, and "squadron sailing" every fortnight will also be attempted. The annual regatta takes place June 23.

EASTERN YACHT CLUB.—The first rendezvous of the squadron will be off Swampscott, June 17, 11:30 A. M. The rendezvous for the squadron cruise to New London will be off West Dorchester, Friday afternoon, June 20, and the annual regatta will take place off Marblehead, Wednesday, July 9. The cruise "around the Cape" as far as New London will be a new feature in squadron sailing and will put the smaller sloops to a severe test, should they meet with the wind fresh from the eastward, but this sort of thing is just what is needed.

CHICAGO YACHT CLUB.—The annual regatta has been fixed for June 14, and a second meeting free to all, will take place July 12; the annual cruise, August 16, will be to South Chicago and return.

THE CANOE REGATTA.—At a meeting of canoeists, held May 8, in this city, it was resolved to organize an "open" regatta for Saturday, June 7, course triangular off the Staten Island Rowing Club House on the northern extremity of Staten Island. Open to all canoes, no time allowance, centreboards, shifting keels, shoes or lee-boards, and shifting ballast to be allowed; no paddling except for coming about. A paddling race is to follow and the question of an "upset race" was left to the discretion of the regatta committee. Entrance fee to all races $2. The committee consists of Mr. F. S. Smith, N. Y. C. C., and Com. Chase, of the J. C. C. C., with a member added from all clubs which participate. Sixteen entries have already been received by the Secretary, Room 84, Morse Building, cor. Beekman and Nassau st. We reserve some more extensive remarks on the proposed regatta and the canoeing interests generally for another number.

DORCHESTER YACHT CLUB.—Fixtures as follows: A match May 30, open to all yacht clubs; two classes for sloops and one for schooners. Entries should be made to Mr. Coolidge Barnard, giving area of sail to be carried at least twenty-four hours before the start. The secretary of the club, Mr. G. H. L. Sharp, offers a silk club flag, to be sailed for in Dorchester Bay, three Saturdays during July and August; open to all cats under 20 ft. belonging to recognized yacht clubs. Matches will also be sailed June 28, July 12, Aug. 9, and Sept. 9; the first three to be for the championship of the club and the last open to all clubs. Capt. Nathaniel Wales and Charles E. Fuller were elected honorary members.

A CRUISING SLOOP.—Pierce Bros., of South Boston have finished a sloop for Mr. Ed. Burgess. She is 26ft. over all, 23 on water line, 10ft. 6in. beam and draws 5ft. She carries 1250 lbs. iron on the keel and will be rigged with a pole mast only. Has rocker keel and no fore-foot. The same builders have finished a cat for Mr. Sydney Burgess, 23ft. on deck and 20ft. water line; draft 2ft. 3in.

SALEM YACHT CLUB.—A number of new craft will be added to this club. The most notable are Daniel Beckett's new schooner, 37ft. 6in. long, 12ft. 4in. beam, and 4ft. 8in. hold, and a sloop by Wm. Smith, called the *Vesta*, built for Mr. F. A. Gardner. She is 24ft. 6in. long, 9ft. 6in. beam, finished in red cherry and cypress. Sail area 190 yards, the jibs having 40. Joshua Brown has built a schooner 37ft. long, for Mr. Wm. P. Parker of Salem. She has 10ft. beam and 4ft. 6in. hold. Had both the above schooners been rigged as yawls they would have been speedier, equally handy, and would have had no mainmast blocking up the cabin. As schooners they lose much in weatherliness, economy and general efficiency.

MOSQUITO YACHT CLUB.—The first match of the season was held in Boston waters, May 3, by the little fellows of the Mosquito Club. Course from South Boston club house to buoy No. 7, off Fort Independence, thence to spar buoy No. 2, and return home. Flying start; wind northwest, and a fine race resulted as follows:

FIRST CLASS—CENTREBOARDS.

Yacht.	Owner.	Start. H.	M.	S.	Return. H.	M.	S.	Sailing Time. H.	M.	S.
Flora Lee	Boardman	10	02	13	11	05	30	1	03	17
Lizzie	McDonald	10	01	55	11	08	07	1	14	12
Sport	J Bertram	10	04	10	11	12	09	1	07	59
Roslyn	J Condon	Time not taken.								

SECOND CLASS—KEELS.

Starlight	Winniat	10	00	45	11	05	52	1	05	07
Lena	Bibber	10	00	00	11	11	19	1	11	19

THIRD CLASS—KEELS.

Sadie	Dean	10	07	54	11	10	52	1	02	58
Winsome	Condon	10	04	42	11	08	21	1	03	39
Joy	Whitman	10	04	40	11	14	12	1	09	65
Whitewing	Charnock	Not taken.								

First prizes to Flora Lee, Starlight and Sadie; second prizes to Lizzie and Winsome. The judges were Mr. James McDonald, Mr. Ross and Mr. Kenny.

FRENCHY JOHNSON.—"Frenchy," the well known oarsman of the Charles River, will appear in a brand-new paper shell recently received from Waters & Son, of Troy, N. Y.

DUXBURY (MASS.) YACHT CLUB.—This club was organized in 1876, numbers over one hundred members and owns a club house on Duxbury Bay. Its burgee flies at the masthead of a fleet of forty sail, from the schooner down to the tiny catboat. Officers for the year: Commodore William A. Drew; Vice Commodore, George A. Green; Fleet Captain, N. B. Watson; Secretary, Alfred E. Green; Regatta Committee, T. A. Hutchins, Louis H. Keith, S. S. Richards, J. E. Came and W. A Drew.

NOVA SCOTIA YACHT SQUADRON.—Twenty-two members and six yachts have been added to the club this spring. The Yacht Racing Association sailing rules have been adopted, with exception of the rule of measurement, the Squadron adhering to their own in which depth is a factor. Fixtures for the season are as follows: opening cruise and annual dinner, June 14; opening races, June 21; races, July 12, August 23 and Sept. 6. Harbor cruises and evolutions under command of flag officers, June 28, July 19, Aug. 2 and Aug 30. Closing cruise, Sept. 53. *Mystery*, sloop, F. C. Sumichrast, Esq., will leave on a cruise to the westward the middle of May. *Nymphia*, Mr. C. E. Brown, has joined the station at Halifax, preparatory to some extended cruising in Bay Chaleurs. She has been yawl rigged. The other yachts of the squadron have about all been launched. Mosely is giving *Petrel*, Mr. G. A. Black, new topsides, deck and stern. He is also building a catamaran for Mr. J. Sterling. There is plenty of good racing in prospect, as besides the prizes offered by the Squadron, the Vice and Rear Commodores and the Hon. Secretary offer one, and another will be given by the latter separately.

ROYAL HALIFAX YACHT CLUB.—The lingering remnants of this once flourishing club have been sold at auction by order of court to satisfy a mortgage and other debts. This club, which for some years has existed in name only, has now fairly ceased as a separate organization, as only two yachts were under its flag of late. Yachting in Nova Scotia will not suffer by its demise.

PRO BONO PUBLICO.—"Rouge Croix," to whom the yachting public on both sides of the Atlantic is indebted for many entertaining yachting yarns and who has done much for the advance of the sport in America, will receive with pleasure the books of the various clubs throughout the country, for purposes of reference in writing an annual review of the seasons' races. Secretaries of clubs will confer a favor upon the community by forwarding their club books to "Rouge Croix" in our care, or we will send his address upon application. Anything that tends to the concentration and perfecting of the yachting interests, now so scattered, should be viewed with favor by all having the concerted action of yachtsmen at heart.

A NEW YARD.—Piepgras, "the Dan Hatcher of America," has added a draughting office to his yard in Greenpoint, and is prepared to furnish drawings and specifications for all kinds of work from a frigate down to the five tonner. He now has his hands pretty full building one cutter, extensive repairs on an imported "five," and a large freighting scow for Havana parties. Mr. Diedrickson's cutter was launched, May 7, and attracted general attention by the amount of room on deck and below. She will hail from the "Sailor's Snug Harbor," Staten Island.

BOW FACING GEAR.—The price of Lyman's Bow Facing Gear has been materially reduced. This gear is especially suitable to sporting boats in which a view of the game ahead is desirable. For family rowing and general boating purposes it is so well adapted, that a much more extended use of this appliance in the future is assured. The workmanship of Mr. Lyman leaves nothing to be desired as regards material and finish.

Game Bag and Gun.

MAY IS A CLOSE MONTH FOR GAME.

—Brown's Patent Gun Cleaner, advertised elsewhere, is neat, handy and satisfactory. One convenience it possesses is the readiness with which the soiled wiper or patch may be removed and a clean one substituted in its place.

THE ROCKY MOUNTAINS.—We call attention to the advertisement of Mr. Mahlon Gore's proposed trip with a party to the Rocky Mountains. This is a rare opportunity.

BIRD SKIN TIDIES.—A decided novelty in the taxidermist's art is the new bird skin tidy designed by Mr. Fritz Von Kordorf, and for sale at Harris' Sportsmen's Emporium, 177 Broadway. These skins are preserved entire, and suitably lined, and make a handsome ornament for the parlor or study. As souvenirs of field exursions these tidies ought to become popular.

THE MEXICAN LION.—Last week Dr. Morton Robinson brought to our office the skin of one of these formidable beasts, which measured something like 10 feet from tip of nose to tip of tail when fresh. It was the trophy of one of his grazing friends in New Mexico who shot it by moonlight while depredating upon his sheep-folds. We printed a history of the transaction in FOREST AND STREAM last winter in one of a series of very interesting letters from that quarter of the globe. These "varmints" are quite numerous, bold, and cause the rancheros much anxiety and loss. Naturalists group the puma, panther, cougar, and mountain lion, under that variety of the Felidæ called *felis concolor*. Its range is from Canada to Patagonia.

SHOOTING TOURNAMENTS POSTPONED.—The Louisville, Ky., Tournament has been postponed until the 16th of June, and the Illinois State Sportsmen's Association's Convention at Peoria has been deferred indefinitely. The reason in each case is a lack of birds. Messrs. Griffith and Barbour, the managers of the Louisville Tournament, assure us that the birds will be on hand for the five days' sport, beginning on the above date.

CANADA—*Montreal, May* 3.—As the close season for the latest of game birds began here on the 12th instant, we, who do not care for glass ball shooting, are oiling our guns with either neat's-foot or pig's-foot oil, which are both good rust preventives, and laying them away until the beginning of the open season—September 1. The ice remained on our lakes and rivers until the last of April, which almost spoiled our spring duck shooting. A few good bags were made, however. Our friend, Mr. C. C. Beatty, one of the most popular mail agents in H. M.'s mail service, reports good sport among canvasbacks, pintails and black ducks, at The Point, in Missisquoi Bay, the last day of the season, the 30th.

STANSTEAD.

RHODE ISLAND—*Newport, May* 4.—Snipe have been quite plenty on the Island this spring, some very good bags have been shot; some seafowl shooting from the boat-house also very good.

NEW YORK—*Greenwood Lake, May* 6.—The severe weather has played sad havoc with the few quail and grouse left. Have seen and heard a few woodcock, but not as many as usual; but the season has been so cold and backward that they may yet come in time to give us at least late sport in the fall. The steamboats resumed navigation in connection with the railroad on the 12th of May. The road is now known as the New York and Greenwood Lake Railroad, and is operated by the Erie Railroad, and all trains arrive and depart from Chambers and Twenty-third street via Pavonia, instead of Debrosses and Courtlandt streets and Pennsylvania Railroad depot, as heretofore. Some of our leading resident sportsmen have recently organized a shooting club, to be known as "The Warwick Gun Club." The President, Wm. B. Bradner, M. D., is one of our leading physicians. The Secretary, Geo. W. Pitts, is a wide-awake druggist, and the Supervisor of our town. The club is composed of fine shots and good business men. They propose having weekly practice glass ball shoots, and you will probably have some good scores from them during the season.

NEW JERSEY—*Barnegat Inlet, May* 10.—Birds are very plenty. B.

ARKANSAS—*Maysville, May* 7.—We have a magnificent game country here. Deer are plenty (sixteen have been seen inside of ten days within two and a half miles of town), also wild turkeys. Quail are numberless, and rabbits a drug, even in private families. All we need is a good law well enforced. But every one is afraid to prosecute law-breakers, and there is not enough of the right kind of material to form a society for game protection. If any of your friends want to come to such a place as this in the fall I would be pleased to furnish any information. E. W. SCOTT.

ILLINOIS—*Quincy, May* 8.—Blue wing teal are plenty, and there is another flight of Wilson snipe, quite fat and much less wild; am sorry to say that many resident sportsmen (?) are shooting both snipe and teal. The females of both are full of eggs. The other day I took a ride in Mo., saw plenty of quail. A. B. B.

COLORADO—*Boulder, May* 3.—Shooting has been a success here this season, as snipe, ducks and geese have been plentiful. Was down on the Platte a few weeks ago with a party of four, and we bagged in all 107 ducks, the majority, however, being teal. Antelope also are numerous on the Platte and Big Thompson. Would be pleased to give information concerning Colorado to those of your readers who desire it. R. A. MAYOR.

BRANT.—*Editor Forest and Stream:* The season for branting at Cape Cod may now be said to be fairly closed. Nor has it been at all satisfactory to those engaged in it. Ordinarily, the brant arrive in such numbers as to afford fair sport by the 18th or 20th of March, but this year, although parties were there awaiting their arrival, none were killed before the 30th of that month. It so happens that some years there are very few young brant. The present is one of those exceptional years. Of the 102 brant killed by the M. B. Club, only three were young ones. The club has for sixteen years had but one season as bad as this. The best shooting always occurs when there is a large proportion of young birds. The old, that from year to year visit this place, become perfectly familiar with boxes, bars, boats, batteries and all other wicked contrivances introduced by skillful gunners for their destruction. They seem to understand exactly what that little pile of sand, with three brant (decoys) sitting on the point, flanked by four dozen wood decoys, means, and of course give it a wide berth; and furthermore, when but few young birds accompany the adults, they are driven off by the latter; whereas, if the young predominate, they will come to the decoys even though they have to separate to do so, and often will draw the old ones after them. It is upon these occasions that the sportsman is rewarded for all his trouble, as he often knocks over twenty or thirty at a shot. Usually the season closes by the 24th of April, but when it is backward there are some brant left in the bay as late as the 1st or 5th of May. They do not, however, decoy well at the very end of the season, as they seem to be awfully impressed with the idea that they are late, and must hurry along, which they do most energetically. H.

Boston, May 6.

ONE-ARMED SHOOTERS.—By a fortunate principle of compensation it often happens that a person deprived of an arm acquires such skill with the remaining one that he is, single-handed, more than a match for other men with the regular number of arms. We once knew a one-armed man who was the unquestioned champion of the village boxers. Two arms would seem to be necessary in the handling of the gun, and yet our readers must remember the extraordinary shooting skill of Mr. Ward, of Canada, some time ago described in this journal. Another instance of this character has just come to our notice. A correspondent, Mr. C. N. Young, of Hoosick Falls, N. Y., writes that his brother, who lost his left arm years ago, is, despite his misfortune, an expert with the shot gun, who habitually scores more birds in a day's sport than his companions.

CARD'S NEW MODEL TRAP.—Through the kindness of Mr. Will H. Cruttenden, of Cazenovia, N. Y., who is the general agent for the Card Rotary Traps, we have been enabled to make trial of one of his latest style, which he calls the "New

Model." In noticing these traps in the columns of FOREST AND STREAM when they were first introduced, we spoke of them in high terms, and the judgment of shooters throughout the country has sustained the decision which we then rendered. We have no hesitation in saying that the "New Model" is a very great improvement on the traps earlier made. The spring is strong and admirably tempered by hand, the machinery of the various parts is carefully fitted, and the trap works easily, and without the need of any force in pulling it. By a recent improvement the trap can be made to throw in any and all directions, or can be stopped so that the balls will fly in all directions except that of the person shooting. A man who is unpracticed in glass ball shooting needs to be prompt in deciding and quick of finger if he is to break many of his balls from one of these new traps. We recommend our readers to consult Mr. Cruttenden's advertisement in this week's FOREST AND STREAM.

KAY'S CHIPS AGAIN.—*New York, May 5.—Editor Forest and Stream:* Experiments have satisfied me that your correspondent "Abraham" is right in his estimation and tables of targets made with the Kay chips. They are certainly all that is claimed for them, and are just the thing for pigeon shooting at long distance. Even if the bird is a quick incomer the spread of shot is sufficient to cover any moderate inaccuracy of aim, and if hit with the center of the charge he is not reduced to pulp. The chip is the only article of the kind which can be absolutely depended on for uniformity of distribution, nearly all of my targets appearing at first glance as if made with one charge. Messrs. Kay & Co. can hardly desire a better advertisement than the fact that the new but redoubtable Wagunhas Gun Club have declined a challenge from the Newark Club unless the latter will agree to dispense with the chip in a match at 30 yards rise, one barrel. All the Newarkers are loud in their praises of the chip. Why should we have our guns choked when by using the chip we can make a cylinder choked? SIDE LEVER.

THE AUXILIARY RIFLE.—A Pensacola, Fla., correspondent writes that the Shelton auxiliary barrel is giving the fullest satisfaction wherever it is introduced in that part of the country. It has proved especially adapted to deer hunting.

DEER HUNTING IN TENNESSEE.

EDITOR FOREST AND STREAM:

When a meet of Her Majesty's staghounds takes place in the great park at Windsor Castle, with the Earl of Hardwicke as the master of the hounds, with his huntsmen and whippers-in and some thirty couple of the finest bred dogs in the country, and a field of from fifty to one hundred splendidly mounted huntsmen, with their red coats, leather breeches and top boots, it furnishes a sight that is not easily forgotten, and one that would arouse in the breast of any one fond of sport the keenest sense of enjoyment, or else it would indeed be difficult to say what would. A fine stag has been captured from the large herd of deer bred on the royal domain especially for this sport. He is yonder in a large van, having been transported to the place of meeting. When all is ready the door is opened, and out he leaps and away he goes. It may be an old one, who has been out before the hounds more than once; he knows what is coming, and makes the best of his time from the start. At a given signal the hounds are cast off, and away they go, filling the air with that beautiful music peculiar to such animals. Pell-mell come the horsemen, over hedge and ditch, stone walls, up hill and down; now through some park, another moment skirting a country village or hamlet. On and on they go, until at last the stag is brought to bay and the chase is at an end. It is true that great courage is required to follow the hounds closely; the pace is sometimes prodigious, and many of the leaps that come in one's way in a good run would rarely be taken by the pluckiest riders but for the intense excitement. As it is, of the starters, but few ever turn up at the finish. In our country, a chase after a full-grown buck is not only the nearest approach to the above, but to the true sportsman is preferable, on account of its more natural and savage character. For instance: On the estate of Mr. D. Hillman, which consists of 75,000 acres in one tract, such occasions often present themselves. In this large body of land all kinds of country are to be found—hill and dale, forest and prairie, water courses, marshes, gullies, fallen timber; all offering difficulties of no mean kind to be surmounted. Our huntsmen have no red coats or top boots, but, as a rule, are well mounted. Our hounds are not kept in kennels under the supervision of a regular huntsman, but the pack is made up from the neighborhood, each man bringing what he can; as many as thirty or forty is a large pack. Our stag is not in a van, but in some covert, hidden away, full of all the cunning instinct of the absolutely wild deer. It is he who has to be found, started, chased and caught or shot.

Deer in our country have stereotyped habits, by which their whereabouts are easily discovered by the old huntsmen. They have their regular feeding-grounds and watering-places, and near which they can almost always be found, or, if not their feeding time, they generally resort to some place near by to rest. Sometimes, when the whereabouts of game is discovered, the hunters dismount at different places along which signs can be seen, and wait a chance shot, as he may run by after the dogs have started him from his hiding-place; or else they all remain mounted and follow the chase in regular style, always with the difference with English stag-hunting—if any one gets an opportunity they shoot the game. Those best acquainted with woodcraft fare the best generally, as they can from the music of the pack tell pretty nearly the way the deer is running, and thus, by cutting across and about, stand a better chance of a shot. But then a deer is hard to hit from a horse when both are in motion; and then there is always a little nervousness on such occasions, so that the mortality from that score is not very great. Besides, a deer will run a long distance after being wounded, unless hit in some vital part. It facilitates the dogs' catching him, however; and then they often have trouble, for an old buck is a dangerous beast to tackle, oftentimes killing and wounding many dogs with his antlers and hoofs. The favorite breeds of hounds and for deer hunting throughout the South are the black and tan and common hounds. The English stag and foxhounds have been tried, but, as a rule, are too fast, and will not be called off from the chase. Young Mr. Hillman told a friend of mine that he was out lately with his pack of hounds and had a splendid run of several hours, and at last killed the deer in the inclosed grounds around his house. When the season opens next fall I would be glad to hear of some of our Eastern sportsmen making preparations to come out here and hunt that country. I am confident they would have excellent sport, and certainly a hearty welcome.

Nashville, Tenn. J. D. H.

HOW TO LOAD FOR GAME.

PAINESVILLE, Ohio, May 1, 1879

EDITOR FOREST AND STREAM:

I shall not attempt to lay down any rules—it would be folly to do so, as no two guns shoot alike with the same load. I write my experience in loading my 12-gauge, 30-inch, 7½lbs. W. & C. Scott premier gun.

though I have owned 10-gauge guns, my experience with them has been limited. I am very much in favor of light guns for all except wild fowl shooting. Even in this shooting, light 12-gauge guns will do much better than one is aware of, unless he has tried it. The trouble lies not in the shooting qualities of the gun, but in the lack of necessary weight to take up the recoil of the heavy charges required. For all upland shooting give me a light 12-gauge gun; it is much pleasanter to carry. To be able to cover a strong, swift-flying bird, that starts most unexpectedly, before he is out of shot, you must be reasonably fresh and elastic—not distressed and dispirited. Your gun must be of such a weight that you can carry it all day without severe fatigue.

A good 12-gauge gun will serve you honestly in all upland shooting, and while not just the thing for wild fowl shooting, will yet suffice if you find occasional opportunity to put it to such work. I use mostly Dittmar powder, and any rule that applies to that will do for black. The majority of sportsmen overload their guns. Men who have been using muzzle-loaders with the best of success, loading with 2½ drams of powder, buy a breech-loader and proceed at once to load with 5 drams. Now, what is the use of it, pray tell? I very seldom load with over 3½ drams of powder and 1 oz. shot. In duck shooting I have been using 4 drams Orange Ducking No. 5 and 1 oz. No. 6 shot, but the powder was very coarse and pleasant to shoot. For snipe, quail and woodcock shooting I find that 3 drams of Dittmar and 1 oz. of 8 or 10 shot does the work nicely. Some men seem to have the best luck with certain sizes of shot. I always use No. 7 for trap shooting; don't seem to have any luck with any other size. For quail I use No. 8; snipe, No. 10; woodcock, No. 10; rabbits, No. 8; squirrels, No. 8; ruffed grouse, No. 6; ducks, Nos. 4 and 6.

My experience has been that the finer the shot used the more powder is wanted back of them. I use two pink edge wads over the powder, and a good plan is to place next the powder a thin waterproof card wad, to prevent the powder from absorbing the grease of the wads. Over the shot I place a black edge wad, except in single bird trap-shooting, when I substitute a card wad, as the lighter the pressure over the shot the better the gun will shoot. This I have proved many times, and on that account never crimp a paper shell. If the wads are a size larger than shell there will be no trouble in the wads starting. I have found on trial at targets that two wads over the powder give a little better penetration, and at least 25 per cent. better pattern. I don't believe in pounding down the wads with a mallet; it makes but a little better penetration and makes the gun scatter badly. Any man who is in doubt how to load his gun should spend a half day trying it at targets with different loads; he can learn in that way what all the books on the subject cannot tell him.

This is for those who are just taking up the gun and are inexperienced, and, little as it is, what I have written has cost me many dollars and much time to learn it.

In reply to "Dexter," I would say the shot I used in targeting my gun were Tatham's soft shot, No. 8, 399 to the oz., making the average pattern of the gun about 90 per cent., using 3½ drams powder, 1⅛ oz. shot. NANIT.

ROCKINGHAM, N. C, April 5, 1879.

EDITOR FOREST AND STREAM:

In your last issue you invite discussions as to how to load for game. I will tell you how I load, have always loaded and ever expect to, yet will not contend that all others should follow my "illustrious example," unless they desire to do so. *Imprimis*, I use a 16-gauge W. & C. Scott breech-loader, 30-inch barrel and 7lbs. weight, and the charges specified below are for this gun. The gun was originally a choke; has, however, been rebored, and is more cylindrical. For quail (we call them partridges) I use 2 drams powder to ⅞ oz. No. 8 shot the season through; for ducks, 2½ drams powder to 1 oz. No. 5 shot; for turkeys, 2½ drams to 1 oz. No. 3 shot, and for deer, 2½ drams powder to 4 chambers buckshot, 12 and 16, the smaller (16) in the red season and the larger (12) in the blue season. T. C. LEAK.

CLEVELAND, O., April 28, 1879.

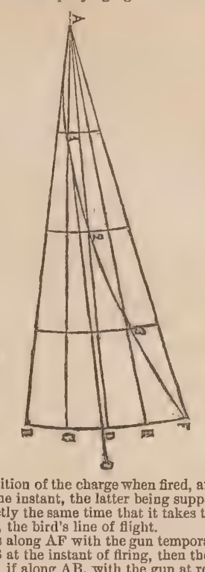
EDITOR FOREST AND STREAM:

I have four guns—one, a 10-gauge, 10-lb. 32-inch barrel. In it I use for large shot from No. 1 to No. 4, 4¼ drams powder, No. 2 grain Oriental, and 1¼ oz. shot. This is for long-range shooting at heavy ducks. In my 12-gauge gun I use 3½ drams powder 1⅛ oz. shot. In the field, 3 drams powder and 1 oz. shot, unless birds are wild, when I use 3½ drams powder and 1⅛ oz. shot. In a 16-gauge 6½lbs. gun 28-inch barrels I use, when birds are not wild, 2½ drams powder and same bulk of shot; if wild, 2¾ drams powder with same bulk of shot. This used to be an old rule for field shooting in muzzle-loading times, and is a good one for field shooting, as it gives no recoil and makes an even, pretty pattern and good penetration. These charges are, in my opinion, the best for the uses mentioned. For a field gun for quails, snipe, woodcock, partridges, prairie chickens, etc., the light 16-gauge gun is a beauty. One never tires with its weight; can grasp it so easily and handle it so quickly that he makes up any loss he may expect by not having a heavier gun and larger charge. And then it is a satisfaction to see a bird fall dead—for the 16-bore shoots close and hard when moderately choked—and feel that one has aimed at his bird and not a foot on one side, as he may do when 1¼ oz. of small shot are rained after a bird weighing scarcely more than the charge of shot sent for his destruction. CANVAS-BACK.

AIM AT FLYING GAME.

EDITOR FOREST AND STREAM:

Some light may be thrown upon the questions of whether to aim at or in front of a bird crossing the shooter by consideration of the accompanying figure and its explanation.



A is the position of the charge when fired, and B that of the bird at the same instant, the latter being supposed to fly from B to F in exactly the same time that it takes the former to go from A to BF, the bird's line of flight.

If the aim is along AF with the gun temporarily at rest, the bird passing B at the instant of firing, then the charge strikes the bird at F; if along AB, with the gun at rest, the bird will reach F as the charge reaches B; if the aim is along AB at the instant of discharge and the gun continues to be held on the bird in its flight toward F, the conditions are those of the question principally requiring consideration.

Suppose now that the line AB represents an indefinitely extended gun barrel, fired in the position AB and swung around with uniform velocity from the instant of discharge, so that when it gets into the position AF the charge reaches the muzzle at F, then when the barrel is in the position AC the charge will be at 1; when in AD, at 2; and when in AE, at 3. The points 1, 2 and 3 are those of the curved line through which the charge has to pass from A to F.

Returning to the original conditions: If A1 represents the length of the gun barrel (held on the bird flying from B toward F after being fired with aim along AB) the charge leaves it at 1 and flies in the straight line 1G, which is the resultant of the forward and angular forces and tangent to the curve at 1, and is therefore outside of the path required to carry it to F. If any other point of the curve A123F is taken as the muzzle of the gun, the breech being at A in all cases, the result shows the charge crossing the bird's line of flight somewhere between B and F at the same instant that the bird reaches F, and palpably chronicles a missing shot behind the bird.

Such successful shots as seem to argue false theory in the foregoing can generally be accounted for without disturbing it: In some cases the scattering of the shot serves to cover the error in aiming, and in others the gun is discharged just as it "catches up with" the bird and while it is moving with a rapid angular velocity unintentionally and accidentally correct. COROHO.

Richmond, Va.

—See Bogardus' advertisement.

Third tie.

Wilber	1 1 1—3	Lockwood	1 1 1—3

Divided.

Ties on three.

Jewett	1 1 1—3	S Fisher	0 1 w
E Fisher	1 1 0—2	Beach	1 1 1—3

Second tie.

Jewett	1 1 0—2	Beach	0 1 1—2

Third tie.

Jewett	1 1 1—3	Beach	0 w

Won by Jewett.

Fourth match, sweepstakes:

Jewett	1 1 1 1 1—5	Lockwood	1 0 1 1 1—4
Rumsey	1 1 0 1 1—4	Mulliken	0 0 1 1 1—3
Angell	1 0 0 0 1—2	Holt	1 1 1 1 1—5
Rubert	1 0 0 1 1—3	Wilhelm	1 1 1 1 1—5
Wilber	1 0 0 1 0—2		

Ties on five.

Jewett	1 1 1—3	Wilhelm	1 1 0—2
Holt	1 1 0—2		

Ties on four divided; ties on three won by Rubert. Fifth match was a sweepstake. Won by Jewett, Rumsey and Holt respectively.

GREGORY.

Neillsville, May 8.—Neillsville Sporting Club; Bogardus trap and rules; 18 yards:

Breed	0 1 1 1 0 1 1 1 1 1 1 1—10
Gotes	1 1 1 1 1 0 1 1 1 1 1 1—11
Sawyer	1 1 1 1 1 1 1 1 1 1 1 0—11
Archer	1 1 1 1 1 1 1 1 1 1 1 0—11
Myres	0 0 0 0 0 0 w
Pullpoit	0 0 1 0 1 1 1 0 1 1 w —6

Double balls thrown at same time and same distance:

Gotes	00 10 11 11 11—7
Sawyer	11 11 11 11 10—9
Archer	01 10 11 10 01—6

WISCONSIN—*Neillsville, May* 3.—Score of the Neillsville Club; second regular practice; Bogardus trap and rules:

Gates	1 1 1 0 1 1 1 0 0 0 1 1—6
Sawyer	1 1 1 1 1 1 1 1 1 1 0 1—11
Tolford	1 1 1 1 1 1 1 0 0 1 1 1—10
French	0 0 1 1 0 0 0 0 0 1 1 1—5
Haislett	1 1 0 1 0 0 1 1 0 0 1 1—7

The club have decided to prosecute all infringements on the game laws, and published notices to that effect.

—On the 26th inst. the Cincinnati Shooting and Fishing Club had their first glass ball shoot of the season; distance, 21 yards, 20 balls per man. The following is the score:

Caldwell	18	Whetstone	11
Disney	16	Bates	15
Topf	10	Epply	11
Koch	15		

The match was for a valuable ring, put up by the club a year ago, and Caldwell, having won it three times, by the terms it becomes his property.

C.

—As the season has now arrived when Rowing, Shooting and Athletic Medals and Badges of all kinds are in demand, all in want of such call on or send to C. B. Wilkinson, 212 Broadway. His designs are the the most elegant, workmanship superior, and prices the lowest of any house in the trade. Although Badges and Medals are his specialty, he manufactures and keeps on hand a full line of Jewelry of all kinds.—[*Adv.*

National Pastimes.

THE WAEFELAER PRIZE CUP.—The sport of flying pigeons is being brought to a very creditable stage of perfection by a number of enthusiastic gentlemen in this country. Chief among those who are active in importing choice strains and in other ways advancing the pastime is Mr. Waefelaer of Hoboken, N. J., who has offered a handsome prize cup for the champion loft of homing pigeons in the coming tournament. The cup is of chaste design; the donor's name being raised upon the rim, and the whole surmounted by a finely-executed pigeon.

INTERNATIONAL CRICKET.—The most brilliant inter-continental match ever witnessed in the United States came off on the St. Georges Cricket Ground, on the 7th and 8th insts. This match, the fifth of a series of international games, was played between seven of Lord Harris' famous English team, who have been visiting Australia, aided by Mr. Forbes, a late Cambridge graduate, and three English-American professionals, and a selected team of six New York and five Philadelphia cricketers. It is due to Mr. Soutter of the St. Georges Club, that the pilgrims consented to fill the vacancies on their eleven and spare the time from sight-seeing to visit Hoboken and play against a team which was far from being a representative one, and one that could not be expected, after a long winter, to be in practice. On the other hand, the visitors were fresh from a year's constant training, which accounts partly for their wonderful scores and splendid fielding.

The weather was delightful and never did the Hoboken grounds look as well. Giles, the club's professional, deserving great credit for having the turf in such neat order so early in the season. The inclosure, however, is too small to play a match upon against such well known batting, as many balls were hit out of the ground, and both bowlers and fielders worked to disadvantage.

A large number of persons visited the ground on the two days on which the play was spun over; though the actual time of the match occupied only five hours and a half. If the game is to continue in popularity, time must certainly be economized. When a man takes a day's shooting or fishing, he does the best of his work early in the day; and so it should be with cricket. The spring mornings are the most pleasant, to be out of bed bowling and batting in the fresh air with a good long day's sport ahead of one, and we sincerely trust that the patrons of this "noble game" will see the necessity of doing away with an evil which has existed and been quoted long enough.

As the full score is annexed, and our space will not admit of our particularizing each individual play, we will briefly state that Mr. Lucas' 98 is the largest and cleanest hit score on record made in an international match in this country; it was a treat to see, and will long be remembered.

—The re-organized Newark Cricket Club, opened its season on the 12th inst., at Newark, N. J. The weather was all that could be desired. Communications should be addressed to John Mills, Secretary.

—On the 3d inst., the Staten Island Cricket and Base Ball Club had its opening at Camp Washington Grounds, S. I. A very large number of ladies and gentlemen members being present, in fact it was by far the best attended meeting ever held in the vicinity of New York. Cricket, base ball and lawn tennis were all well patronized, but particularly cricket, there being a turn out of over thirty players, from which sides were selected. The ground, which is undoubtedly the most picturesque one in the East, looked perfectly lovely. About 4 P. M., Mr. Krebs, Presented the club with a full set of flags of the club colors (red and yellow), as a gift from the "Ladies Club for Out-Door Sports." Mr. K. did the subject justice, and Mr. Stevens responded in a very nice speech, and the new flags, seven in number, were duly unfurled. X.

NEW YORK ATHLETIC CLUB.—The tenth annual spring games, open to amateurs, will take place at Mott Haven May 30, at 2:15 P. M. Entries close Saturday, May 24. The following games will be contested: 100 yards, 220 yards, 440 yards, half-mile, and one mile runs, 120 yards hurdle race, 10 hurdles 3ft. 6in.; one mile and three mile walks, putting the shot, throwing hammer, throwing 56lb. weight, running high jump, running broad jump, pole leaping three mile bicycle race, heavy weight tug of war, teams of four men, two substitutes; light weight tug of war, teams of six men, 150lbs., and under, two substitutes. Three prizes will be given in each game except in tug of war, for which a prize will be given to each man of winning teams; entrance fee, 50 cents; the entry of any person under the age of 18 years will not be received. Any person not a member of a recognized club must be properly introduced by some well-known person who can vouch for his being an amateur. Tug of war teams must represent some club or association. An amateur is any person who has never competed in any open competition, or for a stake, or for public money, or for gate money, or under a false name, or with a professional for a prize, public money, gate money, or where gate money is charged; nor has ever, at any period of his life, taught or pursued athletic exercises as a means of livelihood.

C. A. MAHONEY, Secretary, P. O. Box 3,101.

THE SIX DAYS' WALK.—Of the sixteen men who started on the heel and toe walking match at Gilmore's Garden, Monday, May 5, six were on the track at the finish. George Guyon, of Chicago, covered 480 miles and two laps, Fred. Krohne being scored with 461 miles. "Old Sport," the red-shirted lunatic, who refuses to sink into obscurity, brought up the rear with a score of 401 miles.

ARCHERY SCORES—*Highland Park, Ill.*—The scores given below were recently made in practice by Mr. W. B. D. Gray, of the Highland Park Archery Team. Mr. Gray did not commence the use of the bow until quite late last season. Sixty yards is the longest range he has yet practiced at. Ninety arrows, 60 yards:

Hits.	Score.	Hits.	Score.	Hits.	Score.
82	368	81	370	87	399

Mr. Carver, of the Highland Park Archery Team, and Secretary of the National Association, has made with 30 arrows at 100 yards, 10 hits, 86 score.

ARCHERY SCORES—*Titusville, Pa., May* 7.—Some excellent shooting was done at Marsh's Archery Range to-day. Distance, 25 yards; 60 arrows per man. Geo. H. Webber scored 420, J. J. Marsh 428, and last, but not least, O. J. Marsh, 444. We have two clubs in this city, and hope to send you still better scores.

G. H. W.

Watertown, Mass.—First meeting of the Pequossette Archers; weather showery and cold; target, 48 inches; ladies' range, 20 yards; gentlemen, 30 yards:

	Hits.	Scores.		Hits.	Scores.
Miss Walker	10	28	Miss Patten	4	16
Miss L. Magee	12	48	E. R. Dwight	13	39
Miss E. Magee	5	15	S. P. Abbott	10	38
Miss Ingraham	14	54	A. S. Brownell	21	97

ORITANI ARCHERS.—The Oritani Archers held their second annual meeting at the residence of J. McD. Gardiner, Hackensack, N. J. After hearing the reports of the Secretary and Treasurer, which showed the club's flourishing condition, they proceeded to elect the following officers: President, W. Holberton; Vice-President, Miss K. E. Poor; Secretary and Treasurer, Mr. J. McD. Gardiner. The club adopted the regulation target and American and Columbian rounds, as laid down in by-laws of the National Association.

BAMBOO BOWS.—Concerning the split bamboo bows manufactured by Messrs. Conroy, Bissett & Malleson, of this city, Mr. W. C. Beecher, who is well known as a skillful archer, writes:

BROOKLYN, April 22, 1879.

MESSRS. CONROY, BISSETT & MALLESON:

Gentlemen—I have been much interested in testing your new bamboo bow, in comparison with a number of the most powerful bows in my collection. Although confident that the bamboo bow would give good shooting, I confess that I was not a little surprised at the remarkable results of my tests. The bow I used was six feet, and about 45 lbs. pull, yet it readily outshot my 60-lb. English bow, which is itself a very strong shooter. The same results followed in comparison with a very powerful lift. South Sea bow, and a Japanese war bow, both of which were strictly business bows. To try its endurance I first shot a number of Japanese 33-in. arrows, driving them to the head, and then, in the hardihood of experiment, put my foot on the grip piece and drew the cord nearly five feet without damage to the bow. That was about as tough a test as one could well put a bow to. With anything like reasonable and proper use, the bamboo bow seems to me to be practically indestructible. It is the only bow that I know of on which the archer can draw the good old-fashioned "cloth yard shaft." Its enduring qualities will be fully appreciated by any one who has experienced the annoyance of having a bow to which he has become accustomed break in his hands. Its pull is so smooth and even that one is at first deceived as to its power. It really seems to require less effort to pull my new 50lb. bamboo bow than a 45lb. lancewood, or yew. Its beauty of finish speaks for itself. For those qualities which especially distinguish a good bow—endurance, power and smoothness of pull—they surpass anything that it has been my good fortune to handle. Having once shot with one no lover of the bow would willingly exchange it for any other.

W. C. BEECHER.

—Mr. W. A. Hayward, of 212 Broadway, has a very extensive assortment of all kinds of badges and medals for societies, prizes, etc. He furnishes designs and estimates, and those dealing with him will find fullest satisfaction.

A TOOTHACHE SAINT.—In the Roman Calendar the patron saint of those afflicted with toothache is found in St. Apollonia. She is specially invoked by racked sufferers, according to Bishop Jewel; and the "Fantasie of Idolatrie," printed in Foxe's "Acts and Monuments," has:

"To Saynt Syth for my purse;
Saynt Loye saue my horse;
For my teth to Saynt Apolyne."

In the Royal Library at Stockholm is preserved a manuscript charm for toothache, consisting of a Latin prayer to this saint. At Bonn-on-the-Rhine a tooth, said to have been one of hers, is shown in a glass case in the church on the saint's day, and is devoutly kissed—*i. e.*, the case containing the tooth, not the precious relic itself—by people of both sexes, as a preventive against toothache. One of the most popular charms against the complaint consists in carrying the following form of words somewhere about the person: "As Sant Petter sat at the geats of Jerusalm cur Blessed Lord and Sevour Jesus Christ pased by and sead, What Eleth thee hec sead Lord my Teeth ecketh hec sead arise ane follow me and thy Teeth shall never Eake Eby moor. Fiat! Fiat! Fiat." This is a transcript of a Lancashire version, and should be worn inside the vest or stays over the left breast. Under slightly differing forms this charm is very common throughout England, Scotland and Ireland. Two copies are preserved in the Edinburgh Museum which were worn as late as 1855 and 1879. Another form of written charm was given up by a young woman at Chelsea to the late Cardinal Weld. It was carefully sealed, the penalty for opening it being a return of the toothache, and consisted of the words:

"Good devil cure her,
And take her for your pains."

A cure the girl would probably dislike at the cost. Bishop Hall, in his character of *Virtues and Vices*, says of the superstitious man: "He wears Paracelsian characters for the toothache.—*All the Year Round.*

"GOING A-FISHING."—The man who invented the fishhook will some day have a monument. It will be a granite column five hundred feet high, built by the boys alone. A boy might possibly get along with marbles, tops, stilts, balls and kites, yet he would feel that there was an aching void somewhere. A kite does well enough as long as it will outsail all other kites and the string doesn't break, and a pair of stilts are good property until after the first fall; but for real solid pleasure the fishhook can never be beaten. A boy will always expect more and get less from it than anything else invented, but he never gets too discouraged to try again.

The Smith boy was observed trying his luck yesterday in a pond on a vacant lot on Alfred street. As far back as last December his mother promised him half a day out of school as soon as the fish began to bite, and yesterday was the glorious day. Where there's water there ought to be fish, according to every boy's reckoning, and this youth "surrounded" that wee little pond-hole with its barrel of muddy water with just as much enthusiasm as a man would throw a line into Lake St. Clair. He had ham, sweetcake, potato, dried beef and boiled egg for bait, and when he had spit on the bait and cast in his hook all the Seth Greens ever born couldn't have convinced him that he would fail of at least one good big bite. For two long hours he fished for sturgeon and pickerel and pike, changing the bait now and then and never forgetting to spit on it, and as he hauled up for the last time he would simply admit that it wasn't just the right sort of day to go fishing. If he had had a little one to carry home his triumph would have been more complete, but yet his eyes were like diamonds as he met two boys on the corner and called out: "Say! I've stayed out of school a whole half-day and been a-fishing! I didn't catch any fish, 'cos they were all on their nests, but you ought to have seen the big frog which tumbled off a stone!"

DOGS.—The *Philadelphia Ledger* says:—A correspondent—who has just come to us from England and who sees many things here to approve and disapprove—has written this timely communication on left-tailed dogs which will evidently be read with pleasure by all who intend patronizing the coming bench show:

Mr. Editor: Upon my arrival here a few weeks since after a pleasant trip from Liverpool in the splendid steamer Ohio, of the American line, I was surprised to find this such a beautiful and great city. Your excellent American oysters, roast beef, poultry and superior shad have, I fear, caused a very provoking attack of gout, which will prevent me from visiting the bench show of dogs to open on Monday next. If the dogs to be exhibited prove to be no better breed than the dogs I have noticed along your streets the exhibition will not prove very creditable. At least ninety in every one hundred dogs I have noticed in this city curl their tails to the left—an evidence of low breed and danger. Dogs that curl their tails to the right are never afflicted with hydrophobia; that fatal disease prevails only among dogs that curl their tails left. No gentleman in London or any city of the Continent will own a dog or allow a dog to follow him that curls its tail to the left. If visitors at the dog show will observe what I here assert they will be convinced of this singular fact. Hoping you may find room for this in your interesting newspaper, I am very respectfully yours,

H. LANDRUM.

St. George's Hotel, Philadelphia, April 18, 1879.

DRINKING ASSAI IN PARA.—Observe these baskets of black berries, like grapes in color and size; they are the fruit of the *Assai* palm, the slender, graceful *Euterpe* that we saw. Here is an alliterative proverb:

"Quem veu para Para paro;
"Quem bebeu Assai bebe;"

which we may translate, as Mrs. Agassiz has done:

"Who came to Para was glad to stay;
"Who drank assai went never away."

It is well, then, for us to learn how this famous *vinho d'assai* is made.

In a dark little shed at the back of the court, two mulatto women are rubbing off the black pulp of the berries in great bowls of water, crushing them vigorously with their bare hands and purpling their arms with the chocolate-like juice. After the first batch has been rubbed out, the liquid is decanted from the hard nuts to another lot of berries; these latter being treated in like manner, the resulting thick soup is strained through a wicker-work sieve and dealt out to the eager customers.

Yes; the *Americanos* will have assai *com assucar;* so the little shirtless son scampers off after sugar; ordinary customers at the stand are of the lower classes, who drink their two cents' worth of assai with only a little mandioca meal by way of seasoning. In the forest, where sugar was scarce and the fruit plenty, I learned to like it quite as well so myself; its brisk, nutty flavor is rather spoiled by the sweetening. However, our new-comers may prefer the civilized side; so the sugar is added, and we take a taste of the rich liquid. Even the squeamish ones empty their bowls, and begin to suggest to themselves the possibility of entertaining another half-pint. Talk no more of sherbet and ginger-beer and soda water; hereafter we abjure them all, if we may but have our purple assai. And observe,—as Mr. Weller has it,—that "it's very fillin'." One can make a respectable lunch of it and nothing else.—*Scribner's.*

WHY FLOWERS TURN TO THE SUN.—Wiesner has presented to the Vienna Academy a monograph upon heliotropism and geotropism in plants. After an historical sketch, the author treats of the influence of light on heliotropism, and shows that with decreasing intensity of light the strength of heliotropic effect increases to a certain point, and beyond this point decreases. The lower limit of light intensity coincides with the lower limit of heliotropic effect for the stoppage of growth in length, while the upper limit does not coincide, or only occasionally coincides, with the upper limit of heliotropic effect for growth in length. In the case of very sensitive heliotropic plants, the upper limit of light intensity for stoppage of growth in length lies higher, and in less sensitive plants lower, than the upper limit for growth in length. He next considers the relation between the refrangibility of rays and their heliotropic effect, and shows that portions of very sensitive heliotropic plants, as Vicia sativa, curve in all lights, even in the ultra-red and ultra-violet, except the yellow. Experiments on the joint action of heliotropism and geotropism are next described, and the author concludes that the phenomenon of heliotropism is due to unequal growth upon unequally lighted sides of the plant.—*Harper's.*

SCOTCHING YELLOW FEVER.—Any efforts on the part of the Government to prevent or mitigate the horrors of another plague of yellow fever, is certainly most laudable, and will be gratefully received by the country; yet it is very questionable whether the recent appropriation of $200,000 to build a steel refrigerating ship, could not be much more effectively spent in draining some the Mississippian swamps. On the theory that the yellow fever germs cannot survive a frost it is proposed to build a steel ship, so arranged that it can be reduced to a very low temperature. By this means it is expected that the cargoes of vessels coming from infected ports can be cooled below the freezing point and so disinfected. Circumstances, however, do not bear the theory out very well. The steamer Plymouth, for instance, came to Boston last Fall, after a cruise in the West Indies, with yellow fever on board. After being thoroughly fumigated and exposed to all the severity of a New England winter, she again started South early in March. According to the cold theory, the germs ought to have been frozen solid long ago, yet before she had arrived at the Bermudas, the fever appeared, and the ship was forced to return. If all the storms and cold of Boston Harbor will not kill the germs, certainly a few hours in a refrigerator will not be of any use.—*Christian Union.*

—Mr. L. Delmonico has been telling the public the best ways of cooking fish. Boiling seems to him the "most legitimate," as well as quickest and most convenient. His direction is to "put them in cold spring water—the less the quantity of water the fish can be boiled in the better—with a handful of salt. Rub a little vinegar on the skin of the fish, to prevent it from cracking, and to make the flesh solid. Ten minutes to the pound should be allowed for a salmon, and three or four minutes for almost any other kind; but a good general rule is that the fish is done when the fins pull out easily." Mr. Delmonico also says that broiled fish should be "carefully split in two from head to tail, dried, seasoned with salt and pepper, greased with a little oil (which is preferable to butter), and broiled to a nice brown color, the gridiron having been previously well greased, too;" that baked fish to be eaten in perfection, should be, "cooked with wine, either white or red, in the baking-dish, besides chopped onion, salt, pepper, and nutmeg, and while cooking this sauce should be spread over it several times;" and that the fish may be "deliciously fried in oil, after dipping in milk and then flour, or in very hot grease, after being breaded with beaten eggs and crumbs."

—A new project for the creation of an inland sea has been advanced by General Fremont. The removal of a barrier ridge, he affirms, would admit the waters of the Gulf of California into an ancient basin, and would create a navigable inland sea 200 miles long, 50 miles broad, and 300 feet deep. This piece of engineering would convert what is now a desert region into a commercial highway, and greatly improve the surrounding country. The region selected for the undertaking is an arid and sandy plain, lying between Arizona and Southern California, and the plan of leading into this depression the waters of the Gulf of California is to cut two canals, one ten and the other fifteen miles long, to be connected by a lake twenty miles long, which exists midway between the head of the Gulf and the basin of the proposed sea. Abundant geological evidence exists to prove that the sea recently filled this same basin. One million dollars is estimated to execute the work, and General Fremont is reported to have visited Washington for the purpose of securing the appointment of a commission of engineers to make the necessary surveys to demonstrate its entire practicability, as a preliminary to presenting the scheme to Congress for an appropriation.

CAT FISHING.—A gentleman who resides on Adams street and has a fountain in the front yard stocked with small fish had been puzzled for some time over the disappearance of the fish from the basin of the fountain. One night last week he and several friends sat up and watched. About 10 o'clock they saw the house cat stealthily approach the rim of the fountain and scratch in the ground. The cat caught a worm, which she moved around in the water for a few minutes, then, when the little fish would rise and bite at the bait, the cat, with the other paw, grabed and ate them. "Puss" was the "lone fisherman" of the place. The above story is authentic, yet it reads as if it was apocryphal. Here is an important fact for scientists who draw a distinction between instinct and reason.—*Memphis Appeal.*

—A dress woven from the webs of the large spiders common in South America has been presented to Queen Victoria by the Empress of Brazil. It exceeds in fineness any manufactured silk known, and is very handsome. Spainards, nearly two hundred years ago, endeavored to make gloves, stockings, and other articles of spiders' webs, but they yielded so little profit, and necessitated so much trouble, that the manufacture was abandoned. In 1710 the calculation was made that the webs of 700,000 spiders would be required for about 40 yards of silk. Such dresses are occasionally seen in South America.

—A correspondent of the *Lancet* writes that, when travelling in the upper Sikkim Himalaya, at elevations above 12,000 feet, he took whiskey in small quantities, to counteract the effects of strong exertion in a cold atmosphere. The consequence was the reverse of what was expected, being drowsiness and lassitude, lasting an hour or more. Cold tea, on the contrary, was found to produce a feeling of exhilaration and capacity for renewed efforts.

—Some years ago a large tract of peat-bog was drained at Grangemouth, Scotland, the loose mud and moss being carried down the drains to the estuary. The consequence was, that the oyster-beds in the estuary were covered over with mud, and the bivalves entirely destroyed. "Nothing," writes Frank Buckland, "is so fatal to oysters as a mud-storm, except it be a sand-storm. The mud and sand accumulate in the oyster's delicate breathing-organs and suffocate it."

Hunting, Fishing and Yachting Garments.

The best made goods in the world. Write for descriptive catalogue, and state the sort of garments and material desired.

GEO O. HENNING,
WASHINGTON, D. C.

CAMPING AMONG THE ROCKY MOUNTAINS.

An expedition, under the management of the undersigned, will start from Kansas City, Mo., about June 15, proceeding thence through Kansas and Colorado for a Four Months' Camping Tour Among the Rocky Mountains. The Parks and Trout Streams of Colorado, the Mining Towns and the Wonderful Natural Scenery of the Region are included in the Programme. Complete Traveling and Camping Outfits, food, attendants, etc., etc., provided by the Manager. Each man allowed 50lbs of baggage. Terms: For round trip, $300; one-half to be deposited with Kansas City Savings Association, subject to my order, by May 25; balance deposited before starting. Address, for further particulars, MAHLON GORE, Box 1,091, Kansas City, Mo.

Grand Official Opening

OF THE

Schuetzen Park, at Union Hill, N. J.

MAY 29 AND 30, 1879.

A grand prize shooting will be connected with the above festival. The targets are open to all comers under conditions of the shooting programme.

FOR SALE, CHEAP—Two Gordon Setter Dogs, by champion prize-winner Kent, out of imported Zaidee. Apply at No. 4 West 17th Street. may15 1t

SAPANULE!

TO SPORTSMEN---"THE ONE THING NEEDFUL!"

SAPANULE—Nature's ally—the best friend to man and beast. A preparation that is antagonistic to Inflammation. Congestion, Soreness and Fever cannot exist where this popular lotion is applied. For animals that are hard worked it is a sure restorative. For wounds, cuts, bruises, sprains, contusions, sores, new or old, it is a prompt and infallible cure. For all skin diseases and abrasions its healing and cleansing power is wonderful. SAPANULE is an admirable article for the bath and toilet. Used in foot and sponge baths, it will bring immediate relief from all pain or soreness in feet or limbs. SAPANULE takes all soreness out of bunions and corns, and is a sure cure for chilblains. Owners of dogs will find that by washing their dogs in Sapanule and water will remove any unpleasant odor, leaving the coat clean and silky.

SOLD BY ALL DRUGGISTS, 50c. and $1 per bottle.

A GREAT INVENTION!

Imitation

STAINED GLASS.

Patented Dec. 3, 1878.

CURTAINS, SHADES AND BLINDS

dispensed with. New, Elegant, Cheap and Durable. It produces all the unique effects of a richly painted or **Elegantly Stained Window.** It is easily applied to the glass in Windows of Houses, Churches, Public Buildings, Steamboats, Street and Railroad Cars, Libraries, Parlors, Offices, Bath Rooms, Stairways, Transoms, Vestibule Doors, etc., with the full effect and brilliancy of variously colored ground glass. The article has *just been patented*, and not a single agency has as yet been established.

ONE GOOD MAN in each State wanted, to whom exclusive territory will be reserved for five years.

SAMPLES of three of the most beautiful styles will be sent prepaid with full instructions, WHOLESALE PRICES, etc., on receipt of $1.00.

Agents Apply to L. LUM SMITH, Patentee & M'F'r's. 717 Sansom Street, (Sole Agt. for U. S. & Canada. PHILADELPHIA, Pa.

READ the following Extract from the *Representative Agents' Paper* of the world, THE PHILADELPHIA, PA., AGENTS' HERALD:

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent-readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and extraordinary sale. It will offer the best opportunity for coining money that has ever been presented to Agents, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the Agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

AGENTS' HERALD

THE LARGEST, SPICIEST AND ONLY REPRESENTATIVE PAPER OF ITS KIND.

ACTIVE GENTS GIVEN GOOD EMPLOYMENT EVERYWHERE

TRADE— **"BEATS THE WORLD."** —MARK.

OLD JUDGE SMOKING TOBACCO.

The Only Tobacco Ever Manufactured that Does not Bite the Tongue.

"OLD JUDGE" CIGARETTES.

Manufactued under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effect of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

FOR SALE BY ALL DEALERS.

GOODWIN & CO., Manufacturers, 207 & 209 Water Street,

Sportsmen's Routes.

TO SPORTSMEN:

THE PENNSYLVANIA R.R. CO.

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROTTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

The lines of

Pennsylvani Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, RENOVA, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Also, to

TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

"THE FISHING LINE,"

TAKE THE

Grand Rapids & Indiana R.R.

Mackinaw, Grand Rapids & Cincinnati Short Line)

FOR THE

Trout, Grayling & Black Bass Fisheries,

AND THE

Famous Summer Resorts and Lakes

OF

NORTHERN MICHIGAN

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equalled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.

The TROUT Season begins May 1 and ends Sept. 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE also abound in large numbers in the many lakes and lakelets of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The Climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma

affections.

The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book of 50 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address A. B. LEET.
Gen'l Pass. Agent, Grand Rapids, Mich.

NEW HAVEN, MERIDEN, HARTFORD, Springfield, White Mountains, Montreal and intermediate points. The new palace steamer *C. H. Northam* leaves Pier 25, East River, daily (Sundays excepted) at 3 P. M. A passenger train will be in waiting on the wharf at New Haven, and leave for Springfield and way stations on arrival of boat.

NIGHT LINE—The *Continental* leaves New York at 11 P. M., connecting with passenger train in waiting on wharf at New Haven, leaving at 5 A. M. Tickets sold and baggage checked at 944 Broadway, New York, and 4 Court street, Brooklyn. Excursion to New Haven and return, $1.50. Apply at General Office, on the pier, or to RICHARD PECK, General Agent.

---

ONE OF THE WORLD'S WONDERS,

SOUR LAKE.

The Great Watering Place of Texas.

This remarkable natural phenomenon consists of a circular pool about an acre in extent, in a continual state of ebullition, produced by escaping gases. Around the lake are a great number of wells and springs, of thirteen distinct varieties of water—sulphur, soda, alum, iron, etc. The waters of the lake and many of the springs are very acid. A specific for rheumatism in its worst forms, dyspepsia, chronic diarhœa, skin, kidney, venereal and female diseases. Fishing excellent and game abundant at all seasons. Open all the year. The tourist, whether for health or pleasure, and the student of nature, can find no place more interesting. Sixty miles east of Houston on New Orleans R. R. Board, week, $10; month, $35. Address

J. A. MERCHANT,

Cartridges for Target Practice.

Send for Illustrated Catalogue.

PURE TIN-COATED & BURNISHED DROP AND BUCK SHOT.

AMERICAN STANDARD--EAGLE BRAND.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM: NEW YORK, Jan. 13, 1879.

Having been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot my 6,000 ball match, Jan. 8 and 9, with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting I used them until they became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

THE LEROY SHOT AND LEAD M'F'G CO., NEW YORK.

The Delaware Shell.

Our Improved Shell Now Possesses the Following Merits:

1st. Perfect Uniformity of Flange
2d. They are Sure Fire and Gas Tight.
3d. The Paper is Superior.
4th. The Primers are Easily Expelled and Replaced, and can be Reloaded a Number of Times.

PRICE AS LOW AS ANY OTHER SHELL.

ADDRESS, **Delaware Cartridge Co.,**
WILMINGTON, DELAWARE.

Dittmar Powder

THE CHAMPION POWDER

OF THE WORLD.

NO SMOKE--NO DIRT--LESS RECOIL

STRONG AND SAFE.

SUPERIOR IN EVERY RESPECT TO BLACK POWDER

6,013 SHOTS WITHOUT WIPING IN A SHOT-GUN.

Captain Bogardus' great feat of breaking 6,000 glass balls has proved that the powder is all that is claimed for it. The barrels, without being wiped, were as clean at the end of the match as after the first shot. The fact of the firing of so many shots in succession, and that the Captain has used about 200 pounds of the same powder during the last year in one gun, shows, without a doubt, that the powder is EFFICIENT, UNIFORM and SAFE.

The rifle powder is also without a rival. The standing challenge to test this powder against any other has never been accepted. Many riflemen throughout the country have been successful with the powder, as, for instance, Mr. E. B. Souther, of the Massachusetts Rifle Association, won last year two gold medals, two silver medals, two revolvers, and four other prizes in using the DITTMAR RIFLE POWDER.

Greater facilities and greater demand have enabled us to reduce the price of the powder considerably, and the fact that the Government Armory at Springfield is making now all kinds of testing machinery for us will enable us to produce always a uniform, and in every way reliable, article.

TRY OUR NEW WATERPROOF SHOT-GUN AMMUNITION. Cheap, and warranted to give satisfaction in every respect. Ammunition for gallery rifle practice always on hand, and all kinds of rifle ammunition made to order.

SEND FOR CIRCULARS AND PRICE LISTS.

FANNY McKEE MARYE!

There is in Benicia, California, a little monument inscribed, "Fanny McKee Marye, a Noble Greyhound, Died May 25, 1871."

* * * * * * *

A WAY on the straits of Carquinez stands
A plain rock, ivy-entwined,
A simple tribute of loving hands
To a memory there enshrined;
It marks the grave of a noble dog
Who came from over the sea,
The spirit of beauty and grace and love,
Called "Fanny McKee Marye."

Ah! well I remember the horn and cheer
Re-echoing clear and wide,
To summon the boys from afar and near
All over the country side;
They were rough, wild men, but brave and true,
No manlier ever were born,
Who follow'd the hounds with Fanny in lead
At the merry bright sound of the horn.

At dawn the glow on Diablo's brow,
And the purple at ev'ning's gloam,
Are seen in my dreams full often now,
When I visit my sunset home;
And I wake with a sigh from the sunny land
With its carpet of flowers and streams,
And long for the slumber that carries me back
To the boys and old Fanny in dreams.

Then fill up your glasses with glorious wine,
Let us drink to the days gone by,
Their memory e'er is a golden mine
Of pleasure which never can die;
And when we're aroused on the final morn
By the sound of our last reveille,
May we hear the sweet notes of a spirit horn
Calling Fanny McKee Marye!

—*Yoch Keane.*

For Forest and Stream and Rod and Gun.

The Agawa.

IT was noon, but not dinner-time, before we could get through the locks at Sault Ste. Marie. We had been ready by breakfast to leave, but the shipping seemed all going down while we wanted to go up; so that in our fishing costume—which is more useful than ornamental—we were compelled to lounge wearily about the docks and wait for steamer or other craft going our way.

At last the good steamer *Winslow*, Captain Wilkins, came, and getting close under her stern, we went through the locks with her. Captain Wilkins is soft-hearted toward fishermen, and, as we passed into the upper level, he threw us a line, with the injunction to cast off when we were ready, and took us in tow.

The day was delightful. There was apparently a light breeze from the northwest, but as we rounded the Point of Pines, and met it full in our faces, it seemed fresh enough; and as Weiska Bay widened out, and we got well past Round Island, the wind became too stiff for comfort. Our boat was good and staunch, but as we went on toward the broad lake the wind increased to almost a gale, and the seas pounded our bows with alarming force. Things began to grow interesting, and between Gros Cap and Iroquois Point Light we concluded we had better cast off the line and trust to our oars before getting too far out in the rising sea. The voyageurs then took manfully to the oars, and for two or three good hours it required strength, courage and skill on their part before we were safely landed on Gros Cap Island. About five o'clock the wind began to die away, and by the time we landed the wind had almost ceased, but the sea was still heavy. We tried the rods, however, and then the spoon—the latter with such success that an eight-pound lake trout graced our table at supper.

We had a delightful night, for the wind had blown most of the mosquitoes off the island, and the air soon became too cool for what were left.

Morning came soon enough, even in the shadow of Gros Cap, for we went to bed tired with the labor and excitement of the day, and sleep was welcome. After breakfast we started, with the lake like a mirror, although the swell broke noisily upon the rocky shores. The wind sprung up soon, however, and after a little flirtation with us, so we were cajoled into hoisting our sails, it settled down squarely dead ahead. Off to the west we could see many a craft crowding all sail to get down to Sault Ste. Marie with their favoring wind.

It was with many hours' hard pulling that we reached Maple Island, a beautiful island just off the mouth of the Bachewana Bay; and the men being pretty well fagged, we made camp there. The shores of the island are strewn with boulders, and there is said to be fine fishing there sometimes. Certainly, the bottom is favorable for trout, but on this only time I ever tried it nothing rose to my fly. I do not doubt that fine trout are taken there. But on this occasion the shore was so strewn with logs, rolling and tossing with every wave, that the fishing may have been affected by it. The year before, during a storm on the lake, a tug, having in tow an immense raft, was caught in so fierce a storm that she had to cut and run. The raft broke up, and the logs went everywhere. They lay so thick along the shores that F., with boyish enthusiasm, went jumping from one to another clear around the island, touching the ground but once at an exposed point. And I may say in passing, that I have seen the logs from that raft (at least, I presumed so) scattered all along the lake shores. I have seen them in Black and Nepigon Bays, at Pays Plat, and from Pic Island to Sault Ste. Marie. Their frayed and rounded ends show their travels and bruises. I have seen them on exposed beaches twelve to fifteen feet above the ordinary lake level. The Indians along the coast say they came from a raft which went to pieces a few years ago.

The smoke of our fire, it must be admitted, helped our slumbers that night. There were some mosquitoes, and the night was not cool enough to still their songs. Yet we slept well. In the morning we found the wind still ahead, but we took some consolation from the assurances of Michel that the next day we should have a change. We went on, however, a few miles, taking several fine lake trout with the spoon as we went, and camped on the shore of Pancake Bay. Off one of the points we took some fine trout, but the sea was almost too rough for pleasant fishing. We took the bare rock for a tent floor, and upon beds of spruce boughs we slept well. We would not venture into the thicket, for we remembered our disastrous engagements with the sand flies on former occasions there.

The morning came, with rather a fresh south wind, and stopping only long enough to breakfast, we soon reached Maimunse Point. We found a party of two boat-loads there. They had taken on the way a good many medium-sized trout—perhaps I ought not to use that term, for it may mean different things to different persons. To a North Shore fisherman it means from one to two pounds; small trout are

FLY FISHING.—HEIGHT OF THE SEASON—CRAFTY MR. SPIDER WEAVES HIS FILMY LINES AND TAKES A HAND IN—NEVER HAD SUCH LUCK BEFORE—NOR BEHIND—AND ALL AROUND.

from a half-pound to a pound; good ones from two to three pounds, and beyond that the designation depends rather upon the command of language the fisherman has than upon any recognized nomenclature.

We stopped at Maimanse Island for dinner, and afterward, although the wind had shifted to the southwest and was freshening up rather rapidly, we started out, expecting to run into Montreal River if the wind should increase much. We bowled along quite rapidly, and the wind came heavier and heavier. The coast between Maimanse and Montreal River is an iron-bound and dangerous one. There are two or three little bays into which with some winds a boat like ours could run, but one must be well acquainted with the coast to risk an attempt to run ashore in a westerly gale. But the wind was gradually drawing to the westward, and getting worse for us, both in direction and force. We had passed the Quebec Mines and were looking anxiously along the coast for some sheltered nook into which we could run, or some stretch of sandy shore where we could beach the boat in comparative safety, when we descried, or fancied we did, a short sandy beach between two jutting points, and we thought it safer to risk a landing than to go further. On running closer in we found the sandy beach was a bouldered one, and while it was at the southern edge partially sheltered from the wind by a huge point of rock, yet the sea broke heavily all along it. But we were "in for it," as we dared not risk putting out to sea again, and we made ready to land. The single sail we had latterly been carrying was quickly dropped, the mast unstepped, one of the men put to the oars to steady the boat, the masts hurriedly converted into poles to fend us off the sharp rocks, and, without regard to getting wet, F. and I jumped out and gathered some poles and logs on the shore, upon which we could rest the bow of the boat. This done, the men brought the boat in, we lifted the bow on the logs, and leaving one man in the stern to fend off, we hurriedly threw out the heavier traps, and making rollers or slides of the masts and oars, we drew the boat high and dry on the steep and bouldered shore. And it was none too soon, for the wind increased and the sea came heavier and heavier. A half-hour later, and while we might have got ashore, it would have been with a stoven boat and a loss of many of our provisions. The chance of some fisherman passing near enough to relieve us would have been all that was left, except a tramp through the wilderness for seventy-five miles to civilization.

The place in which we found ourselves was a gully between two spurs of the mountain. As soon as we had the boat and our traps all secure, F. and I proceeded to examine our surroundings. On each side of the cove the rocks rose sheer and sharp to a hundred feet in height, rising higher and higher as they receded from the shore, until the two spurs joined a quarter of a mile inland. The present beach was steep, but gradual in ascent until it reached about twenty-five feet above the lake surface. At the north end the boulders were from four to eight inches in diameter, and gradually increasing in size to the south end, where there were none less than ten inches. They were like the rocks there, of granite. At the upper edge of the beach there was what seemed to be a wall of boulders, seven or eight feet in height, slightly sloped, and which we found some difficulty in climbing. Once above it we found an ancient beach, sloping back more gradually than the modern one for a hundred yards, and a height of fifteen or eighteen feet (possibly more), with a wall at its rear similar to the first we had climbed, back of which was another beach reaching to the foot of the mountain. These beaches were all of boulders, with little or no vegetation, and corresponded with the heights of other ancient beaches I have noticed in many parts of the lake coast. Without any pretentions to geological knowledge, it struck me as a casual observer that the variations of the lake level shown by the beaches were not gradual, but sudden.

We found upon the beach a piece of the deck of some wrecked vessel, large enough for a floor for our tent, and we improved the occasion. About dark the storm was at its height, and some rain fell. The sea dashed all night upon the rocks within a few feet of our tent, but our slumbers were not disturbed.

We found a clear, still morning when we awoke, without a breath of air stirring, but the swell was coming in heavily. About ten o'clock, by great labor and some risks and duckings, we got the boat loaded and pushed off. So heavy a sea was hard upon the rowers; but by noon we made Montreal River, where we stopped for dinner.

F. and I climbed the rocky heights to get a view of the falls. Below the falls the river runs through a perpendicular cleft in the rock, hardly more than twenty-five feet wide, and nearly a hundred deep. The falls are very fine, but the best view I have ever had of them was from the lake, three or four miles off the mouth of the river. I presume there are trout in the stream, as I took one or two at a ripple just above the mouth of the river. But, so far as I know, the approaches to the stream above the falls are impracticable, and the existence of huge pike in the pool just before the river enters the lake renders it improbable that there should be many trout below the falls. The water is quite dark, and the flow is so great as to color the lake for a considerable distance along the shore. After dinner we had a pleasant sail with a fair breeze to the Agawa, which we reached about four o'clock in the afternoon.

We were at last at the Agawa. It had been thought of for a year or two before opportunity offered for a visit. I had heard much of it. Some of my friends had gone in canoes up to the falls, eight or ten miles from the mouth, and had given glowing accounts of the fishing and the scenery. I found it a cold stream, with clear water, and with trout in every pool and upon every rapid. As we approached it we could see that beyond a mile or so of alluvial formation, there was a mountain chain that gave promise of numerous ripples and falls and pools. The gravel banks and sandy shores of the bay into which the river debouched showed that the stream must be quite long, and at times bring down large quantities of earthy matters to the lake. A big snag or two stuck fast in the sands on the bar, with the roots projecting above the water, were enough to indicate the character of some parts of its banks.

We landed upon the west side of the river, and unloading our boats, F. and I left the men to arrange a camp, and took the boat up the stream to get a mess of trout for supper. We went up a half-mile, and returned in an hour with trout enough for a day for all. I lost two hooked at once, by the leader breaking, and F. brought in the biggest fish, a three-pounder. Just across the river from our camp was a hut or log cabin, belonging to the Hudson's Bay Company, and in the late winter and early spring occupied by an agent buying furs. This had been taken possession of by a Cleveland party for a camp, and shortly after we came down the river they came down also. We went over to see their spoils. It was indeed a wonderful day's work, as we then thought it. There were trout from a half-pound to three and a half pounds in weight, beautiful fish and immense strings of them. It seemed an unnecessary waste of material to kill so many; but as the party expected to go up the coast for a day or two, the supply was probably none too great. They had been up the river only two miles, they said, and that since noon.

The next morning Captain M., of the Cleveland party, persuaded us to go up the coast with them, and after breakfast, we sailed for Gravel River. We passed slowly along the Agawa Island rocks, saw the paintings upon them, done probably centuries ago—although some of them, judging from the picture of a horse there, must have been painted within two centuries—now, alas! from the action of the elements, obliterated. Last year, when I passed there, I found the frost had scaled great pieces off the rocks, and the best of the pictures are gone forever. There are yet left some of the coarser ones—a caribou, a bear, and some others of animals. We concluded to take dinner at Sand River, where we found some beautiful falls and lots of small trout. I think they were the liveliest trout I have ever seen, and the hardest to catch. Our hooks were too large for trout of that size, but we managed to take quite a number. Sand River is a favorite Indian encampment, and there are always standing there poles with skins of animals, strips of cloth and other things attached thereto, after the manner of the northern Indian tribes. I was told by Mr. Rosseau, an old trapper and guide, and more recently the owner of a lake fishery located at Maimanse Point, that there is a trail running up past the falls of Sand River by which canoes can be carried, and that trout are very abundant and of respectable size up the river. Although I have since then visited there, my stay was each time too short to look for the trail.

We found Grand River a beautiful stream of clear water, but up about the falls, which must be magnificent in flood, the stream was separated into too many small ones to afford fine fishing. There was an abundance of small trout, and in the hour we spent there we captured quite a number. The black fly was in his element. We had hurried up to the falls, leaving gloves, veils, mosquito oil, and every defense against them at camp at the mouth of the river, and were defenseless. They came around our heads like halos around saints in pictures, though some words were probably used not known to saints. We fought them off with branches, as a boy does wasps or bees, and hurried back to camp and smoke.

The next day was Sunday, and we enjoyed the cool breezes from the lake and the extra dinner we had time to prepare. The succeeding morning, before breakfast, our Cleveland friend took a four-pound trout from the pool within twenty feet of our tent, but the water was too clear to fish there later in the day. The wind blew too heavily to permit us to get out of the river in the morning, and we spent the day until five o'clock in the afternoon in wandering about the shore of the little bay and shooting at whatever offered itself for a mark. We fished off the rocks from sheltered places, but without success. We did not try the falls again. We found a fine spring of water coming down the mountain, which by our thermometer showed a temperature of thirty-eight degrees.

At five, although the sea was heavy and the white caps were thick over the lake, we started out. The voyageurs did not like to venture, but as the skies were clear I thought the wind would die away as usual by the time we reached the Agawa—as it did. In fact we had to row for the last three miles, and it was nearly dark when we reached there. We found the west bank of the river occupied by three or four Indian lodges, and we camped on the east bank. Captain M. camped on Agawa Island. Next morning we went up the river. From the first we had good fishing. About half a mile up I saw on the right bank, just at the edge of the water, a small tree-top projecting about two feet into the water so that a little eddy formed below it, upon which there was foam circling about. I carefully cast there from the boat, and two fine fellows struck at once, and were safely landed. We took from there eight fine trout, as fast as we could land them, weighing not less than one and a half pounds each. I have never failed to take several there at each visit, except my last one, although the tree-top has worn down to a bare branch or two. At that last time I learned the secret of my success there. The water was a foot and a half lower than I had ever before seen it; the dead, bare branch stuck out from the bank above the water, and a foot or two from it there poured out a stream of ice-cold water two or three inches in diameter. I had therefore attributed our luck to the little eddy, when in fact it was the cold spring water in which the fish congregated.

The voyageurs poled the boat up the stream. In some places the rapids were so broad and shallow that we had to disembark and walk past them. In others it was inch by inch against the swift water that the boat would be urged up the stream. The skill of the Indians and voyageurs at this work is remarkable. I remember upon one occasion, when a party of four of us were at the river, we had two faithful fellows in one boat, who were good sailors but poor river-men. These two could not take the boat and two passengers up one of the rapids. In spite of them the current would strike the bows so as to swing the boat around and carry us back down the stream, and even after F. and I disembarked, it was with the utmost difficulty they could take the boat up. That night there was considerable chaffing from the others, and a bet was passed that the youngest of them all, a boy of eighteen or nineteen, could alone take the heaviest boat up that rapid. He was a fine specimen of half-breed Chippewa, but we doubted his ability to do what he had undertaken. At the foot of the rapid F. and I and the elder guide, who were in the boat, disembarked. Placing himself in the stern, the young man took his pole and started up the stream. The rapid was about seventy-five yards in length, with a descent of nearly four feet, as we thought. Not once in the ascent did the boat's nose swerve an inch from the true line, and in a few minutes he was in the still water above, and his bet was won. With a light canoe the performance would seem worthy of note to a white man; but with a heavy Mackinac boat, twenty-three feet long, it seemed almost an impossibility until it was done.

Not far above this rapid, at a point where a little stream comes in from the west, is a pool every visitor to the Agawa will remember. It is twenty-five to thirty feet in diameter and twelve to fifteen feet deep. The main current of the river so passes it on the east side as to make an eddy. Here the fisherman always stops, and has some glorious sport. At times, when the fish will not rise to the surface, the expedient of letting the flies sink a few feet and rapidly bringing them to the surface will prove successful. I have seen unhooked trout, following hooked ones to the surface, captured by the landing-net quite frequently. But it must be said that where the trout does not rise to the fly the prime charm of angling is lost. It is the intense watchfulness and the exercise of skill in casting and in striking which is the delight of the true angler. Any other methods of capture may be justified by necessity, but not by any true principles or fine feelings of the sportsman.

Upon this occasion the trout rose freely, but as we wished to go a mile further up, we did not stay long. Disembarking at this fall, we walked up and waited for the boat. We here left the gravel banks of the river and came directly into the mountains. The stream flows close against the mountain, which towers straight up a thousand feet in the air, the stunted evergreens at the top seeming to overhang us as we move up the river. For a quarter of a mile we go near the middle of the stream, casting from side to side, taking many from the deep channel right under the mountain. Up to this time the timber skirting the stream has kept the mountains from view; but from this on the scenery is grand. The cliffs rise on every side, and at every turn of the river new views meet the eye. There are fine fish taken along in these deep pools, but the mountains so absorb the attention that one hardly cares for aught else, until he becomes accustomed to the scenery.

At the foot of the next rapid is an eddy, which never has failed me yet. I cannot tell how many trout I have taken from it, but there are enough left. We go ashore again here, as the rapid is long and rather shallow; and when the boat reaches the next pool we get in and quietly cross the river to a sand-bar on the left bank, just in casting distance from a great water-worn rock. The pool here is large and deep. Just where the bare rock and the wooded bank meet, and the boughs overhang the water so that a cast has to be rather under-handed to put your fly where you want it, are some cold springs, which the big fellows monopolize, even as the big fellows do in human life. Now, be careful! Put your tail fly right in where that tongue of water reaches into the bank! Ah, the dropper caught a leaf—quick! take it off and try again! There, you have him, a fine two-pounder; now bring him out where there is room to play him and I will try my hackle. And so, taking turns and fish one after another until a fly is caught in the brush, and the clearing of the tackle disturbs the brilliant company, we move a little distance off, build a fire, take a hurried but grateful meal, and resume where we left off. We try different parts of the pool from the sand-bar and the boat, and in our excitement take in more than we ought, for we cannot use them all. Then, letting the boat float lazily over the pool, we look down into the water and see hundreds of the most beautiful and gamiest fish, unless it be the salmon, that is known to the sportsman. It is now three o'clock, and just for the scenery we go up the river to the next point, and then turn our faces toward the camp. It does not take long to go, for the current is swift. We make the two miles in half an hour, and are at camp. Looking over our pile we find the largest, taken by F., three and a half pounds. There are enough to last us to the Sault, if we do not take another. Captain M. has taken some off the Agawa rocks, and refuses any. The poor Indians come in from fishing on the bay with a canoe load of lake trout, weighing from eight to sixteen pounds each, and have enough; so we slightly salt some to last us on the return trip, and make up our minds to reach Maimanse Island the next day.

We have but one regret—that is, that we took so many trout that day as to make it a crime to fish the next.

We visited the Indian lodges that evening. Captain M. presented the chief's wife—or rather one of the chief's wives—with a broad plug of "navy," and by daylight the next morning the chief was over to the cabin trying to sell her to the Captain for fifty dollars. He had two more, and was willing to sell one. As the Captain had one waiting for him at the Sault, he declined to invest, and negotiations ceased.

The Indians showed their honesty by scrupulously keeping away from our camp while we were absent. The men were out trolling for lake trout, but the women and children were left in their encampment, and with a little canoe they had they could have crossed the river—about thirty yards—and helped themselves to many things dear to the Indian heart and stomach.

We packed early and loaded our boats. Two or three of the Indians came over to visit us, and I distributed a pint of brandy among them, without any visible effect. Some hard bread, onions and potatoes, produced more signs of gratitude than anything else. A few nails from empty boxes and the boxes themselves were accepted. But they asked for nothing. They were civil as well as honest. One of them, a splendid specimen of physical manhood, nearly six feet high and straight as an arrow, and about nineteen years old, we learned on our next visit had died of consumption the preceding winter. Still, it seems as if life, with all their privations, has charms for them. When they have food, it is a feast; if none, they suffer in silence. They are quiet, peaceful and grateful. Not profuse in thanks, one can see even in their stolid faces that they possess the virtue of gratitude, and I doubt not many of the other virtues upon which the white man claims to hold a monopoly.

We had a fine sail to Maimanse. It was on another occasion that we landed at the Quebec Mines, and the boys, under command of Gen. H., stormed the heights and captured two or three old cannon, which were years ago taken there for defense against the Indians. But in turn the force under the General were driven from the hill in disorder by an assault from the army of flies about the old village. The mines are deserted. The church stands there yet, and some of the other buildings, but they are fast falling to decay. Occasionally an Indian or a fisherman prowls about the hill, but the mines are worthless, and they will never be reopened.

Camping at Maimanse Island, we learned a tug would be up the next day to take the fish down to the Point of Pines for salting and shipping. There were two fisheries in operation there, one at the Island and the other at Rosseau's, near the Point. So we sailed down to Rosseau's, and waited for a tow. There was quite a settlement there, and we inspected the mending of the nets and the people generally. All but one or two were half-breeds. We found some sweet grass, which seems to grow plentifully about clearings. I have found it in great profusion around deserted fishing stations on the extreme North Shore.

An hour or two before dark the tug started with three boats in tow, as follows: First, the fish boat, loaded to the guards with fish; second, Captain M.'s boat, and, lastly, ours. The tug had but two officers—the captain and mate. The mate was also pilot, wheelsman, fireman, engineer and cook. The captain, after supper, took his position in the

fish boat, and was cleaning fish as long as we could see him. I think the pilot went to sleep occasionally from the way the course was changed from time to time, for our boat swung around like the little boy at the tail end in the game of "crack the whip;" but about two in the morning we came up to the Point of Pines dock. Early the next day we rowed to the Sault, descended the rapids, and reported all well to the anxious ones we had left there during our absence.

I ought to say that, in all my experience on the Agawa, flies and mosquitoes have never troubled us much. I felt the sand fly once there when I went up the river before sunrise on a muggy morning, but never before or since.

Fish Culture.

For Forest and Stream and Rod and Gun.

DO PICKEREL DESTROY TROUT?

IN fancy I can see the derisive smile which will overspread the countenance of every angler who reads the above caption. Do pickerel destroy trout, forsooth! Are they not the scourge of our inland ponds? the sharks of our streams and rivers? And forty years ago did not trout abound in thousands of brooks and ponds where they are now wholly exterminated by these voracious monsters?

Softly, my friends! It has been a little more than forty years since the writer, then a "barefoot boy," drew his first trout (a three-pounder) from the sparkling waters of the Sebois, just where it joins the Piscataquis. And what, O, disciples of split bamboo, braided silk, invisible gut and singing reels, do you suppose was the tackle used on that momentuous occasion? A black alder pole, cut on the spot, to which was attached a discarded band from the busy spinning wheel, which was then found in almost every dwelling in the State. Fastened to this, by a black linen "gange" was a small but coarse-wired and blunt-pointed hook, with a side bend which we called a "curbed" hook, being as near as we could get to "Kirby." I had caught a small chub with this primitive tackle, and with a boy's cruelty was amusing myself by spinning him through the water, when the tempting bait caught the hungry eye of a magnificent trout, which had probably just turned in from the river to begin the ascent of the stream. With a lightning-like rush he gorged both fish and hook, and then commenced the "tug of war." Ye Gods! what a commotion was created in that quiet eddy by the desperate and futile struggles of the noble fish to escape from the cruel hook, and my equally vain and frantic efforts to lift him from his native element. Finding my strength unequal to the task of lifting him with the awkward and unwieldly pole, I adopted the tactics of an older brother who was over-matched by a big eel; and shouldering my pole, marched inland, dragging my prize ingloriously up the sandy beach, the rotten line giving away just as I got him at a safe distance from the water's edge. Since that far away day, I have fished the waters of Maine from the Saco to the St. Croix; from the sea to Allegash Lake;—have taken the "prismatic beauties" from the streams of Canada and New Brunswick; the crystal brooks of the White Hills of New Hampshire the Green Mountains of Vermont; from quiet pools and lovely lakelets of the noble North Woods, and the foaming cascades of the "Golden West";—but the feeling of exultation which filled my breast, as with beating heart I lifted up my glowing prize, has never been excelled. Hurrying home and proudly displaying my trophy, I well remember my father's remark, that twenty years before, such trout were quite common; but the pickerel were destroying them, and in a short time there would be no trout in any of the streams where the pickerel could reach. Of course this statement was gospel to me, and for years I implicitly believed that pickerel were the destruction and bane of trout fishing.

At that time the former fish absolutely swarmed in all waters of the lower Piscataquis and its tributaries. I have taken as many as forty in a single day from a "set net" sixty feet in length, belonging to my father, which I tended for several seasons. When the writer was 13 years of age his parents removed from the above river, settling down within easy reach of one of the most famous pickerel and trout streams in the State. For ten miles it meanders through a natural meadow, and being totally devoid of current, and filled with eel-grass and lily pads, this formed a sort of pickerel's paradise, and from it I have taken eighty in one day's fishing with a single hook and line. The upper portion was almost equally as good for trout, although there was nothing to prevent the pickerel from going the entire length of the stream, and they were found, although in diminished numbers and of smaller size, wherever a piece of dead water occurred, throughout the whole stretch of the trout fishing grounds, from which I have caught sixty trout averaging a quarter of a pound apiece as the result of a single day's fishing. For a dozen years the trout fishing remained almost equally good, the pickerel in the meantime diminishing to less than one-quarter of their original number, owing to the easy accessibility of that portion of the stream by reason of which it was thoroughly fished, especially on wet days during the haying season. During all these years I was not only an enthusiastic trout fisher, but a careful observer of their habits, as well as of those of the pickerel, and my views in regard to the destructiveness of the latter, so far as trout were concerned, had become greatly modified notwithstanding the tenacity with which boyish opinions and prejudices cling to the mind in after life.

The total dissimilarity in their habits and in the character of the waters which they inhabited were among the reasons which contributed to produce this change; but far greater than these was the fact that in all the hundreds, and I might say thousands, of pickerel which I had dressed, not one trout had ever been found. The undigested fish found would be about in proportion of three of their own young to two "chubs" (so called, but really dace). This was a staggerer; for two spring brooks ran directly into the meadow above-mentioned, and at the mouths of these, at rare intervals when all conditions were favorable, splendid catches of trout could be made, ranging all the way from one-quarter to three pounds, and some of the latter weight were even occasionally caught among the lily-pads when trolling for pickerel. I reasoned that if the dace could remain in the very haunts of the pickerel in undiminished numbers, when every mess of the latter which were dressed proved beyond cavil that the former were being swallowed by thousands, why should they exterminate trout, whose agility not only surpassed both so far as to be beyond comparison, but whose home was in the coldest and swiftest parts of the streams, places abhorred by their foes? Doubts as to the truth of the assertion heard on every side that the diminution of trout was due to the presence of pickerel having thus arisen in my mind, I have striven by a course of patient observation, extending over a period of more than twenty years, to solve them. The result has been a settled conviction, that *the destruction of trout in their native streams by pickerel is a myth;* and if they are eaten at all it must be in such insignificant numbers as to be totally discarded from among the causes to which we attribute the lessening numbers of trout in certain localities each succeeding year.

This conclusion has been reached, in spite of all my prejudices being in favor of the latter as against the former. Of course, this does not apply to ponds and artificial breeding-places, where the trout have no room or place of escape; for I must not be understood as holding up the idea that a pickerel would not catch a trout if an opportunity presented itself for doing so. I also firmly believe that the ova of trout are never disturbed by them, under any circumstances; and this for two reasons. One is that the pickerel is not a bottom-feeding fish, and, as far as my observations extend, never noticing anything which has not the appearance of life; and although on very dark, cloudy days it can be caught near the bottom, it is necessary, in order to be successful, to let the bait sink, and then raise it suddenly, the fish seizing it as it ascends. Neither does the pickerel move much at night, as any one who has speared them can testify. The other and stronger reason is the fact that trout always, if possible, select broad and shallow places for their spawning-beds, where the water runs over sand or gravel; and it is no unusual thing to see them depositing their ova in water so shallow that their dorsal fins protrude above the surface. Nothing could be more repugnant to the well known habits of the pickerel than to remain on such places, and I do not believe the person can be found who ever saw one there. Certainly not the writer.

Immediately after being hatched out, the young trout leave the larger streams and retire up the innumerable runs and rivulets, which always abound on all good trout streams, in many instances passing many rods under ground, to reappear in some boiling spring or pool. There they are safe from all enemies, except such as will be hereafter mentioned, and here they remain till they are of a size, which varies according to the character of the water they inhabit. In some little brooks none will be found over four inches in length; in others, which do not appear any larger, they will remain till they are twice that length. Perhaps the greater abundance of food is the cause; at any rate, the facts are as stated.

Having now stated a proposition so much at variance with all preconceived ideas, I wish to fortify it with some facts, to avoid being overwhelmed with the ridicule of unbelievers:

The Little Sebois, to which allusion was made at the beginning of this article, is well known as one of the streams in which the Fish Commissioners have (at two different times, I believe) placed a large supply of young salmon. Twelve miles from its mouth, and three above the place where the salmon were deposited, the stream forks, and at the head of each branch are large lakes. These, as well as the stream throughout its entire length, have been filled with pickerel for over fifty years. On the east branch, eight miles above the forks, is a bog, nearly three miles long. Here the stream is nearly fifty feet in width, and from ten to twenty feet in depth in the driest seasons, when scarcely water enough flows out of it to float an empty canoe. Being eight miles above the nearest settlement (Whitney Ridge), whose inhabitants have plenty of fishing nearer home, the pickerel breed among their favorite lily-pads undisturbed, and there are more of them in that piece of dead water than in any place I ever saw in my life. From the foot of the bog to the forks it is all rapid water, and in the lower portion of this I caught, two years ago last June, with rod and reel, 104 trout, weighing from ¼ to 1¼lb. each! The reason of my great success was undoubtedly due to the fact that a million feet of logs were "hung up" in the stream above, owing to the dry season, and their presence prevented the trout in a measure from ascending; but it shows that the trout were there. They were caught inside of three hours, and from all appearances the catch might have been doubled had one chosen. This stream flows untrammeled by shingle mill or factory. It is too far away for city anglers, and for twenty years the otter and mink have been trapped off it by two of the most skillful trappers in the State. Thus, on this stream, it will be seen, none of the three causes exist, to which alone, in my estimation, we are indebted for the destruction of our trout.

At the foot of the bog above mentioned a dam has been built for driving purposes, the gates of which I found shut on my first arrival at the place, having been left in that condition by the drivers to save water in case of a "June freshet." As this interfered with some lumbering operations which I designed prosecuting in that vicinity, I hoisted the gate, and launching a canoe into the dead waters above, found that there was nearly two feet of water over the entire bog, which in some places is half a mile in width, and the pickerel had deserted the stream and spread out all over the bog.

Paddling up to where, at low water, a little spring brook came in, I jointed up a trunk rod with which I was provided, together with all the necessary adjuncts, and in less than half an hour caught seven trout, whose weight aggregated ten and one-half pounds. Having no landing-net or companion, I was forced to lift them all in over the side of the canoe by the leader, some of them towing me several rods before they gave up the fight. If any one has any doubts as to the difficulty of this kind of fishing—standing alone in the centre of an extremely light and "ticklish" birch—a single trial will suffice to convince them of the contrary. Of course, I thought that I had struck a bonanza, and in a very few days revisited the spot for another mess of trout. The water had fallen a foot below the banks, and at the first five casts I succeeded in losing three flies and landing two pickerel. This was exasperating, and removing my leader I substituted a McHarg bait, and without moving from the place where I had fastened my canoe, I caught fifteen pickerel as fast as I could remove the gang from their mouths and recast—sometimes three or four darting for the glittering bait at once. This state of things lasted through the entire season. Sometimes, just before sunrise, or after sunset, I could catch a few noble trout; but the pickerel soon exhausted my stock of flies, and we had to content ourselves with pickerel, save when I could spare time to visit the stream below the dam, where one was always sure of a fair catch of trout.

Here, then, is a stream which has been filled with pickerel for more than fifty years, and yet the trout fishing in it will compare favorably with any stream that can be named, where pickerel were never known.

But this is far from being the only instance I can name.

Twenty-five years ago I cut a hole through the ice on Madeecunk Lake and caught through it seven trout and five pickerel. The oldest inhabitant could not then remember when there were no pickerel in Madeecunk Lake; and yet at that time, and for ten years subsequently, the trout fishing, from the outlet to the river (about four miles), was simply superb. Now the fishing is best represented by an innumerable row of ciphers. And Bangor anglers excecrate the pickerel! It is singular that their taste for trout was not developed, after over half a century of quiet existence together, until after the completion of the E. & N. R. R., which sent swarms of fishermen from the city each season on to the banks of the stream, it being only about an hour's drive from Mattawamkeag. Both branches of the Penobscot River are filled with pickerel for many miles, the east, as far as Grand Falls, above which they are not found, and the west up to and including the lower lakes. Not only is good trout fishing found in the streams flowing into both these branches below the points named, but it is excellent at proper seasons in the branches themselves.

Now let us examine the condition of some famous trout stream, where these scapegoats are not found. A single example will suffice. This shall be the Big Wilson, flowing into Sebec Lake. This magnificent stream, which in any other State would be called a river, flowing from a noble pond through a succession of wooded hills and mountains, fed by a multitude of sparkling brooks, clear as crystal, seems designed by nature as the very home of the beautiful and agile fish formerly peopled its waters by thousands. Where are they now? Echo answers—where? It is doubtful if there was a stream within the boundaries of the State, thirty years ago, where better trout fishing could be found than in the Big Wilson, and certainly there is none of equal size and capacity, and equally free from mills and settlements, where to-day it is as poor. And why? The answer is easy. Big Wilson Pond is only three miles from the foot of Moosehead Lake, and connected with it by a wagon road. This pond seemed to be the breeding-place of the trout for the entire length of the stream, it being too rough and rocky, apparently, to afford many spawning beds, and all the brooks which flow into it have, owing unfortunately to the mountainous character of the country, falls near their mouths from thirty to eighty feet in height, and above these no trout are found in any of them. Nowhere in that portion of the State were brook trout found so large as in Wilson Pond, and nowhere else were they so capricious in their tastes, so shy and so difficult to catch. Hence a piece of fat pork on a coarse hook had no charms for them, and even the persuasive wriggling of the angleworm failed to lure many of the wary beauties from their liquid home. Even the skilled angler with all his changes and combinations of artificial flies, would frequently fail for days together to evoke a single rise. But a live minnow attached to two hundred feet of line, towed rapidly through the water by a boat or canoe, was always an effective method to take them; and I regret to say that this unsportsmanlike and disgraceful mode of brook trout fishing has been followed by gentlemen who ought to know better, till the trout in the lake are well nigh annihilated; and this, with the fly and bait fishing for five or six miles below the lake, has been sufficient to destroy the trout fishing in this splendid stream, although there is a long stretch below this very little fished. This result has been hastened by the obstruction in the brooks mentioned above, and it would be well could some person be found public-spirited enough to stock them above the falls, most of them being all that could be desired for trout brooks for miles.

But it is not in our own State that the evil effects of over-fishing and unlawful methods of trout taking have reached their full effects, but in the Adirondacks. Take the main road, where it crosses the Indian River, as a central point, and within a circle of ten miles in diameter there are at least thirty ponds, all formerly filled with trout, where now not a single one of these beautiful fish can be found. Some of these have been denuded of their trout for years, and some only recently, but all by the same means—persistent fishing, supplemented by the gill-net of professional fishermen to furnish the tables of fashionable hotels at Saratoga. In all these ponds not one pickerel was ever known, but they are now being slily stocked with these fish—not by the guides, who destroyed the trout, but by lovers of legitimate trout fishing, who are exasperated at the infamous mode of their destruction, and who know the utter futility of attempting to restock them with trout. Perhaps in after years, when pickerel shall have become plenty in these ponds, we shall hear that the trout were exterminated by them!

From what one hears of the threatened destruction of trout by pickerel in the Racquette, one would naturally suppose that their introduction there was a very recent matter; but the writer spent part of the autumn and winter of 1866 on that river, and at that time it was filled with pickerel. The amount of trout that were caught after the lakes froze over was simply astounding; they were literally hauled out by horse loads. This was about the time Murray's articles were being published in the *Atlantic*, I believe. These sent hundreds upon hundreds of anglers and pleasure seekers into those sylvan retreats, and to them and not to the pickerel is due the diminution in the numbers of trout. But the pickerel of Long Lake and the adjacent waters must not be confounded with those of our own State. They are much more nearly related to the muskalonge of Lake Champlain, the St. Francis River, and other St. Lawrence waters.

A gentleman who owned a large farm and also a sawmill, situated on a stream running into Indian River, had on one portion of his land a small pond, about five acres in extent, with a small outlet running into the stream just above the mill. This pond had been totally denuded of trout for some years, and one day, being on a fishing excursion to North River, the thought occurred to him to carry home some pickerel for the purpose of stocking his pond. He therefore took a couple about a foot in length in a large pail with which he happened to be provided, and turned them loose in this pond. By singular good fortune they chanced to be a male and female, and as the outlet where it left the pond was completely choked up by the debris which had fallen into it, they were unable to get out, and in a few years the pond was fully stocked, but owing to some cause, probably the confined space and want of outlet, they utterly refused to bite any and all kinds of bait. At the end of four years, not having caught a single fish, he furnished himself with a spear, and carrying a light boat into the pond after nightfall, placed a torch in the bow, and succeeded in spearing about twenty, one of which, much larger than any of the rest, and undoubtedly one of the original two placed in the pond, tipped the beam at 15 lbs. The following spring a tremendous

freshet swept away the obstructions at the outlet and with them some of the pickerel, one of which he took out of his mill wheel, weighing 16 lbs. This is sufficient proof that they belong to a different species from ours, as I never saw one at home weighing over 5½ lbs., though I believe they have been caught weighing over 7 lbs. They surpass the former in their edible qualities, being whiter, firmer and better tasting. In these respects the pickerel of Maine is superior to all other inland fishes in the State, save, of course, the trout; nine people out of ten preferring them to white perch. The labor of preparing the latter for the table is also much greater and distasteful to most people.

It is no exaggeration to say that the value of the pickerel in the inland waters of the State surpasses that of all the other fishes combined, I mean their commercial value, as food for the people, and for this reason as fast as the country is fully settled the trout disappear from those localities, and to obtain them one has to go to a distance always requiring time, patience and usually money; and their capture is a matter of pastime and healthful recreation rather than a question of food. But pickerel flourish in ponds and still rivers bordered and surrounded by busy villages and smiling fields. Their flesh is palatable and wholesome the year round, no matter how stagnant and warm are the waters and adverse the surroundings. The reason of the almost impossibility of exterminating them, when nets and spearing are not resorted to, is found in the fact that they distribute themselves over the entire area of the waters they inhabit, never collecting in schools nor congregating at certain points. They also become very wary in waters much fished, sometimes utterly refusing to take bait for weeks at a time. Trout, on the contrary, no matter how large a lake or pond they may be in, invariably as the hot season advances, repair to the mouths of the coolest brooks, or to points where springs break out under water. These places are soon discovered by both anglers and poachers; the former take all they can legitimately, the latter catch them by every means in their power; and the extent to which this is carried on cannot even be guessed at by those who only spend a few days or weeks each season in the enjoyment of trout fishing. The writer, on a hot day in July, met two young men staggering under a load of trout suspended from a stout pole carried between them on their shoulders, every one of which had been caught at the mouth of a spring brook by means of a grapnel made by tying four hooks together, and suspending it from a short, stiff pole by a line four feet in length; there could not have been less than 100 pounds of them. And I could fill a volume with like instances which have come under my notice. Next in the order of destruction come the shingle mills. As far as my observation extends an ordinary board mill has no bad effect on trout. The stream alluded to, where trout and pickerel fishing abounded for years, had all the time a mill sawing boards only, situated above the best part of the trout fishing grounds. It did not seem to affect them in the least, and it was no unusual thing for the millmen to catch a mess of trout by putting a perforated board across the foot of the apron before shutting down the gate, leaving the trout floundering helplessly on the floor of the apron as the water drained off through the holes in the board. In the course of time a shingle machine was placed in the mill, and in three seasons the trout fishing below it was almost totally destroyed. And this is the way the thing is brought about: It is well known that in all shingle machines in use at the present day the bolt either descends vertically upon the saw or, if moving horizontally, it is placed on end, so that in either case the saw strikes its side, cutting a chip out the whole length of the bolt. This is technically termed "long sawdust," and being whirled into eddies below the mill, collects into rolls and bunches sometimes as large as a ten gallon keg. As the thirsty sun drinks up the waters, the mill has to be shut down; these bundles become water-logged and sink to the bottom. In October and November when the trout have fairly deposited their ova, the fall rains come on, the masses of sawdust, too heavy to float and too light to remain fixed to the bottom, go rolling down the stream. The greatest ingenuity of man could not devise a more potent engine of destruction. As they sweep over the spawning beds the ova is caught up by a thousand points which bristle in every direction, and carried to the still, deep water below, where it is devoured by swarms of hungry dace, perch and cat-fish (horn pouts).

Lastly in the order of destructive forces come the mink, muskrat and otter, though perhaps if the whole country were taken into consideration their depredations would be found to exceed either of the others. Their evil effects are in inverse proportion to the others, being greatest where the others are least. People who have not actually observed them can form no adequate conception of the havoc a family of otters will work in a trout stream, and above all, in a pond upon a spawning bed. The writer once watched a family of five, which were fishing in a pond between Monson and Moosehead Lake. The rapidity with which they caught and devoured the fish was amazing, and as they were obliged to come to the surface to swallow them I could see each one caught. This infringement on the rights of man made my blood boil, and the arriving of a bullet through the head of one of them, when I succeeded in doing, is still considered one of the most satisfactory performances of my life. On another occasion, when traveling along the bank of a stream in New Brunswick during a prolonged drought when scarcely a drop of water ran in the stream, I discovered in a deep pool, several rods in extent, at least a hundred trout from six inches to a foot and a half in length. The next day on repassing the same place, only three remained, one of these, the very largest, so scarred by the teeth of otter that he must have died. The bank afforded abundant evidence of their destructive visit. Mink confine their depredations chiefly to the smaller brooks and rivulets, where they work almost equal destruction among the small trout.

A pleasant writer in a recent number of the Portland *Transcript* expressed a fear that trout would eventually be annihilated. His fears are undoubtedly only too well founded as far as Moosehead and the Rangeley Lakes are concerned, for where two trout are caught to one hatched it does not require a very brilliant intellect to forecast the ultimate result. But to any one familiar with the vast water resources of Maine, enveloped and surrounded as they are by an almost pathless forest, such a result will appear impossible as long as anything like the present conditions exist. Take for exmple the tract bounded on the east and west by the St. Croix and Penobscot Rivers, and on the north and south by the E. & N. A. R. R. and the old Air Line stage road—a tract about one hundred miles square. Here one might fish for a lifetime, finding no lack of sport, and still one could not be considered as even having entered the outskirts of Maine's vast wilderness.

Let us take a flying trip in imagination into the heart of this almost *terra incognita*, choosing Nicketou, at the junction of the two branches of the Penobscot, as our starting-point, and the east branch as our route. With a good guide and canoe, a week's not over hard work will bring us to Grand Lake, passing on our way the Wissattiquoik, swiftest of streams, tumbling from off Mt. Katahdin from the west, its pellucid waters filled with trout, and its numerous ponds teeming with both brook trout and "lakers." Not far above it, on the eastern side, rolls in the Big Sebois, a noble stream, whose numberless tributaries and magnificent lakes would require a whole season to explore. Just below Grand Lake is the mouth of "Phil. Fish Brook," which, I presume, is the one alluded to by another correspondent of the *Transcript* as "Bill Fish Brook." It was named after a Bangor lumberman; equally well known for his skill in river driving and his reckless habits. Its waters are more nearly transparent than any the writer ever saw. So clear are they that, looking down into them from a canoe, one seems to be suspended in air. At its head are a pair of beautiful twin ponds, from which two well-known Bangor lumbermen once took nearly three hundred trout through the ice one rainy day in March. The dam at the outlet of Grand Lake, just above the brook's mouth, is one of the greatest places for trout in the State being shut down till the last drive arrives at the foot of the lake, no trout are able to get above it, and they swarm in the deep holes at the foot of the aprons by hundreds. The writer has seen a pork barrel nearly filled with those caught by the cook of a crew which had arrived first at the dam and was waiting for the "hind drives." Grand Lake, four miles long, and nearly as broad, is a lovely sheet of water, and was formerly peopled by a singular species of the genus *Salmo*, called togue. It bore not the faintest resemblance to any variety of the trout family, with the exception of having the adipose second dorsal fin. It very nearly resembles a sucker, or mullet, in the squareness and coarseness of its outline, being broadest and deepest just at the base of the gill covers, tapering from thence to the tail, which was narrower and more forked than even a "laker's." Black on its back, dark gray on its sides, grayish-white underneath, with a very few large black spots on each side, just back of the pectoral fins. But its most remarkable characteristic was a large callosity on the end of the lower jaw, perfectly round, and flat in front, being larger across in a full-sized fish than a ten-cent piece. It was a very sluggish fish, without the slightest approach to gameness; its flesh was white, of a muddy and rather disagreeable taste, and smelled so strongly when cooking as to be almost nauseating. When the "cut" was made, connecting the St. John waters with those of the Penobscot, the lakers, almost exactly resembling those of Moosehead and St. Croix Lakes, came down into Grand Lake, and the togue began to slowly disappear. At present I do not believe one can be found in the lake, nor anything like them in the State. They have been caught weighing as high as forty pounds. At the northwestern extremity of Grand Lake, Trout Brook comes in—about twenty-five miles long, with splendid trout fishing throughout its entire length. On this stream and its tributaries there are perhaps twenty ponds, all, I believe, containing trout; and in one of them—not more than four acres in extent, with no inlet, and an outlet not more than a yard wide—a laker was caught weighing sixteen pounds. [By laker is meant the *Salmo confinis*.] A thoroughfare four miles in length connects Grand with Second Lake. In this thoroughfare, for a short time during each season, the trout fishing is superb; and such trout! running from one and a half to four pounds.

Second Lake is three miles long, and a few rods above it is the mouth of Webster Brook, formerly a small tributary of the East Branch; but now, owing to the admission of the Allegash waters through the "cut," three times as large as the main stream. Ten miles of the roughest kind of water up this stream brings us to Webster Lake. Here, one winter, when moose hunting, the writer once caught a mess of trout out of an "air-hole" near the inlet, which is, he thinks, almost unprecedented. At the head of this lake is the "cut," three-fourths of a mile in length, which brings us to what was formerly the head of the Telos Lake, but is now called its foot, its waters being turned back by a massive dam at the foot of Chamberlain Lake. Telos Lake is five miles long, and has at least one magnificent trout stream.

A short thoroughfare brings us to Round Pond, two miles in length, and a favorite spot in winter for the hardy lumbermen to catch lakers through the ice.

Another short thoroughfare, and we are fairly launched on Chamberlain Lake, a noble expanse of water twelve miles in length; or, if reckoned from the extremities of its "arms," eighteen.

We have now reached the heart of the Great Maine Wilderness. Far below us to the southward, blue in the distance, loom up the rugged peaks of old Katahdin; around us, dark, unbroken, almost illimitable, stretches the primeval forest. In its dusky shadows roam the fleet caribou and the lordly moose, the latter, alas! now few and far between. No costly hotels invite the fastidious angler to repose his weary limbs after the fatigues of the day, or tempt his palate with tables covered with all the delicacies of the season. A large lumberman's farm on the eastern shore has one rude dwelling, surrounded by numerous barns, where one is welcome to the rough fare of the lumber camps. But here the trout sport in all their native freedom; and here they will continue to sport long after the fishing at Moosehead and Rangeley Lakes shall be only a pleasant memory to anglers who have laid aside the rod for the cane.

From here three routes are open for our return. We can go to the northern extremity of the lake, and down the Allegash and St. John to Fredericton; or to the west, across Mud Pond Carry into the West Branch, and down that to the point of departure; or up it to the Northwest Carry, and across that to Moosehead Lake. PENOBSCOT.

San Francisco, March 27, 1879.

SHAD IN ARKANSAS.—For the third season, genuine shad have appeared in the Washita River, Ark. The first season few were caught; last year only about thirty or forty were taken to market; but this spring the run has been tremendous, and the river dwellers are in a high state of jubilation over the new supply of brain food. There have been shad and rumors of shad time and again in the Valley of Hot Water, but the fish have invariably turned out to be "gizzard shad;" and a gizzard shad is no more a shad than a catfish is a cat. This addition to the food fishes of Arkansas is one of the many good results of the labors of the United States Fish Commission, upon which Professor Baird and his able corps of assistants are to be congratulated.

SINGULAR DISEASE AMONG LAND-LOCKED SALMON.—Commissioner Webber, of New Hampshire, has informed us of a new and fatal disease which has attacked the newly hatched fry in the State Hatching House at Manchester. It is a dropsical swelling of the umbilical sac. It first appeared on the 8th of May instant. In Feburary 60,000 spawn were put into the hatching house, and hatched perfectly. About the middle of April another lot of 68,000 fully ripe ova were introduced, and almost immediately hatched out. The disease appeared when the fry were about two weeks old. The sac swells to about five times its original size and then bursts, discharging a thick chalky matter which does not dissolve in water, but remains floating in irregular masses. At the culmination of the disease the eyes of the fish protrude and there is every evidence of much suffering. The question is, What sort of nourishment have the parent fish been giving them?

NEW HAMPSHIRE.—At a meeting of the New Hampshire Fish Commissioners, held at Manchester, May 14, it was voted to extend the hatching-house to the capacity of 1,000,000 eggs; to excavate two more storage ponds for young fish; to purchase a 100-feet gill-net, and to distribute 100,000 land-locked salmon, now in the hatching-house, in the following lakes and ponds, viz.: Connecticut Lake, Sunapee Lake, Mascoma Lake, Squam Lake, Winnipesaukee Lake, Massabesic Lake, Ossipee Lake, Silver Lake, in Madison; Walker's Pond, Conway; Echo Lake, Profile House; Merry-meeting Pond; Rocky Pond, Hollis; Tarleton Pond, Piedmont; ponds in Stark and Great East Pond, Wakefield; reserving 10,000 to meet other applications, and to divide the 10,000 Rangeley trout between Sunapee, Squam and some lake in the east of the State, not yet decided upon.

THE CORRY HATCHING HOUSE—*Editor Forest and Stream:* At the State Hatchery Seth Weeks has thirty-four hatching-trays in a very nice, cool and clean building, and seems to be an enthusiast over his work and descants on the peculiarities of his pets at length. He has raised some 500,000 lake and brook trout this season; his yearlings do very well indeed, as do his land-locked salmon. He has a pool of brook trout at the east side of the hatchery, containing some 500 stock fish that will average ten to sixteen inches, and are very deep and richly marked. He has been very successful this season, having lost very few fish, and believes in giving the fry a strong head of water, and also doing away with gravel in the troughs. The water does not vary more than a dram all through the year, and that is one of the secrets of his success. It is remarkably clear and cold. There is a system of springs on the premises that flow away in a stream three feet wide and perhaps six to ten inches deep. He has some six hundred land-locked salmon in two adjoining pools that appear in splendid condition. In a large pool north of the hatchery are lake trout spawners, many of which are two feet long and remarkably vigorous. I stood six feet from the edge, and had water flung in my face from their broad tails as they contended for the meat; and as they would break the surface my pulse would beat a trifle quicker, and I longed to feel one of them testing my seven ounce rod and the virtue of my tackle. There are still a few good streams left along the line of the P. & E. R. R.; one or two I will not give away, but if parties will go to St. Mary's, or almost anywhere in that section, and will strike back a few miles there are some monarchs that need taming. Four miles back of Somersett, Pa., there is a good stream—in fact, two good streams, with plenty of good fish in them. One of the streams runs through Bakersville, and the other is two miles from there. The bass in the Youghegany River are getting dangerous, being of a large size and lots of them. The best place to start for them is from Confluence, on the B. & O. R. R., Egypt, Ohio, Fyle or Stewarton. PROGRESS.

Somerset, Pa., May 11, 1879.

Natural History.

A LIST OF BIRDS TAKEN IN SOUTHERN WYOMING.

BY S. W. WILLISTON.

[With Supplementary Notes by the Natural History Editor.]

THE following list of birds, although only partial, may, perhaps, be worthy of record. My observations were almost wholly made in the immediate vicinity of Como, a watering station upon the Union Pacific Railroad, and extended from the twentieth of April to the first of July. Lake Como, near by, is an alkaline sheet of water, three quarters of a mile in length by half a mile in width. The water is of crystal clearness, five to ten feet in depth, and the bottom thickly covered with aquatic plants. The most noticeable inhabitant of the lake is the well-known larval, *Siredon lichenoides*, that first makes its appearance about the twentieth of June, the adult *Amblystoma mavortium* being common at all seasons in the region near by. In early spring the waters are swarming with two or three species of Amphipod crustacea and small water mites. These, together with very numerous neuropterous larvæ and an occasional gyrinid and hydrophilid water beetle, are the sole inhabitants of the lake. Emptying into the lake is a large fresh-water marsh near by, a favorite nesting and feeding-place for large numbers of water birds. Owing to the almost entire absence of timber, few tree-inhabiting birds were obtained, except such few as frequented the sparse brushy growth along the bottom of Rock Creek near by. Collections were made daily, and every new bird eagerly sought for, so that probably the greater part of the species frequenting the region during that time were obtained. The observations were made during the season 1878.

[NOTE.—As the Editor of this department of FOREST AND STREAM and his brother spent a few days in the vicinity of Como during the first part of September last, it has been thought well, with Mr. Williston's permission, to increase his

list by such additional species as were taken by us at that time. These, though few in number, render the list somewhat more complete than it would otherwise be, and include some species taken during the fall migration. Such additions to the list will be found inclosed in brackets and signed with the initials of the observer. A few additional notes, bearing mainly on the distribution of the various species, have been added to Mr. Williston's observations, and are marked in the same manner.]

1. *Turdus migratorius*, Robin.—First seen May 2. Three afterward seen at Como, and a few at Rawlins. Not common. Nest observed in sage brush. [Abundant during August in the surrounding mountains, where they collected in great flocks, feeding on the red raspberries which grew in great profusion on the rocky hillsides.—G. B. G.]

2. *Oreoscoptes montanus*, Sage Thresher, Mountain Mocking Bird.—This sweet songster was one of the most common and noticeable birds of the region. A pair were shot a day after my arrival (April 20) while yet there was a heavy snow lying upon the ground; within a week they were about Como in numbers. They seem to prefer the heavy patches of sage brush in the valleys and at the foot of the hills. The males, especially toward evening, were commonly seen perched upon the topmost twigs of the sage, pouring forth their pleasing melody, and upon being disturbed, flying to a neighboring bush, immediately to resume it. A nest with two fresh eggs was observed May 17. Several nests were afterward seen, none containing more than four eggs. The latest fresh eggs were observed June 8. The nests were large and rather flat, with a very scant lining of grass; built high up in the bushes, and well concealed.

3. *Galeoscoptes carolinensis*, Cat-Bird.—First taken May 30. Common.

4. *Harporhynchus rufus*, Brown Thresher.—First seen May 21. Common with the last on Rock Creek.

5. *Sialia arctica*, Arctic Bluebird.—April 20. Abundant upon the hillsides and about the telegraph wires, and especially noticeable from their habit of hovering in the air. They prefer for their nesting-places banks of the loose cretaceous shale, often in the railroad cuttings. A female was captured May 31, deep in a crevice with her nest, containing three nearly hatched eggs.

[6. *Parus montanus*.—A single specimen observed in the Freeze Out Mountains, some miles north of Como.—G. B. G.]

[7. *Sitta canadensis*.—This species was observed several times in August in the Freeze Out Mountains.—G. B. G.]

8. *Salpinctes obsoleta*, Rock Wren.—Common. These birds made their appearance about the first of May, nearly at the same time that I had first noticed them in Western Kansas. I have frequently disturbed a female with her brood of from six to eight half-fledged young about the chalk cliffs of Kansas, and watched with amusement the scampering of the little fellows, who would hide in any conceivable hole or crevice, while the parent at a distance would be calling for her brood in the utmost distress; the whole scene reminding me very strongly of a motherly quail and her restless brood. Although their ordinary note is somewhat harsh, I have more than once been struck with the not unpleasing song that they sometimes utter.

9. *Telmatodytes palustris*, Long-Billed Marsh Wren.—April 23. Not uncommon on the marsh.

10. *Eremophila alpestris*, Shore Lark.—Abundant at my arrival and through the summer. Nest with three fresh eggs found May 27 in a hollowed spot near a tuft of grass.

11. *Anthus ludovocianus*, Wagtail.—A pair were taken April 23 near the edge of the lake, and nearly a month later two were taken on the marsh.

[12. *Helminthophaga celata*.—A single specimen was taken early in September part way up the ridge back of Como Station. It was feeding among the sage brush when killed.—M. G.]

13. *Dendroica æstiva*, Summer Yellowbird.—May 26. Very soon numerous, confining themselves wholly to the creek brush.

14. *D. striata*, Black Poll Warbler.—One single specimen seen and taken on the bank of the lake May 27.

15. *D. coronata*, Yellow Crowned Warbler.—A small flock seen and two specimens taken, May 2, on Rock Creek. None were observed afterward.

16. *Siurus navius* [? var.], Water Thrush.—A single specimen seen and taken near the water's edge May 10.

[In looking over the birds collected by Mr. Williston, the specimen here referred to at once attracted the writer's attention, on account of two marked peculiarities, namely, the large size of its bill and the unusually dark coloration of the specimen.

In all the more recent descriptions of this species, considerable stress is laid on the length of the bill, which is stated to to be "about one-half inch," "not more than one-half," etc., while the bill of *S. motacilla* is spoken of as over one-half, nearly three-fourths, etc. The shape of the bill in this specimen and its coloration show conclusively that it is to be referred to as belonging to the *navius* type of the genus, notwithstanding the fact that the bill along the calmen measures .62in. Taking the largest specimens of *S. motacilla* and *S. navius* in the writer's collection, and comparing them with the specimen under consideration, we have the measurements of the bill as follows:

S. motacilla, .55in.; *S. navius*, .49in., and *S. navius* (the present specimen) .62in. The relative proportions of the parts, as will be seen below, are in some respects quite different from those of *S. navius*.

The writer being unwilling to trust to his own judgment in the matter, and having but a small series of specimens for comparison, sent on the present specimen to Washington, where it was examined by Dr. Coues, and afterward, through the kindness of Mr. Ridgeway, compared with a series of specimens in the Smithsonian Institution. Mr. Ridgway's remarks on the bird are given below. He says:

The *Siurus* which you sent is certainly a very curious bird. Whatever it is, it certainly has nothing to do with *S. motacilla*, being totally unlike that species in coloration. In tints and pattern it is an exaggerated *S. navius*, although there is little that is different in this respect from typical examples of the latter species. The throat is, however, more thickly spotted and the sides more heavily striped than in any of the eight adult examples with which I compared it directly. Selecting from these latter the best developed adult male, and from a series of twelve specimens of *S. motacilla*, the one having *the longest bill*, the measurements are found to compare as follows:

S. navius (Male, Maryland)—Wing, 2.85; tail, 1.95; bill, from nostril, .35, from gonys, .32; greatest depth of bill, .15; tarsus, .82 (!).

S. —— —— (Specimen sent for examination)—Wing, 3.25; tail, 2.50; bill, from nostril, .47, from gonys, .42; greatest depth of bill, .16; tarsus, .82 (!).

S. motacilla (Male adult, Illinois)—Wing, 3.25; tail, 2.30; bill, from nostril .44, from gonys .39; greatest depth of bill, .18; tarsus, .87 (!).

You will thus notice that, while the wing and tail are about the same length as in *motacilla*, the bill is decidedly longer and more slender—quite a different shape, in fact—and the tarsus much shorter or just the same length as in ordinary *navius*!

The specimen in question evidently bears to *S. navius* exactly the same relation that *Geothlypis rostratus* does to *G. trichas*; and if I were called upon to fix the habitat of the specimen, I should, judging merely by analogy in the foregoing and other cases, say it was from some island off the coast.

Yours truly, R. RIDGWAY.

The present case is certainly a very interesting one, and the fact that we have from the central Rocky Mountain region a specimen whose characters lead one of our most practiced and skillful ornithologists to attribute it to a southeastern locality is, to say the least, very surprising and, if the bird in question represents a race or variety, quite at variance with certain laws laid down by some of our best authorities. It is perhaps better, in view of the limited material at present at our command, to regard this specimen merely as an accidental variation; and the writer is unwilling to describe it even varietally until further observation shall have given us additional facts to go upon.—G. B. G.]

(To be continued.)

THE FLESH OF THE SAGE GROUSE.

DENVER, Col., March 18, 1879.

EDITOR FOREST AND STREAM:

I cannot refrain from protesting against the manner in which you dismissed the sage grouse discussion in your issue of the 6th inst. After publishing "Transit's" letter, vouching for the excellence of its flesh, and "Incog's" on the other side, you close the case by what I consider an unfair comparison. You say, "What would our readers say if we should print a number of contributions in favor of, or against, the flavor of onions?" Ergo, the sage grouse has a flavor as pronounced as the onion; further, it is obnoxious. But "Transit," the writer of this, and others, cannot discover, or will not acknowledge, it. This is clearly what your words mean. "Transit's" opinion is certainly entitled to credit. It covers a long period of time and very extensive use of the bird. There are plenty of credible men who will indorse his statements. A discussion of the onion would simply be an avowal by one writer that he likes it, and by another that he does not. All would admit its peculiar fragrance. W. N. B.

We are not quite willing to acknowledge that our comparison was unfair, but admitting that it was, we still think that the discussion of such a question is entirely useless. We do not think that what we said could fairly be construed to mean that the flavor of the sage grouse is as pronounced as that of the onion. That, of course, would not be true.

We have simply expressed our opinion in regard to this matter—an opinion based on an experience of nine seasons spent in a region where this bird was abundant, and where often it was the only fresh meat obtainable. Still, the sentiment is only an opinion, and as such is worth exactly as much as, and no more than, other opinions expressed for and against the excellence of this bird's flesh by other correspondents. What earthly advantage is to be gained by a discussion on such a point?

We wish to apologize to our correspondent for allowing his communication to lie unpublished so long. It was mislaid, and thus overlooked.

RANGE OF THE BLACK-TAIL DEER.

SALT LAKE CITY, March, 1879.

EDITOR FOREST AND STREAM:

In March number of *Scribner*, article four, the author speaks of the mule deer as having one side of the Sierras, and the blacktail the other, as his home. My observation is that the blacktail deer only is found on the Sierras, and the mule deer occupies from near the eastern foothills to the eastern foothills of the Rocky Mountain range, and also is the only variety found in the Coast Range in Southern California. How it may be north toward the Oregon line I am not informed. One other matter I mention for the purpose of getting through your paper, from some of your numerous correspondents, some facts, not perhaps generally known, as to the different spicies of wild goat in this country. The large white goat is well-known to naturalists and hunters, but it is believed there is another, found at least in some parts of Arizona, smaller than the common variety, colored, and changing color, like the deer, with the horns curling around the ear and of a dark color, resembling in shape the thin curling horn of a common sheep. The writer found a small band of the above description on a steep, almost inaccessible mountain in Arizona, but was unable to get one. A miner at the same camp did kill one from the same band, and it is from seeing the skin of that the above description is made. Some of your readers can no doubt tell us all about it. No such species is named in Judge Caton's excellent work on the deer family, nor have I found this particular species of goat described elsewhere. It may not be deemed of much consequence, but some are interested possibly so much as to give a few lines to the subject if they are better off than the rest of us. "All truth is precious if not all divine." GEO. H. WYMAN.

There is some evidence to show that the true blacktail (*Cervus columbianus*) occasionally wanders into the Rocky Mountains. Mr. W. H. Reed, a trustworthy witness, has informed us that in an experience of eight years' hunting in Southern Wyoming and Utah, he has killed two or three deer which were undoubtedly blacktails. We should be glad to hear more about the goat mentioned by our correspondent. We assume, of course, that he is familiar with both the male and female of the mountain sheep, and that the animal to which he refers is different from both those and from *Aplocerus*.

THE BIRDS OF MARTINIQUE.—We have received, through the kindness of Mr. Geo. N. Lawrence, his catalogue of the birds collected in Martinique by Mr. Ober, which has been published in the Proceedings of the United States National Museum. The present paper is the result of the author's study of the collection of ninety-one specimens made in this island, and enumerates forty species either taken or seen, of which one—*Mylarchus sclateri*—is new.

Mr. Lawrence's observations on a number of the species which came to hand in this collection are very full and important. The collector's notes, in some cases quite full, add interest to an already valuable paper.

A GOLDEN-CROWNED KINGLET—*Editor Forest and Stream:* Please find inclosed a head from the smallest bird I ever saw, other than a humming bird, and, to say the truth, it was very little larger than some humming birds I have seen. In color it was very much like what is known in Virginia as the cedar, or cherry bird, only it had no red about it whatever. This little bird was killed by a stone thrown by a little twelve-year-old imp of darkness in the shape of a negro, early in March. Surely this is not a common bird in this part of Virginia, or I should have observed it long since. Be so kind as to name it through FOREST AND STREAM. BIRD SHOT.

Spottsylvania, Va., May 6, 1870.

The head is that of the golden-crowned kinglet (*Regulus satrapa*), a very abundant winter visitant throughout almost the whole United States.

WHAT A TAME RABBIT EATS—*Editor Forest and Stream:* Seeing an article in your issue of the 10th, headed "Are Rabbits Carnivorous?" I wish to say that I think they are to a certain extent. My reasons for saying so are that I have a tame rabbit that has been running loose in my workshop for the last two years. It has become quite a pet with the men, taking the place of the family cat. Every day, when the men get their baskets and sit down to dinner, the rabbit is always on hand, ready for anything that may be given him, showing a decided preference for a piece of meat—beef, pork, etc., no matter what, so it is meat; and then will finish up with a piece of bread and butter, cake or pie, so that I am of the opinion that all rabbits are carnivorous to a certain extent.

69 *Tracey street, Cleveland, O., April* 15, 1876. S. B.

AN UPLAND ALLIGATOR—*Marietta, Ga., May* 17.—Following the lonely track which leads for thirty-three miles through Savannah's sand-hills and pine barrens from New Smyrna, Florida, to the St. John's River, we once came upon an alligator seven feet long, taking his siesta in the middle of the road. The colored boy who drove the wagon turned off the road, jumped down, and, for want of a better weapon, attacked the creature with his whip. Safe in its coat of mail, the alligator at first did not notice the assault; but presently a cut across the eyes waked it up, and opening its huge mouth it hissed defiance, waved its tail on high, and went for the darkey. By this time, however, the boy concluded that his horses claimed his attention, and retreated to the wagon, remarking, "Ef I had my axe along I'd have mashed his head, for true." Many alligators have I seen in Florida lakes and rivers, but never before met one on the high road. Probably the dry weather had driven the reptile from its accustomed haunts in search of water. S. C. C.

BREEDING OF WOODCOCK—*Editor Forest and Stream:* A friend, with whom I have for many years past hunted, and a better shot or more enthusiastic sportsman does not draw trigger, and myself were out on the 31st of March a year ago (our season closes April 1), when we got up, in very thick corn, six woodcock, all of which we brought to bag. Four of them were young ones, but so well grown that it was hard to tell the difference even after having them in hand. We started out after one o'clock P. M., and brought home twenty-three quail and six woodcock. We thought that a good afternoon's bag. J. C. H.

Fayetteville, N. Y., May 10.

ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR WEEK ENDING MAY 17.—One white-throated monkey, *Cebus hybolenecus*, presented by Dr. James S. Bailey, Albany; one Bengalese cat, *Felis bengalensis*, hab. India, placed on exhibition; one raccoon, *Procyon lotor*, presented by Mr. Paul Santert, N. Y. city; three young foxes, *Vulpes fulvus*, presented by Mr. J. P. Panchot, Wisconsin; one red squirrel, *Sciurus hudsonius*, presented by Mr. Charles McCann, N. Y. city; one canary bird, *Serinus canaria*, presented by Mr. J. W. Tucker, N. Y. city; six wild geese, *Bernicla canadensis*, bred in the Menagerie; three Toulouse geese, *Anser domesticus*, bred in the Menagerie.

W. A. CONKLIN, Director.

—It was a motley throng that gathered in Gilmore's Garden last Saturday evening—the cigar makers of New York, Brooklyn and Jersey City. There were all kinds of contests and competitions, including an advertised award to the prettiest woman and a most grotesque race between a number of moon-eyed Chinese heathen, who did some tall running.

—The Ravenswood Lacrosse Club defeated the University Lacrosse Club of New York three games out of five at Prospect Park, Brooklyn, last Saturday. There was excellent playing on both sides.

The Kennel.

KING CHARLES AND BLENHEIM SPANIELS.

LONDON, England, May 5, 1879.

EDITOR FOREST AND STREAM:

Taking an interest in all dogs, and especially in King Charles and Blenheim spaniels, and seeing you answered one of your correspondents that you that you did not know a breeder of these dogs in America, I think it would interest your readers to know that an old acquaintance of mine has bred these dogs and lived out of the proceeds for the last thirty years. His name is Joseph Garwood, of No. 3 Brownlow Mews, Henry street, Gray's Inn Road, London; and to hear Joe speak of the swells, lords, ladies and gentlemen who come to see his pets and are his customers, would surprise those who are not "doggy" in their tastes. But then all find their way into any nook and corner if a good thing is to be found—in old China, paintings, etc. But to return to the spaniels. Joe's door has a board across the front—you would fancy he had a family of young children to protect instead of dogs! As you enter the doorway and parlor you see several wooden boxes like rabbit hatches, and on being invited to let out the occupants, out rush six or eight of the handsomest stud dogs one ever saw, all frisking and playing about you.

I will describe the *elite* of the society, and first take Dandy, a beauty—such ears! He is a red King Charles, took first prize at the Alexandra Palace—last December, I think—and second at Agricultural Hall about two years ago. Prince ranks next, a black and tan; first prize Crystal Palace, 1878, and second at the Alexandra Palace. Next we must look at Prince's father, Bertie, a handsome black and tan, but never shown. For those who admire black, white and tan dogs, as seen in many old paintings, there is Charlie, a very well bred and handsome fellow. In Blenheims, a red and white dog named Young Duke is a beauty; took second prize at the Agricultural Hall.

I missed two of my favorites. They have gone the way of all flesh, and as Joe values his stud dogs at good prices, I know they had every care, but old age will creep on! Well, Iky, a splendid black and tan King Charles, the best, I think, that one could see, and old Duke, father of Young Duke, are no more! I think Joe refused £50 for Iky, but these dogs are a source of income for stud purposes alone. If any of your readers want pups I do not think they can do better than apply to Joe, or could order through you. Joe has just sent out six spaniels to Madras, and some years ago an American gentleman called on him and bought, so, somewhere or other in America, you no doubt have the descendants of his famous breed.

I hope in what I have written I have not trodden unintentionally on the toes of any exhibitors in making wrong statements about the prizes, etc. If I have, I must excuse myself by saying that I merely jotted down, over a pipe, the conversation I had with old Joe on a recent visit to his abode. I am fond of dogs, but am no dealer or exhibitor; still, for old acquaintance sake, I hope this letter will do Joe good, if your readers are intending buyers. G. W.

THE LITTLE DEARS.—The fair dames who take the little dogs around to shop have found a new thing in the spring openings. It is nothing else than a little oblong wicker dog basket, cushioned and lined with silk, and covered with half canopies. These sweet little jewel boxes are attached to the traveling-bag, or may be carried in the hand. Aristocratic dogdom is delighted.

ANTIDOTE FOR STRYCHNINE.—In Australia salad oil is commonly used as an antidote for strychnine poisoning, and is found to work very satisfactorily. A good dose—half a bottle—if administered even one or two hours after the poison has been swallowed, proves an effectual cure.

—In man the weight of the brain amounts, on the average, to one-thirtieth part of the body. In the Newfoundland dog it does not amount to one-sixtieth part; in the poodle not to one one-hundreth part, and in the bull dog to not one-three hundreth part.

GLADSTONE AND JO, JR.—*Nashville, Tenn., May* 14.—We have had uninterruptedly fine weather, which has caused all the rivers and creeks to decline and become so clear that fish will not take any kind of bait, and as there is no game in season the sportsmen all are without employment. A great deal of interest is manifested in the coming match between Mr. Bryan's Gladstone (Llewellin) and Mr. Dew's Joe Jr. (native), announced to take place in the fall. It is encouraging to see the number of gentlemen among us who are giving their attention to the breeding of dogs. I have no doubt that the entries for the Field Trials next December will astonish many by the large number of Tennessee dogs that will run.
J. D. H.

GOOD POINTER BLOOD.—The following letter apropos of late English Field Trials at Chester, appears in the last issue of *Bell's Life:*

SIR—Seeing that you do not mention Vrous's pedigree, the dam of the winner at Chester last week, knowing also that you are a stickler for gencalogy, and also that our American imitators will be pleased to hear of the fact, Snapshot having been sold some time ago across the Atlantic, I beg leave to supply it. I bred her, by Snapshot out of Juno, a very excellent black and white pointer bitch. I gave her to Major Starkie, and had a very high opinion of her powers. Nimble Ninepence, the "Rhcbe" of pointers, is dead; even Mr. Hunting, with all his skill, who was specially summoned from town to Wales, having failed to arrest the progress of severe internal abscesses. Her stock have been especially valuable, including, as they do, Sixpence, Yellow Drake, Irrepressible Drake, Gipsy Drake, Dandy Drake, the new aspirant Tick, and several other good ones given away. She was a better brood bitch than even Belle, and nicked especially well to Old Drake. Before her death she had been put to one of his best sons, my Beau, his first essay, and an unfortunate one. Yours, etc., R. J. LL. PRICE.
Boodles Club.

—John Goodrich's constant companion, in Hartford, was a fine setter dog, and the attachment between them was very strong. They went hunting for muskrats a few weeks ago, and toward night the dog returned alone. He was wet and muddy, and acted in a strangely excited manner, running to and fro, as though to attract attention. He led the way to a creek, where Goodrich's body was found. The master had fallen into the water in a fit, and the dog, after trying in vain to pull him out, had run home for assistance. The dog would eat nothing after the burial of his master, from whose hands alone he had been accustomed to receive food, and for whom his grief was apparently excessive. He died, finally, of starvation.

—The first field trial ever held in Germany took place at Hanover on the 10th of April, when several English bred dogs ran. The puppy stakes had twenty runners, and was won by a pointer, the second being a pure Laverack, called Pearl, belonging to Mr. Marais, by Tam O'Shanter out of Lerna, by Lort's Jock, and bred by Mr. G. Earl, of Banstead. This puppy, being only eight months old, has created quite a *furore* in Germany for Leveracks.—*Bell's Life.*

—Mr. L. F. Whitman's (Detroit) English setter bitch Moll (Jack-Spot) has been bred to same owner's Rattler (Rob-Roy-Pickles).

—Mr. J. H. Kraft's (New Albany, Ind.) English setter bitch Bessie Lee (Rake-Fannie) has been bred to Mr. Whitman's Rattler.

—Mr. J. Hopkins Smith's red Irish setter Meg (imp. Milo-imp. Bridget) has been bred to champion Elcho.

—The black pointer bitch Princess (Gillespie's Fan-Dilling's Ranger), winner of first at Boston and second at New York, the property of G. G. Barker, Esq., of Boston, has whelped nine puppies, sired by Strong's Pete.

—On May 14 Capt. W. H. Littleton's Pat (a new name for a bitch) whelped (so our Detroit correspondent writes) seven puppies, sired by L. F. Whitman's Rattler.

—Mr. Geo. E. Brown, of Dedham, Mass., claims the name of Glen, Jr., for his Gordon puppy by Dr. Aten's Glen out of Mr. Jos. Fisher's Border Lily.

—The imported setter bitch Rhoda, owned by Jesse Starr, Jr., of Camden, N. J., whelped, on the 12th inst., eight puppies—four dogs and four bitches—sired by Mr. Raymond's Young Laverack. Four of them will be sold.

—John E. I. Grainger, of this city, claims the name of Lady Gay for his foxterrier bitch, by Paulo out of Nettle; bred by James Lawrence, Esq., of Boston; was whelped about December 4, 1878.

—Mr. A. Elmore, of Granby, Conn., claims the name Gay for his liver and white-ticked pointer dog pup, seven months old, from Snapshot and Fanny II. Also the name of Grace for lemon and white bitch pup, same age, from Sensation and imported Juno.

Sea and River Fishing.

FISH IN SEASON IN MAY.

Trout, *Salmo fontinalis.*
Salmon, *Salmo Salar.*
Grayling, *Thymnallus tricolor.*
Salmon Trout, *Salmo confinis.*
Shad, *Alosa.*
Land-locked Salmon, *Salmo gloveri.*

FLIES IN SEASON IN MAY.

BLACK MAY, NO. 10.—Body, black; feet, black; wings, grayish hyaline

COW DUNG, NOS. 10 AND 11.—Body and feet, brownish yellow; wings, yellow gray.

GREAT DUN, NOS. 9 AND 8.—Body, purple brown; feet, gray brown; wings, dark gray hyaline; setæ, dark brown, annulated with gray.

RED SPINNER, NOS. 10 AND 9.—Body, bright claret, ribbed with gold tinsel; feet, brick color; wings, gray hyal; setæ, paleine brick color

YELLOW MAY, NO. 10.—Body and feet, pale yellow; wings, pale yellow, mottled with brown; setæ, yellow.

COACHMAN.—Body, peacock herl; feet, dark red hackle; wings, white.

KING OF THE WATER.—Same as queen of the water, with scarlet body instead of orange.

GOLD SPINNER.—Body, orange, ribbed with gold tinsel; feet, pale red hackle; wings, bright gray.

CAPTAIN.—Body, posterior half, peacock herl, anterior half, gray; white feet; red hackle; wings gray; setæ, scarlet green and wood-duck feathers mixed.

SOLDIER.—Body, crimson; feet, red hackle; wings, gray.

KINGDOM.—Body, white, ringed with green; feet, peacock herl, and red hackle; wings, gray, mottled with brown.

Black Palmer, Brown Palmer, Red Palmer and *Gray Palmer* are made respectively of the colored hackles that distinguish them.

FISH IN MARKET—RETAIL PRICES.—Bass, 18 cents; bluefish, 12½; salmon, 70; mackerel, 10; shad, per pound, 8; weafish, 12; white perch, 12; Spanish mackerel, 75; green turtle, 15; halbut, 18; haddock, 6; kingfish, 10; codfish, 6; blackfish, 10; flounders, 8; porgies, 8; sea bass, 15; eels, 18; lobsters, 8; sheepshead, 18; soft clams, 30 to 75; whitefish, 15; pickerel, 15; salmon trout, 15; brook trout, Long Island, $1; whitebait, per pound, $1; smoked halibut, 10; smoked salmon, 15; soft crabs, per doz., $1.25.

"WEAKFISH."—Now that this delicious game fish is once more running, as the season for fishing comes round, the following description and instructions from Hallock's Sportsman's Gazetteer will prove opportune:

This fish is marked by gorgeous spots upon a ground of blue and silver, and by red and yellowfins, which are characteristic of the fresh water trout, and have undoubtedly given to it the name of "trout" in some sections. Ordinarily it is caught by hand-lines fished from a boat. These weakfish come in with the tide in immense shoals, following the small fry upon which they and their congeners feed, and are caught by the boat-load at half-flood within a few feet of the surface. Bait with a shrimp or shedder, and keep the line constantly in motion, and half the time you will "jig" them in the belly, tail or side, as the finny mass moves over the hook. Down at the "Narrows" of New York Bay, near Fort Richmond is a favorite place. In New Haven harbor, and other harbors of the Sound, and especially in the vicinity of Montauk Point, Long Island, they are taken in great numbers. However, no one but market-fishermen and novices take weakfish in this way. Anglers prefer to fish with rods and diner tackle in deeper water along the edges of channels and tide-races, where the rock or shifting sands form shelves and ledges to which the small fry gather for safety, and where bits of organic matter are drifted by the tide and deposited. A light bluefish squid kept just clear of the bottom is used. Here the weakfish run singly and much larger in size—four times the weight of those "schooling"—coming along under the still water of the ledges where their prey is huddled, and gulping down large masses at a mouthful. These big fellows are designated as "tide-runners." They weigh about four pounds, and pull well in a five-knot current.

But there is another mode, still, of taking weakfish, of which, verily, many an old fisherman wotteth not. Attention, all! Take a "cat-rigged" boat, a craft with a mainsail only and mast stepped well forward, one that works quickly, for quick work is required, and go to Fire Island Inlet at half ebb. At half ebb, or when the tide is running out like a mill-tail, is the only time to take them. Should you attempt the experiment on the flood, you would lose your boat and your life. Let there be a stiff quartering breeze, and now with a steady helm and a good rap full, bear right down on the beach, mounting the crest of the waves that in ten seconds more will break into shivers on the sand. Keep a quick eye, a steady nerve, and a ready hand. You will take the edge of the swift current where it pours out of the inlet. Fear not the mounting "combers" or the breaking foam, the tide will bear you back and keep you off the shingle. Right here at the mouth of the inlet the action of the tide is constantly washing out the sand, and as it is borne down on the current, it presently sinks by its own specific gravity, and gradually piles up until it forms a little ledge a foot high or more, just as the driving snow in winter is borne over the crest of a drift until it forms a counter-scarp, with an apron hanging over the abrupt and perpendicular verge. Right under the edge of this ledge the small fry congregate, and the "tide-runners" forage for food. Here throw your "squid." Just now is the critical instant. In two seconds you will either be pounding on the beach or surging down on the impetuous current of the strong ebb tide. The breeze is blowing fresh. Up mounts your boat on the glassy billow, whose crest is foaming just two rods in front. A false move now is ruinous. Ready about, hard down your helm! *Now!* while she shakes, toss in your "squid" into the deep green brine. There, you have him. Keep her away and haul in lively. Hurrah! a four-pounder. Lift him over the rail easy; belay your sheet there—steady! Whish! away we go, with wind and tide fair, and a seven-knot current, and in a jiffy are swept many rods off from the land, and ready to repeat the manœuvre again. Clear away your line, come about, and charge up to the beach once more. What can be more exciting? Here we have all the attractions and excitement of yachting and fishing combined, with every sense on the alert, and every nerve tautened to fullest tension. Who will dare turn up his nose in contempt of weakfishing?

The weakfish is also taken with squid in the surf at Montauk, Newport and elsewhere, and affords the most exciting sport—the angler often standing waist deep in the breakers, throwing his squid to incredible distances by practice, and dragging the fish by main strength to *terra firma* when he has struck. The best season for angling is from the middle of June until the first of September.

SPRING TIME BY THE BLUE RIDGE TROUT STREAMS.

APRIL, when she is kind, has many charms for us Southern trout fishers. We sally forth with new life and full of high hopes for the coming season, and plans, alas! too often not to be realized. The burning suns of June have faded from our recollection, and as we wet our lines in the swirling streams and well-filled pools, we are too apt to forget the miserable trickle that so many of our favorite spots will be reduced to ere the summer days have ceased to lengthen.

The large fish, too, are now on the feed, and the audacious minnow has not yet begun to play havoc with our bait (for I am sorry to add that the nobler art is denied one on the brooks in this immediate neighborhood, so small and encumbered with brush are they). We can now move boldly forward, regardless of the still slumbering "moccasin," and lastly we are not forced to discuss our breakfasts at unchristian hours, and race in the morning sun.

April, however, this year has not so far been particularly gracious. Dry and cold east winds have swept over the parching lands, and the garish light of many moons has glared over red and thirsty uplands, where the feeble wheat is struggling to make itself seen. The mountains stand out bare and brown into the hard blue sky, and their rocky ridges shine through the still leafless woods. Rocks and snags raise their unwelcome heads above the surface of the streams that usually do not have the impudence to emerge till June, and the pink blush of the peach orchards alone reminds us anglers of "the April of our loves."

There are some very excellent trout rivers in parts of the "Blue Ridge," by whose waters I hope shortly to put up the long discarded fly rod. For the past few years I have been restricted to plying my art within the radius of a day's ride from home, and have been, from the nature of the streams, confined, bitterly against my inclinations, to the use of the wriggling worm. Not by any any means that I wish to decry clear water worm-fishing for trout; for I say emphatically—not as a partisan, but as an old, experienced and devoted fly fisherman—that the former requires as much experience, more patience and, in some ways, as much skill in the face of such natural obstacles as we have here, as fly-fishing for brook trout does. Pitching a long line up stream—which I hold to be the only sporting method of worm fishing—guiding the bait through the countless sunken obstructions that are waiting for it; detecting the slight waver in the line and the tremulous pluck of the biting trout, and, above all, knowing the exact moment to strike, are not learned in a day. A practiced fly fisher will soon acquire it, but a tyro will take years where trout are shy and obstacles numerous.

The obscure streams that leap down the rugged sides of what may fairly be called the grandest portion of the range, are paid the most assiduous attention to by our local genii. The trouting fraternity are, most fortunately, numerically weak; but, on the other hand, they are, without any exception, the most persistently enthusiastic of any class of anglers that in a somewhat varied experience it has been my lot to meet. About four of them fish every day during the season, taking our three streams, with a trouting length of three miles, alternately, and have done so within the memory of—I was going to quote that inevitable "oldest inhabitant," but that would be a little too strong perhaps—say twenty-five years; it would be under the mark.

Then there are some half-dozen others—mostly low country farmers, but more attentive to their business than the first-named gentry—who only put in an appearance in wet weather. On holidays the entire population of the country, black and white, turn out in force for a general onslaught on the finny race—the result in this case is usually harmless—while occasionally during the summer months merchants, doctors and lawyers from the distant towns come along in Jersey waggons, and with much tackle and more whiskey astonish the weak minds of the grim and sallow beings who commune with nature from beneath mud chinked hovels and force ragged crops out of rugged mountain sides among the clouds. Spectral looking individuals are these same unhappy beings, as bending beneath sacks of corn they plod their slow way downward to the mill, unsympathized with and uncared for, squalid and ignorant, a miserable outgrowth of the unfortunate "institution" that has left a great part of a noble country a blighted wilderness. Enough, however, of moralizing and hackneyed truisms.

The "boss" fisherman of this district is a terrible man on trout. He sends the writer a challenge every spring to fish for a new hat. I at once, however, throw up the sponge, and have never presumed to contest with him his "wormy" laurels. This worthy sportsman is by way of being a farmer, at least he has a farm and lives upon it and by it. How the cultivation of said plantation is carried on I never learnt. If I were an Ethiopian I should like to hire to that very easy going individual. If he happens to have gone up stream before you (which will certainly be the case unless you have breakfasted the night before) the water side population look as much amazed as they are capable of looking anything, that you do not at once go home, as his mere presence, his very shadow passing up the water is supposed to leave a paralyzing influence behind him on the trout.

Most of the local fishermen are what are here called "dodgers," *i. e.*, they try to keep unseen and ahead of any one they find on the creek before them, for there is a curious belief among them that it is useless fishing the same water as another even hours after him.

When, therefore, you catch sight of some shadowy form gliding through the forest behind you with a fifteen-foot sapling in his hand and half a pound of tobacco in his mouth, bear in mind that that apparition's object is to keep in front of you at all hazards, so resign yourself calmly to the situation. Make a feint of moving rapidly up stream as long as the vision may be supposed to be in sight, and then return quietly to your former position. If you, like most true anglers, indulge in the soothing weed, charge your briar and give him plenty of time to get on. He will be sure to go a long way ahead of you, and will then fish rapidly and carelessly, continually expecting to see you making a rush behind him, and in fact will generally have a bad time of it.

If you meet your friend in the course of a few days and allude to the number of fish basketed by yourself, he will promptly double and possibly even treble your bag and fairly stun you with pounders and three-quarter pounders, though they are in fact woefully scarce. This is all, however, an understood figure of speech, and serves only to amuse the initiated. The best way is to commit the "aborgine" to a statement of his own performance and then pile it on regardless to your own account.

Seriously speaking though, why are the angling fraternity on both sides of the Atlantic, and for aught I know all the world over, so gloriously inaccurate? Sober minded, sober judging men—men of unexceptional character, famous for truth, integrity, uprightness and every other virtue under the sun, seem powerless to resist the failing, and when they get to the size of a salmon or the weight of a bass as often as not lie away most jovially.

More license I think is indulged as regards weight than numbers. Naturally so, perhaps, as there is more scope for it. I have ever noticed that the brook trout seems to offer more special temptations to the unconscious romancer. A quarter of a pound one would almost suppose from listening to many sportsmen casually conversing, is the minimun size a trout can possibly exist at. Now a brook trout of a quarter of a pound is by no means to be despised, and in many famous, I might almost say historic, trouting rivers in Scotland, Wales and the West of England, your bag if it be a large one will never average 4 oz. per trout. The White Adder (the largest tributary of the Tweed) is considered one of the finest trouting streams on the border. It is open to the public and sixty fish would be a good basket, the total would weigh from ten to twelve pounds. Again, as another instance, with an apology for the digression, the passage in "Marmion" may linger in the recollection of some of my readers, where, after riding from Tantallon Castle, he

> "Looks down upon the Tyne,
> And far beneath where slow they creep
> From pool to eddy still and deep,
> Where alders moist and willows weep,
> He hears her streams repine."

This of course is not the Tyne of coal and rowing celebrity, but a modest river that waters the fertile plains of East Lothian, and falls into the Firth of Forth near the "Bass Rock." It is closely preserved and most highly estimated by anglers, while the peculiarity about it is that not only your basket averages invariably four ounces to the fish, but that a majority of the individual trout turn the scale exactly at that weight, which is a very unusual regularity all the world over for that style of fishing.

Turning again to "half-pounders," that weight will, I think, be found to do duty in numberless instances with novices and "big talkers," for fish that weigh about three ounces. A genuine half-pound brook trout will very often, if you are fishing with as fine tackle as you ought to be in a brushy place, give some trouble, and would under those circumstances most assuredly break a great many of the ignorami who verbally make light of him, while a *bona fide* pounder from a mountain brook is a noble fellow and not to be despised by all the salmon fishers that ever swung a rod.

The "merry month" will soon be with us, when the surroundings of our streams will burst forth in all their splendor. The summer breezes will ripple in our faces over billowy seas of leafy green. The calmia and the rhododendron will blaze resplendent on every side. The poplar, the chesnut and the oak will wave their leaves above our heads and throw dark shadows over the glistening waterfalls; great yellow butterflies will sail dreamily over the sunless pools, and many colored lizards scuttle over the rocks; long-legged water spiders will congregate in the back eddies, and as it to complete the picture as we find ourselves year after year treading the same well-known paths, we shall unconsciously mutter with Britain's laureate the familiar lines:

> "And here will sigh thine alder tree,
> And here thine aspen quiver,
> And here by thee will hum the bee
> For ever and for ever."

Charlemont, Va. RINGWOOD

RANGE OF THE STRIPED BASS (*Roccuslineatus*).—Our very observing correspondent at Beaufort, S. C., "S. C. C.," states that he was told of the capture of a number of these fish in March in Bull's River, with rod and reel, which ran up to 15 pounds. In April one of 20 pounds was caught in Black Creek, Florida, and was seen by his informant, a Northern gentleman, well acquainted with the species. As they are known to occur as far north as the Bay of Chalheads, their range must be greater than almost any of our coast fishes.

ABBEY & IMBRIE'S SALMON REELS.—This firm informs us that they have more orders for salmon reels than they can furnish for several weeks to come, notwithstanding the very high prices charged, viz., $25 and $30. We have added two of their latest patterns to our own collection, and hope to prove them on Canadian waters next month. One of them is of German silver, and the other of German silver and rubber combined. They are beautiful specimens of workmanship.

USEFUL TO AMATEURS AND EXPERTS.—In Mills & Son's new catalogue of fishing tackle, which of itself contains much valuable information for anglers, there is a list of outfits for trout and black bass fishing, so graduated in quality and price as to suit the purse and skill of all persons from the clumsy tyro to the veteran expert who "knows it all." This list must be of great service to non-residents of this city, as having full confidence in this long established house (successors to Bates & Co., 7 Warren st.,) they can order their outfits as advertised without any trouble to themselves or preliminary inquiry. For instance, they can furnish a 3-piece trout rod, lancewood tip, brass click reel, 25 yards braided oiled silk line, one dozen hooks on gut, one dozen flies and fly case, for the amazingly low price of $5, or a superior outfit, including all essentials save landing net, for $30. Their bass outfits are $6.75 and $16. The Leonard reels are justly celebrated, as we know from personal use of them, while the Leonard bamboo rods have a wide reputation. We handled one of these the other day which has just been built for service in English waters, where the fish are shy, and the streams exposed, and rises only reward a long reach. It was 21 feet long and weighed 3 lbs. 2½ ozs. We are glad that there are Englishmen over there brawny enough to swing it.

GOODYEAR RUBBER GOODS.—It is enough to delight the angler's eye to examine the wading pants and other waterproof goods exhibited by the Goodyear Rubber Company at their large warehouse, corner of Broadway and Broome streets. There are wading stockings of mackintosh, soft and pliable, and wholly impervious to water, which fit the feet like a glove, and over which wading shoes are to be worn. These reach to the hips. Then there are wading pants which cover one to the neck, like a Boyton swimming suit, some made with boots attached and some with stockings merely. The soles of the boots are made of a mixture of rubber and cork so as to prevent slipping on the river bottoms. The pants can be worn next to the skin if desired, or put on over an ordinary suit of clothing. Those whose limbs have stiffened in the ice-cold water of streams which they have waded in ordinary trowsers, will appreciate the comfort of these protectors from wet, cold, and rheumatism.

The assortment of other rubber clothing, such as coats, capes, ponchos, blankets, etc., which the Goodyear Company exhibits, is really astonishing to those who have never observed what an infinite variety of articles can be made from rubber. Sportsmen should use rubber more than they have done. By so doing they will not only add to their own personal comfort, but strengthen their health and lengthen their days. There never was an excursion made when rubber clothing of some sort did not come into service. Rubber blankets should always be used underneath, and over, in camping at night, if one is sleeping *al fresco* in the open air, to protect from dampness below and the dew above. They should always be spread under one sitting at a blind in a meadow, sink box, or boat.

The Goodyear Company has a down town store at the corner of Fulton and Broadway. At either place one can supply himself with a most complete outfit of all sorts of articles, and when he has gotten all together, pack them in a rubber knapsack or bag, to be had at low prices.

AN ANGLER'S FISH STORY.—Here is a little episode of an angler's life which ought to be put in *brackets*. The narrator is himself the hero of the adventure.

It seems that one day last year, while Walter M. Brackett, the noted painter of fish portraits was angling for salmon in the river Marguerite, in Canada, he was seated in one end of the boat, his paddle and gaffer in the other, and his wife amidships. Walter was trolling artistically, gently drawing in the fly preparatory to swinging for another cast, when, just as he lifted the line clear of the water, a huge salmon came lunging after it with that fierce rush which his species are apt to make when they see the long-time dallying prize suddenly lift itself from the surface and dart away. So great was the upward impetus of the fish that he leaped clear of the water and describing a graceful circumambient arc, landed in John, the guide's lap, grazing his arm with a heavy weight as he fell. After flopping awhile in the bottom of the boat he was stunned by a blow on the head and made quiet.

Then, if ever, salmo *salar* the "leaper" earned the fame of his sobriquet. It was truly a "leap in the dark," as Tom Paine described the exit from life unto death. It was worthy of immortality on canvas; and Mr. Brackett should thus apotheosize it. But it came near bringing dire disaster. Had the salmon struck Walter on the head, or knocked the paddle out of John's grip, or disordered Mrs. B.'s coiffure, or thumped the boat on the port gunwale, or slid off the stern-post on its ear, the boat would probably have been capsized in very deep water, and Walter would never have survived to paint the finest salmon picture which ever decorated an easel. At all events, the fish would have got away and escaped an ignominious death by a thump on the head.

Those pictures which we saw a fortnight ago in Mr. Brackett's studio, are studies of salmon and sea trout, and are thought to surpass his celebrated quartette series of the "Rise," "Leap," "Struggle," and "Landed," which he sold to England for $4,000 or $5,000 some five years ago, and which he afterwards duplicated by permission of the owner.

Walter talks of removing his studio from Boston to New York. The latter place being the farthest from the river Marguerite, there will be less danger of his being struck on the head by a vaulting salmon; though some sturgeon in the bay may some day take a header for him.

MAINE—*Foxcroft, May* 19.—Immediately after the ice was out of Sebec Lake Wilson stream was besieged by anglers, all anxious to get there for the first run of the wary land-locked salmon. Mr. E. W. Bailey, a noted angler of this place, retired with thirty very fine trout, the largest weighing 4lbs. Evaster generally succeeds in bringing them to the landing-net. Charley Dana, an Indian, returned from Sebec Lake on Friday. He brought back with him twenty-eight muskrats, which he shot and trapped in one night. The skins are twenty cents each. The ice in Mooschead Lake has not entirely left yet, but probably before this reaches you the lake will be quite free from ice. H.

MASSACHUSETTS—*New Bedford, May* 15.—The numbers of marine fish in our market constantly increase. The principal feature of the market this week are the salmon taken in the "fish traps," the largest yet; came from Menimpsha, Martha's Vineyard, yesterday, weighing 23 pounds. Our trout fishermen have been having fine sport, Mr. A. E. Lucas being high hook with sixteen fish, weighing 21½ lbs. CONCHA.

—The fishermen who frequent Coney Island Creek to catch the first run of striped bass have recently taken some very fine fish, ranging from half a pound to a couple of pounds.

—The fishermen of Long Island are having extraordinary luck with the menhaden just now. The factory at Deep Hole, near Sag Harbor, has received 1,935,450 fish within four days, equal to 225 barrels of oil and 200 tons of scrap. The factory has five steamers and several sailboats engaged in fishing, and the works are so arranged that two steamers can be discharged at once of about 90,000 fish an hour. At the Promised Land factory of George Tuthill, near Amagansett, 2,000,000 fish were used within a week, making 300 barrels of oil. On Wednesday sixty vessels were cruising off East Hampton, twenty of them steamers, and one steamer sent ashore the news that it has taken 900,000 fish in twelve hours.—*Eagle.*

NEW JERSEY—*Kinzey's Ashley House, Barnegat Inlet, May* 17.—No bluefish of any account up to date. Blackfish, sea bass and flounders very plenty; from 25 to 50 per boat taken daily on slack water. Sea bass run unusually large. B.

VIRGINIA—*Leesburg, May* 14.—To-morrow close season for bass begins. A good many good catches have been made of good-sized fish. Rev. Dr. Elliott, from Washington, with Mr. Murray, took 30lbs. in a few hours on Goose Creek.

FLORIDA FISHING NOTES.—*Editor Forest and Stream: April* 16—Wind southwest. Thermometer at noon, 80 deg. Fished three hours in deep channel under the bluff; got six cavalli, *Trachynotus carolinus*, from 2 to 4 pounds in weight, one of the most active and vigorous of fishes, game to the last, but not valuable as food; also four blackfish, *Centropristes atrarius*. In these waters they seldom exceed one pound in weight, but are well flavored and delicious on the table; taken in deep water on rocky bottoms; and one mangrove snapper, of 2 pounds weight.

April 19—Wind northwest. Thermometer at noon, 75 deg. Same ground as before; fished two hours this afternoon and got three cavalli of 2 pounds each, six sailor's choice or sonp, *Hamulon quadrilineatum*; one snapper of 3 pounds weight, *Serranus erythogaster*. This is a shy and wary fish, and, although numerous in these waters, few are taken with the hook compared with other species; therefore we consider a large snapper—say of 5 or 6 pounds—something of a prize; a hard fighter when hooked, and good eating. The river is now full of catfish; one species, of 1 or 2 pounds weight, much resembles the catfish of fresh water; the other, the sea cat, grows large, sometimes weighing 10 pounds, and is a handsome and active fish. Neither is eaten here.

April 21—Wind southeast. Thermometer at noon, 76 deg. Went to the Inlet and fished four hours in a shallow cove; got nine bass, from 4 to 10 pounds in weight, *Sciænops ocellatus*, called redfish on the Gulf, red drum in Virginia. This is our favorite game fish. It is abundant, grows to a large size—say 50 pounds—and is a fair fighter, like the striped bass, making long runs and affording excellent sport for the rod fisher. Got one salt water trout of 4 pounds, *Cynocion regalis*, a very handsome fish, much resembling the lake trout of the Adirondacks in form, color and marking; except for the absence of the adipose fin, one would take it for one of the salmons; is allied to the weakfish or squetege, but is better eating. Got also one cavalli of 3 pounds.

April 24—Wind southeast. Thermometer at noon, 76 deg. Crossed the Inlet into the Hillsboro River, and fished at Massacre Bluff; got a few whiting and pigfish, also a ladyfish of about 2 pounds weight, *Scomberesox*, a very active creature, leaping three or four times out of the water when hooked, like a grilse, which it somewhat resembles in form and color, though not in edible quality, being bony and tasteless. After this, two or three sheepshead, which at this season often take cut mullet bait, but as it is the spawning time with them we turn them back to the water. Then I hooked three sharks, one of which, about 3 feet long, was brought to gaff; the other two, being large, took away the hooks and escaped. After this a stingray of some 50 pounds, which, after some fifteen minutes play, went off with hook and sinker. Then to the Cove, where in shallow water I got two 6lb bass.

Halifax Inlet, April 16. S. C. C.

MICHIGAN—*Detroit, May* 17.—George F. Robinson, clerk of the Superior Court, caught thirty-two bass in half a day's fishing at Sandwich, Thursday; and on the same day W. C. Colburn caught twenty-seven bass at Point Moyeaux, the resort of the "Big Eight" Sporting Club.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

NO. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, MAY 22, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

☞ Trade supplied by American News Company.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, May 23.—Trotting: Ambler Park; Coldwater, Mich. Base Ball: Springfield vs. Capital City, at Albany.

Saturday, May 24.—Boston Union Athletic Club Spring Meeting; Staten Island Athletic Club Spring Meeting; Harvard University Athletic Club Spring Meeting. Base Ball: Springfield vs. Capital City, at Albany; New Bedford vs. Manchester, at Manchester; Holyoke vs. Worcester, at Worcester.

Monday, May 26.—Troy Athletic Club Meeting. Base Ball: Springfield vs. Albany, at Albany; Holyoke vs. Manchester, at Manchester; Worcester vs. New Bedford, at New Bedford; Capital City vs. Utica, at Utica.

Tuesday, May 27.—Trotting: Lynchburg, Va.; Belmont Park, Phila. Troy Club Meeting, as above.

Wednesday, May 28.—Base Ball: Springfield vs. Albany, at Albany; Utica vs. Holyoke, at Holyoke. Trotting as above.

Thursday, May 29.—Trotting as above. Base Ball: Holyoke vs. Springfield, at Springfield; Worcester vs. New Bedford, at New Bedford.

COURTESIES APPRECIATED.—We owe thanks to our gracious turf contemporaries, *Spirit of the Times, Turf, Field and Farm* and *Clipper*, for their very cordial endorsement and recommendation of Hallock's "Sportsman's Gazetteer," the Fifth Edition of which appeared in May. It has now attained a bulk of 921 pages, and is daily consulted by thousands of persons who are interested in shooting, fishing, taxidermy, boating, woodcraft and the like. It has several fine maps, a glossary, and a directory to 4,000 of the principal game resorts of the United States.

BUTLER UNIVERSITY SUMMER TRAMP.—The summer excursions of the Butler University (Irvington, Ind.,) students have been very successful in years past. This season a party will go to Europe, sailing from this city for Bremen, June 21. From Bremen they will go to Cologne, then up the Rhine to Bingen, and *via* Strassburg or Heidelberg, to Heiden in Switzerland. Through Switzerland a journey of 304 miles will be undertaken on foot. A visit will be made to Venice, and after leaving Switzerland, a visit to Paris, a walk through Normandy and a visit to Oxford and London. The party will be limited to fifteen—half ladies; and the total expences, about $300. The excursion will be under the management of Prof. D. S. Jordan, well known to our readers as the author of a manual of the Vertebrates, and a recognized authority on American fishes. We can imagine no better way for young people to improve their summer vacation.

DO PICKEREL DESTROY TROUT?

AFTER our readers have finished their perusal of the very long but most interesting article with this caption in the Department of Fish Culture this week they will entertain a higher opinion of the much maligned pickerel, and a better appreciation of his game qualities, which have been systematically belittled by comparison with other more favored and popular game fish.

There is no doubt that the pickerel (applying the term generically,) is a more toothsome fish, and capable of affording more sport to the angler than the popular notion gives him credit for. It has always been fashionable in this country to disparage the pickerel, and any person who may have ventured at any time to say aught in his praise or to palliate some of his questionable traits, either has been voted an ignoramus, or silenced at once by the hue and cry of the popular voice. The boldness of our correspondent, therefore, in appearing in his defence, is something really worthy of admiration. In England the character of the pickerel as a game and food fish stands much higher. All the books on angling devote a large share to the habits of the jack, the pike, and the pickerel, and the various devices employed in their culture. Even that highest modern authority, Francis Francis, Esq., of the London *Field*, gives the pike a prominent place and a full-length portrait in his "Sporting Sketches," lately issued, while ancient writers have always extolled his sport-giving attributes and sung his praises at high festivals and royal feasts. But a pike is not a pickerel, any more than he is a muscalunge, though many intelligent anglers class the smaller pike as large pickerel, and are only able to determine the distinction between the two when the capture of an over-sized pickerel warrants them in deciding that he is a pike. Without comparing here the specific characteristics of these two species of the Esocidæ (they are fully designated in "Hallock's Sportsman's Gazetteer,") it is necessary to state that there are several varieties of pickerel, which range in size from the little pond fish, scarcely ever exceeding seven inches in length, to the big pickerel of the lakes which sometimes reach weights of five to seven pounds, though they more frequently average two and a half or three.

In discussing the relations of pickerel to trout, where both kinds of fish occupy the same water, these varieties of pickerel have to be separately considered. The most common of the lot are the little pond pickerel which thrive in the shallow warm-water mill ponds, canals, lagoons and streams of most of the Eastern and Southern States, and the larger variety so generally found in the larger lakes of the North and West that it may be almost regarded as lacustrine. Now, trout cannot live in the water inhabited by the former; so that, it matters little to the trout, so far as the first are concerned, whether pickerel destroy them or not, for they would die anyhow. Besides being warm and shallow, the ponds are usually covered with deep mud and deposits of silt in which weeds and lily pads thrive, affording lurking places for the stealthy pickerel as well as shelter for shoals of minnows, and small fry, upon which the pickerel almost wholly subsist. Trout would never deposit spawn in such places. If they did, the ova would not fructify; and if the ova hatched out, the fry would of course share the same fate with the little minnows and other fingerlings; and such as escaped would soon die naturally. A pickerel pond is no place for trout.

Sometimes diminutive trout are found in the little cool-water feeders of mill ponds, but they are soon exterminated by urchins with pin hooks as well as by venturing upon the original domain of the pickerel—not because the pickerel intrude into the clear and rapid waters of the brooks. Wherever the pickerel are known to occupy streams which were previously the domain of trout, they will be found only in those parts which are sluggish, warm, weedy, and muddy; that is, if the character of the brooks has not been changed. Generally it will be found, as in the case of the Raquette River in the Adirondacks, that the water has been set back by dams and devoided of its current.

As for the pickerel of the large clear-water lakes, with bold shores and rocky bottoms, investigation will prove that they invariably hang around the shallow bights and flats where the rushes and *yellow* lily pads grow; while if there be trout in the same water, on the other hand they will seek and occupy the cold and deeper portions where the pickerel seldom venture. Occasionally, it is true, the pickerel strike out on a sort of foraging expedition and are taken several rods away from the shoals; but the experienced angler will never troll or still-fish in the middle waters, if he wishes to fill his basket, while the pot-fisherman who puts out his set lines, always stretches them from the shore of some sequestered bay, and the fish which are taken fasten to the hooks near either shore, and hardly ever to the middle ones. In fact, there is no more danger of the pickerel going into the colder water of the trout's peculiar belonging than there is of the trout seeking the tepid lounging places where the pickerel hide. Where trout naturally spawn, pickerel never come. There is a remarkable exemplification of this in the great river Nepigon whose main channel is very deep and rocky, and its water clear and cold and filled with trout, while all its tributaries are warm and turbid, swarming with pike and muscalunge. The demarcating line is never crossed by either. As reasonably might we expect to find the angel fish of Bermuda in the Polar Sea, or walruses in the tropics.

With these views, fully matured from personal experience, we are prepared to warmly endorse the conclusions of our observant correspondent, and we hope those who have hitherto looked upon the pickerel as a "pirate" and fresh water shark' will regard him more leniently. With a growing admiration of the corruscating green and gold of his lakeside livery, will accrue an increasing relish for his delicious flesh. Eaters will praise the flavor, while they tolerate the bones. It should be remembered that fish in confinement will inevitably prey upon each other, even if fed to repletion, when they would not do so if each variety had ample room and conditions favorable to his natural life and growth. In planting fish in preserves, physical conditions should first be carefully considered before a choice is made of the kind of fish to be introduced.

POSITION IN RIFLE SHOOTING.

THE question of position in shooting on the ranges has been brought very prominently before the rifle world by the recent circular from the National Rifle Association, asking the opinions of experts on the subject. The inquiry was a restricted one, being intended only to cover the suggested modification of the rules which would give to those using military rifles the option of "any position" at ranges over 200 yards. It was, in short, the choice of back or prone position at the mid and long ranges for soldiers.

The question has drawn opinion from many quarters. From the East and West, riflemen of skill before the butts, of undoubted theoretic ability, and whose experience has been long and varied, have given their views. Capt. J. H. Burns, President of the California Rifle Association, was of opinion that the present requirement of a prone position should remain in force. J. N. Frye, the President of what is beyond doubt to-day the leading rifle organization of the country—that having its grounds at Walnut Hill—with W. H. Jackson, Captain of the present existing American team, was of opinion that a go-as-you-please policy was the best. Mr. John Johnstone, President of the Milwaukee Rifle Club, agreed to this, as did Sheldon I. Kellogg, Jr., of the Oakland (Cal.) Club. Capt. James E. Stetson, of New Haven, very sensibly remarked that the full measure of success in the present style of marksmanship had not been reached, and until this was the fact attention should be given rather to improving in our present style than in searching up new methods of endeavor. Col. Wingate offered the change, and preached vigorously for the retention of the styles of shooting as laid down in the tactics and in his manuel of practice. There were many other opinions and variations of views, some proposing partial modifications of the rules now in vogue, while others were in favor of a new departure; and the Committee of the N. R. A. may well be excused for their delay at making a report, if all these diverse treatments are to be amalgamated. Many of the writers set out with the assumed premise that the sole object of rifle practice is the raising up of a body of soldiers, and that the way to make the average citizen into a proper defender of his country by force of arms is to drill him in soldier's duty; and then at once comes a new element to the problem in determining what a soldier's duty actually may be. Very naturally the easiest opinion under these circumstances is to fall back into "any position," leaving it to the individual rifleman on the range to make the answer.

This ready mode is, after all, a postponement of the issue, which must be met, and should be disposed of in such a way that future as well as present emergencies may be overcome. It seems to us very simple, when once the standard to be gained is reached. It is not true that the object of the range is to make soldiers directly. It is rather to so familiarize the average citizen with the use of arms that when he is called upon to use them he will not be worse than useless in their manipulation. A man cannot, for instance, shoot exclusively at long range without becoming thereby a far better marksman at short range than the man who never fires a rifle. It is idle to argue whether soldiers in action do a majority of their work in ball firing from this, that or the other position. Granted that any position is the rule—and, no doubt, it is very near the fact—it is no reason why the rules of the rifle range should be thus guided by the actual practice of the battle-field. There is a vast range of general drill and preparation going to secure the broad ground-work of proficiency, upon which a satisfactory soldiery only can be fixed. A frequenter of the firing points, who has been compelled to do his work under certain severe restrictions, is not going to become any the more incapable when these restrictions are removed. Now, for the convenience of record, for the better gauging of progress, and for the assured stability which such uniformity of practice gives to any sport or pursuit, the advocates and promoters of rifle practice have agreed upon certain broad, simple rules, which are now known in all parts and under which much headway has been made. These it is now proposed to set aside in favor of greater freedom, for reason that such liberty will allow better results. The reasoning is specious, since, if mere excellence of record was aimed at, it could be got in a dozen different ways.

Were all the members, say of the New York State Guard, frequenting Creedmoor, thoroughly familiar with their weapons, then some such experiments as those hinted at might be tried; but there is yet a great deal of work to be done in bringing the men up to a fair degree of proficiency. The country as a whole has yet to receive its first lesson on this important subject, and the rules which have held thus far, and under which such excellent progress has been made, are good enough for much further use. There is danger in disturbing well fixed principles and practices, and the rifle practice as now carried on is well calculated to give to those en-

gaging in it that excellence in a general way which will enable them to make any special application of it at a moment's notice. We do a vast amount of work in our gymnasiums which seems to have little relevancy to the work of actual every-day life, yet no one would think of abolishing these useful institutions because each sort of work or practice was conducted under strict rule. There is an indirect preparation and a direct work. Rifle shooting is of this former class, and to judge it by the rules or practices of the work toward which it is tending is entirely unfair and illogical. There is much that is artificial about it. The target is an arbitrary arrangement; the rule of shoulder shooting up to 200 yards is not the practice of the battle-field, and in other ways it would be manifestly improper to make the free and easy method of men before the enemy the rule for the conduct of formal tests on the range. Be the rules as they may, they bear uniformly, and are just or unjust to all alike, and until it is shown that a rule is decidedly prejudicial, that its tendency is bad, or that it is entirely an obstruction, it is wiser and safer to keep it. The old rule of position in military shooting has not been shown as yet to be of this character.

PERSONAL.—Dr. J. FitzMathew, late H. M. 72d Regiment, an English sportsman wide and favorably known in America, has gone to Nova Scotia and Cape Breton in quest of salmon.

Col. W. E. Burr, of St. Louis, favored us with a call last week. He is a frequenter of the Lake Superior country.

The Princess Louise, who delighted the Canadian heart last winter by indulging in the wild sport of the toboggan, has added new laurels to her fame by "running the slides" of the Grand River.

We are glad to see Dr. Frank Clerk back again from Europe, where he has been for two years painting landscapes and punishing salmon. He has now laid aside his rod, sold out his river in Canada, and is devoting himself more to husbandry, as it were, in connection with his wife and fine little boy. He says salmon fishing is too fatiguing for him. He will spend the coming summer among the hills of New Hampshire sketching and trout fishing. He looks as hearty as ever.

A SCHOOL OF SILK CULTURE.—There has been established at the Permanent Industrial Exhibition in Philadelphia, a school of silk culture. The season opened last Thursday, and will be continued about eight weeks from that date. Dr. S. Chamberlain, who is an experienced and skillful silk culturist, has charge of the school, and the students will have the benefit of his long study of the subject. Silk culture is an undeveloped industry which, from its nature, it is very desirable should be cultivated. It is profitable, is especially adapted to the family, and may be engaged in by all who can raise a few mulberry trees or simply procure the leaves. When the cocoons are produced, they can either be sold or an added value put upon them by reeling the silk, or they can be used to raise eggs again for sale. The climate even as far north as Connecticut, and perhaps further north, favors this industry. Our readers may further inform themselves by personally inspecting the methods exhibited by Dr. Chamberlain, in the Philadelphia school, or by correspondence with Mr. Horace T. Smith, Permanent International Exhibition, Philadelphia, Pa.

MUSIC AND LUNATICS.—The much mal-treated expression concerning the soothing influences of music had a novel illustration in New York the other day. A portion of the Blackwell's Island Lunatic Asylum which contained ninety of the most refractory female patients was discovered to be on fire one evening last week. With great difficulty the lunatics were guided from the building and marshalled into the large amusement hall. Here they cowered in abject terror, evincing the greatest suffering from their apprehension of danger. Suddenly one of the attendents began playing the liviest airs on the piano; the effect was instantaneous. The poor creatures forgot their fear, their countenances lighted up with mad mirth, and the whole company plunged into the giddy mazes of a most extraordinary dance. The music kept up its strains and the legs and arms flew wildly until the flames were subdued and the old quarters were made ready again for the reception of the Balamites.

CARVER EN GRAND TENUE.—We have received from England some elegant photographs of Dr. Carver in costume, as he appeared before H. R. H., the Prince of Wales, at Sandringham, on April 15th, 1879. One of these shows the Doctor in his velvet shooting jacket, ornate with trophies and medals, as he appears at the glass ball trap; and another in full panoply of beads and buckskin, embroidered leggings and wide spreading sombrero, in his character of vaquero, ranger, and plainsman, roping victims with his lariat, shooting arrows Indian-fashion, and hitting glass balls with a rifle from his saddle, with his horse on full jump. The English sporting papers admit that all this sort of thing is quite new to them, and altogether marvelous in its way; at the same time the feats of skill divide their attention with the remarkable weapons which he uses. The London *Field* explains that it is the Winchester Magazine rifle, with its sixteen cartridges discharging in five seconds which make these apparently incredible feats possible. This rifle does not seem to be known in England, though it has probably been heard of in Turkey and Russia; several millions having been shipped there from time to time. Dr. Carver has taken an excellent method to introduce it to notice.

SABBATH MISHAPS.—Last Sunday afternoon a party of excursionists in a tiny steam launch were capsized in Little Hell Gate, in the East River, New York, and three of them were drowned. This is one of a number of similar Sunday accidents, which some people regard as special dispensations of Providence for the punishment of Sabbath-breaking. This leads us to say that those reasoning thus should remember that persons who seek their enjoyment only on this day are of necessity little experienced in the ways of these pastimes. They do not find sufficient opportunity for perfecting themselves in the use of the oar or trimming the sail, or handling the gun or holding the ribbons. This lack of skill gives opportunity for frequent mishaps, and the wonder is for this reason that so few Sabbath pleasure-seekers come to grief.

TAXING ANGLERS.—In England the York Fishery Board have imposed a rod license of 2s. 6d. (62½ cents) per head for the privilege of angling in the waters of that district. This would seem a very severe exaction to us here in America; but how much more so the license of 10s. ($2.50) which is demanded in the Teign, the Dart, the Taw, the Torridge, and the Tamar Fishery Districts! As all of these districts adjoin, the imposition amounts to a tax of $10 upon persons wishing to angle over an area of a comparatively few miles. Of course many protests are raised, and much remonstrance against a system of class legislation which in effect gives only those who can afford it a monopoly of the sport. The pretext, of course, is to preserve the fish and secure better fishing; but most persons would prefer a total prohibition of all fishing whatever rather than a discrimination which becomes prohibitive as respects poor men. It is one of the inevitable results, however, of civilization and crowding settlements. It is exemplified on our own Long Island, where a tax of 50c. to $1 per pound on all trout taken amounts to a burden really more onerous than some of the exactions of the English rod license system. Little complaint is heard so long as free streams in the wilderness are comparatively accessible; but as population becomes more dense, the trout will disappear unless preserved; and those persons who may then pay to preserve and propagate the trout, will in turn ask pay from those who propose to catch them. There will be no more free fishing.

It is just so, to a measurable extent, with our game. When our country was a wilderness, and the game creatures were really "*feræ naturæ*," men had common rights to kill and capture; but when the increase of settlements came to divide the territory, and subdivide it again and again into large and small farms, the owners of those tracts and parcels acquired rights upon which outsiders could not intrude. This is the secret of the continual wrangle between the resident farmer and the nomadic sportsman, and the cause of trespass notices. A visible trespass notice implies game within the forbidden inclosure; the owner of the land is presumably the protector of the game on his own territory, and either he must exercise his rights respecting trespass, or the law must intervene and put a tax on guns, just as it has done in England on both rods and guns.

—The Dartmouth College boys have figured in the newspapers as rebelling against the Faculty. Of course the rebellion was settled as it invariably is, by the students coming to terms and apologizing. When will American college students learn the folly of attempting to defy the authority of their professors? In the Dartmouth trouble some young heathens revived the old barbarism of the water-treatment, and held their comrades under the pump nozzle. The injured men threaten to go to law for redress. That is what they should do. Put the odium of a criminal offense upon what is a criminal offense.

GAME PROTECTION.

—We wonder that Michigan permits fishing for black bass during the month of May. It is just as proper to fish for trout in October.

MIGRATORY QUAIL.—The quail imported by the Lakeville (Conn.) Club last year have returned from their winter migration.

MASSACHUSETTS.—The first conviction under the new Massachusetts game law was a case in Wakefield, one John McJague being convicted of killing and having in possession a partridge contrary to law, and fined $25 and costs, amounting in all to $30.80. It was a pretty dear partridge. The Massachusetts Fish and Game Protective Association, who were the prosecution in this case, mean to make it expensive work to kill birds out of season.

A BAD LAW AND A CORRUPT LAW-MAKER.—If the facts as related below by a Seneca Falls correspondent are without palliating circumstances, the condition of things as pictured is not creditable to the Senatorial District concerned. Politicians are unhappily nowadays not severely scrupulous as to the ways and means employed to seat themselves in the State or National Capitol, and there is consequently no cause for surprise in the fact that a prospective law-maker should "make his calling and election sure" by deferring to the demands of greedy and unscrupulous fish-mongers. Possibly the communities which sanction and encourage the capture of gravid fish may not realize what the certain result of such destruction must be; but the game protecting clubs mentioned by the writer should certainly possess sufficient gumption to understand the case and enough spunk to remedy the abuse. Our correspondent writes:

"The north end of Cayuga Lake, two miles from Seneca Falls, is (from the configuration of the lakes and the shoalness of the water) the breeding-ground of the entire lake. This Senatorial District is, politically, a close one. An ex-Senator secured his election by pledging himself to a clique of pot-fishermen that he would cause the passage of a law repealing all State enactments relative to fishing for a space of four miles from the north end of Cayuga Lake. As a result, this portion of the beautiful body of water is, except when winter prevents, almost festooned with fykes and other implements of fish butchery, which rapidly deplete the finny tribe and render fair fishing worthless. As an example, I met one of these piscatorial pirates to-day with over fifty fine black bass, ranging from two to four pounds each, gravid with spawn, which exuded from them at every jolt of his wagon. He coolly informed me that "about one hundred men were netting them," that they had "the right kind of Assemblymen and law here," and that "they could 'torpedo' them if they wanted to." This sort of thing has been going on openly since the ice was out of the lake, and has been the practice for years past. There is no attempt at concealment, and the fish are openly shipped off by express to distant points, and are daily peddled around in this place, Waterloo, Geneva and surrounding villages, all in different counties from where the fish were trapped. There are two flourishing "Sportsmen's Clubs," but I cannot, after diligent inquiry, find that there has been an arrest for infraction of game or fish laws in five years.

There is no similar local exemption in any other section of the State, that I can ascertain, and it certainly seems that even if such an ill-begotten edict must encumber our statute book, yet the right should not extend to selling the fish all over different counties in this part of the State with impunity, and virtually reduce the fishing laws to a farce—more especially when such strenuous efforts are being made at Syracuse, Rochester and elsewhere to restock the lakes and streams and to punish all violations."

SUPERVISORS AND GAME LAWS.—*Bath, N. Y., May* 10.—*Editor Forest and Stream:* A short time since we stocked the river running through this place with black bass, and as we wished to protect them until they have time to propagate, we petitioned our Assemblyman to have an act passed to prohibit fishing for two years, and he informed us that it would be difficult to get such an act passed as the Supervisors were delegated the power to pass such. I wish to ask if the resolutions, etc., of the Supervisors to such an effect would be perfectly legal and binding. I had heretofore supposed, of course, they were, until two young attorneys, who take delight in fighting any and every measure we take to protect both game and fish, said that they will undertake to clear any one who breaks said law, and that it has been done.

E. N. H.

We are at a loss to account for the widely prevalent misconception regarding the authority of Supervisors to alter or amend existing game laws. The clause in the Game Bill defining this authority reads: "It shall be lawful for the Board of Supervisors of any county to make regulations touching other birds, fish or game than those mentioned in this act, and such ordinance shall be published, etc.," and we have before insisted that this is such plain English that it cannot be rewritten in a more unmistakable form. Authority to legislate respecting *other birds, game or fish than those mentioned in the act*, surely cannot by any legal contortion be construed into authority to make laws regarding what *are mentioned in the act*. Here, for instance, in the case now propounded, black bass are included in the State law; the Supervisors of no county therefore have any authority to fix other close or open seasons for these fish than those assigned by the legislators at Albany. The question is not whether the newly planted fish should be protected or not; the question is of the proper persons to secure the protection. The Assemblyman by consulting his handbook will see that he is mistaken in supposing this is not his business, and having convinced him of his mistake our Bath correspondent will doubtless thereby induce him to work for the needed legislation. Our young legal friends, we may remark, are correct in their decision; but the spirit of hostility to game protection not only displays their lack of public spirit, but is discreditable to the profession. There are never lacking such legal sticklers for the letter of the law who bring to the defense of poachers and pirates the quips and quibbles of the statute; and it is by such defense that the illegal pot-hunter is encouraged to pursue his calling. And on the contrary, the most efficient friends of game protection and the most intelligent laborers in the cause are found in the legal profession.

The Rifle.

MASSACHUSETTS—*Walnut Hill.*—The two days spent in rifle work at the range by the Massachusetts Rifle Association members were both marked by very good work. Wednesday the 14th was long range day. The light was good, and the wind, marking from "8 to 9 o'clock," quite manageable until the men had moved back to 1,000 yards, when it exhibited an uncontrollable disposition. Several of the marksmen made excellent range scores. Following is the result:

W H Jackson.

800	4	4	5	5	5	5	4	5	5	5	5	5	5—72
900	4	4	5	5	5	5	4	5	5	3	5	5	5—70
1,000	3	5	5	5	5	5	5	5	5	5	5	5	5—69—211

J S Sumner.

Salem Wilder.

500	4	5	5	4	4	5	5	5	5	4	4	5	3	5	5—69
900	4	5	5	5	5	3	4	5	5	5	5	4	0	5	—64
1,000	5	5	4	4	5	3	5	5	4	5	5	R	4	4	0—88—191

On Saturday the 17th the range was crowded again and one of the most charming of spring days blessed the marksmen. The wind-dial indicated 9 to 10 o'clock upon its face, light fleecy clouds obstructed the sun just enough to present a capital light and prevent any mirage from troubling the happy riflemen. At 12 o'clock the Winchester match was called with forty-seven entries, and the best scores were:

Capt W H Jackson	4	5	4	5	4	5	5	4	5	5	5	4	5	5	4—69
E F Richardson	5	4	4	5	5	5	4	5	4	5	5	5	5	4	4—69
W Charles	4	5	5	4	4	5	4	5	5	5	4	4	5	5	4—68
E F Brooks	5	4	4	4	5	5	4	4	4	5	5	4	5	5	4—67
L L Hubbard	4	4	4	5	5	4	5	5	5	5	5	4	4	4	4—67
O M Jewell	5	5	4	5	4	4	4	5	4	4	4	4	4	5	5—66

E Whitbier	4	4	4	4	5	4	4	4	4	5	4	3	5	5	5—64
E B Soutter	4	4	4	5	4	4	4	4	5	4	4	4	4	4	5—64
E W Law	5	4	4	3	4	4	4	5	4	4	4	4	4	4	4—61
C R Gilling	2	6	3	4	5	5	4	4	4	2	5	3	4	4	5—60

MASSACHUSETTS—*Boston, Mammoth Rifle Gallery.*—The regular monthly prize shoot is progressing finely, and excellent shooting has been done, many members of the Massachusetts Rifle Association practicing daily. Sergeant Geo. W. Barry, of the Slocum Light Guards of Providence, R. I., visited the gallery this last week and made a capital 38. Sergeant Barry was in the R. I. team which shot at Creedmoor last fall, and his 38 was made with an open-sight rifle. The following is the standing of the several competitors, 150 feet, possible 40:

Frank Hollis	5	4	4	5	5	5	5	5	4	4	5	5	5	5	5—33
Wm Bradford	5	5	4	4	5	5	5	5	5	4	4	4	5	5	5—33
George Lamb	4	5	5	5	4	5	5	4	5	5	5	4	5	5	5—33
Geo W Barry	5	5	5	4	5	4	5	5	5	4	4	4	4	4	4—31
H W Eager	5	5	5	5	4	5	5	4	5	5	4	5	5	4	4—33

BELLEVUE RANGE—*Medford, May* 14.—The second meeting in the May series took place this P. M.; distance 200 yds., open to all comers:

W Charles	5	5	4	5	4	5	4	4	5	5—46					
W Charles (re-entry)	5	5	4	4	4	5	5	5	4	4—45					
C H Russell	4	5	5	5	5	4	4	4	5	5—45					
C H Russell (re-entry)	5	4	4	4	4	5	4	5	4	4—43					
H H D Cushing	5	5	5	4	4	4	5	4	4	4—44					
H S Harris	5	5	5	4	4	4	5	5	4	4—45					
R Sayer	5	5	4	4	4	4	4	5	4	4—44					
R Sawyer (re entry)	4	4	5	5	4	4	4	5	5	4—43

J H Eames	5	5	4	4	4	5	4	4	4	4—43					
J H Eames (re-entry)	4	4	4	5	5	4	5	5	4	4—43					
C D Harrison	4	4	5	4	5	4	4	5	4	4—43					
C D Harrison (re-entry)	4	4	4	5	4	4	5	5	4	4—43					
W Gerry	5	4	5	4	4	4	4	4	4	4—42					

A feature of this day's sport was the shooting of a telegraphic match with the Denver Rifle Club of Colorado. The challenge had been received early in the month from the Denver boys.

The conditions of this match called for ten men to shoot ten rounds at 200 yards and 500 yards, off hand at 200, and any position at 500 yards, the five best scores at both ranges to be given. Mr. Vining of the Medford Club acted as umpire for the Denver men. The weather conditions at the time of opening were capital, but for some reason the men did not shoot up to their standard; in fact, better shooting is done on all match days. At the 200 yards firing point, Captain Jackson, however, was shooting in good form and scored a capital 47 out of a possible 50. At 500 yards the riflemen experienced a shifting wind, going from 9 o'clock to 5, and becoming "fish tail" and blowing down the range; light and shadows affected elevations, keeping the men busy. All retired with 49 each out of a possible 50. Below is the scores at both ranges:

200 yards.										
Capta'n W H Jackson	5	5	4	5	5	5	5	5	4	5—47
L L Hubbard	4	5	5	5	5	4	5	4	5	4—44
J S Sumner	5	5	4	4	5	4	3	5	4	5—44
E W Law	4	4	4	4	5	5	4	4	4	5—43
William Gerrish	4	5	5	4	4	4	3	4	4	5—42—220
500 yards.										
E W Law	4	5	5	5	5	5	5	5	5	5—49
William Gerrish	5	5	5	5	4	5	5	5	5	5—49
H S Harris	5	5	5	5	5	5	4	5	5	5—49
J S Sumner	5	5	5	5	5	5	5	5	4	5—49
O M Jewell	5	5	5	5	5	5	5	5	4	5—49—245

The riflemen here are all expectancy over the spring meeting on the 21st and 22d insts. There will be 5 matches, including the Director's match. The other four are all-comers contests, being at 200 yards, any rifle, for an aggregate prize list of $205; at 200 yards military rifle with a $60 prize list at 600 yards carton with $86 in prizes, and at 900 yards, carton, with 10 prizes aggregating $101 in value. It is expected that there will be a large attendance, both of riflemen and spectators, ample arrangements having been made for their comfort and pleasure. Targets will be opened for bull's-eye practice each day at 8:30. All the competitions to continue both days. And no competitor will be allowed to enter in any match after 5:30 P. M. on either day.

The Denver Club telegraphed on a total of 464 points, giving the victory to Walnut Hill by one point.

CONNECTICUT—*Collinsville, May* 15.—Canton Rod and Gun Club, Riverside Range. Regular weekly shoot, 200 yards, off-hand, 3lbs. pull, 10 shots:

	Mass.	Creed.		Mass.	Creed.
Hull	101	46	Lanbenstein	93	42
Bidwell	98	42	Moore	91	42
Lewis	93	42	Andrews	90	42

CONNECTICUT RIFLE ASSOCIATION.—*Willowbrook.*—The three long-ranges of Willowbrook Range, Berlin, will be ready for practice shooting this week, and members of the Connecticut Rifle Association are invited to meet at the range Saturday afternoon next, for practice.

NEW YORK—*Garnerville, May* 14.—the return match between Mr. W. Broas, of the Garnerville Rifle Club, and Mr. E. J. Peck, of the Samsondale R. C., took place this afternoon on the Samsondale's range. The day was very clear and bright, but the wind blew hard and was very flawy. Mr. Broas again won, with scores as follows—15 shots, 200 yards:

W Broas	5	5	4	3	4	4	4	3	5	4	4	4	4	5	2—62
E J Peck	4	4	5	3	4	5	3	4	2	4	3	5	5	4	5—54

ROCKMOOR.

SEPPENFELDT RIFLE CLUB.—The weekly Score, Thursday, May 15. Reduced Creedmoor 200 yards target; possible, 50:

Fr Holtzmann	50	Th Brossard	41
A H Anderson	49	John Chambers	43
Wm Seppenfeldt	48	Chas Lang	43
Alt Keller	48	O Fitzpatrick	43
John Keenan	48	E T Mander	43
J W Adams	47	M Kern	42
H Jachne	47	O Decker	42
P Brennan	47	Chas J D Colen	38
John Maher	47	J Hoagland	37
John Rehn	46	G Magurk	36
G C Walters	45		

G. C. WALTERS, Sec'y.

—C. E. Blydenburgh, who has been East on a visit for some weeks past, left for his Colorado home on Tuesday evening last, accompanied by his brother. He will push into the mountains on an important surveying commission. Each of the young men carries a Winchester repeater, and Charley says if any Indian wants his hair he is welcome to it, but he must first take the bullets separate.

CREEDMOOR.—The Spring Meeting will be held June 3 and 4, with Capt. Chas. F. Robbins, of the 7th Regt., as Executive Officer.

—At Creedmoor, on Saturday last, the skirmisher's match was had at distances between 200 and 500 yards. F. C. Mc-Lewer won with 38 in possible 50, other scores standing: C. H. Eagle, 36; J. L. Paulding, 32; J. L. Price, 29; W. C. Reddy, 25.

NEW JERSEY—*Stockton.*—The new Stockton Range, a mile and a half west of Camden, N. J., was formally thrown open to the public on Monday, 12th inst. The first match was the "Remington Match," for a Creedmoor Remington Rifle, valued at $100, open to all comers, 200 yards, 10 shots, any rifle except muzzle-loader. The leading scores stood:

Ed Leopold	40	W H Roberts	39
C M Stimis	40	Henry Reed	37
J B Burrouzhs	39	Lieut J R Denman	35
Capt Wm Wood	39	Wm Stine, Jr	33
Lieut L H Green	39	Wm Struthers	31

The second match was the Inter-State Military, open to teams of six from the National Guard or Militia of any State, or of the Regular Army or Navy of the United States; 200 and 500 yards; 7 shots at each distance. The entries were all from N. J., the summary showing in the possible 420:

	200 yards.	500 yards.	Total.
Ninth Regt Team	159	141	300
Co A Team	142	91	233
Co C Team	139	64	203

On the second day the Stockton Range Trophy was competed for at 200, 500 and 600 yards. The leaders standing, 7 shots each range:

	200.	500.	600.	Total.
W P Wood	29	23	23	80
C M Stimis	30	24	18	72
L H Greene	28	24	16	68
T R Denman	27	16	12	55
J Price	24	11	15	50

Capt. D. Loder won the Perrine Match at 100, 200 and 500 yards, with 62 in the possible 75.

The Schuyler & Hartley Match, at 200 yards, brought out some good shooting, Sommer, of the Keystone Club, winning with 42. The scores stood:

Lewis J Sommer	42	Capt Sandenauz	37
B Tomer	42	W G Greeby	37
M M Bowers	40	A Milnette	35
J Price	40	J J Girard	35
Wm Stine, Jr	39	M H Roberts	35
D Loder	39	W Palmer	34
W George	38	E Y Stone	32
J M Burroughs	38	E H Lee	31
Wm Porter	38	J H Jones	28
Dr Dudley	38	Wm Struthers	26
M Price	37	R Kerswell	21

The contest for the life membership badge was the last shot and competed, at 200 yards, 10 shots. W. A. Ranche, President of the Pennsylvania State Rifle Association, winning with 43 points.

NEW JERSEY—*Brinton, May* 17.—Two interesting matches were shot to-day. The first of these was the second of the series of competition for the Sharps military rifles at 200 yards. Mr. W. A. Mulford, Jr., took the prize with 43 out of a possible 50 points. The competitors who came nearest to him scored as follows: F. H. Holton, 43; J. W. Martin, 42; J. M. Dart, 42; H. W. Gourley, 40; A. Hubbell, 40; F. L. Sheldon, 40; B. A. Vail, 40; L. H. Greve, 39; P. Bonnett, 38; I. T. Denman, 37; E. M. Squier, 36; G. W. Townsend, 36; A. H. Cobb, 35; C. H. Houghton, 35.

On the conclusion of the above match the "Association" match was shot; very similar conditions. In this the score ran as follows: W. M. Farrow, 46; B. A. Vail, 45; F. H. Holton, 45; F. C. Sheldon, 45; D. F. Davids, 44; C. H. Houghton, 44; J. W. Todd, 43; E. M. Squier, 43; H. Fisher, 43; J. M. Dent, 43; A. Hubbell, 43; H. W. Gourley, 41; L. H. Denman, 40; J. L. Miller, 40.

BRINTON RANGE—*May* 13.—First of a series of twelve competitions for a Ballard mid-range rifle was shot this afternoon on Brinton Range, with beautiful weather. Open to all comers; distance, 200 yards; position, standing; weapon, any breech-loading rifle; rounds, ten without cleaning; the best three scores of all competitors to be considered in the award of the prize, the highest aggregate winning. The best scores made ran as follows:

J W Todd	43	A Anderson	39
J F Hill	43	C E Overbaugh	37
J M Dart	41	C E Houghton	35
D F Davids	41	P Bonnett	32
W A Mulford	40		

Newark, May 14.—The Amateur Rifle Club here to-day scores as follows in their regular weekly shoot, off-hand:

Wm Hayes	4	5	4	4	5	5	5	5	5	5—47
T Felsburg	4	5	5	4	5	5	5	3	5	4—45
W P McLeod	5	4	5	5	4	4	4	4	4	6—44
G L Freche	3	5	4	5	4	5	5	4	4	6—44
W Hesse, Jr	5	4	3	4	4	5	4	5	4	5—43
J Bayer	5	4	4	4	5	4	3	5	5	4—43
J F Hill	4	4	4	3	4	3	4	4	5	6—41

STOCKTON RIFLE RANGE—*Philadelphia, May* 13.—Contest for the Stockton range medal, open to all comers, and firing from 200, 500 and 600 yards, with any military rifle; one sighting and seven scoring shots at each range. The following is the score:

	200 yards.	500 yards.	600 yards.	Total.
Capt Wm P Wood	29	23	23	80
E Milton Stimes	30	24	18	72
Lieut L H Greene	28	24	16	68
J R Denman	27	16	12	55
J Price	24	11	15	50
M Price	24	17	7	48
Samuel Fouracre	20	10	7	37
W Rawson	20	9	—	29
M Gillespie	11	2	6	25
H D Massimere	19	—	2	21
M H Roberts	14	3	—	17

Best possible score, 105.

LOUISIANA—*New Orleans, May* 11.—The new Lilienthal cup had its first contest to-day, with beautiful weather and at 11 o'clock many competitors and spectators were gathered at Frogmoor. The conditions provide for an individual match, under military rules, with military rifles, distance 200 and 500 yards, five shots at each range, with two sighting shots. Three winnings entitle the winner to possession of the prize.

The contest for this cup will be repeated on the fourth Sundays of the coming months.

	200 yards.				500 yards.				
Bercegeay	5	3	4	4	4—20	5	4	5	5	2—21—41

A Colehour	4	4	5	4	4	4	4	4	4	4—41
Wm Burns	4	5	4	4	4	4	4	2	5	4—40
E P Chatfield	4	4	3	4	4	4	4	4	3	3—37
Visitors.										
L W Parke	5	4	3	3	4	4	5	4	4	2—38
Dr E W bawyer	3	4	4	2	5	3	4	4	3	4—36

The competition for the prize cup presented by Mr. J. E. Tilt, will take place on Saturday next, May 24. There are some 20 entries already, and some good scores are anticipated, as a number of the Geo. K. Thomas Post Club have entered, comprizing their best shots. BRAD.

Lake View.—The following is the score of the Lake View Rifle Club at practice May 10—200 yards, off-hand. Weather clear and warm; wind at one o'clock light:

Chas Catlin	5	4	5	5	5	4	5	5	3	—46
J A Colehour	4	4	5	4	5	4	4	4	5	4—43
H C Bradley	5	4	5	4	4	4	4	4	4	4—43
F Henrotin	4	4	5	4	4	5	4	4	3	4—41
John Macauley	4	4	4	5	5	4	4	4	4	4—42
John McConnell	4	4	3	5	4	4	3	4	5	4—40

BRAD.

MICHIGAN—*East Saginaw, May* 17.—The following is the score made by the East Saginaw Amateur Rifle Club at their regular weekly practice, 200 yards target reduced, possible, 50:

W J Shaw	4	5	5	4	5	5	4	4	5	5—46
C C Yawkey	4	4	5	5	4	5	5	4	4	5—45
R F Corbyn	5	5	4	5	4	4	5	4	5	4—45
J H Howey	4	4	4	5	4	5	4	4	5	5—43
H G Hamilton	4	5	4	4	5	4	4	5	4	4—43
F R Osborn	4	4	4	4	3	4	5	4	4	4—41

On the 24th the club will begin to shoot over their 200-yard range. J. H. H., Sec'y.

Chicago, May 17.—The following score was made by the George H. Thomas Post Rifle Club on its 200-yard range today:

Tyrrell	4	5	5	4	4	4	5	4	4	4—43
Austin	5	4	4	5	5	5	4	4	4	4—43
Freeman	4	4	4	4	4	5	4	5	4	4—42
Drury	4	5	3	5	4	4	4	4	5	4—42
Goodrich	5	4	4	4	3	5	4	4	3	4—41
Hobbs	4	4	4	4	4	5	4	4	4	4—41
Chenoweth	4	3	4	4	4	3	4	4	4	4—38

WISCONSIN—*Milwaukee, May* 16.—The members of the Milwaukee Rifle Club held their first long-range shoot of the season to-day. Mr. Hill, at 900 yards, fired at the wrong target, scoring a 4 and 5, but which, under the rules, did not add to his score. Mr. Markham reached the grounds too late to shoot at the distance of 1,000 yards, and Mr. Robertson lacked shells enough to stand at the same range. An accident to the rifle of Mr. Berry also prevented him from shooting at that distance. The scores stood:

	900 yards.										1,000 yards.										
Johnston	5	4	5	5	5	5	4	5	4	—47	5	4	5	5	5	5	5	5	5	—47	—94
Trakel	5	4	5	5	5	5	4	4	5	—46	5	5	4	4	6	4	5	4	5	4	—46—92
Bangs	5	4	5	5	4	5	4	4	4	—45	5	3	4	5	2	3	4	5	5	5	4—43—88
Weiss	3	5	0	5	3	5	5	4	4	—38	5	5	4	4	5	5	6	4	5	—46—84	
Yale	3	5	4	5	5	4	5	5	5	—46	5	5	4	5	3	4	3	3	5	5	—42—88
Meumer	3	3	4	5	4	5	5	5	4	—42	3	4	0	4	5	5	4	3	3	4	—35—77
D Hill	4	5	5	3	0	3	5	0	2	5	—32	5	5	5	5	4	4	5	5	4	—46—78
Berry	4	4	2	4	5	5	5	4	5	5	—43										—43
Markham	4	0	4	0	4	5	2	3	4	5	—31	3	5	3	3	2	5	3	5	4	4—40—71
Robertson																					—31

NEVADA—*Gold Hill, May* 7.—We have several fine military companies here. I hope to be able to forward you some fine scores the coming summer when the season opens and the many annual prizes are contested for. Under the direction of Thomas Gallagher, captain of the Sarsfield team, at their target to-day, the following scores with military rifles, 200 yards, off-hand, were made:

T Gallagher	4	5	5	5	5	5	3	5	5	4—46
Gwen Byrne	5	4	4	5	4	4	4	4	4	5—43
W D Gibson	4	4	4	5	4	5	4	4	3	4—41
Wm S Haskins	4	5	4	4	4	5	4	3	4	4—41
Amos Merritt	4	4	4	5	4	3	4	4	4	4—40

Although the above is not an extraordinary score, yet before the season closes we will show some better ones. In Gold Hill we have a boy wonder in regard to shooting. He is but sixteen years of age, and a slight built little fellow. On April 30 he made the following score, military rifle, 200 yards, off-hand:

Patsy Field	3	4	4	4	5	5	5	5	5	4—46

Do you not consider this excellent for a boy of his age?

BELL.

—In the recent match between Denver and Milwaukee Denver was ahead 9 points at 200 yards and Milwaukee ahead 8 points at 500 yards. The result being so close, the Milwaukee Club has challenged the Denver Club to a match at 800, 900 and 1,000 yards.

THE PLEVNA "LEAD RAIN."—*New York, May* 16.—Your "Arailia" correspondent is, I think, in error as to the so-called Peabody-Martini being a copy of the English Martini-Henry, I am almost certain that the Peabody is the earlier patent. As to the slaughter at Plevna, it is to be doubted whether much of it was due to the repeaters, which were bought for cavalry use. Each Turkish infantry man during the defense of Plevna was supplied with a box containing 500 cartridges, which he fired away as fast as possible *without* aim, literally showering lead all over the approaches to the works up to a distance of a mile, *vide*, Lt. F. V. Greene's article on the Russo-Turkish war in last month's *North American*. G. M.

PROFESSIONAL RIFLEMEN.—*Richmond, Va., May* 8.—I have received a circular from the National Rifle Association inviting correspondence on the subject of professional riflemen, and the advisability of handicapping them, also the definition of the term "professional rifleman." When in your city some months since I had a talk with Mr. Farrow on this subject, and he agreed with me that himself and Mr. Hyde were really the only professionals in New York, as we could think of no others who were paid regular salaries to shoot rifles, though I am at a loss to understand why "professionals" should be handicapped and no other, I have always thought a rifleman should have a record as well as a horse, and that a man who had made in a match say 47, should be handicapped regardless of his being a professional. We will suppose a prize put up to be shot for by those who have never made better than 42 (200 yds.), according to this arrangement the man with his 47 should be handicapped five points, a 44 man two points, and so on, in order to induce the military to take part in more of the matches. It might be well to make some allowance for the difference in the military and regular target rifles (peep and globe sights and wind gauge). I think it a bad idea to attempt to bar the few professionals, as I am sure they have done and will continue to do a great deal toward getting new men into the fraternity, establishing new clubs through the country and a great many other things, for which they deserve credit. I know that in all matches they are called upon for all sorts of information, and, as far as my observations go, give it cheerfully. As I have very little time to devote to this subject I hope some of the riflemen of your city will take hold of the plan I suggest and put it in proper shape to be sent to the N. R. A. HANDICAP.

☞ FOREST AND STREAM will be sent for six months for $2; for three months for $1. To clubs of five or more, $3 per year.

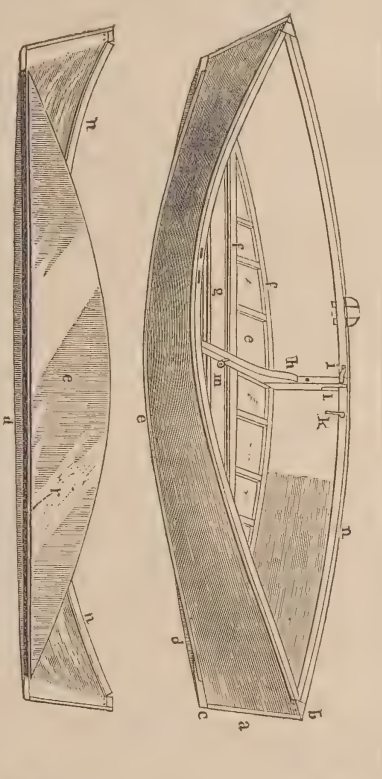
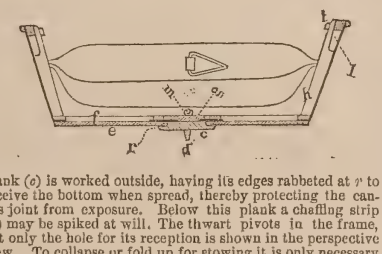
TO CORRESPONDENTS.—In order that the record of yacht races for 1879 may be as thorough and complete as possible, we desire to call the attention of correspondents to several points. In sending in accounts of matches sailed, be particular to state as far as possible the following: Date of race; list of entries; measurement; owners; classification; course; time allowance; prizes sailed for in each class; actual and corrected time made; winners of prizes; state of wind, tide and weather. In open matches, or union regattas, mention the clubs to which the entries belong, and make note of special prizes as distinct from regular club prizes. Omit reference to irrelevant matter. Elaborate on points of seamanship, navigation, model or rig, as the case actually calls for.

A NEW "COLLAPSABLE."

YACHTSMEN generally, and the owners of craft of moderate tonnage especially, are aware of the troubles caused by towing a dingey, or tender, astern, as well as of the positive nuisance they are when stowed upon deck during heavy weather. With so much disfavor are boats regarded that many prefer cruising without any such encumbrances, and will take their chances upon the probabilities of hailing a boat when one is wanted, or of running alongside a pier for water and provisions. At times this will leave one in a most pitiful plight, unable to leave ship just when wanted. It is needless to add that this practice of sailing without a tender is both dangerous and unsailor-like, and it is certain that any solution of the trouble will be welcomed by all who object to dragging a punt half filled with water in their wake, or to stumbling over her when stowed bottom up in the weather gangway and when gear has to be manned in a hurry. Last year a remark in these columns to the effect that a suitable collapsable boat was a *sine qua non* to a well-fitted yacht drew the attention of Messrs. Coughtry, of New York, to this missing link to the yachtsman's perfect happiness, and they set about and deliberately invented a style of boat which, we think, supplies this much-felt need in a more satisfactory manner than anything of the kind yet brought to light. With the accompanying illustrations, the working of their patented collapsable boat will be readily understood. The boat consists essentially of a light wooden bottom (*e*), secured to a hardwood frame (*f*) and a central flat keelson plank (*g*). From the latter the stems (*b*) rise at each end, being secured at their heels by light knees, and having false stems outside to protect the fastenings of the canvas. The sides are of canvas, the hardwood gunwales (*n*) being jointed or hinged to the head of the stems. The shape of the boat is maintained by one or more frames (as *h*), which hook to a swivel eye-bolt in the kelson, and are held in their place by small kleets on the gunwale at *i*, and prevented from slueing fore and aft by turning up a little metal lock (*k*). In order to stretch the canvas of the sides up taut, a cam lever (*l*) is pinned to the faying surface of the frame and hove up under the gunwale raising and keeping the latter at the required height. The bottom is divided into halves longitudinally and hinged to the keelson plank by canvas strips. The canvas is shown by the dark lines in the cross section. To protect this hinge on the bottom and to give longitudinal strength a keel





plank (*o*) is worked outside, having its edges rabbeted at *r* to receive the bottom when spread, thereby protecting the canvas joint from exposure. Below this plank a chaffing strip (*d*) may be spiked at will. The thwart pivots in the frame, but only the hole for its reception is shown in the perspective view. To collapse or fold up for stowing it is only necessary to turn the thwarts "up and down" as shown in the cut of the cross section, where the brace has also been folded to the thwart, turn down the cam levers (*b*), sue the frames fore and aft, unhook from the keelson at *m* and lift them out. The gunwales are then allowed to drop till they strike each other in the middle line of the boat and the halved bottom is next turned up on each side as shown in the cut in which the rabbet *r* has been shaded for sake of distinctness. The canvas of the sides falls into snug folds, and the frames may be shoved away in the middle. In this condition the boat is only about 4in. thick and can be stowed wherever most convenient, on the house, alongside of it, or handed below, slung overhead, strapped along the centre-board well, shoved under transome cushions or simply laid on the floor. The boat can be spread and rigged in less than a minute. Its advantages are the possession of a superior model—in fact almost any form may be given to the frames—solid bottom with no canvas to chafe and scrape in beaching, protected joints, simplicity, unsinkable parts, nothing to loose, lightness, cheapness and beauty. A bevelled or rockered bottom may be adopted if desired. We think this boat undoubtedly the best of the kind, being in many respects superior to the "Berthon" and the "McDonald" boats of England. The inventors are about making arrangements for its manufacture and will adopt such patterns as to weight, size and finish as the public demand seems to require. For yachts' dingeys the boat should meet with much favor, while its extension to other uses will develop with time. They will run mainly from 9ft. to 14ft., and from 40 to 70 lbs.

YACHTING NEWS.

SAN FRANCISCO MODEL YACHT CLUB.—This club is a new institution of San Francisco, and will sail its first match in midsummer. A cutter model, 48x9in., will take part, and with the schooners and yawls will give variety enough to lead to valuable conclusions.

BEVERLY YACHT CLUB.—In addition to the matches announced, it has been decided to hold a special regatta at Nahant, June 14. An invitation will be extended to the Dorchester Y. C. to participate, but the Beverly sailing regulations will be in force. The special match of the club will be held at Cotuit, probably July 3.

NEW YORK YACHT CLUB.—The Commodore, S. N. Kane, Esq., has announced that the *Restless* will not be commissioned this year as he contemplates a trip abroad, and he therefore tendered his resignation as Commodore of the club. The club thereupon requested him to reconsider his decision, at the same time expressing their regret at the prospect of the loss of so valuable and efficient a flag officer. The following members have been added to the club; Messrs. R. H. Huntley, sloop *Niantic;* Frank Dexter, sloop *Egeria*, and Edmond Yard, sloop *America*.

THE ADDIE V.—This well-known sloop left this port May 6, for Boston, with her owner, Mr. Studley, and Com. P. Grant, Jr., on board. She put in at the Vineyard May 14. The *Addie* is one of the nblest sloops that hailed from the Metropolis, and her acquisition by Boston adds another fine craft to the rapidly growing fleet from "the other side of the Cape."

BROOKLYN YACHT CLUB.—The club will so amend its constitution as to place the election of flag officers in the hands of yacht owners only. Mr. Sam. McIlroy was elected a member of the Board of Trustees vice Mr. P. W. Ostrander, resigned; and Mr. S. L. Blood was elected to fill a vacancy on the Regatta Committee. Mr. Edmund Yard, sloop *America*, was elected a member. All yacht owners are requested to be present at the next meeting on the second Wednesday in June, as important business is to be transacted. The club's quarters are now at 371 and 373 Fulton st., Brooklyn.

PAVONIA YACHT CLUB.—The following officers have been elected for the year: Com., J. G. Northrup; Vice-Com., William Taylor; Rear-Com., Charles Wild; President, A. L. Kreymeyer; Secretary, A. W. Murray; Treasurer, H. Holmes; Sailing Master, D. Murphy; Measurer, W. Murphy; Steward, James Dainty. A committee is to confer with the Jersey City Yacht Club to arrange a union regatta for some date in July next.

BALTIMORE REGATTA.—The Baltimore Yacht Club will hold a regatta June 1. Course, from Point Breeze to White Rocks and return. Prizes, $25, $20, $15 and a silver pitcher. Com. J. Laake has charge of the matter.

BLOCK ISLAND BREAKWATER.—After nine years of work the breakwater at Block Island has been completed. Cost, $885,000.

A NEW STEAM YACHT.—The steam yacht which D. J. Lawlor has been building for Com. Frank H. Peabody, of Boston, is 54ft. long, 10ft. beam and 5ft. hold; white oak timbers and yellow pine plank, copper fastened; engine of the double inverted type; cylinders, 7in. diam.; vertical steel boiler, 6ft. 8in. high, 4ft. diam., with 126 two-inch tubes; pressure, about 150lbs.; propeller, 42in. diam. She will receive full schooner rig. Tanks hold 400 gal. water, and her bunker capacity is large, as she is intended for distant cruising.

BAY OF QUINTE YACHT CLUB.—At the annual meeting, held in Belleville, Ont., May 8, the following officers were elected: Com., D. B. Robertson, *Dauntless;* Vice-Com., W. H. Campbell, *Katie Gray;* Capt., R. M. Roy, *Gracie;* Sec'y, R. S. Bell, *Katie Gray;* Treas., Morgan Jellett, *Dauntless;* and Measurer, S. T. Greene, *Zephyr*. Executive Com.: Jas. Clarke, Chairman; A. Robertson, Mayor; D. Pitceathly, Jas. H. Starling, Thos. Kelso, W. M. Pike, R. J. Bell, A. M. Foster and Prof. Dawson. Regatta Com.: Morgan Jellett, Chairman; Hon. G. Sherwood, A. Robertson (Mayor), Thos. Kelso, S. S. Lazier, A. E. Dennison, E. Force, J. H. Starling, D. Pitceathly and C. W. Bell. The whole board of officers were re-elected from last year. The club numbers 65 members and has 16 yachts on its books, as follows, the numbers annexed being their respective tonnage: *Dauntless*, 24; *Madcap*, 16; *Gracie, Katie Gray, Kathleen, Enid, Sylvia, Surprise, Emma*, 10; *Zephyr, Merlin*, 7; *Alice Craig, Wideawake, Mabel*, 5; *Minnie A.*, 4½; *Amorette*, 3. The *Emma* and *Merlin* hail from Kingston and the *Surprise* from Trenton; the rest all from Belleville. This club has taken the lead of all others on the lakes, the Royal Canadian of Toronto being an excessively sleepy affair and unknown outside of its home port; and the organizations on the American shore are still in their infancy. Mr. Cole, of Ottawa, has offered a fine club design to be sailed for by second and third class yachts, and it is proposed to organize systematic cruising in squadron this year. The commodore will present at the annual regatta in September a cup to the first second-class yacht home, and the treasurer offers a prize to the second one home. The commodore also offers a piece of plate to the winner in the second class in the June matches. The first regular regatta was fixed for June 13, over the usual course, on Big Bay. As Mr. F. C. Sumichrast, of Halifax, proposes hoisting the Bay of Quinte burgee at the masthead of *Mystery* this summer, the club presented him with the club colors for that purpose.

MONTREAL YACHT CLUB.—The annual meeting of the Montreal Yacht Club was held in Longueil, May 9. The Treasurer's report showed a balance on hand, and also that the sum required for the building of a club house had been subscribed, and the work would be proceeded with immediately. The new officers are: Com., Dr. Brewster, re-elected; Vice-Com., Angus McIntosh, re-elected; Sec., A. A. Tracy; Treas., Henry McIntosh; Meas., R. McGregor, re-elected; Committee, Messrs. Roy, J. Lesperance and D. Lewis. With the above officers there is no doubt but that the season of 1879 will be the best yet, with a large increase in the number of yachts and members. There will be several squadron cruises held during the year.

EASTERN YACHT CLUB.—The Lighthouse Board has replied to the committee of the Eastern Yacht Club that its suggestions concerning the better distinguishing of buoys by night will be entertained.

ATLANTIC YACHT CLUB.—The annual cruise will commence July 26. Rendezvous at Whitestone, L. I. The regular annual regatta has been fixed for Saturday, June 7, and entries should be made at an early date. Prizes will be on exhibition one week before the race.

PACIFIC YACHT BUILDING.—The new schooner which White & Farnham are building at San Francisco is about planked up. She is 62ft. on deck, 56ft. waterline, 18ft. 8in. beam, and 4ft. 3in. hold.

TRUE TO LIFE.—Mr. A. Carey Smith, marine artist, has on his easel at the Studio Building a very handsome oil painting of the *Comet* under full sail. The point of view chosen shows the schooner nearly broadside on, and the likeness of the craft is life-like. The sea, sky and distance have an air so true to nature that one can well fancy himself aboard her decks taking the drift as it flies aft from her fore-chains. As anatomy is necessary to the figure artist, so is a knowledge of model and naval design an absolute requisite to the marine painter, and few possess greater or more varied proficiency in this direction that Mr. Smith. Hardly a celebrated yacht in American waters but whose beauty and grace of outline has been transferred to canvas by the skilled hand and unerring eye of this artist, who takes rank as one of America's foremost marine painters. No sooner is one task completed than another canvas is stretched to meet the demand upon his talent, and what with the designing of yachts and orders for paintings far ahead of the capacity of one man's brush, Mr. Smith finds few moments to spare; but these he devotes among his many friends to the discussion of that all-absorbing theme—naval architecture—a field in which he has rendered as prominent services as in the guiding of the brush and the harmonizing of forms and colors upon the mimic scenes of yachting life.

COHILL-BARR MATCH.—This match, sailed on the Delaware, May 12, course 40 miles, resulted in a tedious drift, owing to light airs and calms. The *Barr* crossed the line two minutes ahead.

THE MURIEL.—This cutter is to receive a larger rig upon her return from Chesapeake waters. It is to be a big one, and will bring out what speed she possesses.

THE NORNA.—Mr. Contoit's beautiful schooner has been on the screw-docks for a cleaning and painting last week, preparatory to some extended cruising. Very favorable accounts of her performances reach us.

YACHTSMAN AND COASTERS' GUIDE.—The second edition of Capt. Pratt's valuable little work on coast navigation from Cape Hatteras to St. John's, N, B., has been received. The first edition sold "like hot cakes," and the many useful and succinct additions made to the new edition will insure to it an equal amount of popular favor. The volume gives the courses and distances with relative bearings of the light-houses and ships along the coast, with sailing directions for 75 harbors and ports; a list of buoys, beacons, etc., of the Sound, especially for the use of yachtsmen; the Hudson River, some receipts and seaman's proverbs, and much other matter of interest to all who go down to the sea in ships. It is a short compendium of the more elaborate and expensive works of similar character issued by the U. S. Coast Survey. Printed in clear type and bound in waterproof cover. To be had of Capt. Wm. A. Pratt, of Deep River, Conn.

EMMA D. vs. UNKNOWN.—A match was sailed May 19 between these two 20ft. cat-boats, over the Harlem course. Sail five times over, distance 22 miles; stakes, $100 a boat and set of colors. Wind light from SE., but freshening; tide, flood. Won after a close match by *Emma D.* (John McDuff) in 2h. 28m. 51s.; *Unknown* (Albert Simms), 2h. 33m. 5s. McManus had the helm of the latter and Jac. Varian tooled the former. Both yachts belong to the Empire Yacht Club.

THE PHANTOM.—This fast schooner, 133 tons, has been sold to Mr. Honey, of Boston.

NEW CRUISING SCHOONER.—At Loring's yard, East Boston, there has been built for Mr. John M. Ward a cruising schooner on a pilot-boat model. Length, 53ft. 6in., 47ft. Keel, 16ft. beam, depth of hold, 5ft. 6in.; masts, 52 and 50ft; maintopmast, 15ft.; bowsprit from knightheads, 16ft.; bulwarks, 12in. high; cabin trunk, 23ft. long; cockpit, 8 and 9ft., and 16in. deep; main cabin, 13x8ft., with 6ft. 2in. clear; head-room under house; one stateroom, pantry, galley, etc., and 12ft. forecastle. She was built by Capt. Lincoln Simpson; joinerwork, by James McIntyre; rigger, Francis Lord; sail-maker, George W. Roberts, and iron work by Fitz & Joy.

JOHNSON-RILEY RACE.—Articles have been signed for a single scull race between Frenchy Johnson and James H. Riley for $500 a side, over the Ensenore course at Owasco, mile and a half and return. To take place May 15.

THE DAUNTLESS.—This schooner, long the property of Mr. James Gordon Bennett, has been sold to Mr. R. Waller, and a movement is on foot to have him elected Commodore of the New York Y. C.

THE PALMER.—This schooner will not be changed to a keel, as at first intended, but will only receive an overhauling preparatory to her cruise on the lakes.

A NEW SLOOP.—Mr. Henry Steers is building at Greenpoint a 30ft. yacht for his own use. She is distinguished as being built exceedingly strong and of picked stuff. Report says she is to be cat-rigged, but we hope not.

SOUTHERN YACHT CLUB.—The annual regatta of this club takes place May 26. The club has the remarkable number of 450 members, with $3,232 in the treasury. Times must be good in the Pelican State.

THE YAWL'S SUPERIORITY.

SAN FRANCISCO, May 2, 1879.

EDITOR FOREST AND STREAM:

In your issue of April 24 your correspondent "Lubber" seems to have been greatly troubled with that double reef in his sloop's mainsail, and no wonder Of all the nautical nuisances in a blow that of reefing a sloop's mainsail is the very meanest, and "Lubber" may console himself with the fact that many a blue-water sailor has been almost equally nonplussed; not so much from the want of knowledge as to how the reef should be put in as at the possibility of putting it in at all, without imminent danger to the boat and the crew. To put a reef into a sloop's mainsail it is almost necessary to let go the jib halliard and partly haul it down, to prevent the boat from "paying off" into the trough of the sea, and thus endangering her spars, or something worse. At the very best it is an awkward, uncomfortable and unsatisfactory job, and, if on a race, the time lost is a most serious item. Your recommendation to change her rig into a yawl is the true solution of the difficulty, for difficulty and danger will always be an incident of a sloop rig in heavy weather. On the other hand, a yawl rig is the most delightful in all weathers. There is no other rig for a yacht within fifty to sixty feet over all that can, for a moment, compare with it, either in speed, facility in handling, or safety in any wind and sea. I refer more particularly to the style of yawl in use here, as, in my estimation, the English yawl rig does not so well answer the requirements of a centre-board boat as does our 'Frisco rig. The difference is not so much in the general principle as in the details and handiness. The English yawl is a cutter, with a short mainboom and "jigger" mast, and small jigger sail aft; a ring traveler for the jib in the bowsprit and a forestaysail to the knight-heads. This brings the mainmast much further aft than in our rig, and to that extent reduces the size of the mainsail and the power and speed of the boat by dividing the canvas that we carry in one good size mainsail, between the mainsail and forestaysail of the English rig.

The advantages of our rig over the English yawl are, more speed, greater celerity and ease in handling, and more cabin room in a centre-board boat, even of the same beam, owing to the centreboard being placed further forward. Indeed you could scarcely design a well-balanced English yawl rig on one of our centre-board boats; but our 'Frisco rig is just the thing for changing a centre-board sloop to the best rig out. If well considered by a good designer (a man may know how to sail a yawl well and yet know next to nothing of how best to change and balance her rig,) the change is sure to give satisfaction. The *Startled Fawn*, *Emerald and Sappho*, all sloops from thirty-seven to forty-one feet on water line, have been changed to yawls, as described, and handle and sail better than before. No owner would change back. The material points in our yawls are, the single jib as in a sloop, the large mainsail, all "inboard," and the large driver, or jigger, as compared with the affair of the English rig.

The advantages we claim for our rig are all well proven in the above boats and also in the *Frolic*, Com. Harrison's yawl, forty-three feet on the water line, and in several smaller boats, *Ariel*, *Mist*, *Enid* and others. We find in practice in our rough water in the bay that when we have occasion to shorten sail the best way is to lower the mainsail (the peak only, if in a squall) and reef; a double reef is a rare thing. The boom is all inboard and the reef can be put in at your leisure. If short handed you can haul your jib and driver sheets to windward, put the helm down and leave her lying-to, like a duck, her sails perfectly balanced, and reef at your ease, or leave the sail in the brails and jog on under easy canvas (the driver and jib).

Com. Harrison in the *Frolic*, in taking out parties—and he is very generous in this way—frequently sets driver and jib alone, if blowing at all fresh, and the boat moves along at a five or six mile rate as steady as a church; indeed, she could stand a strong gale under this sail, and the steadiness and ease of the boat under this sail is remarkable. Much more so than a boat would be under a single sheet of canvas in the centre of the vessel, as the two pieces of canvas at the extreme ends keep her wonderfully easy and buoyant, and she is always under instant control, either to stay or wear, as the jib or driver sheets give her quick and certain motion if required. If "Lubber" will have his thirty-four feet sloop changed into a yawl, on our 'Frisco plan, he will be a happy man, and he can handle her easily with himself and one man, or a stout boy, as "crew," FRISCO.

We do not think that any sailor will for a moment question the superior handiness of the yawl, as set forth by our correspondent above. The exact size of yacht for which this rig is best fitted depends upon circumstances. When the sloop's boom becomes of such length and weight, and the mainsail of such size, as to be difficult to manage and troublesome to handle with the crew carried, then the yawl rig will offer the best substitute. It secures greater speed than the schooner and is more economical in cost and maintenance. In short, it is a rig halfway between the sloop and schooner, possessing to a large degree the advantages of both, without the chief objections made to either. From this it is to be gathered that no fixed tonnage can be assigned as the limit to which the sloop rig should be carried, but each individual owner must be governed by the conditions under which his sailing is done and, finding the sloop no longer meeting his requirements for cruising purposes, the yawl will be his next best choice. In accord with this we find this handy rig on craft of all sizes, ranging from McGreggor's diminutive yawl *Rob Roy*, of 21ft., up to the imposing *Lufra*, of 200 tons. It is a rig that only requires to be introduced to recommend itself.

Game Bag and Gun.

MAY IS A CLOSE MONTH FOR GAME.

—The new gas concentrator and foul protector, devised by Mr. Shelton as an auxiliary of the auxiliary rifle barrel, materially auxiliarates the effectiveness of the arm.

—The editor of the Tionesta (Pa.) *Forest National* has three young otters, and the family cat is suckling them with great satisfaction to all concerned. The editor dug 'em out of a hole, and carried them home in his pocket. Editors will carry anything home in their pockets.

—Mr. H. C. Squires, No. 1 Cortlandt street, has on exhibition the elegant gun presented to Mr. Charles Hallock, Editor of FOREST AND STREAM, by Dr. H. Struve, of Dresden, Saxony. The arm is of the most elaborate and costly finish, and a curiosity in its way. It is used for hunting chamois and other large game among the mountains. Connoiseurs of fine gun workmanship will be well repaid by giving it an examination.

THE SPORTSMAN'S WATCH CHAIN.—Mr. M. N. Shepard, 150 Fulton street, New York, has invented and manufactured a gold watch chain, especially adapted to the tastes of sportsmen. It consists of a gun or rifle for the bar, and glass balls, cartridges, balls and bullets for the chain proper. A cut of it will be found in our advertising columns. As a prize for shooting contests this is a peculiarly appropriate article, combining with the ornament of a badge something that is useful as well.

THE NEW SMOKE BALLS FOR TRAP-SHOOTING.—Our sympathies are decidedly with the Titusville Target Ball Company of Pennsylvania for the distress to which they have been put by the delinquency of the parties to whom they had intrusted the manufacture of their new explosive balls. Depending upon the pledges of the parties with whom they had contracted they advertised prematurely in our paper early last spring, and not having been able to fill the orders with which they have been overwhelmed, have very naturally incurred censure and reproach which they did not deserve. We have had many inquiries as to their reliability and purpose, and are now happy to be abie to publish the subjoined card in explanation of their present situation:

TITUSVILLE, Pa., May 13, 1879.

Dear Sir:—On the 7th of last February we made a contract with the "Unexcelled Fire Works Co., of New York, to manufacture our explosive balls. It was not with them an experiment, as they had made a quantity of perfect balls for us last fall. They took the contract with a thorough understanding of what they had to do. We provided them at our own expense with the machinery required. There was no embarrassment or risk as to payment, because we were prepared and offered to deposit the money in advance.

Our balls are a complete success in every way. In proof of which we enclose some copies of letters. We, and all who have seen them, are convinced they must greatly diminish the trade in glass balls. The above named company have failed to comply with our orders and have put us off from time to time with excuses by no means satisfactory. You can draw your own inference as to the cause of their delay.

We have now concluded arrangements with another house to supply us as rapidly as possible, and are about consumating arrangements with still a third firm.

We will soon be able to demonstrate to you and to the world that ours is beyond question the best and most convenient ball ever invented for the purpose.

We now have orders for an immense number. Until these are filled we cannot expect to respond to new ones with the promptitude we would wish.

Trusting you will appreciate the difficulty under which we are laboring, and indulge us with some patience, we remain, respectfully yours, C. V. BOUGHTON, Manager, Target Ball Co.

CAZENOVIA, N. Y., May 1, 1879.

C. V. BOUGHTON, Manager Target Ball Co.:

Kind Sir—Yesterday our club used the sample box of your explosive balls, and all unite in saying that they are most perfect and give the best satisfaction of anything of the kind in the market.

Most respectfully, WILL H. CRUTTENDEN,
Gen. Agent for Card's Trap.

NEW JERSEY—*Barnegat Inlet, May* 14.—Bay birds of all descriptions are very plenty; scarcely an hour to-day but you could count from ten to twenty flocks; wind southward.
B.

NORTH CAROLINA—*Salem, Forsyth Co.*—The prospect for next fall and winter's quail and turkey here never was better. I am surprised that more Northern men do not find their way here. C. G. P.

VIRGINIA.—Chincoteague Island sport is reported to be "booming," as the politicians say. The marshes are swarming with birds, and gunners who are so fortunate as to visit the Island find their lines cast in pleasant places.

OREGON—*Eugene, May* 5.—The spring shooting has been as good as usual; have killed a number of mountain grouse, and also bagged a considerable number of geese. A friend killed, in a part of forenoon, ten geese, as they were on their northward journey. The pigeons have just made their appearance, and thousands are on the late-sown grain fields. Such an abundance of finer game here, that pigeons are not noticed much. J. G. S.

SHOT GUN TESTS.

MAYSVILLE, Ark., May 7, 1879.

EDITOR FOREST AND STREAM:

I will venture a few remarks, not with a desire to lay down any rules, but simply to give some of your readers an experience of several years with the shotgun on small game. A charge that will be effective at long ranges is sure to be so at shorter ones; so always load for a long shot. My first hunting was done with a muzzle-loader, 13-gauge, 41-inch barrels, 11½lbs., and I yet have the first complaint to make of it, as regards killing powers, with any kind of shot larger that 8's, provided sufficient powder was used; but from later experience with shorter and lighter guns, I find just as good results can be obtained with the same charge of powder and one, or even two, sizes smaller shot, and with so much less fatigue when hunting on foot. Hence, I should generally recommend a light gun. I will confess to a slight personal leaning toward larger shot and heavy charges of powder for large game. The general tendency, I think, is to overcharge with shot. The harder a shot strikes the worse wound it will make; consequently we want heavy charges of powder to give high velocity, but stopping when the recoil becomes unpleasant. (My experience does not extend to chilled shot.) The following approximates nearly, I think, to the standard for a 12-gauge, 30-inch, 8lbs. choke-bore gun.

	Powder.	Shot.
Deer	4 drs.	12 No. 2 buck.
Turkeys	4 "	1oz. No. 2 or 3
Ducks and old grouse	4	1 to 1¼ No. 4
Partridge, Squirrel and Rabbits	3½	1oz. No. 6 or 7
Young Grouse, Quail, Woodcock, Snipe, etc.	3½	1oz. 8 to 10

For a cylinder bore or muzzle-loader from ⅛ to ¼ oz. more shot, and from ¼ to ½ dram less for very quick or strong powder. For 10-gauge ¼ dram more. E. W. SCOTT.

TEXAS, May 5, 1879.

EDITOR FOREST AND STREAM:

In response to your invitation of April 24, I wish to lay some facts for your readers on the gun question. The editor of the London *Field* during the latter part of last year conducted some very exhaustive experiments upon the loading of guns, and as a final satisfactory result, obtained the following, which I transcribe literally from *Field* Nov. 18, 1878, under the head of "Shooting Notes:"

"Nov. 18, 1878.—Mr. Maleham's 12-bore, shot with 3 drs. Curtis & Harvey No. 6 powder and 1⅛ oz. chilled shot; wads

the same gauge, used with Schultz powder, as reported on Nov. 9, but slightly smaller by selection :

Left Barrel.					Right Barrel.				
No.	Pat.	10-in.	Penet.	Recoil	No.	Pat.	10-in.	Penet.	Recoil
1	187	40	1.70	75	1	224	63	2.17	74
2	195	40	1.59	74	2	225	74	1.94	74
3	222	62	1.84	75	3	202	67	2.03	76
4	171	49	1.58	76	4	178	40	1.65	76
5	201	45	1.70	76	5	236	64	1.98	72
6	210	61	1.95	74	6	188	38	1.58	75
7	175	30	1.56	75	7	203	50	1.56	75
8	226	64	1.83	75	8	209	45	1.73	75
9	215	52	1.77	75	9	225	68	1.94	75
10	195	46	1.65	77	10	218	54	2.01	75
11	202	55	1.94	75	11	207	53	1.70	76
12	191	42	1.52	76	12	210	69	2.07	75
13	199	44	1.89	76	13	....	....	....	....

Average penetration force........................ 179.16
Average pattern........................204.56
Difference in pattern........................ 33.56
Average recoil above 50lbs........................ 25.08 } 63.64
Difference in recoil........................ 5.00

Figure of merit........................115.52

In the great trial of guns in May, conducted under the auspices of the *Field*, this same gun of Mr. Maleham's shows up as follows. I give the summary only, so as not to extend this paper unduly :

"May Trial.—Same gun, with C & H. powder No. 6, 3¼ drams :

SUMMARY.

Average penetration........................ 142.56
Average pattern........................197.48
Difference in pattern........................141.48
Average recoil above 50lbs........................ 37.72 } 185.20
Difference in recoil........................ 6.00

Figure of merit........................*Minus* 42.64

Now, this extraordinary gain in the power of this gun was obtained nearly altogether from the use of the following wads. I transcribe again almost literally from *Field*, Nov. 9, embodied into a fly sheet of a little later date, giving directions for the loading of guns :

"No. 1. A thick wad of fine felt, pink on one side and grease proof black on the other, 11¼ to 11½ gauge slightly greased. No. 2. A greased felt wad, carefully cut to an 11¼-gauge, and ⅜ to ½-inch in length. No. 3. A thin card board wad, 12-gauge, so as to just fit case. No. 1 goes first over powder then No. 2 gently seated on No. 1, then No. 3 on top No. 2, then the shot, and a final No. 3 on top of shot."

In further elucidation of this result I have to remark that the gun as shown was the same, the powder the same make and grade, only a smaller quantity, the shot the same, and only the wads different; in the May trial being the usual 12 G. black grease proof and felt generally used, with cardboard over shot, whereas in Nov. 18 trial are as described above of 11¼ and 11½ gauge; the whole secret of the transaction, as the *Field* editor very fully explains, being first, in having a cartridge case of the exact length of chamber of gun; second, in having wads of such a size and combining together such a length as will, upon discharge of gun, a little more than fill the cone at the end of chamber and so prevent any possible chance of gas from powder getting in front and mixing with the shot. I regret to say that I have been unable to test this system of loading practically as I have completely failed to procure the wads specified in this country. I am told that they are not in this market and that I will have to import them. These wads were arrived at and the result gained only after every imaginable kind and size of wad had been tried ; doubtless we have not obtained the most out of our guns yet, but this seems to have been the greatest step in advance within the last six months. The size of shot as in all English trials was No. 6. MATABAN.

We shall print next week a report of the London *Field* gun trial of 1879.

MUSKEGON, Mich., May 6, 1879.

EDITOR FOREST AND STREAM :

I have sold a number of Parker's plain twist guns, and have made targets with each of them, and notice but little difference in the shooting qualities. All shoot well. I own a 12-bore, 30 inch gun, such as they sell for $55, which shoots as well as any gun I ever saw. I loaded two shells, each with 4 drs. No. 3 Oriental powder and 1⅛ ounces No. 7 Tatham's chilled shot. My papers would only admit of 16in. circles being made on them. I shot at 35 yards, and with sight barrel put 200 pellets in the 16-in. circle, 128 in 12-in. circle, and 60 pellets in the 6-in. circle. This is the only time I ever used chilled shot. I have frequently put 40 pellets No. 7 soft shot in 6-in. circle. I used Dixon's measures in loading. Two felt wads on powder and a light one on the shot. In that way I get good penetration. JAY.

RUSHVILLE, Ill., May 6, 1879.

EDITOR FOREST AND STREAM :

Mr. Reese Knapp, of Browning, of this county, the best duck shooter I am acquainted with, and in my opinion as good, if not the best, in the State, uses a single-barrel muzzle-loader, No. 5 (1 inch) bore, 40 inch barrel, and 16 lbs. weight, choke bored. This gun, with proper charge, he claims is nearly certain on a single duck 75 yards if properly aimed. Charge, if ducks are flying low, 4 drs. powder and 1¼ oz. shot ; if flying high, 6 to 8 drs. powder and 1¼ to 1½ oz. shot, No. 3 or 4 St. Louis size. It will be observed that his charges of shot are not much heavier than most sportsmen use in a 10 or 12 bore, also not much more powder. Yet he says it kills much cleaner than a short, light gun, and if he does not kill a duck dead he never goes after it. His shooting is not flock-shooting, but mostly at single birds over high timber, where he can make a good bag when ordinary sized guns will not reach them. This spring he has killed about 1,200 ducks, shooting only when prices were good and the weather cold enough to ship. During the mild winter of 1877-78 he killed 3,000. One day in the spring of 1872 he killed 106 ducks, the following day 66 geese, the next 143 mallards, and the next afternoon 86 ducks and 8 geese. Other noted duck-shots who hunt on the Sangamon bottom use heavy single-barrel muzzle-loaders, among whom may be mentioned Fred. Kimble, of Peoria, Ill. While on the subject of single-barreled guns I wish to advance a theory of my own in regard to what may be a superiority of single guns over double. Double-barreled guns, especially breech-loaders, are thick at breech and light at muzzle, thus causing the barrels to incline inward, causing the right barrel to shoot to the left, and *vice versa*, and the top rib is elevated at breech, causing it to shoot high. With a single barrel these difficulties do not occur. I know that my Remington double gun shoots considerably to the right and left and above. I think a double gun should be so fitted together and the rib elevated at muzzle in such a manner that it will throw the centre of its charge where it is aimed as accurately as a rifle, and I have been surprised that gunmakers have not given it some attention. ARROW.

—See Bogardus' advertisement.

PIGEON MATCHES.

GLASS BALL CHALLENGE.—*Jersey City, May 17.—Editor Forest and Stream:* The Jersey City Heights Gun Club will shoot a friendly match (for honor and glory) at glass balls, with any regularly organized gun Club in the United States. Teams of from ten to fifteen men on each side ; twenty balls each man, thrown from three Bogardus traps, and Bogardus Rules to govern. Said match to be shot at the Jersey City Heights Gun Club Grounds, Marion, N. J., at such time as shall hereafter be decided upon. P. W. LEVERING, Sec'y.

ANOTHER CHALLENGE—*Chicago, May 17—Editor Forest and Stream:* I will shoot from twenty to twenty-five men, *bona fide* residents of the State of Illinois, against the same number of men of any other State in the United States, who must, at the date of this challenge, be *bona fide* residents of the State accepting the challenge, for twenty-five hundred dollars or more a side, the birds to go with the match, at fifty single wild birds each man, twenty-five yards rise, plunge traps, Forrester Club, of Chicago, rules to govern (1⅛ oz. shot). The acceptors of this challenge will be allowed $400 for expenses. The match to be shot in Chicago the latter part of July or first part of August, or within a reasonable length of time after acceptance of challenge. One-half the amount to be deposited in the hands of the Editor of the FOREST AND STREAM at the time the challenge is accepted, and the remaining half to be deposited the day before the match is shot. If not accepted by any State in America, it is open for acceptance by any country in the world. Notification of acceptance of challenge, accompanied by deposit, to be made to the Editor of the FOREST AND STREAM, which will be promptly covered by a similar amount by me. S. H. TURRILL.

P. S.—If the above stake is too large, any State desiring to make a match will please state how much willing to shoot for, which will receive my consideration.

NEW HAMPSHIRE—*Ashland, May* 17.—Ashland Gun Club ; Bogardus trap and rules, 18 yards rise :

NEW YORK GUN CLUB—*Bergen Point, N. J., May* 17.—Handicap matches of the New York Gun Club, Hurlingham rules. There was a heavy mist in the afternoon, and the smoke of the powder, settling heavily down, seriously interfered with the shooting :

Zelner, 30 yds........1 1 1 0 1—4 Templeton, 30 yds........0 1 1 1 1—4
Butler, 30 yds........1 0 0 0 0—1 Reblin, 25 yds........1 1 1 1 0—4
Lee, 28 yds........1 1 1 1 1—5 Manning, 29 yds........0 1 1 1 1—4

Zelner took second.

Sweepstakes at pigeons :

Butler, 30 yds........1 0 0 1 1—3 Templeton, 30 yds........1 1 1 0 1—4
Zelner, 30 yds........1 1 1 1 0—4 Manning, 20 yds........0 1 0 1 1—3
Lee, 29 yds........0 1 0 0 1—2 Reblin, 25 yds........1 1 0 0 1—3

In shoot off Templeton won first, Butler second.

Sweepstakes at pigeons :

Butler, 30 yds........1 1 1—3 Zelner, 30 yds........0 0 1—1
Reblin, 25 yds........1 1 1—3 Lee, 29 yds........0 0 1—1
Templeton, 30 yds........0 1 1—2 Salmon, 27 yds........0 0 1—1
Manning, 29 yds........1 0 1—2

Butler won first and Templeton second.

Glass balls, 25 yards rise :

Butler........0 1 0 1 0 2 Reblin........1 0 0 1 0—2
Zelner........1 1 1 1 1—5 Salmon........0 0 1 0 1—2
Templeton........0 1 1 1 1—4 Dexter........1 0 1 0 1—3
Lee........1 1 0 1 1—4

Templeton won second.

Sweepstakes at birds:

Zelner, 31 yds........1 1 1—3 Dexter, 29 yds........1 1 0—2
Butler, 30 yds........0 1 1—2 Dunleavy, 25 yds........0 1 1—2
Templeton, 31 yds........0 0 1—1 Warner, 25 yds........1 1 1—3
Reblin, 25 yds........0 1 1—2 Manning, 29 yds........1 1 1—3
Salmon, 27 yds........1 1 0—2 Lee, 29 yds........1 1 1—3

Manning won first money, Dunleavy and Butler divided second, and Templeton took third.

Sweepstakes at birds :

Zelner, 31 yds........1 0 0—1 Warner, 25 yds........0 1 1—2
Butler, 30 yds........1 1 1—3 Manning, 29 yds........1 1 0—2
Templeton, 31 yds........1 1 0—2 Lee, 29 yds........1 1 1—3
Reblin, 25 yds........0 0 1—1 Armstrong, 29 yds........1 1 1—3
Salmon, 27 yds........0 1 0—1 Stone, 25 yds........0 1 0—1
Dexter, 27 yds........0 1 1—2 Fox, 25 yds........1 0 1—2
Dunleavy, 25 yds........1 1 1—3

Butler first, Dunleavy second.

Sweepstakes at birds :

Zelner, 31 yds........1 1 1—3 Warner, 25 yds........0 1 1—2
Butler, 31 yds........1 1 1—3 Manning, 30 yds........1 1 0—2
Templeton, 31 yds........1 1 1—3 Lee, 29 yds........1 0 1—2
Reblin, 25 yds........1 1 1—3 Armstrong, 29 yds........0 1 1—2
Salmon, 27 yds........1 1 1—3 Stone, 25 yds........1 1 1—3
Dexter, 29 yds........1 1 1—3 Fox, 25 yds........1 0 1—2
Dunleavy, 25 yds........1 1 1—3 James, 25 yds........0 1 1—2
Walters, 28 yds........1 1 1—3

Zelner, Butler, Dexter and Templeton divided first money, and second and third moneys were divided between Armstrong and James.

The eighth and closing match was at three birds each, miss and go out, the stakes to be awarded to those killing all.

Zelner, 31 yds........1 1 1—3 Stone, 25 yds........1 0 w
Butler, 31 yds........1 1 1—3 Salmon, 27 yds........1 0 w

HAMMERLESS.

EXCELSIOR GUN CLUB.—Regular monthly contest for champion badge, Brooklyn, E. D., May 13. Mr. Otto Huber, who won the badge last month was handicapped at 25 yards rise. It was an exciting contest between H. Hedeman and H. Altenbrand, and resulted in each grassing nine out of the ten birds. In shooting off the tie Mr. Altenbrand killed his three birds straight, and Mr. Hedemman missed one. The badge was thereupon handed over to Mr. Altenbrand, who has won it on one or two previous occasions.

AN OHIO CLUB.—*Youngstown, Ohio. May 12.—Editor Forest and Stream:* Ten young gentlemen of this city held a meeting last Saturday and organized as the "Buckeye Ball Breakers." A prominent young attorney of this city was elected President, but he immediately resigned; they then proceeded to elect another President, and as he did not resign, they then elected a Secretary and Treasurer. This done they then went into a committee of the whole and passed a bill appropriating $15 for current expenses. The bill having received the unanimous vote of the committee, the president thought he had better not veto it, as several members of the club are red hot Democrats and go in for lavish appropriations, no matter where the shad scales come from. The bill now being a law the treasurer was instructed to buy a barrel of glass balls and have them ready for the first monthly contest of the club. The question was then put before the committee; What make of a trap to purchase. A Greenback member from the South Side made a motion that the treasurer be instructed to buy the cheapest trap that he could find for sale; he said he was a Greenbacker and

went in for economy and retrenchment. This motion brought several Democratic members to their feet, and they proceded in no measured terms to tell the G. B. that this club is not going to be run on the narrow principles of the Greenback party. The loud noise made by the knocking of the president's gravel (an empty powder can) on the table reminded the Democrats that they were out of order, they immediately subsided. The president then announced that the Greenbacker's motion was lost. A Republican from the Fourth Ward made a motion that the committee should consult the advertising columns of the FOREST AND STREAM for information concerning traps, and this motion being carried a copy of the paper was fished out of the bottom drawer of the attorney's desk. After a thororgh examination and a general discussion of the merits and demerits of the many traps advertised therein, the committee, with the exception of the G. B., voted to buy the $10 trap as advertised, with a full hand and solid foot. The most important business of the club having been done; the Greenbacker made a motion to adjourn; the motion being seconded and carried, he started off muttering as he went, time is money, and that he was not going to waste it. All the other members remained and had a sociable time, whileing away many an hour telling of passed exploits and future expectations. BUCKEYE BOY.

LOUISVILLE GUN CLUB.—A closely contested pigeon match was shot by the Louisville (Ky.) Gun Club, May 13, for the President's Medal, a handsome piece of workmanship. The shooting cone was excellent, and the progress of the match watched with the keenest interest by a large number of spectators:

National Pastimes.

—The "Maurice Thompson arrow" is manufactured by E. I. Horsman, of this city. Its advantages, as the inventor claims, are that it gives a lower trajectory and a more rapid rotary motion than any other arrow, and is consequently less affected by the wind.

INSIDIOUS ARCHERY.—The interest in archery grows apace and at all the sportsmen's emporiums gaudy displays of butts and implements are exposed to view. Messrs. J. B. Crook and Messrs. Conroy, Bissett & Malleson, both of Fulton street, report much activity in sales, and new archery clubs constantly forming. We are delighted to observe the increasing interest in this most delightful pastime. The bamboo bows sold by Conroy, Bissett & Malleson are said to be superior to anything imported.

THE BICYCLE TOURNAMENT.—The seventy-two-hours bicycle race at the Rink, this city, concluded last Saturday evening, was contested by eight riders, who were all experienced men and alleged "champions," or "ex-champions." The best three scores made at the end of each twelve hours were as follows: W. De Noielle, 127, 217, 275, 378, 435, 500; C. De Noielle, 113, 205, 269, 458, 417, 500; Rutland, 109, 180, 255, 325, 394, 476. There was supposed crookedness about the scoring. The records do not compare favorably with those of the English tournament. In the Agricultural Hall contest, six days, eighteen hours each day, the winner, Cann, covered 1,060 miles, and the second man, Edlin, 1,025 miles. A comparison of the American bicycling and pedestrian records shows that although the bicyclists made much greater speed, the pedestrians gradually lessened the difference between them.

BOSTON BICYCLE CLUB.—There will be club meets each Saturday at 2:30 P. M., opposite Trinity Church, until further notice, except when a special circular calls the club elsewhere.

SCOTTISH-AMERICAN CLUB.—Handicap games, May 17, on club grounds: Quarter-mile hurdle race, won by J. E. Haigh, 1m. 8⅘s.; one-mile run, M. Ellis, Jr., 5m. 4⅕s.; three-miles walk, F. L. Lackmacher, 24m. 41s.

CRICKET.

STATEN ISLAND 2D VS. ST. GEORGES 2D.—The first match of the season, between New York clubs, was played at Hoboken, on the 15th inst., the contestants being second elevens of the Staten Island and St. Georges Clubs, the former winning by 29 runs. The game was one of the most interesting second eleven matches that we have seen for a long time, and from start to finish everything was on the bounce and everyone on the bound. For Staten Island, Mr. Dodge scored an excellent 40, and Mr. Davidge 21; Mr. James Eyre 13, and taking 10 wickets for 28 runs. For St. Georges, Mr. Campbell's 13 was top score for his side; Messrs. Ropes and Holland contributing 12 each. The score was as follows:

	1st Inning.	2d Inning.	Total.
Staten Island 2d	65	70	135
St. Georges 2d	62	44	106

FIXTURES.

May 22—Staten Island.—Staten Island 2d vs. Columbia.
May 24—Nicetown, Pa.—Germontown vs. Merion.
May 24—West Phils.—Belmont vs. Philadelphia.
May 24—Havreford, Pa.—Belmont vs. Chestnut Hill.

On May 10 the Young America met the Merion at Ardmore, on the Penn. R. R. As it was a one day's match only two innings were played—Merion, 124; Young America, 93. This is the second defeat the Young America has met with this season, but when the club gets settled on its new ground we expect to see them win as of yore. In looking over Philadelphia scores we miss the name of Mr. John Sarge, who, in our opinion, was for many seasons the safest bat that Philadelphia ever turned out. If gentle persuasion will not induce this gentleman to take the field, the other thing should be tried, for we will not feel satisfied until we see another generation trotting after his hits.

STATEN ISLAND 2D VS. COLUMBIA.—*Staten Island, May 22d.*—An interesting feature of this match will be that the Island club intend placing an entirely different eleven in the field from that which played against the St. Georges. The management of the Staten Island Club should be congratulated upon having such a large list of active members.

STATEN ISAND VS. ST. GEORGE.—On Saturday last, 17th inst., the first eleven of these clubs met on the Camp Washington Grounds, S. I., when the home club, as was the case on the 15th, again vanquished the redoubtable "dragon-slayers," this time, however, by five wickets. The day was dark, and in the afternoon a dense fog came rolling up, checking large scoring. Play began at half-past twelve, with the St. Georges at the bat, and when the ten were out—for Capt. Soutter played one man short—the tins showed only 36; of this total Bance had contributed a good 18. The Islanders began their first venture with delightful confidence, which, however, was somewhat nipped in the bud when the scorebook showed five men out for 13. Kessler then came to the fore, and by good cricket, assisted by the absence of a wicket-keeper, hit an excellent 25, not out, in which was a fine strong drive for 6. Roberts added a useful 12, when he was well caught by Mostyn at cover-point; and with 2 extras the inning closed for 57. During the intermission between the innings, the outward bound steamer *Britanic*, having Lord Harris' English cricketers on board, faced the grounds. The club's blazing colors (red and yellow) on the flag-staff were "officially" dipped, the *Britanic* answering with a full-flag salute and a fog-horn accompaniment. There was not an American on the ground who would not have shouted "Good-by, Lucas!" if he could have been heard.

At the beginning of the Georges' second inning, Giles and Bance put together 20 before the latter was finely caught by Lane off his own bowling. This same bowling, by the way, is remarkably good, and we believe it would be doubly effective had it the support of a good wicket-keeper. But alas! a wicket-keeper is a *rara avis* in these parts. Giles played in fine form, and had 27 to his credit before he was caught by Stevens. Moeran scored 12 rapidly, and with all out the telegraph stood 66.

The Island club had now only 46 runs to make to win. These were procured at the expense of 5 wickets Moore, 17, in his usual style; Kessler, 12, and again not out; and Roberts, 7, not out, being the principal scorers. The fielding throughout was unexceptionally good, particularly that of the home team, no extras being scored against it. Several gentlemen tried their hand at umpiring, and, of course, the customary number of errors was the result. The following are the totals:

	1st Inn'gs.	2d Inn'gs.	Total
Staten Island	57	46 (5 wkts)	103
St Georges	36	66	102

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

G. M. D., Columbus, Ga.—For birds' eggs send to Wallace, taxidermist, North William st., New York.

W. T. W., Philadelphia.—See our advertising column for bicycle, also something about the machines in another column.

L. U. L., McPherson, Kansas.—Where can I get designs for stage scenery? Ans. Address Dramatic Agency, 14 Union Square.

DOMINO, Flushing.—Seth Green's New book, entitled "Fish Culture and Fish Catching" can be obtained from George H. Meyers, 76 Chambers st., New York.

A. E. W., New York.—For second-hand four-oared barge insert an advertisement in this paper and if there is such a thing in American waters you will surely hear of it.

J. B. S., Lock Haven.—Where and at what price can I purchase a spike collar? Ans. Of M. P. Von Culin, Delaware City, Del., or at most any sportman's out-fitting store.

NEUROP, Delhi, N. Y.—Where can I get those peculiar pins used for bug specimens, to pin them to a card? Ans. Address James W. Queen & Co., Opticians, 924 Chestnut st., Phila. They are known as Entomological Pins.

W. J. S., Princeton.—Can you let me know whether one John Maccubbin still keeps a shooting resort at Nottingham, Prince George Co., Md.? Ans. Now, you've got us. Inquire of Chas. E. Coffin, Muirkirk Furnace, Prince George Co.

TRIX.—Berthon's recipe for rendering canvas boats waterproof is as follows: To 6 oz. hard yellow soap add 1½ pt. water, and when boiling add ½ lb. patent driers, 5 lbs. boiled linseed oil and 5 lbs. ground spruce ochre. Also, see last week's answers.

E. W. J., Tenants Harbor, Me.—I notice in your last paper that you have a copy of a book on Washington Ter., price $1. Can I get one from your office, or will I have to send to the Ter. for it? Ans. Send to M. Choix, Seattle, Washington, Territory.

E. G. F., Concord, N. H.—There are a number of journals devoted to poultry, some of which give more or less attention to the care of rabbits, white mice, birds, aad other such fry. Try the *Poultry World*, Hartford, Conn. A new chicken paper is started about every month.

T. W., Leesburg, Va.—What is the most convenient way of carrying an extra tip? Ans. Fasten it to a narrow planed lath or batten, seizing it (as sailors would say,) with cord at each end and the middle. If you have two or more tips, it would be better to carry them in a bamboo cane.

MALLARD, Ottawa.—On page 469, No. 24 vol. 10, FOREST AND STREAM, you state that "Dr. Carver took an occasional draft of coca elixir." Will you be kind enough to inform me if I can get the coca elixir in Canada? If not, where, the price and if it can be sent by mail? Ans. Coca pills, mailable, of Lyman & Sons, Montreal, $1.50 per 100 wholesale.

DICKSON, Baltimore.—What are Spratt's dog cakes worth, and in what quantities are they sold? What is considered a feed for a dog, in and out of work? Ans. At retail, 10 cents per pound. To be had from H. C. Squires, No. 1 Courtland st., in quantities of one pound and upward. About three per day would be sufficient for an average sized dog out of work, with two more when working.

PUGESEN, Wyoming.—Can you tell me if there is good fishing and hunting in the season in northern Georgia? Ans. Upper Georgia is picturesque and healthy, but it has no lakes or rivers that afford fishing, and game is scarce. There are a few trout streams in the mountains, and some black bass in the rivers. Ruffed grouse and squirrels are the principal game.

W. S. L., New York.—1. Are the Chesapeake Bay ducking dogs to be purchased in this city? 2. Would they be good dogs for tule shooting in California? 3. Is there an agency for George Paterson decoys in this city? Ans. 1. We do not know of any for sale here. You might get one of G. G. Hammond, New London, Conn. 2. Yes, excellent. 3. Do not know of any.

SUBSCRIBER, Norfolk, Va.—My setter dog 6 years old has a severe cough. After a severe fit of coughing he will throw up a small quantity of white flem which seems to relieve him for a short time. Ans. Give your dog the following: Friar's balsam, 15 drops; syrup of poppies, 1 dram; diluted sulphric acid, 5 drops; mucilage, ½oz.; water, ½oz; mix and give two or three times a day.

T. R. G., Dover, N. H.—Do raisers of dogs place so high an estimate upon buttermilk as an article of food as does Dr. Gordon Stables? In his "Practical Kennel Guide" he says, "Buttermilk is invaluable * * there is nothing like it. I swear by it." Ans. We do not know how many breerers of dogs have tried it, but, without being as enthusiastic as Dr. Stables, we believe it to be excellent.

C. H. W., Amesbury, Mass.—My pointer dog has a very bad cough, does not appear to be sick and I think it is caused by the bone in the throat. Is there any form of distemper that commences in this manner? Ans. The cough is probably caused by cold. Distemper sometimes commences in that way, but would be but a short time in developing. Give your dog one grain opium and one grain ipecac night and morning and it will probably relieve him.

P., Salem, N. C.—We are about to organize a sportsmen's club here. Will you be kind enough to tell us where we can get a copy of the rules, forms, etc., used in those organizations? Will you tell me the mame of the best and most practical work on sheep, the price and where I can get it? Ans. 1. Have sent you copy of Am. Club List containing Rules for organization. 2. Send your order for sheep book to Orange Judd Co., 245 Broadway, this city.

R. E. B., Pittsfield, Mass.—Please inform me the average growth of our common brook trout for months or year? Ans. The common brook trout usually attain a length of six inches at the end of two years, and subsequently increase in weight with varying growth. There is no fixed rule. They are in their prime at 10 years. A 10-year trout may weigh ten pounds, or only two pounds. Carp and pike live to very great ages—200 to 300 yers; the good trout die young. Twelve years is the average.

G. H. W., Red Bank.—Can you give me any information regarding black bass fishing at Clayton, N. Y., on the St. Lawrence River? Can I get accommodation for wife and two children? Will 8 oz. split bamboo fly rod answer for black bass fly fishing? Will the 15th of June be about the proper time to visit Clayton? Ans. Good hotel; good accommodation, good fishing; everything very good. We used an eight ounce bamboo trout rod for black bass in the Chippewa and Mississippi last year. The time you mention is the best.

D. M. Y., Morristown.—My setter dog is very lean, coat rough, eyes running, breath very offensive at times; eats very little, and at times ravenously; is greatly troubled with thirst, and drinks inordinately, often literally gorging himself with water and then throwing it up; does not digest his food; is very nervous, and when on a point trembles violently and soon becomes exhausted. Ans. Your dog has worms. Give him areca nut in the proportion of two grains for each pound of his weight, on an empty stomach; four hours after give him 1 oz. castor oil.

A. VAN B., Hackensack, N. J.—About two weeks ago my setter pup, eight months old, was attacked with a cough and running at the eyes. I gave him a dose of oil and bathed his eyes with a solution of zinc. The cough soon ceased, but the eyes still run. A few days ago a slight cough returned, and a sore not unlike a sty appeared on each eye. Appetite and spirits excellent. Ans. Give your dog one grain powdered opium and one grain ipecac twice a day. Bathe the eyes with lukewarm water. If the dog is not losing flesh, and his appetite is good, he will probably come out all right without any medicine.

L. S., Salem, O.—Where can I find the cheapest and best book on fish culture? State price. Ans. There is no American work on general fish culture, if we except the joint production of the Hon. Robt. B. Roosevelt and Seth Green, Esq., a small volume of 150 pages, which although it advertises itself to contain all that can be said on the subject of Fish Culture, is nevertheless to our view, meagre and imperfect. The price is $1, we believe, to be obtained of Geo. H. Meyers, 76 Chambers st. Livingston Stone's book entitled "Domesticated Trout," treats very thoroughly and intelligently of that branch of the subject. Price $1.75.

H. H., McKeesport.—1. My puppies 9 weeks old puff up and seem in great pain after eating. Not able to walk, the fore legs seeming useless, any more than being able to stand up, when they stick their noses on the ground and try to stand on their heads. They then sit down and bite at the rectum. In the course of half an hour they are all right again. Feed them on bread and milk warmed. Stools regular and healthy. I thought they had worms, but after using areca nut and castor oil, I could not find any trace of them. 2 Are the migratory quail expected from Europe this month? Ans. 1. We should certainly say that worms were the cause of the trouble. Unless the areca nut was given when they were fasting it would not be likely to have any effect. Try one grain of santonine for several consecutive days. It is better for very young puppies than areca nut. 2. Yes, but they have not yet arrived.

F. W. H., Silver City, Idaho.—Where can I get information about the taking of eggs from fish, to be sent to other places so they will keep for a short time and hatch. We wish to transfer some of the celebrated "red fish" caught in the Mountain Lake of Idaho. Ans. You can get a double transportation can from J. C. Hitchcock, Oconomowoc, Wisconsin, or you might easily make one yourself out of tin or wood. Our own plan, which Commissioner Webber of New Hampshire, approves, is to fasten a perforated wooden bowl to the bottom of a barrel, and set the barrel into a tub of water, so that the space between the tub and barrel will not be more than three inches. The swashing of the water in the course of transportaion aerates it, and keeps the fish alive. This is caused by the rocking of the barrel as well as the jolting of the car or wagon. The barrel should be perforated too.

W. E. F., Cambridge.—Would I find good shooting in Labrador during the months of July and August? Could I reach it by sailing vessel from Boston? What would the average expense be for such a trip for four months? Is it a close season for fishing and shooting during those months? How is the climate, temperate or cold? Ans. For passage to Labrador address M. M. Caick, 113 Franklin st., Boston. Fare $100. There are always many vessels sailing out of Newburyport and Gloucester about this time, in which you might secure passage; also from Yarmouth and Halifax, Nova Scotia, St. John, N. B., and Quebec. There is no close season for game in Labrador. Climate temperate but changeful from middle of June to first of September. Curlew arrive first of August. There should be no shooting before then. Better consult Mr. Hallock's article in *Harper's* magazine for April and May, 1861

BUNGEY.—Sir John Harington the translator of Ariosto had a famous dog "Bungey" concerning whom he wrote in 1608 to Henry Prince of Wales, eldest son James I, as follows. Let those of our readers who have followed Harington through the adventures of *Orlando Furioso* read this letter and remember it is the work of a poet:

May it please Your Highnesse to accept in as good sort what I now offer as it hath done aforetyme; and I may saye "*i pede fausto*," —but having good reason to thinke your Highnesse had goode will to likenye to reade what others have tolde of my rare dogge I will even give a brief historie of his goode deedes and straunge feats; and herein will I not plaie the curr myselfe but in goode sooth re'a'e what is no more nor lesse than bare verity. Although I mean not to disparage the deedes of Alexander's horse, I will match my dogge against him for a goode carriage, for if he did not a great Prince on his back, I am bolde to saie he did often bear the sweet wordes of a greater Princesse on his necke. He went from my house at the Bathe to Greenwhiche Palace and did deliver up to the courte there such matters as were entrusted to his care. This he hathe often done and came safe to Bathe or my house here at Kelstone, with goodlie returnes from such nobilitie as were pleased to emploie him; nor was it ever told our Ladie Queene that this messenger did ever blab ought concerninge his highe truste as others have done in more special matters. Neither must it be forgotten as how he once was sente with two charges of sack wine from the Bathe to my house by my man Combe; and on his way the cordage did slackene, but my trustie bearer did now beare himselfe so wisely as to covertly hide one flasket in the rushes and take the other in his teethe to the howse, after whiche he wente forthe and returnede with the other parte of his burden to dinner. Hereat Your Highnesse may perchance marvele and doubte, but we have living testimonie of those who wrought in the fieldes and espiede his worke, and now live to tell that they did muche longe to plaie the dogge and give storage to the wine themselves, but they did refraine and watchede the passinge of the whole business—I could dwell more on this matter, but "*jubes renovare dolorem.*" I will not saie in what manner he died. As we traveld towards the Bathe he leaped on my horse's necke and was more earnest in courtinge my notice than what I had observed for time backe; and after my chidinge his disturbinge my passing forwardes he gave me some glances of such affection as moved me to cajole him; but alas, he crept suddenly into a thorny brake and died in a short time. Having saide so much of him in prose, I will say something too in verse, as you will find hereafter at the close of this historie. Now let Ulysses praise his dogge Argus or Tobite be led by that doggy whose name doth not appear, yet coud I say such things of my Bungey (for so he was styled) as might shame them both. JOHN HARINGTON.

P. S.—The verses above spoken of are in my book of Epigrams in praise of my dogge Bungey to Momus, and I have an excellente picture curiously limned to remain in my posteritye.

ABOUT ANTS.—The larvæ of ants, like those of bees and wasps, are small, white, legless grubs, somewhat conical in form, being narrower toward the head. They are carefully tended and fed, bging carried about from chamber to chamber by the workers, probably in order to secure the most suitable amount of warmth and moisture. I have observed also that they are very often sorted according to age. It is sometimes very curious in my nests to see them divided into groups according to size, so that they remind one of a school divided into five or six classes. When full grown they turn into pupæ, sometimes naked, sometimes covered with a silken cocoon, constituting tho so-called "ant-effgs." After remaining some days in this state, they emerge as perfect insects. In many cases, however, they would perish in the attempt, if they were not assisted, and it is very pretty to see the older ants helping them to extricate themselves, carefully unfolding their legs and smoothing out the wings, with truly feminine tenderness and delicacy.

Under ordinary circumstances, an ants' nest, like a beehive, consists of three kinds of individuals: workers, or imperfect females (which constitute the great majority), males, and perfect females. There are, however, often several females in an ants' nest, while, as we all know, there is never more than one queen in a hive. The queens have wings, but after a single flight they tear off their own wings, and do not again quit the nest. In addition to the ordinary workers, there is in some species a second, or rather a third, form of female. In almost any ants' nest we may see that the workers differ more or less in size. The amount of difference, however, depends upon the species. In *Lasius niger*, the small brown garden ant, the workers are, for instance, much more uniform than in the little yellow meadow ant, or in *Atta barbara*, where some of them are more than twice as large as others. But in certain ants there are differences still more remarkable. Thus, in a Mexican species, besides the common workers, which have the form of ordinary neuter ants, there are certain others in which the abdomen is swollen into an immense sub-diaphanous sphere. These individuals are very inactive, and principally occupied in making a kind of honey—*Lubbock.*

EGGS AND EGG CULTURE.—The traffic in eggs in this country is estimated, by competent authorities, to equal $150,000,000 per annum. New York receives in a single year 530,000 barrels of eggs, valued at $9,000,000. In 1877 there were exported from this country 5,202,205 dozen eggs, valued at $668,701. It is claimed that Philadelphia consumes daily 80,000 dozen eggs. The approximate receipts of eggs in Boston for the year 1878 have been as follows: 107,627 cases, containing 49 each; 43,000 boxes, containing 100 dozen each, and 17,783 barrels, containing 79 dozen each. These figures give, as a result, 168,410 packages, containing 5,516,652 dozen eggs, or 78,187,836 single eggs. It is estimated that fully 95 per centum of all receipts are consumed in Massachusetts, and that 80 per centum are consumed in and near Boston. In nearly all small towns and villages enough eggs are raised to supply the local demand. The number of eggs consumed in this State, when computed, is found to be an average of 52 eggs per year to every inhabitant, or one egg per week. All these eggs come to Boston from various sections, in about the following proportions: Eastern eggs, mostly from Maine by boat and rail, at all seasons of the year, 24 per centum of total receipts; northern eggs from Northern New York and Canada, 37 per centum; P. E. I. eggs from Prince Edward's Island, between the months of April and November, 17 per centum; western eggs, 19 per centum; and southern eggs, from Virginia during a few weeks in the spring, 3 per centum. Of the northern eggs the greater part comes from Canada, and this trade is constantly increasing. A single Boston firm, the largest receiver of eggs in this market, handled nearly 600,000 dozen eggs last year.—*Boston Cultivator.*

A SOFT MONEY RAT.—In the office of the Osborne House, at Auburn, N. Y., is the stuffed effigy of a rat. Some time ago the proprietor was much perplexed and annoyed by the frequent disappearance of cash from the money draw. A strict watch was instituted but where the money went and how it went was as much of a mystery as ever. Finally everything was explained by the discovery of a rat making off with a greenback. The rodent's savings bank was ferreted out and a snug deposit of sixty-nine dollars found neatly disposed in its sleeping coach. The Chinese live on rats, we could live on rats' nests like this.

FIRE-ARMS, AMMUNITION AND ALL ARTICLES CONNECTED WITH THE SAME, AND SOLE AGENT FOR

J. Stevens & Co.'s Celebrated Arms.

Mr. Charles Folsom :

WARREN, CT.

GENTLEMEN—The little .38 calibre rifle you sent me on the 5th inst. is *all right* in every respect. In a trial here last Saturday on our 500 yard range, I used it against the Wesson, Maynard, Henry, Sharp and Remington, and five of the Billings and four of the Williams muzzle-loaders, and did not have to take the second place for any of them; although I was tied by one, which has heretofore been the "boss."

Yours truly, H. W. LYFERD.

A GREAT INVENTION!

Imitation
STAINED GLASS.

Patented Dec. 3, 1878.

CURTAINS, SHADES AND BLINDS

dispensed with. New, Elegant, Cheap and Durable. It produces all the unique effects of a richly painted or **Elegantly Stained Window**. It is easily applied to the glass in Windows of Houses, Churches, Public Buildings, Steamboats, Street and Railroad Cars, Libraries, Parlors, Offices, Bath Rooms, Stairways, Transoms, Vestibule Doors, etc., with the full effect and brilliancy of variously colored ground glass. The article has *just been patented*, and not a single agency has as yet been established.

ONE GOOD MAN in each State wanted, to whom exclusive territory will be reserved for five years.

SAMPLES of three of the most beautiful styles will be sent prepaid with full instructions, WHOLESALE PRICES, etc., on receipt of $1.00.

Agents Apply to { L. LUM SMITH, Patentee & M'f'r's. 717 Sansom Street, Sole Agt. for U. S & Canada. PHILADELHIA, Pa. }

READ the following Extract from the *Representatives Agents' Paper* of the world, THE PHILADELPHIA, PA., AGENTS' HERALD:

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and extraordinary sale. It will offer the best opportunity for coining money that has ever been presented to Agents, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the Agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

AGENTS' HERALD

THE LARGEST, SPICIEST AND ONLY REPRESENTATIVE PAPER OF ITS KIND.

ACTIVE GIVEN EMPLOYMENT
GENTS GOOD EVERYWHERE

By over 200 responsible advertisers in this month's issue of the AGENTS' HERALD. TRADE— **"BEATS THE WORLD."** —MARK.

OLD JUDGE SMOKING TOBACCO.

The Only Tobacco Ever Manufactured that Does not Bite the Tongue.

"OLD JUDGE" CIGARETTES.

Manufactured under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effect of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

FOR SALE BY ALL DEALERS.

GOODWIN & CO., Manufacturers, 207 & 209 Water Street,
NEW YORK.

THE LATEST! **FRAGRANT VANITY FAIR**

Sportsmen's Routes.

TO SPORTSMEN:

THE PENNSYLVANIA R.R. CO.

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROTTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

The lines of

Pennsylvani Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, RENOVA, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Also, to

TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

"THE FISHING LINE"

TAKE THE

Grand Rapids & Indiana R.R.

Mackinaw, Grand Rapids & Cincinnati Short Line)

FOR THE

Trout, Grayling & Black Bass Fisheries,

AND THE

Famous Summer Resorts and Lakes

OF

NORTHERN MICHIGAN

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equalled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.

The TROUT Season begins May 1 and ends Sept. 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE also abound in large numbers in the many lakes and lakelets of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The Climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma

affections.

The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address A. B. LEET.
Gen'l Pass. Agent, Grand Rapids, Mich.

NEW HAVEN, MERIDEN, HARTFORD, Springfield, White Mountains, Montreal and intermediate points. The new palace steamer *C. H. Northam* leaves Pier 25, East River, daily (Sundays excepted) at 3 P. M. A passenger train will be in waiting on the wharf at New Haven, and leave for Springfield and way stations on arrival of boat.

NIGHT LINE—The *Continental* leaves New York at 11 P. M., connecting with passenger train in waiting on wharf at New Haven, leaving at 5 A. M. Tickets sold and baggage checked at 944 Broadway, New York, and 4 Court street, Brooklyn. Excursion to New Haven and return, $1.50. ONE OF THE WORLD'S WONDERS,

SOUR LAKE.

The Great Watering Place of Texas.

This remarkable natural phenomenon consists of a circular pool about an acre in extent, in a continual state of ebullition, produced by escaping gases. Around the lake are a great number of wells and springs, of thirteen distinct varieties of water—sulphur, soda, alum, iron, etc. The waters of the lake and many of the springs are very acid. A specific for rheumatism in its worst forms, dyspepsia, chronic diarhœa, skin, kidney, venereal and female diseases. Fishing excellent and game abundant at all seasons. Open all the year. The tourist, whether for health or pleasure, and the student of nature, can find no place more interesting. Sixty miles east of Houston on New Orleans R. R. Board, week, $10; month, $35. Address

J. A. MERCHANT,
apr24 3mos Sour Lake, Texas.

GOODSELL HOUSE.

M. JENNINGS, - - Manager.

BROOKFIELD CENTRE, CONN.

Brookfield Centre is situated on the Housatonic Railroad, three hours ride from New York city and about an hour from Bridgeport, Conn. Its location is on high ground, healthy and picturesque, the neighborhood abounding in pleasant drives. The Housatonic River flows near it, where good bass and other fishing can be had. The hotel accommodates about thirty guests, and is pleasantly arranged. The bar, billiard room and dancing room are separate from the hotel building. Brookfield Centre has an Episcopal and Presbyterian church; services every Sabbath.

Through cars from Grand Central Depot, New York, via N. Y & N. H. Railroad, or take Bridgeport boat from the East River.

PURE TIN-COATED & BURNISHED DROP AND BUCK SHOT.

AMERICAN STANDARD--EAGLE BRAND.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM: NEW YORK, Jan. 13, 1879.

Having been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot my 6,000 ball match, Jan. 8 and 9, with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,000 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting I used them until they became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

THE LEROY SHOT AND LEAD M'F'G CO., NEW YORK.

The Delaware Shell.

Our Improved Shell Now Possesses the Following Merits:

1st. Perfect Uniformity of Flange

PRICE AS LOW AS ANY OTHER SHELL.

ADDRESS, **Delaware Cartridge Co.,**
WILMINGTON, DELAWARE.

Dittmar Powder

THE CHAMPION POWDER

OF THE WORLD.

NO SMOKE--NO DIRT--LESS RECOIL

STRONG AND SAFE.

SUPERIOR IN EVERY RESPECT TO BLACK POWDER

6,013 SHOTS WITHOUT WIPING IN A SHOT-GUN.

Captain Bogardus' great feat of breaking 6,000 glass balls has proved that the powder is all that is claimed for it. The barrels, without being wiped, were as clean at the end of the match as after the first shot. The fact of the firing of so many shots in succession, and that the Captain has used about 200 pounds of the same powder during the last year in one gun, shows, without a doubt, that the powder is EFFICIENT, UNIFORM and SAFE.

The rifle powder is also without a rival. The standing challenge to test this powder against any other has never been accepted. Many riflemen throughout the country have been successful with the powder, as, for instance, Mr. E. B. Souther, of the Massachusetts Rifle Association, won last year two gold medals, two silver medals, two revolvers, and four other prizes in using the DITTMAR RIFLE POWDER.

Greater facilities and greater demand have enabled us to reduce the price of the powder considerably, and the fact that the Government Armory at Springfield is making now all kinds of testing machinery for us will enable us to produce always a uniform, and in every way reliable, article.

TRY OUR NEW WATERPROOF SHOT-GUN AMMUNITION. Cheap, and warranted to give satisfaction in every respect. Ammunition for gallery rifle practice always on hand, and all kinds of rifle ammunition made to order.

SEND FOR CIRCULARS AND PRICE LISTS.

BIRDS AT PLAY—A FOREST IDYL.

[Translated from the Swedish for FOREST AND STREAM by A. T. LINDHOLM.]

SHOULDER thy rifle, thou hunter so bold,
And stealth'ly descend down the path through the wold;
For now is the time, while from glimmering height
The dim, fading stars yet are shedding their light,
And Earth's slumbering still, under Night's balmy wing,
On the flower-decked bosom of Spring.

Be careful the bird, like the lover, is shy;
And watchful is he; never closes his eye.
Now, quietly, 'pon tip-toe, proceed on thy way,
For soon shall the birds commence play.
Lo! the shades of the night begin fading away
For the quickening light of the dawning of day;
And with a red glare the mountain tops glow,
Yet 'tis dark in the valleys below.
See'st thou yon hillock with forest trees crowned,
Where like cloudlets the shattered mists flit around,
And the tree-tops are tinged by the glittering spray?
Ah! there are the birds now at play!

Hark! now their love notes, saluting the day,
Awaken the fair ones to innocent play.
How tender those notes, full of longing so sweet,
With which the fond singer his bride doth greet!
Now courting the coy one, who's pretending to know
But little, if aught, of his grief and his woe.
List! in how sad and how mournful a strain:
He telleth the harsh's oft-told legend again;
Of desires immortal, of undying faith,
And an untiring hope that abideth to death!
Oh! bard of the forest, who can thee disdain,
While Nature thou speak'st in thy wild, gushing strain?
Love! oh, thou mystic, unquenchable flame,
Though constantly changing, yet ever the same!
Life's creative word! Nature's e'erbeating heart!
Ah! the highest of rapture and pain thou art
On earth as in heaven. Sing happy and free,
No art in thy measures can imitate thee!
But—all of a sudden the singer's notes grow
Agitating and wild;—he's encountered a foe!
And this rival he threatens to deadly assail;
He must drive him away over hillock and dale.
And who can his violent wrath put to rest?
For of war song and battle now heaveth his breast!
Same battle's to be fought, as at Troja of old,
As an Iliad of the forest now here might be told:

Menelaus shall fight against Paris—a bride
Is the prize to contend for;—the crowd draws aside—
Fair Helena is seated, though not on the wall,
But high from a fir-tree, majestic and tall,
Looks down on the fight;—for a mate she must seek,
Howe'er the battle may turn, between Trojan and Greek.
With deafening war-cries ascending the sky,
Now, breast against breast, and with fire-flashing eye,
The warriors meet, and, with thundering might,
Their death-dealing weapons employ in the fight.
Fierce rageth the combat, and reeking in blood
It spreads consternation and dread through the wood.
Yet the contest is short, and the battle doth cease,
When, dismayed, overpowered, Paris he flees.
But ah! a Pandarus bends treacherous bow,
And the loud, boasting Achean victor lieth low!

Now, victorious shouts through the forest resound;
With many accounts of brave deeds they abound!
And the fair and the loved one is hailed with rejoice,
Though still there is wrath in the brave singer's voice.
But it cannot abide in a fond lover's breast,
And soon, by degrees, it is soothed to rest;
And in softened cadences floweth the lay
Till, in faint uttered sighs, it is melting away.
Now, hunter, be quick, follow swiftly thy trail!
The moment is near when th' bird's vision shall fail;
When ceased has his long, dying note—hold thy breath!
Stoop down—and be still as the stillness of death!
What matters it thee if the hillock is steep,
And the water, beneath in the fen, it is deep?
Make thy steady advance, and the precious game
In a moment is thine. Therefore, ready, take aim!
Fire! Ah! the ball pierced the singer's brave heart,
Yet victorious in death:—for he fell free from smart.
But the love song is hushed! Ah! yet happy was he,
For he sang and he died in love's sweet ecstacy!

The beautiful poem, "The Birds at Play" (*Fogel-Leken*), of which the above is an excellent translation, is from the pen of the late Bishop Esaias Tegner, the world-renowned author of "*Frithiof's Saga.*" The bird to which reference is made in the poem is the Capercailzie or Cock-of-the-Woods (*Tetrao uro gallus*). This most noble game bird, by far the largest member of the grouse family—the male bird often reaching a weight of twenty pounds—inhabits the pine and spruce forests of northern Europe—Scandinavia, Finland, Russia, Bohemia. In former times—in fact, already so long ago that there are records of bows and arrows being used for the purpose—this bird was mostly hunted and shot when at play in springtime. The song or play which he performs from his night-perch, mostly one of the lower limbs of some large pine or spruce tree, commences at the first break of day, and consists of three widely different notes: First, a loud, snapping tune, repeated a number of times in quick succession, and expressed by the word "pellopp." This is wound up by a single guttural sound, somewhat like that when the cork is drawn from an empty bottle, and is by the hunters called the "gulp" (klunk, Sw.), and immediately followed by a lower, hissing cadence. While omitting the first of these notes the bird is wide awake and on a sharp lookout for any approaching danger, but after the second and during the continuance of the third he is perfectly deaf and blind. The hunter takes advantage of this. Entering the forest where these birds are known to resort, just before early dawn, he proceeds slowly and cautiously until he hears the first note, then remains perfectly still while it lasts and until the "gulp" is heard, which is the signal for the hunter to make three or four rapid strides forward, after which he again stands as still as a statue until, a few minutes later, his time for moving again comes on. In this way the hunter can gradually approach within easy shooting distance of the bird. But this mode of hunting the Capercailzie is now a thing of the past, at least on the Scandinavian peninsula; no "treacherous Pandarus," or any other pot-hunter, will be likely hereafter to disturb his spring frolic, for according to a most stringent game law of those countries, the close season, as well for the bird in question as all his congeners, extends from Jan. 1 to Aug. 15. But a sportsman, hunting in the wild pine forests of northern Europe in proper season, may have the grand opportunity—as has been the good fortune of the writer—to behold a dozen of these birds, as big as turkeys, rise simultaneously, and with the din of a thunder clap, before his pointing dog, within twenty yards from the muzzle of his gun, and offer an easy mark, provided our sportsman is cool enough to keep back the buck-ague.

Not very social or gregarious in his habits at any time, the Capercailzie is particularly anxious during play-time to have all to himself a wide range, including all the fair ladies of his acquaintance within reach, for he is as much of a polygamist as any "Latter Days' Saint," and as jealous of his harem as a Turk. If two bold champions happen to be within each other's hearing while their love making concerts are going on, a desperate fight is sure to fellow, as described so graphically in the poem. J. S.

For Forest and Stream and Rod and Gun.

Down the Big River—No. 5.

(Continued from our issue of May 8th.)

AFTER packing our portables, having partially dried them after their week's drenching, we started down for Hickman, Kentucky, at which place we mailed postal cards home and spent our last dime for molasses. We had the misfortune, two weeks previously to drop nearly all our money overboard out of our pocket while bathing in the river, and have been short ever since. Expect to find funds at Memphis. We got but a pint of molasses for our money, which the shop boy said was at the rate of fifty cents a gallon, and we took his word for it. Hickman is quite a pretty place perched on a hill overlooking the river, but seemed dead so far as business was concerned. They were playing chess in the freight office, and clerks and proprietors were lounging idly in front of nearly all the stores. Saloons seemed to preponderate.

We camped a few miles below the town, and by the time we had got things arranged it was quite dark. We had slapjacks for supper because we could get nothing else. We were beginning to tire of this fare which had grown monotonous. Besides, our flour had begun to smell bad from being constantly damp, and cooking did not altogether remove the taint. Still, to hungry palates it was tolerable, and thus far we had not grumbled. I took some of the slapjacks on my tin plate, and poured upon them some of the ten-cent molasses of Hickman. It smelled good, and promised to give a relish to the cakes; but alas! for the short-lived hopes of man. Along with the syrup, a large number of small dark objects gurgled out of the bottle and settled down on the cakes. I thought at first they were chrystallizations of sugar, but was soon undeceived. They were flies—dead flies. There were fifteen, more or less, to each cake, and on looking through the bottle at the camp-fire we were forcibly reminded of the Moodyite hymn, "Still, there's more to follow." Without supper, but with a mournful heart, I crept into my hammock and went to sleep.

Tuesday—Before we got up several hogs came prowling around, and it was the noise made by their nosing among our dishes that awakened us. We got up, and strained the flies out of our molasses, and spread our flour out in the sun to dry, but the bad smell still clung to it. We had half a sack of corn-meal left, and of this I proposed to make a hoe-cake, but found on examination that it smelled worse than the flour did, so we threw it overboard. We breakfasted on strong-smelling pancakes, sweetened with fly molasses. We ate them, but did not enjoy them. If any reader of FOREST AND STREAM resides in Hickman he will do the writer a favor by castigating the boy who sold me that molasses. He was in the first boat warehouse as you go up from the wharf. About noon we embarked again. The river slowly widens, much more slowly than I had expected. To my eye it is about one-third wider than at Davenport, but when we have to pull across it it seems twice as wide. Until lately we have not seen its full width save at intervals, owing to the continuous string of islands which overlap each other. They are getting less numerous now, but larger. There are many little creeks running into the river, but it is rarely we see their mouths, or, seeing a dark indentation in the line of cotton-woods opposite, do not recognize it as the mouth of a stream. The distinguishing characteristic of our camp to-night is mosquitoes.

Wednesday Morning—My last entry last night was to the effect that there were mosquitoes here. I can substantiate the statement now. Not a wink of sleep did I get last night. They came around in countless hordes and took the camp by storm. I rubbed my skin with essence of pennyroyal till it was raw, but it only seemed to tickle the mosquitoes. After trying in vain to sleep, I got up and built a roaring fire and lay down in the smoke, and thus managed to live through the night.

The banks are becoming more thinly settled now, the towns being farther apart and the "deadenings" much less numerous. The banks are wooded, and from the opposite side present the appearance of an impassable wall of trunks and leaves.

We came to-day upon an interesting phenomenon—that is, it was interesting to us. We got into a small indentation in a channel cut across the sandbar of a bend, and as the current did not reach it, the mud had settled and left the water with the clear hue of the *alta* Mississippi. It was a welcome sight to us, for we were terribly hot and thirsty; but alas! the water was hot, too—hotter than we were. We saved a pailful of it, however, for our coffee to-night.

Between Madrid Bend and Morris Landing we saw on the shore a band of men who were bent on lynching somebody if they could only catch him. There were about one hundred and fifty of the "Regulators," armed to the teeteth.

Thursday—An uneventful day, making just four weeks since we left home. We made pretty fair time, considering that we have had no sleep for two nights. We are camped just below the mouth of the Obion River. Hale's Point is just above us, and Wright's Point on the opposite side. They are what I call twenty-five cent towns. They look as big as a city on the map, but it is quite possible to sail close by them and not be aware of their proximity. They consist of eight or ten houses, generally so scattered as to be easily mistaken for single clearings with the usual outbuildings. White houses are rare in these towns.

I shot at a mud-hen to-day, but missed. On a strip of sandy beach we saw a spot where a number of turtle eggs had been dug up and emptied. The four-toed tracks in the sand suggested a 'coon as the probable robber.

Got completely disgusted with our flour this morning, and threw it—about thirty pounds—overboard. No more grub in the larder.

Saturday—A glorious morning, after a miserable night. Indeed, all nights are miserable now, only varying in intensity. Away up north of here, a man told us that when we got below St. Genevieve we would be eaten up by mosquitoes; but, ye gods! who could have imagined it would be like this! I have not slept for nights on account of them.

Last night we encamped at the base of a chalky bluff, where nothing but a few willows grew, and a stream, as if a spring came, tumbling down a cleft it had cut for itself in the clay bluff. It was not a spring branch, however, but only the waste water from an irrigating ditch cut through a farm on top of the hill. At the bottom of the bluff, clay slate cropped out in places, and numberless small stones lying around were encrusted with the hardened sediment of the spray of the water washed down from above. We were not troubled much by mosquitoes here, but sand-flies, or chigas, or something of like character, kept at us all night, making our bodies smart and prickle almost unendurably. We were nearly upset while trying to land here. The current was very swift, and carried the boat sideways against a small tree growing out of the water. The cover, which was down and lying loosely across the boat, was pushed to one side till it overbalanced, and we began dipping water. As quickly as possible I sprang up and stood on the down-stream gunwale of the boat, to force it down to a level, and then, by hard pushing and pulling, we managed to get clear.

This morning, when we got all ready to start, we found that our rudder was missing. It had hung loosely in the stern, and the swell of a passing steamer had unshipped it and sent it adrift. This was by no means a small loss, for

our boat is keelless, and where there are so many currents and counter-currents as there are along here, it is not easy to keep a straight course. With a board torn from the lining of the boat, and the branch of a young pine (by the way, the first evergreen I remember seeing so far), we rigged up a temporary arrangement, which answers our purpose, though not remarkably well.

The day has been terribly hot, and we much feel the want of some cooling drink. We rarely see springs, and nearly as rarely do we pass a house that can boast of a well. Even cistern water is not often to be had. I don't know whether it is laziness or indifference that causes it, but the people here seem to think cool, clear water a very unessential luxury, not worth the trouble of digging after. Cistern water is the usual source of supply with those who have energy enough to dig a shallow hole and board it up and run a trough to it from the eaves of the house; and this water, stored up and stagnated for months, sometimes, has often a disagreeable taste and smell, reminding you of rotten wood. Even in towns we have inquired in vain for a glass of cold water. The river water, when allowed to settle, makes tolerable lemonade; but we have no lemons.

The clay bluffs under which we camped last night extend southward for several miles on this, the Tennessee, side. The sub-stratum is a whitish clay, and the later deposit a reddish sand or loam, or both. They rise almost perpendicularly from five to forty feet above the water's edge.

One by one we meet with signs that we are approaching a Southern country. We passed several to-day, such as we had not noticed before. Close by the bank would be clumped a number of low, one-story, apparently single-roomed dwellings, whose coat of whitewash could not conceal their age, nor metamorphose into modern houses the "negro quarters" of *ante bellum* times. Beyond them would appear the large girdled clearing, the "deadening," and away off in the trees could be seen the "Big House," where of old the planters used to enjoy the pleasures of their peculiar, *insouciant* existence. There is a halo of romance around these places which, despite all sentimental notions about the glory of the Union and the degradation of slavery, makes one regret instinctively that the old *regime* has been done away with.

About noon to-day we tried to camp long enough to cook coffee at a place which looked inviting, but we found that the apparently dry beach was soft as mush, and about three feet deep. Caywood tried to walk ashore on a dead tree, and, on taking a false step, found out exactly how deep the mud was. It reached above his knees.

This afternoon we shot a woodpecker, the only living thing seen to-day, and in lieu of something better to eat, we made a soup of it by boiling it in about two quarts of water. It had a very transparent character, but we have not had a morsel of anything for three days, and woodpecker soup is better—a very little better—than nothing. We have half a pint of beans, which we are saving for to-morrow—Sunday.

Sunday Night—A terribly hot day. Too hot to stir out, but we have to stir, nevertheless. It rained last night for the fourth time this week. Rainy nights and scorching days are the principal climatic characteristics of this river. We started without breakfast, and went on without dinner, and have decided to go to bed without supper, saving our beans till to-morrow morning. We floated nearly all day. We do not wish to get to Memphis before to-morrow noon, to give time for our remittances to get there first. If I don't make victuals suffer then, I'll know the reason why. I am terribly hungry, and so is Caywood; but I don't feel it so much to-day as I did yesterday. Around our camp to-night are our first cypresses: huge things, with the proverbial ugly excrescences on their trunks, which, it is said, Yankee speculators of ye olden time used to sell for hams, the lime-washed covering concealing the cheat. We are about twenty-five miles from Memphis, according to the map. A man going by in a skiff tells us it is about twenty miles if we go through the "shute of forty," but a little farther if we go around. We shall not go around. The same man tells us that there is a brackish pond out in the woods where deer often come to drink. He has given me the directions for finding it, and to-night I am going to try a watch for them. A haunch of venison would be very desirable just now. Fish are jumping all around, but on our trying to catch one our only luck is to catch a snag, and break our pole. Ten dollars gone, and "ne'er a catfish."

Geologically speaking, there is very little of interest to be seen along the southern Mississippi. With the exception of a few bluffy points, the voyageur meets nothing but mud, mud, mud, sometimes of a sandy nature, but more often the pure, sticky, unadulterated article. For twelve hundred miles I remember only three patches of gravelly beach. In places the banks are shelving, but more often they are from one to ten feet perpendicular. The shelving banks are bare of weeds, and generally lined with cottonwood trees. The high banks have a sort of weedy verdure. Up in the bluffy country, above Dubuque, it is of course different; but, excepting the columned bluffs of Grafton, Ill., and the clay hillsides of Chalk Bluffs, Ky., there is nothing of especial geological interest below the rocky cañons of Northern Iowa. True, the knowledge that these muddy banks are the creation of the mighty river that flows between them might give them a brief interest; but a night's camp on a beach would rob the spot of every scintilla of the charm given it by scientific knowledge.

Below Cairo the river begins to show its crookedness. It bends and twists like a wounded snake, and the crookedest of crooked whisky was never half as sinuous. With the exception of a single stretch of about twenty-five miles, just above the mouth of the Arkansas River, there are not five miles between Cairo and New Orleans without its bend, sometimes east, sometimes west, and by no means rarely due north. These bends have long sandbars stretching out nearly to the opposite shore, producing a very miserable feeling in the mind of the voyageur who has pulled twenty-five miles since dinner, and has to get around the point before he can find a suitable camping place. Sometimes, however, there are "shutes" running across these points, by which the day's journey can be considerably shortened.

We encamped on an island in Northern Mississippi, which thirty years ago was part of the State of Arkansas, and is still claimed by that commonwealth, though the river now runs between them. The trees which line the banks are all deciduous; the cottonwoods predominating in the south, oaks and maples and willows more abundant in the north. Of undergrowth there is an abundance, but it is of a very disagreeable nature. I saw but one vegetable curiosity (to me), and that was the draped trees, first noticed above Chester, Ill. They are quite common farther south, sometimes standing alone, but more often appearing in clumps. I have seen whole acres of the tall, slender cottonwoods, in which, with the exception of two or three feet at their bases, not a square inch of trunk or branch was visible, the rest being closely matted with a trailing parasite. The appearance of a forest thus draped, especially when the red trumpet vines are mingled with the common trailer, is strikingly picturesque.

As we get farther south the vegetation assumes in places a character more interesting to the Northerner. Besides the ever-present cottonwoods, the cypress is occasionally seen, with the pseudo-acacia and others of lesser note. The woods in places become a tangled brake, half-regular undergrowth and half-creeping plants. These trailers are of three kinds—the poison ivy, the red trumpet vine and, less common, the wild grape. The first of these forms the principal drapery of the enrobed forests. In those woods where the trees stand farther apart the trailers drop from the branches in graceful festoons, forming pictures worthy the portfolio of a first-class artist. In these spots nothing disagreeable meets the eye. The brown of the tree-trunks is wholly concealed by the green of the vines, and this color forms a pleasing contrast with the red of the trumpet blossom.

The cottonwood does not flourish far from water. It is a splendid tree for a grove when planted far enough apart to allow the branches to spread, but when planted near together will soon grow to resemble a grove of bean-poles, so tall and slender will be the trunks. The tree is a valuable one for travelers, but is not worth much for anything else. Its market price in Mississippi, we were told, is one dollar per cord.

Kingfishers, two species of woodpeckers, a few ducks, one goose, one mud-hen, numbers of starks, crows and turkey-buzzards innumerable, quail and snipe in the northern parts, one bald eagle, two owls, whippoorwills and nighthawks, with a few singing birds, are all the birds I find noted in my journal. No; there was one other, a bird more interesting to me than all the rest. It was a kind of gull, or tern, first noticed above Cairo, but becoming more and more numerous as we proceeded southward. In Tennessee and Mississippi the sandbars and floating driftwoods are fairly alive with them. They are about the size of a turtle dove, but with a longer, though proportionately narrower, spread of wing, the pinions being so long in proportion to the size of the body that at every flap when flying it seems as though the wings acted like a pair of levers to lift the bird spasmodically upward, causing its flight to resemble a series of impulsive leaps through the air. They fly fast, and this jerky movement gives them the appearance of being always in a hurry. When they alight, whether on sandbar or drifting log, they bring up so suddenly they have to hold their wings poised straight above their backs for a moment, as if to preserve their equilibrium and keep them from pitching forward on their heads. When poising in the air, watching for fish, they keep their wings going in such a manner they remind one of a huge butterfly, and for such I often mistook them at a distance. They have sharp, querulous voices, and are continually using them, whether at rest or on the wing. Their notes give the hearer the impression that they are of a snarling and spiteful disposition. Their color is a light cream underneath, darker on the back, with a black spot on the head, yellow bills and legs, webbed feet and four toes, one of which is set away back from the other three. When fishing they circle about for awhile, then pause and turn head-downward, and drop, rather than dive, into the water, usually going completely under. When they come up, if successful, they fly to the log or sandbar where their mate is sitting, and alighting a foot or two distant, begin to chatter away as if in congratulation over the prospect of a square meal. When they have chatted to their hearts' content, they waltz coquettishly up to each other and divide the luckless minnow between them. They lay their eggs, two in number, on floating *debris* or naked sandbar, without making the slightest attempt at a nest. The eggs are about as large as a whippoorwill's, lightish in color, with one end slightly blotched.

The entomologist alone would find a "surfeit of sweets" in such a voyage. Even I, who know little or nothing of bugology, am interested. True, most, if not all, of the bugs to be met with are already well-known to scientists, and "that horrible sense of the *deja connu*" robs the pests of much of their charm, scientifically; but socially they make themselves known to each voyageur with all the charming freshness and originality of new acquaintance. First on the list is the mosquito. He is very numerous in places, and the places are also numerous. He is always the same lively, singing, tormenting little "cuss," so famous in books of out-door life. I mention him first because, though other bugs are very abundant, there is more mosquito to the square inch along this river than of all other bugs combined. Then there are spiders of every variety—water spiders, and tree spiders, and ground spiders; spiders that dart on their prey, and spiders who catch their fish in nets; black spiders and gray, and red and spotted and striped ones. Flying things there are of every description and of every degree of disagreeableness. Beetles innumerable, and ants by the million, and little gnats by the cart-load. I believe I saw more bugs during this six weeks of river life than I ever saw before, and I have seen a few bugs, too, I reckon.

GOOSE AND DUCK SHOOTING IN THE ROCKY MOUNTAINS.

EDITOR FOREST AND STREAM:

VIRGINIA CITY, Montana, April 5, 1879.

The past winter was an unusually long one, but at last, with the first spring days, came geese and ducks in fair numbers, though the flight was by no means a heavy one.

On the 14th of March I received the following brief, gratifying dispatch: "Geese are here. The first flock came in last night."

Then there was "hurrying in hot haste," and on the 17th, in company with Mr. Ed. G. Harendeen, a true sportsman and fair shot, I started for what is known here as the Madison Island. An island would give one the idea that the place mentioned was dry land surrounded by water, as our geography used to tell us; but such is not the case with our island. It is rather a low, marshy tract, many thousands of acres in extent, gullied with sloughs and pits, surrounded by high ranges of mountains, and formed by the overflow of the Madison River, which here divides up into five separate and distinct channels before it enters a narrow canyon, making just such a resort as geese and ducks do most admire. This locality has been my favorite hunting-ground, both spring and fall, for several years.

A drive of seventeen miles, over a snowy range, brought us to our destination about three o'clock P. M., giving us ample time to pitch our tent, arrange camp, and do a little reconnoitering. We found game fairly plentiful, and brought a few birds to bag before dark. About an hour and a half after the sun slipped out of sight behind the high mountains to the west of us, we heard ducks whistling over camp, and they seemed to be settling in a pond a couple of hundred yards to the northward. I asked the boys (Ed. and the teamster) if they had ever shot ducks by moonlight, to which they replied with a smile that they had "heard of such things—just heard of them, that's all." I drew my gun out, and then they laughed audibly. Then I saw it was either ducks or disgrace, and I started for the pond, which I soon reached, and found that my surmise as to the ducks alighting in it was correct, but I could not approach near enough to them to get a shot on the water. They took to wing with a mighty rush, from which I concluded they were in considerable numbers. Soon a dozen or more came whirling back from the west, giving me the advantage of the still lingering twilight. On they came, and when near enough I "turned loose," and dropped two—one for each barrel. I had barely time to reload, and Dick to retrieve the two ducks I had killed, when another flock was in range, and I repeated, with the same result. This night cannonade made them shy, and after a round or two more, at long range, I went to camp with my two pairs of ducks, and a saved reputation. The next morning I picked up another pair, and a few days after Ed. found another duck that I had killed. They were all widgeons.

I might give a detailed account of our hunt, but let it suffice to say that it was a most enjoyable one, barring the stormy weather, and that our success was all that reasonable mortals could wish for. Our score included twenty-five geese and ducks, mostly mallards and widgeon; not lean in flesh, like the Cleveland Doctor's, but in fine condition. I never have seen fatter at this season of the year. K.

Fish Culture.

DO ALL CALIFORNIA SALMON DIE AFTER SPAWNING?

PROF. BAIRD of the Smithsonian Institution at Washington has kindly sent us the annexed correspondence, relating to the California salmon, which contains some facts of much importance:

SAN FRANCISCO, California, May 8, 1879.

PROFESSOR BAIRD:

I send a letter with this which, if you deem advisable, you may publish. It is conclusive that Sacramento salmon do not all die after spawning.

Being addressed to you and published by your authority, it may do much to correct the widely prevalent erroneous impression that other laws govern the habits and characteristics of this fish from those which control the Atlantic salmon.

Yours, (Signed) B. B. REDDING.

SAN FRANCISCO, California, May 5, 1879.

PROF. SPENCER F. BAIRD, U. S. Fish Commissioner, Washington D. C.:

Dear Sir:—It gives me pleasure to add some facts confirmatory of the opinions expressed by you in your letter to the German Fish Commission. Such vast numbers of the Sacramento salmon (*Quinnat*) die on the spawning grounds of the upper waters of the Pacific Coast rivers that it is not surprising that our early scientific observers partake of the belief of the early settlers, and conclude that all of this species died after performing the act of reproduction. As you state in your letter, if these fish all die after spawning there is no explanation of the fact that we find on the spawning-grounds salmon evidently of all ages from two to five years or more. If they all were to die after spawning then the further anomaly would have to be conceded that, when hatched, and after going to the ocean, the eggs and milt of some are matured in two years, others only in three years, others again only in four or five years, and that they remain continuously in the ocean two, three, four or five years before returning to the river.

The salmon fishermen of Sacramento have always denied that all the salmon of that river die after spawning. They assert that from five to ten per cent. of all the salmon caught by them in October and November are spent fish, on their return from the spawning grounds.

To-day I received positive information on the subject from Mr. R. D. Hume, who for many years was at the head of the largest canning establishment on the Columbia River. The facts reported by Mr. Hume outweigh all the theories yet advanced on the subject. Having become satisfied that without resort to artificial propagation the Columbia would in a few years fall off in its yield of salmon, and failing to induce others in the business to join him in vigorous efforts toward keeping up the supply in that river, Mr. Hume sold his establishment and erected another on Rogue River. This river is in Oregon, near the boundary between that State and California. Before constructing his buildings to be used for canning, Mr. Hume prepared ponds and erected a structure for the hatching of salmon eggs, as he had determined to test his theories that the supply of salmon would be inexhaustible in a river if, in addition to the natural supply, two artificially hatched young fish were placed in the stream for each one fully mature that was taking out. The artificial hatching of the eggs was placed under the superintendence of Mr. Kirby Pratt who had been educated in the business under Mr. Livingston Stone at the U. S. Fishery on the McCloud River. As the fish were caught in seines the sexes were separated and placed in different ponds to remain until mature. When stripped of the eggs and milt one hundred of each sex, that had not been injured in the process, were marked by cutting off close to the body about one third of the rays of the dorsal fin. As the knife was passed from the rear forward this left a triangular notch cut from the dorsal fin of each fish. These marked fish were then returned to the river to die or find their way to the ocean. In the following year (1878) the men who clean the fish for canning were instructed to save for examination any fish that was found having this mark. Of the two hundred thus marked and turned into the river in 1877, ten were caught in 1878—five of each sex—fat, healthy, and with another supply of maturing eggs and milt. This is positive evidence that five per cent. of the Sacramento salmon do not die the year they reproduce, and it is safe to estimate that another five per cent. of marked fish escape the nets of the fishermen. A record will be kept of any fish marked in 1877, that may be caught this year. Mr. Hume caused the adipose fin to be removed from the young fish hatched in 1877, so that it might be ascertained how rapidly they increased in weight in the ocean, and also by additional marking to learn how many years in succession they can be caught and used for purposes of artificial reproduction. Mr. Hume has the only salmon canning establishment on Rogue River and practically controls the fish of that stream. As he has had the enterprise to make his business permanent by keeping up the supply in the river through artificial hatching and as he takes great interest in all that relates to fish culture, his experiments and observations will, without doubt, settle many other disputed points in the natural history of the Sacramento salmon.

Yours, (Signed) B. B. REDDING.

It seems that much of the impression which has obtained regarding the mortality of the salmon has been gathered from alleged statements of Mr. Stone, who was long attached to the U. S. Fishery Commission in California. Such statements must have been made early in his study of these fish.

Great progress has been made in the past six years in general fish culture in this country, and probably no student has had better opportunities to investigate the habits of the *Salmonidæ* and contribute more to the general information than Mr. Stone has done. Much of that however which was accepted as fact in 1873, has been controverted under the new light since obtained; and it is more than probable that the information which Mr. Stone has gained in the meantime has so impressed itself upon his mind as to drive from his memory the recollection of having, in his rudimentary researches, made statements which results have proved to have been wholly erroneous. We are sorry if Mr. Stone committed himself to such positive assertions as were conveyed to us in his note of May 15th, to which Mr. Brackett indignantly refers in the following letter. Mr. Brackett is one of the most efficient of the whole body of Fish Commissioners; and having taken up the matter in hand seriously in his Massachusetts Fish Reports, feels impelled to support his statements therein made; which he seems to have done effectually. We were not aware of the exact attitude of the case when we commented upon Mr. Stone's note, or we would not have written what Mr. Brackett has chosen to apply to himself as "uncomplimentary." We certainly did not intend to include him among the class of men who "talk much and do nothing:"

WINCHESTER, Mass., May 19, 1879.

EDITOR FOREST AND STREAM:

In your paper of May 15 is a disclaimer by Livingston Stone, accompanied by some editorial remarks not very complimentary to some of the State Commissioners on Fisheries. Mr. Stone says that "in several newspaper articles and State reports he has been quoted as saying that *all* California salmon die after spawning," etc. I have italicized the word *all*, as possibly Mr. Stone may take issue on this word; and yet I presume that no one knows better than he that the California salmon or the Sacramento and its tributaries are the fish that have interested the State Commissioners as well as the public, and whatever criticisms or remarks have been made in the State reports have reference to these salmon and to no other. It is hardly to be supposed that any of the State Commissioners would intentionally misrepresent Mr. Stone. As one of the commissioners I plead guilty to having quoted him, and to have taken exceptions to some of his statements. I did it not from personal feeling, but from a sincere desire to get at the truth. I have taken a warm interest in the distribution of these salmon, and felt, in common with many others, that if Mr. Stone's views were correct it was a serious objection to their introduction into our rivers. My authority for the statements made in the Massachusetts Report is the United States Commissioner's Report, 1872-3, where in reply to a question by Prof. Baird Mr. Stone says: "Their eyes get more or less injured; they often become blind; swarms of parasites gather in their gills and stick to their fins; their bodies reach the extreme point of attenuation, and as soon as the spawning is accomplished they die." Page 191, question 44; Ans. "It is certain, however, that the salmon of the McCloud and Little Sacramento do not spawn but once in those rivers, for they all die after spawning." Ques. 45; Ans. "Whatever the effect of the spawning may be, it is certain, however, that the salmon of the McCloud and Little Sacramento do not spawn but once in those rivers, for they all die after spawning." Ques. 45; Ans. "Whatever the effect of the spawning may be it is certain that the spawning fish die as soon as it is over." Again, 192, Ques. 61, Prof. Baird asks, "Do the parent fish, either or both, watch over the young after they are hatched?" Ans. by Stone, "The parents are dead long before the young are hatched." Some doubts having been expressed as to the correctness of these statements in Prof. Baird's Report for 1873-4-5, page 446, Mr. Stone devotes more than half the page to prove that he was right.

In the spring of 1878 you published in your paper a very able and exhaustive article written by B. B. Redding, Commissioner for California, furnished to you by Prof. Baird, the aim of which was to prove that Mr. Stone was mistaken in making these statements. He says, "I am certain that Mr. Stone is in error in reporting that California salmon die after having spawned."

And now, Mr. Editor, in view of the above facts the editorial remarks accompanying Mr. Stone's card must be a surprise to your readers. E. A. BRACKETT.

Commissioner of Inland Fisheries.

AN EXCELLENT APPOINTMENT.—It affords us much gratification to record the appointment of Mr. Eugene G. Blackford, of this city, as a fourth member of the New York State Fish Commission. Mr. Blackford's active interest in fish culture has made him well known to our readers, and they will join us in the opinion that his selection for the position to which he has been appointed is in many ways most happy. His stand in Fulton Market has long been recognized by fishermen as the depot for all marine discoveries; and from here the Smithsonian Institution has been enriched with numerous valuable ichthyological specimens. While Mr. Blackford's location on the sea shore affords a rare opportunity for work in both salt and fresh waters, the counties of Kings, Queen and Suffolk, or those comprising Long Island, will be under his immediate supervision, and here it is proposed to erect a State hatching-house. We shall look for a new impetus to fish culture, and presage valuable results to the fishing industry from this addition to the State fish cultural corps.

NEW YORK.—*Delaware County Notes.*—Mr. John Griffin, alias "Ancient California," of Hobart, in this county, a man of wealth, taste and a genuine sportsman, has put 30,000 young trout into the streams in his vicinity this spring..... John Bennett, Esq., has put 30,000 young fry, also from Seth Green's hatchery, into the streams near Stamford, all falling into the west branch of the Delaware. The latter gentleman has the finest private trout ponds in this section, with 4,000 or 5,000 trout in them, averaging from three-fourths of a pound downward to one-fourth. Mr. Bennett, before he retired from business, kept the best drug store ever set up in this vicinity. One day a scar-visaged old woman, who originally hailed from the Emerald Isle, and whose partiality for whisky was noted and brought her into many a row, came into the store. She had a most forlorn look, a pair of black eyes, a swollen nose and other proofs that she and her "Old Man" had been having a set-to. "Mister Bennett, surr!" she cried, "have you ever a cure for the headache. Sure I've one that's jist killin' me entirely." John looked wise—a way he has—took down a two-gallon jar of double concentrated spirits of ammonia. He shook it up well, uncorked it, and told the old beldame to "smell of that!" She took one fearful sniff, it choked her all up, and with one horrible gasping yell she fell flat on her back on the floor. There she lay a few seconds, then she scrambled to her feet and rushed for the door. She never crossed Bennett's threshold again. The Doctor is the best man we have in this town in all good works, and there is no humbug about him. He takes the FOREST AND STREAM too, and I expect an overhauling for saying as much as I have, but I'm tough and can stand it.....A fishing party of eight is making up for the Beaverkill next week, and you shall hear from them—*offishally*. N. B.

TENNESSEE—*Nashville, May* 22.—We have had rain in the last two weeks, which has put the different streams about here in excellent condition, and some good takes have been made. It is refreshing to know that the partial protection laws passed by the last Legislature are going to be enforced. A number of persons will be indicted to-day for seining Mill Creek within the last two days, and it is thought they will be made examples of by fining them $100 each—the full extent of the law. This is as it should be. Men who are selfish enough to destroy the pleasure of hundreds to gratify their own greed should be made suffer. Professor Spencer F. Baird wrote to Col. Akens, the Fish Commissioner here, that it was too late this season, but the coming one he would see to the establishment of the proposed hatching-houses in Middle Tennessee or North Alabama. Shad have not made their appearance this season in any numbers, although I was told by a gentleman the other day that while fishing in the Cumberland River with hook and line he took a fine one. Judge Ferriss has a pond near this city, in which he has a large number of bass and perch raised from fry taken in some of the streams about here. He says they are increasing, and is hopeful that his venture will prove a success. J. D. H.

WISCONSIN—*Madison, May* 17—*Editor Forest and Stream:* The following report will show that there has been considerable work done at the State Fish Hatchery near this city; in fact, more fish have been hatched and distributed since the first hatch in 1876-77 than by any other State Commission. Cheering reports are frequently received of the successful planting and good results attained by the distribution from this hatchery. Mackinaw and speckled trout of the first distribution have been especially successful. The whitefish planted on the shores of Lake Michigan have done remarkably well, millions appearing upon the spawning-beds of these shores. A large breeding-pond has been finished at the hatchery, capable of keeping 300,000 trout. There has been hatched and distributed the past spring 10,000,000 Lake Michigan whitefish. In the inland lakes there have been planted some 4,000,000 Mackinaw trout. Nearly 500,000 Lake Mendota whitefish have been distributed in the larger lakes of Eastern Wisconsin. The demand for this fish is very large. There are now 50,000 Mackinaw trout at the hatchery for distribution to private parties for breeders.

Natural History.

A LIST OF BIRDS TAKEN IN SOUTHERN WYOMING.

BY S. W. WILLISTON.

[With Supplementary Notes by the Natural History Editor.]

(*Continued.*)

[17. *Pyranga ludoviciana*, Louisiana Tanager.—Quite abundant in the Freeze Out Mountains, where it was often seen feeding on the red raspberries with the robins, woodpeckers and various finches.—G. B. G.]

18. *Hirundo horreorum*, Barn Swallow.—A very few were seen May 6-8, but in a few days they had arrived in numbers, together with the cliff swallows flying over the marsh and lake. In the progress of these birds westward over the Kansas plains, I have frequently during May been surprised by their appearance on the open unsettled prairies, many miles from any human habitation, and continuing to follow the team for hours, darting about in their graceful flights, seldom a hundred yards from the wagon. In one instance a pair followed me thus closely for twenty-five miles, but finally left me at a cattle ranche, where several other pairs had already taken up their residence.

[19. *Tachycineta thalassina*, Violet-Green Swallow.—Very abundant in the mountains, but rarely seen at Como, but one specimen having been taken there. This specimen was shot while hawking over the lake in company with *H. horreorum* and *P. lunifrons*.—G. B. G.]

20. *Petrochelidon lunifrons*, Cliff Swallow.—Abundant. They made their appearance at about the same time as the barn swallows, and for several weeks thousands were constantly flying about the marsh. Among the chalk cliffs of Kansas I have often been amazed at the assiduity these birds show in building their nests. Always apparently choosing their nesting sites near water, they would sometimes, before their dwellings were completed, find the source from which they drew their building material dried up, when they would bravely seek more distant places, sometimes a mile or more farther off. Many of the nests had little if any neck, so that the young might often be seen from without. They would rarely build within reach of hands, although the cliffs were very low. I watched, near the middle of July, 1877, for several hours with the greatest amusement, a colony of young fledglings in their attempts to fly. Perceiving an unwonted commotion among the older birds near a cañon of perhaps twenty-five feet in depth, and suspecting the cause, I went cautiously to the bank and looked down, and there beheld a perfect babel of bird commotion. Along the sandy bottom were hundreds of the young, chirping and attempting their feeble flights, while the restless parent birds overhead were loudly twittering their encouragement. On the opposite bank numerous timid fledglings sat chirping at the doors of their homes, afraid to venture out, till at last, responding to the eager tones of the encircling parents, some one would be encouraged to try his feeble wings, descending in safety to the bottom of some neighboring crevice; others, with more tender pinions, would be injured in the fall. Each year the birds, old and young, had wended their way southward before the last week in July, and none were ever seen later.

[21. *Cotyle riparia*, Bank Swallow.—Several times seen over lake.—G. B. G.]

22. *Myiadestes townsendi*, Townsend's Flycatching Thrush.—Two specimens taken near Rock Creek, April 30 and May 3.

[23. *Vireo bellii*, Bell's Vireo.—Quite abundant late in August among the timber and low brush on streams flowing out of the Freeze Out Mountains, where the writer took specimens.—G. B. G.]

24. *Collurio ludovicianus excubitoroides*, White-Rumped Shrike.—Abundant. First seen April 23. Almost any observer is struck, both upon the plains and in the mountains, by the fondness which this bird shows for the vicinity of the railroad and telegraph wires, where so many perch in watch for insects and small birds. A nest was found May 5, with four fresh eggs, in thick brush. It was well made, and deeply lined with hair. A week later I quietly watched within a few feet of a nest while a female was sitting without much fear at my proximity. A male, perched near by, would occasionally burst forth in his not unpleasing notes, and as often, another, also keeping watch over his sitting mate, would pounce upon him, and a most vigorous battle would be the result. These nests contained but two or three eggs, freshly laid. June 12 another nest was seen with seven eggs, slightly incubated.

[25. *Carpodacus cassinii*, Cassin's Purple Finch.—Quite abundant in the Medicine Bow Mountains, twenty miles southwest of Como, where a number of specimens were taken.—G. B. G.]

[26. *Chrysomitris pinus*, Pine Linnet.—Abundant while migrating, late in August in the Medicine Bow Mountains.—G. B. G.]

27. *Passerculus savanna*, Savanna Sparrow.—Quite abundant about Como, and generally in the open country.

28. *Poœcetes gramineus confinis*, Bay-Winged Sparrow.—Abundant. Nests seen near foot of Como Ridge.

29. *Melospiza melodia* (var. *fallax*), Not uncommon about Como.

30. *Junco hyemalis*, Snow Bird.—A single one taken Apri 22.

31. *J. oregonus*, Oregon Snow Bird.—Somewhat abundant as late as May 1. [A single nest of this species was found August 16, high up on the Freeze Out Range. The writer's attention was attracted by seeing one of these birds with an insect in its mouth uttering cries of uneasiness at his presence. After withdrawing to a little distance, the bird was seen to disappear between two old logs, and then to come out again without the food. A brief search showed the nest at the foot of a little spruce not more than two feet high. The nest was deeply sunk in the ground, and was quite a bulky structure. Externally it was formed of coarse grass and weed stems, and its lining, neatly arranged, was of finer grass. It contained four young, about a week old. Both parents exhibited great distress during the examination of the nest.—G. B. G.]

32. *J. cinereus caniceps*.—One specimen from above snow line on Elk Mountain, June 15.

33. *Spizella pallida*, Clay-colored Sparrow.—First seen May 12, and afterward constantly observed sitting upon the sage bushes trilling their monotonous notes.

34. *Zonotrichia leucophrys Gambelli*, Gambell's Sparrow.—A pair were taken May 2 flying about the bush on Rock Creek. During the following week three or four more were seen, and by the middle of the month they had become very abundant among the sage brush on the sides of the hill, rarely going on to the lower ground. [Abundant in August in the neighboring mountains.]

35. *Calomospiza bicolor*, Lark Bunting.—A single pair were observed near the station May 5, and a week afterward large flocks were common. [Not a single individual in the many large flocks seen in the early part of September wore the dark dress of the spring male.]

[36. *Pipilo chlorurus*, Green-Tailed Finch.—This species was not very common about Como, although a few specimens were taken on the Ridge back of the station in September. In the mountains, however, as well as along the wooded streams which flow from them, these birds were extremely numerous in August, and no doubt had bred there. Several specimens among those taken by the writer had apparently but just left the nest.—G. B. G.]

37. *Dolichonyx oryzivorus*, Bobolink.—A single specimen seen near the marsh May 20.

38. *Molothrus pecoris*, Cow Bird.—A pair first seen among the numerous Brewer's black birds, May 12, but I did not find them at all common afterwards.

Notwithstanding the bad repute which these birds have for thrusting their parental duties off upon others, I have always held them in the highest favor, as indeed any one must who has spent much time upon the dreary plains. Often in the summer when the scorched and withered prairies presented not a single object to relieve the weary monotony, their profound stillness unbroken by the faintest sound, one of these birds would quietly make its appearance, flying about the

horses in search of relief from the hot rays of the sun; or, if at meal time, gathering up the crumbs with a confident, self-satisfied air. If undisturbed the bird's boldness becomes amusing, and it ventures nearer and nearer, with occasional halts to see if the danger is imminent, or to pick some stray crumb, till at last she—for I do not remember to have observed the male so bold—would be actually feeding from one's plate. Several times I have thus caught them with my bare hands, and even when caught they showed less fear than anger at such unwarrantable liberties.

While spending the winter of 1872-3, an exceptionally cold one, in southern Kansas I observed a female who had taken up her winter quarters in a stable, where she remained perched upon a horse's back. Being somewhat of a nuisance she was several times gently driven away, but always persisted in returning to her warm roost upon the same animal's back. When the horse was fed she would fly to another, to return and feed upon the scattered grain. Each day the animals were driven a half mile to water, when she invariably accompanied them, making a careful toilet while they were drinking, and again returning to the stable. She probably remained till spring, but I last saw her near the first of February.

39. *Agelæus phœniceus*, Red-Winged Blackbird.—A single female taken the first week in May, and a pair June 20, evidently nesting on the marsh. None others were seen, and they could hardly have escaped observation had they been there. [In early fall this species was frequently observed.—G. B. G.]

40. *Xanthocephalus icterocephalus*, Yellow-Headed Blackbird.—A single male made his appearance with a flock of Brewer's blackbirds, May 26. Very soon, however, a considerable colony had become domiciled among the tall reeds of the marsh, where their noisy and very laborious notes were continuously heard. In the latter part of June their neatly woven nests were not infrequently found.

41. *Sturnella magna neglecta*, Western Field Lark.—Common.

42. *Scolecophagus cyanocephalus*, Brewer's Blackbird.—A large flock made its appearance May 26, and afterward these birds were very abundant and noisy about the station and marsh. They were very bold, venturing to the doors of the station, but warily taking flight at the least alarm, only to return immediately. They would occasionally have a trifling dispute with the shore larks, in which the latter held their own.

43. *Corvus corax*, Raven.—Numerous flocks of these birds were seen the previous December flying about Como Ridge, but were not very common in summer.

44. *Corvus americanus*, Crow.—Not common.

[45. *Picicorous columbianus*, Clark's Crow.—Very abundant both in the Frecze Out and Medicine Bow mountains, and everywhere cautious and wary. If one had a shot-gun they were not to be approached, but when one was carrying a rifle they would sit unconcernedly in the tops of the pines while you passed beneath the tree.—G. B. G.]

46. *Pica melanoleuca hudsonica*, Magpie.—Though more abundant further West, but one was observed at Como.

47. *Tyrannus carolinensis*, Kingbird.—May 27; not uncommon.

(To be continued.)

AN EXTRACT FROM OLD HEARNE.

PHILADELPHIA, March 14, 1879.

EDITOR FOREST AND STREAM:

I own an old book, which I think is rare The title is, "A Journey from Prince of Wales Fort, in Hudson's Bay, to the Northern Ocean, by Order of the Hudson's Bay Company, for the Discovery of Copper Mines; a Northwest Passage, in the Years 1769, '70, '71 and '72. By Sam'l Hearne. Published in Dublin in the Year 1796." It contains an account of the natives, climate, soil, minerals, rivers, lakes, trees, grasses, and fishes; and in an interesting way describes all the birds and animals that inhabit those regions. I will give you part of Chap. X. It is as follows:

In order to rectify a mistake, which, from wrong information, has crept into Mr. Pennant's "Arctic Zoology," in page 21 of that elegant work, he classes the moose with the we-was-kish, though it certainly has not any affinity to it. The we-was-kish, or as some (though improperly) call it the was-keesse, is quite a different animal from the moose, being by no means so large in size. The horns of the we-was kish are something similar to those of the common deer, but are not palmated in any part. They stand more upright, have fewer branches, and want the brow antler. The head of this animal s so far from being like that of the moose, that the nose is sharp, like the nose of a sheep; indeed, the whole external appearance of the head is not very unlike that of an ass. The hair is usually of a sandy red; and they are frequently called by the English who visit the interior parts of the country, red deer. The flesh is tolerable eating; but the fat is as hard as tallow, and if eaten as hot as possible, will yet chill in so short a time that it clogs the teeth, and sticks to the roof of the mouth in such a manner as to render it very disagreeable. In the spring of 1775 I had thirteen sledge-loads of this meat brought to Cumberland House in one day, and also two of the heads of this animal unskinned But the horns were chopped off, a proof of their wearing them all winter. They are the most stupid of all the deer kind, and frequently make a shrill whistling and quivering noise, not very unlike the braying of an ass, which directs the hunter to the very spot where they are. They generally keep in large herds, and when they find plenty of pasture remain a long time in one place. Those deer are seldom an object of chase with the Indians bordering on Basquiau, except when moose and other game fail. Their skins, when dressed, very much resemble that of the moose, though they are much thinner, and have this peculiar quality: that they will wash as well as shamoy leather; whereas all the other leathers and pelts dressed by the Indians, if they get wet, turn quite hard, unless great care be taken to keep constantly rubbing them while drying.

A full account is also given of quite a number of birds, including the ruffed grouse, pheasant, wood partridge, willow partridge and rock partridge; also ten kinds of geese.

C. T. JONES, JR.

This very interesting old work is not very common, but you will find it quoted in all works on North American birds and mammals.

THE QUAIL AND WOODCOCK OF FRANCE.

NEW YORK, April 25, 1879.

Having just returned from a visit to France, I thought your readers might possibly like to hear a little about how the brethren of the sporting fraternity amuse themselves across the water.

The hunting season in France opens some time during the last two weeks in August, the exact day varying in the different departments, and being fixed by law from year to year. The prevailing opinion, I regret to say, seems to be that a Frenchman cannot shoot unless gaudily attired in a complete costume, from a pair of patent leather topped boots and corduroy knee-breeches, to a velveteen coat and a cut-away cap. I confess I had some such idea as this myself before experience taught me better; but I soon learned that, while from their superior advantages in the quantity of game, the average American was by far the best shot. Yet the sportsman who could kill his red legged partridge in the midst of a mountain forest might compete with and hold his own against anybody, from whatever country he hails.

The first bird of the season, and the first one I tried my hand at, was the "caille," which I suppose to be the same bird as the Messina quail, but may be mistaken, never having the opportunity of seeing the latter. I did not find them very abundant, for, after the first week's shooting, they disappeared, migrating during September. If this little quail corresponds—and I think it does—to the recently imported birds from Messina, I must say that for my part I want to keep my dogs aloof from it. In the first place, they are inveterate runners, and many a time I have followed one up and down the whole length of a corn-field only to have him get up at perhaps the very spot where the dog first struck the scent. If this tends to increase the steadiness of a dog, I am mistaken. Again, being most easily found and shot, nine-tenths of all the dogs in France are brought up on it, and with a few exceptions French bird dogs are the worst set of curs it has ever been my lot to be obliged to endure.

A little later in the season I found agreeable recreation in hunting the red and gray partridge, "perdrix rouge" and "perdrix grise." The former is always found in the thickest woods on the tops of mountains, and when once disturbed and shot at will fly great distances, and it is barely possible to find them again. The latter resemble more in their habits our quail, being found in weed and stubble fields, always near some cover.

During the latter part of October and throughout November the woodcock begin to come on, and, whew! what woodcock! Although aware that the English woodcock was much larger than our American bird, I shall never forget my astonishment on the occasion of my first experience with it.

"How would you like a day after 'becasses'?" my particular chum and friend said to me one morning shortly after the opening of the season. My answer must have been satisfactory, for five P. M. that same evening found us on board a train bound for Isère, a part of southern France well and deservedly known for its game. Next morning found us bright and early on the grounds. Accustomed as I was to shooting American woodcock in the fall, I naturally kept my gun in a ready position, expecting each moment to hear a whistling noise and see a brown body traveling "en grande vitesse" through the bushes; but what was my astonishment when the dog flushed within ten feet of my nose a bird which flopped off in a hawk-like manner and was killed by my companion, falling dead less than fifteen yards from the muzzle of his gun. On picking it up I could not believe my eyes. Here was a bird with all the appearance of, and being without doubt, a woodcock, and yet rising like a chicken-hawk and flying off as leisurely as if he did not know the effect of an ounce of lead propelled by three drams of powder. In short, after a hard day's tramp, with the usual number of hits and misses, I came to the conclusion that to be able to kill American woodcock does not necessarily imply one's ability to kill some birds in France; but he who can cut down one of our fall birds would find the magnified bird of the same appellation an easy victim to his prowess.

One bad habit I did discover in France and Germany, and it is one imported into this country by the mass of pot-hunters who throng all available places within fifty miles of New York, shooting anything, from the farmers' chickens to the little singing bird, and accompanied by dogs whose appearance beggars description. They will do this at home, and what a ridiculous sight it is to see a full-fledged Dutch sport, followed by a small terrier, crawling carefully along in order to slay some poor little creature, who, trusting in the miserable fellow, allows himself to be approached and murdered. Any one living in New Jersey will fully appreciate the truth of this remark, if he has ever been out on the opening day.

W. D.

THE BIRDS OF GUADELOUPE.—The results of Mr. Ober's investigations in the Lesser Antilles have already furnished a very considerable amount of material for scientific study, and we have already called attention to the interesting ornithological results of his explorations. Mr. Lawrence, whose interesting papers on the various collections have been noticed from time to time in these columns as they have appeared, has recently published a list of the Birds reported from Guadeloupe in the Proceeding of the United States National Museum. The specimens upon which the present paper is based number 132, and the observer's notes refer to 45 species, either taken or observed. A very interesting and instructive list of the birds observed in these islands (Guadeloupe and Grande Terre) by Dr. L'Hermionier, between the years 1827 and 1844, appears here for the first time, and contains the names of 135 species.

Some interesting announcements with regard to the proper systematic positions of several species are made in this notably with regard to *Euphonia flavifrons*. Mr. Ober brought with him from these islands three specimens of *Geotrygon mystacea* alive, and two of them are now to be seen in the Central Park menagerie.

The present paper is the last of the series upon the ornithology of the Lesser Antilles. The results of Mr. Lawrence's study of the birds of these islands are very valuable and have added much to our knowledge of their ornithology. It is a matter of general congratulation that the examination of these collections was intrusted to one so admirably qualified to do the subject justice.

CHESAPEAKE ZOOLOGICAL LABRATORY.—The second session of this new school of study of the products of the sea will be opened at Crisfield, Maryland, on the Eastern Shore of the Chesapeake Bay, about June 20, and will be conducted by the John Hopkins University, with the co-operation of the Maryland and U. S. Fish Commissions. One of the barges of the Maryland Fish Commission, with a building upon it fifty feet long by nineteen wide, will be fitted up as a laboratory, with tables, aquaria, etc., for ten persons, and another barge, with state-rooms, will be used as a dormitory. The Assistant U. S. Fish Commissioner, T. B. Ferguson, will accompany the party with a small steamboat, and will take charge of the dredging and collecting. The barges will be at Crisfield from June 20 to July 11, thus affording an opportunity for the study of the fauna of the large and important oyster beds of Tangier Sound. About July 11 the laboratory will be moved to some point not yet selected, near the mouth of the bay, either within or outside the Capes. On account of limited accommodations, none but those who are already acquainted with the methods of zoological work can be accepted as members of the party, and no formal instruction will be given. Tables, microscopes, aquaria, boats, collecting nets and a small library will be provided, and a fee of ten dollars will be charged by the university for the use of the laboratory outfit during the season. It would be well to send a model of barges, tenders and apparatus to the coming Fish Exhibition at Berlin, Prussia.

—We have received from an irascible correspondent a peppery letter, finding all sorts of fault with a writer, J. C. H., for saying that he killed near Fayetteville, N. Y., four young woodcock in thick corn the 31st of March. The fact is that the note complained of came from Fayetteville, N. C. (which, being interpreted, means North Carolina), quite a different latitude.

DOMESTICATED RUFFED GROUSE.—M. W. Clark, of Danville Junction, Maine, writes us:

"I have three—one cock and two hens—grouse, and the two hens have just made their nests, and to-day one nest shows two and the other one egg—a pretty and interesting sight. I have a circular coop ten feet in diameter and six feet high, built on the ground, without a floor, and small evergreen trees set about in it, making nice sheltered nooks for hiding and for their nests. I have just obtained ten eggs from a wild nest in the woods and set them under a hen, and shall try what I can do with them in raising any young grouse. Surely shall not have enough to spare this season. Now, can you tell me what food to feed to the little chicks when they first come out?"

ANS. Our correspondent probably knows as well as we do, that the natural food of the grown ruffed grouse is buckwheat, corn, beans, grapes, strawberries and all other berries, buds, and in winter acorns and sometimes laurel. The young chicks doubtless eat such food as the woods provide at the season of the year when they hatch; and this food must consist largely of larvæ, grubs, worms, and tender shoots of plants. In the absence of such food, a small proportion of oatmeal, with cracked corn partly soaked, would suggest themselves. Bread, unless very dry, is unsuitable for any birds.

A BACKWOODS ZOOLOGICAL GARDEN.—Mr. M. W. Clark is the proprietor of a summer resort and chalybeate springs near Danville Junction, Maine. He also has a very pretty collection of wild creatures which he pets, and which attract the interest of his guests. Writing from Danville Junction, he says:

My mineral springs are about 1½ mile from here, and near them I have built three small but nice trout ponds—two of them with stone and cement, and the larger one of stone, not cemented. In these I have fifty or more splendid trout, some of them from the celebrated Rangeley and Richardson lakes. How they will jump from the water when I throw them their bits of liver! And I have also, a few rods away, a nice pond for water fowl, which is now inhabited by one pair wild geese, one pair wood ducks, one pair black ducks and two and a half pairs domestic ducks ("pekins"), and they make a happy and interesting family. I have also near that a paddock of peacocks and wild turkeys and another of rabbits, and on some high posts near by, a rustic pigeon-house inhabited by fan-tails. I have also four deer and three ruffed grouse.

A SNOW WHITE SEAL.—A young seal was caught on the coast of Maine, at Cape Elizabeth, a week or two ago, as white as snow; but he died of too much handling, before he could be taken proper care of.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN FROM MAY 4 TO MAY 21.—Six alligators, *Alligator mississippiensis;* two Virginia deer, *Cervus virginianus;* two fallow deer, *Dama vulgaris*, from England; one black bear cub, *Ursus americanus;* one hog-nosed snake, *Heterodon platyrhinos;* one pine snake, *Pituophus melanoleucus;* six garter snakes, *Eutenia sirtalis;* one fence lizard, *Sceloporus undulatus;* one bullfrog, *Rana catesbiana;* four red foxes, *Vulpes fulvus;* one little black-headed duck, *Fuligula affinis;* all presented One red kangaroo, *Macropus rufus*, and one Virginia deer, *Cervus virginianus*, both born in garden. Two European badgers, *Meles taxus;* one gray ichneumon, *Herpestes griseus;* three Anubis baboons, *Cynocephalus anubis;* one emu, *Dromœus novæ-hollandiæ;* one scarlet ibis, *Ibis ru-*

bra; three bar-headed geese, *Anser indicus;* two Sebastopol geese, domestic; one secretary vulture, *Gypogeranus serpentarius;* four ring-necked pheasants, *Phasianus torquatus;* two great blue herons, *Ardea herodias;* one darter, *Plotus anhinga;* all purchased.

ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR WEEK ENDING MAY 24.—One king vulture, *Gyparchus papa,* presented by MR. GARRET ROACH, N. Y. city; one bald eagle, *Haliœtus leucocephalus,* presented by H. P. Kingsland, N. Y. city; two foxes, *Vulpes fulvus,* presented by Mr. Hermann Clausen, N. Y. city; one small alligator, *Alligator mississippiensis,* presented by Master Romeyn S. Stafford, N. Y. city; one bonnet monkey, *Macacus radiatus,* purchased; five prairie wolves, *Canis latrans,* born in the Menagerie.

W. A. CONKLIN, Director.

The Kennel.

THE MASTIFF.

WE have wondered why this dog has not become more popular in this country, particularly since the splendid display made at the first bench show in this city, when a number of crack dogs from England were exhibited. We can only account for it on the ground of a popular misapprehension regarding his disposition and traits of character. The mastiff is essentially a domestic dog, a dog of the family, and in England is a popular companion for ladies and children, as any one who has noticed Mr. Du Marrier's sketches in *Punch* will have observed. But like all dogs, if kept on the chain too constantly when young his manners change and he develops into the guard dog alone, with perhaps a sour and uncertain disposition. For both purposes his magnificent proportions eminently adapt him, although we question whether he has the intelligence of either the Newfoundland or St. Bernard. Of the great antiquity of the mastiff there appears to be but little doubt. "Idstone" says that he was known to the Greeks as the *Molossus,* taking its name from Molossis, a part of Epirus, opposite Corfu, whence at that early period the best sorts were obtained. Probably the breed was imported subsequently from Middle Asia until it became distributed throughout Europe. In unsettled times in the British Islands it was used as a terror to the thief, whence its name, "mase theefe" or "master theefe."

In 1871 sixty-three mastiffs were exhibited at the Crystal Palace Dog Show, which shows the popularity to which the breed had reached in that country; and it is said that there was not a bad specimen in all that number. One of the most successful breeders has been a lady, Miss Aglionby, recently, we believe, deceased. Some ten years ago Miss Aglionby bred five dogs from one litter, all of which became great celebrities. One of them, Turk, was sold for £450, probably the largest price ever paid for a dog unless it was a public greyhound. We think there is little doubt that the best mastiff seen at dog shows in this country is King Olaf, imported and owned by Mr. Wm. Forbes Morgan, of this city. King Olaf was known in England as Young Sultan, and was by Dr. Hunt's Sultan out of his Countess. He took second prize at the first show held in this city, Mr. Brown's (of Liverpool) dog, Vandal, being first. At the second show he was entered for exhibition only, but being brought into the ring by mistake was immediately selected by Mr. Lort as the winner. This year he took first, and also achieved the same honor in Philadelphia. The Shah, whose portrait we print (and which originally appeared in our English contemporary, *The Country*), is a well known English champion, having won first prize at all the principal English shows. He is a fawn dog, standing a little over 32 inches at the shoulder and weighing 180 pounds.

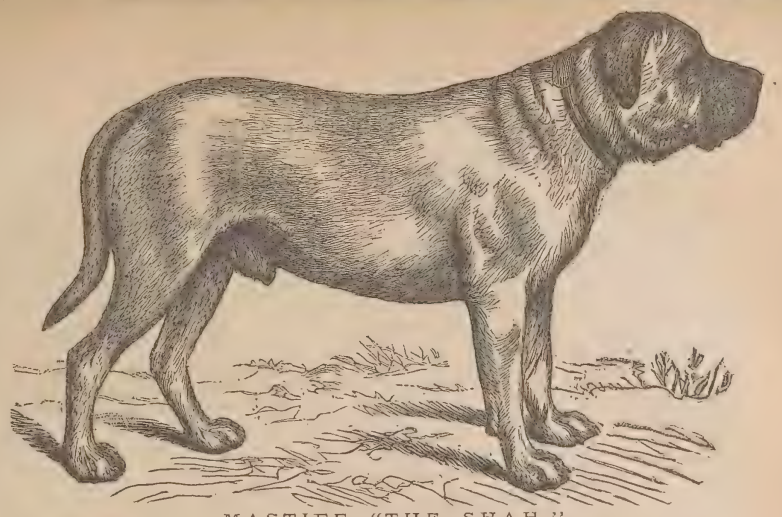
Everybody has heard of the Lyme Hall breed. Mr. Hugh Dalziel, in an article contributed some time ago to an English contemporary, writes of them as follows:

"Of our present dogs, the strain for which the greatest, or rather absolute, purity is claimed is the Lyme Hall mastiff, which has been in the Legh family since the beginning of the fifteenth century, if not from a still earlier date; but whether the existing dogs of this strain have been kept pure by absolute in-and-in breeding, or with such merely occasional cross with some closely-allied strain as may have been found necessary to prevent deterioration, so that we may rely on it as representing the original type, I have no means of knowing; but as it is held as a pure representative of the old English mastiff by the noble family who have so long had it in their possession, I can have no doubt that good reasons for that belief exist, and that the strain is at least approximately pure and best represents the old breed; and I am not aware that any other breeders claim anything approaching to such a long descent for their dogs, although a strain so noted as the Lyme Hall must long have been would be sure to spread and leave its mark on such other kennels as were most likely to be preserved with some degree of purity."

The same authority writes as follows:

"In general appearance the mastiff is noble and dignified; his strength is shown in his immense bone, large, square and well-knit frame, while the majesty of his carriage, his noble head and the magnanimous expression of his countenance bespeak consciousness of power governed by a noble and courageous nature. There are mastiffs with sinister and scowling faces, exhibiting the ferocity of the coward and bully, but these will rarely be found to possess the grandeur of form that distinguishes the breed, and are often cross-bred; but instances of a surly and dangerous disposition will show itself in otherwise good and pure dogs, and, when it does, they become a positive danger even to their owners and a terror and a nuisance to the neighborhood in which they may be kept; but the natural disposition is gentle, with an intuitive desire to afford protection, so that a well-trained mastiff is at once the best of companions—not given to quarrel, solicitous of notice from those he serves—and proves, with his intelligence and high metal, the best of guards for person and property. These good qualities characterize the modern mastiff, and show the power of man in taming down the fierce nature of the fighting dogs of Britain, for in this, as in outward form, it is impossible to doubt he has been greatly modified and improved since he was mainly kept in order to display his prowess in the bull ring and the bear garden.

"I have mentioned the faults of temper in dealing with the general character. I will now point out the faults in outward appearance most often met with. These are, first, I think, the ungainliness of motion caused by weak legs, particularly shown in the knee joints and the development of cow hocks; with this there is generally flat, lean, wasted hams, and sometimes light, weak loins, and all these or the cow hocks only give a shambling gait that is most objectionable. These defects are often caused by bad rearing, inferior or insufficient food, want of room or dampness in the kennel. The faults alluded to are very common, and it should be the endeavor of breeders and also of judges to get rid of them—the latter by refusing prizes to all dogs that show the faults, and the former by judicious selection and careful rearing."



MASTIFF "THE SHAH."

The points for judging the mastiff, as given by "Stonehenge," are as follows:

	Value.		Value.
Head	20	Legs	5
Eyes	5	Feet	5
Ears	5	Color	5
Muzzle	5	Coat	5
Neck	5	Symmetry	10
Shoulders	5	Stern	5
Loin	8	Size	5
Chest	7		
Total			100

The Head should be massive with a broad and flat forehead, ears small and wholly pendant, lying close to the cheek, though set on further back than in the hound, pointer and setter.

Eyes small, but mild and intelligent in expression.

Face short, with a square muzzle, not tapering toward the point of the nose; teeth level, but sometimes there is a slight projection of the lower jaw; flews deep.

The Neck should be muscular, with the head well set into it, showing a slight prominence at the upper point of juncture; body very large, with deep and wide chest, well ribbed up and a powerful loin.

The Legs should be straight, with great bone (this point is not generally well displayed, owing to confinement, as is also the next).

Feet round and close.

The Coat should be short, and the tail fine, but with a very slight indication of roughness; it should be carried high when the dog is excited.

The Color most desired is fallow (fawn), with black muzzle, and the richer the black the better; next to this comes brindle, then red with black muzzle, or black; sometimes there is a considerable mixture of white, but this is not desirable.

Height from 29 to 31 inches in the dog, and even more if a fine symmetry can be combined. A dog standing 29 inches ought to weigh, in good condition, not far from 120 to 130 pounds.

For Forest and Stream and Rod and Gun.

AFTER THE BRUSH.

THE 14th of April found me in the saddle again, and in proper mood for my old red. The lesion of the muscles of my back was soon repaired by a sturdy nature, and the remedy of "Pious Jeems" was not more efficacious or speedy. This reminds me of my first and last tilt from early manhood to the present. It occurred at the University of Virginia, and in the lecture-room of that learned linguist, Dr. Blasterman, Professor in that institution of modern languages. I was a member of his class, together with R. M. T. Hunter and Alex. H. H. Stuart. I was the smallest youth in the University, weighing only seventy-six pounds when challenged as an athlete by my instructor. Dr. Blasterman was quite corpulent, had a mouth like a catfish and could spurt out broken English in German accent with marked volubility. His face was a perfect full moon, with two blue half-curved caverns in it, twinkling with good humor, but indicating a want of culture and a want of dignity. For some cause he was strongly prejudiced against me, and never let an occasion pass when a thrust could be made at me. One morning in the Spanish class a noise was made by Jno. Taylor, of Caroline Co., Va., who occupied a seat on my immediate front. Quick as thought Dr. Blasterman turned toward it, looking me fiercely in the face, with the admonition that a repetition would result in the expulsion from the lecture-room of the offender. He then turned off and Taylor repeated the noise, and I was ordered out as the offender. I took up my books and put on my hat, smiling but making no reply. I had to pass by him, and I soon discovered that my manhood was to be tested. When in his reach he knocked off my hat, and I flew into his face like an angry hornet, striking with violence his plethoric nose, which deluged us both in its crimson. I stuck to it with great perternacity until Alex. H. H. Stuart, afterward Sec'y of the Interior during President Fillmore's administration, interposed. The Faculty was speedily summoned. Expulsion seemed inevitable. I was invited to attend. The whole college soon became tumultuous and its dissolution in jeopardy if a proper trial and judgment was not rendered in my case. I had a fair one, and the Faculty, in a spirit of justice and propriety waived a decision and referred it to the visitors. My case went before the most honored tribunal that ever sat upon such an occasion. Ex-President James Madison, ex-President James Monroe, Hon. Wm. C. Rives, Gen. John A. Cocke and Joseph C. Caleb composed that tribunal. I was tried and acquitted.

Excuse this digression, which I have alluded to only to recall to my fellow-classmates pleasant though trying reminiscences of the long past. Boys, let us meet at the next gathering of the alumni at the University of Virginia.

The 14th of April seemed ordered specially for the occasion I designed to spend it. The clouds hung low, rocks all moist, wind barely perceptible but from the south. I made every preparation usual for a vigorous red fox race, and the same as on the morning of the 25th of March, an account of which is in your issue of the 24th of April, with the exception of my using the young horse in the first dash and holding Lord Elgin in reserve. To secure a close start—for the old red has become so wily as to move off at the first note of a hound—I made a detour to the north of his hunting ground and entirely above it, so as to hunt down the Roanoke and face the wind. The move was a judicious one and adroitly executed. But unluckily the whole forest seemed alive with rabbits, and the greater part of the pack became terribly demoralized. Comet Logan, Monitor, Storm, Pallas, Red Bird and Molly alone escaped it. I struck the trail in my plantation, cold at first but gradually improving. In an hour I was upon him. Those seven dogs pressed earnestly, and like arrows passed close to my residence, and there was a recruit of the demoralized dogs of the early morning. They got in just right, and such a rip after fox or deer was never before witnessed. The fox ran up the Roanoke before the wind to the limit of his usual haunt, then detoured much as I had done in the morning. I soon discovered that death was his fate without some providential interposition. This was afforded by a hole on the banks of the Roanoke, and in a spirit of generous chivalry I would not dig him out. So the old red is still alive, and this fall I hope will be in proper condition for just such another tilt.

Gaston, N. C. T. G. T.

NEBRASKA DOG SHOW.

OMAHA, May 15, 1879.

The second annual bench show of Nebraska was held at this city May 13, 14 and 15. The sporting dogs, *i. e.*, setters and pointers, were well represented. The Irish setter predominating as to numbers and representing such strains as Grouse-Gipsey, Plunkett-Ruby, Beirbower's Khalif, etc. The English setters were also well represented by the progeny of Leicester, Victress, Blue Dasie II., Joe, Jr., etc. The liver and liver and white pointers were also well represented—ten entries, all well bred.

The State Association resolved to hold a bench show with each annual meeting of the association, also resolved to hold a field trial of dogs in September next, open to the world. Below I send you a list of the winning dogs. Non-sporting dogs were not represented, although this city alone can produce hundreds of Dalmatians, collies, terriers, greyhounds, St. Bernards, Newfoundlands, etc., etc.

LIST OF PREMIUMS AWARDED.

IRISH CLASSES.

Champion Irish Setters—Dogs—1st, Gen'l R R Livingston's Brian, Grouse-Gypsie. Bitches—1st, Wm Preston's Lucy, by Beirbower's Khalif.

Imported Irish Setters—1st, D S Banigor's Bronze, Plunkett-Ruby.

Native Irish Setters—Dogs—1st, silver cup, Saml Long's Dash, by Brian-.....; 2d, medal, C L Baums' Snyder. Bitches—1st, silver cup, B E B Kennepy's Nora, Brian-Mona; 2d, medal, J C McBride's Topsy, by Brian-..... Puppies—1st, medal, C P Matthewson's Mack, Brian-Mona; V h c, J D Jones' Tim.

ENGLISH CLASSES.

Native English Setters—1st, silver cup, H B Sackett's Joe; 2d, medal, S B Hathaway's Spat; 3d, medal, J A Hammon's Sweepstakes, Joe Jr Blue Dasie II, 3 mos; V h c, J A Hammon's Doxie, by Leicester-Victress.

Gordon (black and tan) Setters—1st, silver cup, Z Taylor's Rex 2d medal, J A Hammon's .....

Pointers—1st, silver cup, D M Welty's Belle; 2d, medal, Wm Mack's Toney.

THE FIELD TRIAL DERBY.

THIS, one of the most interesting of English canine events, was decided during the second week in May. The list of entries was the largest of any of the five years during which the stake has been run, numbering twenty-nine. The judges were Mr. Geo. Brewis and Maj. Le Gendre Starkie. The following is a list of the entries and winners:

FIFTH FIELD TRIAL DERBY, for pointer and setter puppies bred in 1878; the winner received £50, the second £25, third and fourth £5 each, and the best of the opposite breed £5.

R Lloyd Price's lem w d Luck of Eden Hall, by Drake—Sall, 14 mos (pointer), 1st.

Barclay Field's liv w b Sall, by Riot—Reine, 14 mos (pointer), 2d.

R Purcell Llewellin's lem w b Countess Rose, by Count Windem—Norna, 10 mos (setter), 3d.

E Armstrong's rd b Antrim, by Charlie—Jane, 15 mos (setter).

H Lowe's bk w b Countess Kate, by Tam O'Shanter—Meg, 12 mos (setter).

G Pilkington's liv w b Keswick, by Faust—Faith, 13 mos (pointer).

A P Heywood Lonsdale's bk w t b Janette, by Count Dan—Belle (setter).

Elias Bishop's bk w d Duke, by Count Dan—Belle, 12 mos (setter).

Prince Albert Solm's liv w b Firefly, by Joker—Fly, 11 mos (pointer).

Sir T B Lennard's liv w b Melissa, by Mallard—Belle, 14 mos (pointer).

G de Landre Macdona's bk w d Ranger Rab, by Champion Ranger—Moll, 14 mos (setter).

S E Shirley's w lem flk b Scarlet, by Tam O'Shanter—Troll, 11 mos (setter).

Viscount Downe's liv w d Speck, by Dot—Snake, 13 mos (point'r)

R Lloyd Price's liv w b Belle Faust, by Faust—Belle, 15 mos (pointer).

R Purcell Llewellin's bk w b Countess Nellie, by Count Windem—Novel, 11 mos (setter).

W Allison's bk t b Belle, by Ronald—Ruth, 14 mos (setter).

T Iseard's liv w d Claret, by Naso—Mite, 14 mos (pointer).

J C Macdona's liv w d Crotch (late Sefton), by Y Bang—Jane, 15 mos (pointer).

C P Fauntleroy's rd w b Pun, by Pam—Prue, 13 mos (setter).

J H Salter's bd liv w b Faucy, by Mike—Romp, 14 mos (pointer)

W Arkwright's liv w b Tinkle, by Champion Bang—Belle, 15 mos (pointer).

E Bishop's lem w d Frank, by Ranger—Lady, 13 mos (setter).

S E Shirley's w flk b Silken, by Tam O'Shanter—Troll, 11 mos (setter).

S Price's liv w d Guy, by Champion Bang—Juno, 12 mos (pointer).

Staple Browne's bk w b Flirt, by Tam O'Shanter—Fussy, 13 mos (setter).

A P Heywood Lonsdale's bk w t b Juno, by Count Dan—Belle, 12 mos (setter).

R Lloyd Price's liv w b Tick (late Tick Louse), by Drake—Nimble Ninepence, 12 mos (pointer).

Sir T B Lennard's liv w d Magnet, by Mallard—Belle, 14 mos (pointer)

J H Salters' liv w b Lily, by Mike—Romp, 14 mos (pointer).

Our space will not permit us to give details of the running, which, for youngsters, appears to have been very fair. *Bell's Life* says: "As I prophesied last week, the pointers beat the setters, and Mr. Lloyd Price could have won with two in his kennel, as Tick has always been better than the dog; but Mr. price took 50 to 1 about Luck of Eden Hall for this event when he was a small puppy, so preferred winning with him. Both the first and second are descendants of Old Drake, the winner, who will make a very grand performer, being a son of the old champion, and Sall is a grand-daughter, and also a grand-daughter of Price's champion Bang. We warmly congratulate Mr. Price on his success, which is a big feather, considering the number of the competitors and the quality of the field." The next stake run was

THE ALL-AGED STAKES (Sweepstakes) of £6 10s. each, for 16 all-aged pointers or setters, dogs and bitches; £60 for the winner, £20 for the second, and the third and fourth £10 each; if the stake does not fill, the prizes to be given in proportion to the number of entries; all dogs or bitches competing must be the bona fide property of the persons entering them.

Whitehouse's Rapid (pointer) beat Lloyd Price's Bow Bells.

Llewellin's Count Windem (setter) beat Macdona's Ranger (setter).

Lord Downe's Sam (setter) beat Platt's Rhyl (setter).

Barclay Field's Riot (pointer) beat Sir T. Lennard's Priam (pointer).

E Armstrong's Dan (setter) beat East's Viscount (setter).

G Pilkington's Garnet (pointer) beat Arkwright's Don Jose (pointer).

Major Platt's Darkie (setter) beat Fauntleroy's Phillo (setter).

R Lloyd Price's Dismal Jimmy (pointer) beat T Bower's Blue Belle (setter).

Ties—Rapid beat Count Windem; Riot beat Dan; Garnet beat Sam; Darkie beat Dismal Jimmy.

Second Ties—Rapid beat Riot; Darkie beat Garnet.

Major Platt's setter Darkie, by Rhyl (son of Ranger)—Dolly, beat Whitehouse's pointer Rapid, by Chang—Romp, and won.

The last event was the Kennel Club Challenge Cup, which had been won for two years by Mr. Macdona's Ranger, and had he won it this year it would have remained at Hilbre House, but the old dog was compelled to succumb to one of his grandsons. The following is the detail of the running:

THE KENNEL CLUB CHALLENGE CUP, value £90, for all-aged pointers and setters; the cup (held by G de Landre Macdona) to be won three years to become absolute property, added to an optional sweepstake.

Barclay Field's Riot (pointer) beat Sir Thomas Lennard's Priam (pointer)

Major Platt's Darkie (setter) beat G de Landre Macdona's Ranger.

G Pilkington's Keswick (pointer) beat J Platt's Rhyl (setter).

Lloyd Price's liv w pointer Tick beat Whitehouse's Rapid (pointer).

Ties—Darkie beat Riot; Tick beat Rapid; Darkie beat Keswick.

Second Ties—Major Platt's Darkie, by Rhyl—Dolly, beat Lloyd Price's pointer Tick, and won.

The scent throughout the day was very bad, and the extraordinary nose exhibited by the setter Darkie exactly suited the state of flairs, and pulled him through these two big stakes. Major Platt becoming holder of the Cup.

A GOOD ALL ROUND DOG.—*Mr. Editor:* A friend of mine that I can vouch for as to truthfulness, tells me that he has a well-bred black setter that is first rate in the field, pointing his birds staunchly, and retrieving them nicely, and doing well all that is required of him. He will also follow a fox with the hounds all day, and bark every jump, and shows extraordinary sagacity in picking up an old trail when the hounds are at fault. How is this for high? H.

Springfield, Mass.

COCKER SPANIELS IN BUFFALO.

BUFFALO, N. Y., May 20, 1879.

EDITOR FOREST AND STREAM:

In your issue of May 15 I notice an article with the above heading signed by one John Hammon, of Clifton, Canada, which casts reflections upon Mr. J. B. Harrington, of this city, and his dogs, which in my opinion is really unjust. I have known Mr. H. for some time, and have seen his cocker spaniels, and so far as I am competent to judge I should pronounce them fine, well bred dogs. Mr. H. is manager of the American District Telegraph Co. here, and has his office located at No. 20 East Seneca st., and has been with the same company in that capacity ever since its organization. Last winter I was so unfortunate as to have a fine little spaniel stolen from me. Mr. Harrington having heard of the fact (and who by the way has held a special police commission for the past five years) traced the dog to a bootblack and recovered him. Mr. H. did this out of pure love for a good dog, as I had offered no reward nor held out any inducement for his recovery. Hoping you will give this a place in your valuable columns in justice to Mr. H., I remain yours, E. B. J.

BUFFALO, N. Y. May 20, 1879.

EDITOR FOREST AND STREAM:

Dear Sir—I was very much surprised on taking up your issue of May 15 to find such a letter as the one you published from J. Hammon, of Clifton, Ont., about "Cockers in Buffalo." In the first place he couldn't have made much inquiry for J. B. H. at 20 E. Seneca st., as he is there every day till 7 P. M., and is well-known. As to his dogs being half water spaniel, that is ridiculous; one of them does show a slight trace of a water spaniel cross, but his liver and white Floss is a fine thoroughbred cocker from as good stock as can be found in the States or Canadas. In regard to the J. Neill spoken of, he is not "the largest owner of sporting dogs in the East" (although he deals in them), not very much. In the estimation of sportsmen in this vicinity who know him—and some of them know him to their sorrow—he is not the owner of any sporting dogs. I think Mr. Hammon's letter entirely uncalled for, especially as the tone of it is such as to reflect wrongfully on J. B. H., whom I know to be a conscientious gentleman, and always ready to further the interest of the canine race, especially the sporting class. I am sure if G. M. D., when he is in the city, would see the black cocker J. B. H. speaks of he will find it all that he says it is. C. B.

BUFFALO, May 16, 1879.

EDITOR FOREST AND STREAM:

In your last issue, May 15th, I find an article signed by one "John Hammon" and headed "Cocker Spaniels in Buffalo," which casts a slur on my dogs and also places me somewhat in a bad light. I inclose you with this letter, one also from Mr. S. A. Roberts, Proprietor of "Rod and Gun," which in justice to myself and dogs I hope you will publish with this. In your issue of April 24, I thoughtlessly wrote an article in answer to one signed "G. M. D." of Toronto, Ont. I did not intend it as an advertisement, as I have no dogs for sale, nor do I breed dogs for a living, but inasmuch as the article in question did prove an advertisement, having received about three packs of letters from parties all over the States (which goes to show plainly that your journal is a valuable advertising medium); and some of said parties have in second letters shown confidence enough in me and my dogs to engage pups in coming litters. I deem it no more than fair to remunerate you, which I intended to do at the proper time. Mr. Hamon claims he could not find me at 20 E. Seneca st.; well, your valuable journal finds me there every week regularly, and has for a long time. Last Wednesday I was called out of town on business, and upon my return my assistants informed me that a gent had called to see me in reference to some spaniels and they told him to call to-morrow and he would find me. In regard to Mr. J. Neill, the greatest dog owner in the East, I will merely say that he never saw one of my dogs, to my knowledge, in his life, and I pray the good Lord he never may, unless I am with them, for I have a great desire to keep them for my own use. Several times I have been tempted to give your readers a description of this man's "Dog Factory," but have refrained from fear he would out of revenge poison my dogs. But I will relate one little story told me to-day by "our esteemed friend and sportsman," S. A. Roberts, and who gives his consent to publish it. To give an idea as to what kind of a man this "great dog owner of the East" is, the story is this: A prominent merchant here lost a valuable and much loved setter, and after repeated trials to regain it without success, was told by a "knowing one" to get a detective and visit Joe Neill's "Dog Factory" and see what luck he would have. The merchant did so, *and there found his setter on a chain*, but did not let Neill discover it. The merchant admired that dog above all others, and asked his pedigree. He was bred by the Duke of Newcastle and imported direct from his kennels. The merchant asked Neill to let him loose to observe his actions. As soon as the poor dog was unchained he showed his gratitude by fairly jumping all over his master, and it was some time before he could be quieted to allow an explanation. Joe finally "weakened" and owned up; the officer stepped in to do his duty, but the merchant took pity on Neill's family and "let up" on him. This can be corroborated if necessary over the *bona fide* signature of the merchant himself; and friend Roberts offers to wager a bottl h's best" that no genuine sportsman in Buffalo would buy a dog from Neill at any price. So much for the "greatest dog owner of the East." My dogs are good enough to perfectly satisfy me, and some of them are far better specimens than some I have seen on different show benches, and I fancy Mr. C. W. Nash, of Ont., who owns the famous stud cocker Rake, the sire of my Floss and ten other well-bred cockers, will not fancy the slurs Mr. Hammon sees fit to throw out against the breeding of my cockers. The "curly spaniel" that Mr. Roberts refers to belongs to a lady of my household, and is not claimed to be a "cocker," although a fine dog. I had supposed this Mr. Hammon to be a gentleman, as I have a letter in my possession from Mr. Chas. Lincoln, Supt., giving me an introduction to him in case I wished to call on him. If I can find leisure I may use it yet, and should I di cover a fine dog among his kennel with a curl or two on his back, I will not publish through the FOREST AND STREAM that he is not a cocker until I at least learn whether he claims him to be a cocker. I think if Mr. Hammon had paid less attention to the "greatest dog thief in the East," and more to the truthful sayings of honest "Steve" Roberts, he would have had no occasion to have written his article on "Cocker Spaniels in Buffalo." The cocker dog Roy, whom I bred my Floss to last April, is as fine a specimen as can be found anywhere in this vicinity. He is solid liver (dark), with a magnificent wavy coat without a curly hair in it. Bitches have been sent to him from all parts, and one from New York City.

Yours truly, J. B. HARRINGTON, 20 E. Seneca st.

BUFFALO, May 16, 1879.

EDITOR FOREST AND STREAM:

I notice in your issue of May 15 an article headed "Cockers in Buffalo," signed by one John Hammon, of Clifton, Ont., and in said article I am reported as giving my opinion that Mr. J. B Harrington's cockers were not cockers at all, but half water spaniels, being curly coated. Mr. Hammon, by the way a perfect stranger to me, called at my place with a mutual friend and asked me about Mr. H.'s cockers. I told him Mr. H. had some fine ones, but one indicated a cross with the water spaniel, as his coat was somewhat curly, and this one Mr. H. does not claim to be a thorough-bred cocker but a slight cross with water. I have seen Mr. H.'s cocker bitch Floss to-day, and in my opinion pronounce her a fine specimen, with a beautiful coat, soft, silky and wavy; no curls, but a beauty.

S. A. ROBERTS, Pro. Rod and Gun.

BUFFALO, N. Y., May 18, 1879.

MR. J. B. HARRINGTON:

Dear Sir—On reading my FOREST AND STREAM of this week, my eye lit, almost the first thing, on an answer to your late communication to F. & S. concerning cockers. I write you in regard to this to offer you my sympathy as a lover of a good dog. I have seen your two cockers, and have especially admired your liver and white Norfolk, and to be dragged in the mire before the public as Hammon has dragged you I consider deplorable. Judging from the manner in which he speaks of Neill, I think he must be a particular friend of his, and, if "birds of a feather, etc." I have no doubt Hammon is fully as bad as his friend Neill, who I presume you know has the reputation of being the largest dog thief in the East, as H. has it. He has been convicted of stealing valuable dogs from sportsmen in this vicinity more than once, and many a lost setter and pointer have been traced through his hands to parties in Canada. I am sorry FOREST AND STREAM's columns should be contaminated by such stuff.

Yours truly, CHARLES BATTEY, 382 Mich st.

—The imported red Irish setter bitch Stella, owned by Mr. Chas Denison, of Hartford, Conn., whelped on Saturday week 14 puppies, sired by Champion Elcho.

—The setter Perl V., owned by Mr. Wm. Vie, of St. Louis, whelped on the 6th inst. six puppies—4 dogs and 2 bitches—sired by the Topeka Kennel Club's Brussell (Leicester–Dart).

—Mr. W. M. Tileston's Gordon setter bitch Lou whelped, on the 20th inst., eight puppies—five dogs and three bitches—all black and tan, without white; sired by Young Jock, by Jock out of Mr. Emerson Foote's Mab, she by Jerome's Shot out of Dutchess. Four of these puppies will be sold.

—Mr. Leonard, of Boston, has bred his bitch Florrie (Copeland's Pete–Bassett's Bess) to Mr. Geo. A. Thayer's Daniel Webster. Florrie is own sister to Mr. Lathrop's Dick, and her owner says she cannot be made to flush a bird.

—Mr. E. C. La Montagne, of this city, has had the misfortune to lose his promising setter puppy Cremorne (Promise–Abbey), and his pointer puppy Mac (Sensation–Juno). Cause in each instance, distemper.

—John E. Long, Esq., of Detroit, has sold his justly valuable dog to Mr. Fay, of Boston, for the great price of $600. Such sums are seldom realized on either side of the Atlantic.

Rational Pastimes.

RUINOUS ATHLETICS.—We extend our thanks to the Journeymen Plumber's B. P. Society for their courtesy in sending us an invitation to their Tenth Annual Afternoon and Evening Picnic and Athletic Games, at Harlem, next Wednesday. We must confess, however, that we are somewhat startled by the announcement on the programme of two or three contests in these games. For instance, gold and silver medals are offered for the first and second men in "a grand three-hours' contest ('Go as you please')." Do not the promotors of this enterprise see that such a race is directly subversive of the plumber's trade? A plumber trying to go a long distance in a short time! The idea is simply ridiculous, nay, more than this, such mad efforts should be discountenanced by every intelligent member of the craft. It means ruin. Nowhere could the pedestrian craze be attended with such dire results. As plumbers go, it is not the plumber who hesitates that is lost, it is he who makes haste most slowly that comes in ahead—in the bill. The only sensible way for our friends to indulge in competitive trials of walking and running is to see who can consume the most time in going the shortest distance.

—Messrs. Peck & Snyder, 124 Nassau st., publish a series of handy 25-cent manuals of Lacrosse, Lawn Tennis, Archery, Pedestrianism and Gymnastics. The books will be found very complete and convenient.

RIFLED ARROWS.—The question of rifled arrows has already been quite fully discussed. To show that the idea was not novel, we add this note from a Fayetteville (N. C.) correspondent:

When I was a boy, alas! these many years bygone, we used to make very choice arrows of what we call the "sour wood," which grows very straight and without a knot. We would make a hole in the arrows about five inches from the part fitted to the string, and another about four or five inches higher up, then take a feather and split it lengthwise, leaving only the feathers on one half. Insert the end in the lower hole, and then wrap it around the arrow to the upper one, and insert. Here you have a rifled arrow, and they shoot with greater accuracy. Put a little peg to fasten the feathers in.

HARVARD ATHLETICS.—The winners in the first annual spring games of the Harvard Athletic Club, last Thursday, were as follows:

One Mile Walk—Five entries—Hindekoper, '80, 7m 59½s.
Quarter-mile Run—Four entries—Simons, '80, 55 1-5s.
Running Broad Jump—Thompson, '82, 17ft 4in.
One Mile Dash—Six entries—Bell, '81, 4m 56s.
Throwing the Hammer—Brandegee, 50ft 8in.
Hurdle Race, 120 yards—Cowdin, '79, 18 1-5s.
Half-mile Run—Simons, '80, 2m 8 2-3s.
Two Hundred and Twenty Yards—Wendell, '82, 25 3-5s.
Three-mile Run—James, '79, 18m 53s.

DARTMOUTH ATHLETICS—The winners of the contests in the Dartmouth College athletic games, at Hanover, N. H., May 21 and 22, were as follows:

Throwing Heavy Hammer, 17 pounds—E H Lines, New York City, 65ft 9½in.

Best Three Jumps—F G Humiston, Groton, Mass, 25ft 8¾in.

One-hundred-yard Dash—C S Sloane, Washington, 11⅛s, and E B Condon, New York City, 12s.

Standing High Jump—Thomas Flint, Jr, San Juan, Cal, and G A Underhill, Nashua, tie, 4ft 2in.

Putting Shot, 7 pounds—J F Merriam, Derry, N H, 27ft 6in.

Half-mile Run—C H Cogswell, North Easton, Mass, 2m 7¼s, being five seconds better than his victory at Mott Haven on May 9.

One-hundred-yard Dash, backward—E B Condon, New York City, 17¾s.

One Mile Walk—J H King, Malone, N Y, 8m 42¼s, and W G Poor, Andover, Mass, 8m 42 3-8s.

Hurdle Race, 120 Yards—W P Quimby, Hanover, and G E Thompson, Dover, tie, 20s.

Three-mile Run—H H Parker, Hanover, 17m 37½s.

Pole Vaulting—C S Sloane, Washington, 8ft 7in.

Two-hundred-and-twenty-yard Dash—W P Snow, Roxbury, Vt, 26s.

Three Hours Go-as-you-please Match—G B Teames, of Thomaston, Conn, who ran 16 miles without stopping, and made 20 9-10 miles altogether. C H Smith, of West Brattleboro, Vt, made 20 2-5 miles and 100ft.

The Running Long Jump was won by N D Cram, of Chicago, who covered 17ft 4½in, and the standing long jump by J F Merriam, of Derry, who made 9½ft.

The Quarter-Mile Run was won by C H Cogswell, of North Easton, Mass, in 54s, 4-5 of a second better than his time at Mott Haven.

The Running High Jump was won by Thomas Flint, Jr, of San Juan, Cal, who covered 5ft 4in.

The Hundred-yard Sack Race was won by C B Little, of Pembroke, in 29¾s.

The Three-legged Race, same distance, was won by Condon and Quimby in 17½s.

The Three-winged Base-ball was thrown 318ft 11in by N D Cram.

The Potato Race—Fifteen potatoes, fifteen feet apart, returning with one potato at a time—Won by H P Snow, of Roxbury, Vt, in 4m 40 3-8s.

C H Cogswell won the 220-yard dash in 24 1-8s.

The tie hurdle race of Wednesday between Thompson and Quimby was won by the former in 19½s.

N D Cram won the hop, skip and jump, covering 38⅛ft.

The Two-mile Walk was won by J H King, Malone, N Y, in 19m 3 5-8s.

Mile Run—H H Parker, Hanover, 5m 2½s.

One-hundred-yard Dash—Final heat—C S Sloane, Washington, 11s.

Hurdle Race—Final heat—G E Thompson, Dover, 19½s.

Consolation Race—Quarter of a mile—S B Merrill, Stratford, 1m 3⅛s.

The base-ball game between the Independent, of Proctorsville, Vt, and the university nine was won by the university by 21 to 2.

SYRACUSE UNIVERSITY.—The annual field sports of the Syracuse (N. Y.) University were held last Friday afternoon. The winning contestants were as follows:

Pole jump, Howe, '79, 7ft 2in; 100 yards dash, Goodwin, '81, 12¼s; base ball throwing, Goodwin's, 309ft; half-mile run, Burroughs, Medic., 2m 30¾s; standing long jump, Richmond, Medic., 10ft 3½in; tug of war—Medic. vs Liberal Arts—won by Liberal Arts, but given to Medics. by the judges, on account of alleged fraud; foot-ball kicking, Dawson, '80, 120ft 3in; three-legged race, 100 yards, Goodwin and Haven, 15¼s; wheelbarrow race, 100 yards, each contestant to wheel the other 50 yards, Dawson and Tyler, 21s; hurdle race, 100 yards 12 hurdles, Dawson, 19s; running long jump, Oberlander, Medic., 17ft 1in; under and over race—prize, *Syracusan* for 1880—Dawson, 20¾s; tug of war—'80 vs '82—won by '82; hammer throwing, 10 lbs, Myers, '79, 74ft; boxing match—Tyler vs Goodwin—5 hits for Tyler, none for Goodwin; running horse race, ½-mile—Gott vs Alvord—won by Frank Gott in 1m 9⅛s.

UNIVERSITY OF PENNSYLVANIA.—The spring games of the University of Pennsylvania, May 24, were won by the following contestants:

Two-hour-race won by S T Pemberton, making 16 miles, time 1h 57m 35s; one mile walk won by J B Townsend in 8m 45s; running high jump won by W T Robinson, 5ft 4½in; quarter-mile run won by F M Dick in 55s; putting 16-pound shot won by H H Lee, 30ft 7½in; 100-yard dash for championship cup won by H H Lee in 16 1-8s; running broad jump won by Thayer, 20ft 3in; half-mile run won by E A White in 2m 22¾s; graduates' 100-yards won by Geylin in 11s; graduates' mile walk won by McIlvaine in 8m 31s; pole vaulting won by G L Heins, walk-over; 220-yard dash won by H H Lee, 30 1-6s; throwing hammer won by D Milne, distance 63ft 8½in; two-mile walk won by D C Tilghman in 19m 16s; hurdle race won by W T Robinson in 22 7-8s; one mile run, walk-over for E A White; strangers' 100-yard run won by H H Lee in 10½s; tug of war between sophomores and freshmen won by freshmen, 1m 39s.

CRICKET.

FIXTURES.

May 30—West Philadelphia, Belmont vs Chestnut Hill.
May 30—Paterson, N J, Manhattan vs Paterson.
May 30—Ardmore, Merion Veterans vs Commercial Exchange.
May 30—Staten Island, Club Match. 1st eleven vs next 22.
May 30—Hoboken, St Georges Club Match.
May 30—Newark, Newark Club Match.
May 30-31—Nicetown, Young America vs Germantown.
May 31—Haverford, Philadelphia vs Dorian.
May 31—West Philadelphia, Germantown 2d vs Belmont 2d.
May 31—Ardmore, Young America 2d vs Merion 2d.

—The 30th—Decoration Day—being a holiday, the organizations in the vicinity of New York have decided not to play inter-club matches on that day. By this excellent arrangement, no one eleven can monopolize the ground to the exclusion of the rest of its club's members, many of whom have no other opportunity of playing except on a public holiday.

STATEN ISLAND 2d VS. COLUMBIA.—On Thursday last, 22d inst., the latter organization, hailing from Hoboken, visited the Island club on their grounds at Camp Washington, and by careful play landed a victory by 7 wickets. The Columbias are an active lot of young players, and have improved in their style since last season. Although we are never sorry to see young clubs triumph over senior organizations—which, as a rule, are too apt to under-rate younger opponents—yet we believe that beginners can derive greater benefit from playing against good, sound cricket; and it would seem the duty of the stronger club, if only in compliment to the youngsters, to at least place good elevens in the field. By neglecting to do this, many would be good matches are ruined, and one-sided, unsatisfactory games the result. Of the play, Hole 10 and Outerbridge 15 (not out) batted well for Staten Island, while for the Columbia, Cuddihy distinguished himself with 8 and 20, not out, and Payton and Gregory 10 each. Subjoined are the totals:

	1st Inn'g.	2d Inn'g.	Total.
Columbia	52	32 (3 wkts)	84
Staten Island 2d	45	37	82

GERMANTOWN VS. MERION.—The first match of the season between these crack clubs was played at Nicetown on Saturday, the 24th inst. Both teams were representative, but the bowling of Caldwell and T. Hargreaves (G. C. C.) proved too much for the gentlemen from Ardmore, who lost the match by 46 runs, on the first innings. The Merion Club is stronger this season than we have ever seen it, and the Germantown did well to christen their new colors (red and blue) in a victory against such opponents. Saturday is "Susan's Sunday out" for cricket in Philadelphia, and no less than four matches (in which eight clubs took part) were played on the 24th, but on account of beginning late in the day only one of these games was played out, the others being decided on the one day's rule—*i. e.*, first inning. One inning games are unsatisfactory, as they rob the matches of all interest when only half gone through with. Often the most exciting part of a match is toward the finish when the game is close, as it is then we see our best cricket. In this contest, though, the play did not begin until 11 o'clock and ended at 6 sharp, yet three innings were played, the home club scoring 107 1st innings and only 79 2d innings, a total of 186. The Merion played but one inning for 61, leaving them to score 125 to tie. Here was a chance for a good up-hill game, and when it is remembered that with the same eleven, barring one man, it scored 124 (1st inning) against the Young America in their first match of the season, we believe this game would have been a close one. For the Germantown John Hargreaves scored 33 and 19; Joe Hargreaves, 9 and 10; Brown, 0 and 15; Morgan, 14 and 2; Hoffman, 13 and 2; C. Caldwell, 0 and 12, and N. Caldwell 11 and 0. In bowling N. Caldwell got 5 wickets for 17 runs, three in one over, and T. Hargreaves 3 for 14. For Merion, Thayer (not out), 20; Law, 13. Fox got 10 wickets for 63 runs, and Law 5 for 61. The following are the totals:

	1st Inn'g.	2d Inn'g	Total.
Germantown	107	79	186
Merion	61	..	61

BELMONT VS. PHILADELPHIA—*Belmont's Grounds.*—At West Philadelphia, on the 24th inst., the home club scored a victory by 7 runs over the veteran club of the Quaker City. Three innings were played, the youngsters going twice to the bat. In their second inning; though their seventh wicket fell for the small score of 29, the eighth showed 83 and the ninth 127! For B. C. C., Yarnall scored 0 and 47; North, 8 and 30; Townsend, 8 and (not out) 25, and West, 23 and 3. For the visitors, White contributed 13; V. Satori, 13; Haines, 11, and Clay, 10. Annexed are the totals:

	1st Inn'g.	2d Inn'g.	Total
Belmont	88	138	226
Philadelphia	81	..	81

DORIAN VS. CHESTNUT HILL.—This match was played on the grounds of the former club, at Haverford College, on the 24th. Mason for the home club scored a well hit 71:

	1st Inn'g.	Total.
Dorian	180	180
Chestnut Hill	33	33

BELMONT, JR., VS. CHESTNUT HILL, JR.—These young gentlemen played a match on the 24th inst., at West Philadelphia, when the home club won by one inning and 75 runs. In 1857, '58 and '59 there were hundreds of matches played in Philadelphia between school-boys, and we are glad to see them at it again, for we were inclined to believe there were no boys left anywhere:

	1st Inn'g.	2d Inn'g.	Total.
Belmont	126	..	125
Chestnut Hill, Jr	10	41	51

LONGUEUIL CRICKET CLUB.—The annual meeting of the Longueuil Cricket Club, of Montreal, took place at Bourdou's, May 17. The club played nine matches last season, winning seven, losing one, the other being a draw. The following were elected officers for this season: Pres., W. J. M. Jones; Vice-Pres., J. F. Walker; Sec'y and Treas., J. Thos. Ostell. Committee: Duncan McIntyre, F. Langlands, J. M. Ingersoll, W. C. Trotter.

☞ FOREST AND STREAM will be sent for six months for $2; for three months for $1. To clubs of five or more, $3 per year.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

G. LAICK, Tarrytown.—Seth Green's address is 15 Mortimer street Rochester, N. York.

J. N. S.—"Oars and Sculls" is the best book for your purpose. Send to Peck & Snyder, 124 Nassau st., N. Y.

A. P. L., Dunellen, N. J.—For New Jersey game laws write to the West Jersey Game Protective Association, Camden, N. J.

H. D. M., New York.—For portrait of Dr. Carver send to Chas. Zimmerman, Photographer, St. Paul, Minn. Those mentioned by us last week were English.

B. S. K. O., F. W., R. B. G., G. C., G. Q., W. W. P., T. G. and G. C., Phœnixville, Pa.—The season for black bass in Pennsylvania opens June 1. Do you all go at once?

B. P., Boston.—Give the pedigrees of Dr. Polhemus' imported Duke and Farrar's Nell. Ans. Do not know Duke's pedigree. Nell is by Jobling's Tom out of Jessie, by Kent out of Old Moll.

G. D. N., Toronto.—Five-ton cutter yacht complete costs from $500 to $1,000, according to finish. For Lake cruising would decidedly prefer such a boat to the shingle bottom centreboard sloop.

COMPTON.—We will shortly review the second edition of Lloyd's "Yacht Register," and you can then see what it contains. See this week's reviews relating to "Coast Survey Book," Boston to New York.

H. R.—The entrance fee of $2 in the coming canoe regatta will cover all races of the day or any one of them. The liberal sailing rules were adopted to bring all classes of canoeists together, very wisely, we think.

S. C. P., Easton, Pa.—The dog most probably has worms and should be treated for them. Give him, fasting, areca nut to the extent of about 2 grs. to every pound he weighs; four hours afterward give him one oz. of castor oil.

M. DE R., Marseilles.—There is no other recognized authority on yachting in America outside of FOREST AND STREAM that we know of. *Le Yacht* is published at 50 Rue St. Lazare, Paris, and is very ably edited; 20fr. per year.

W. A. B., Norfolk, Va.—Is Dittmar powder as safe as black, and what charge would you advise for a No. 12 breech-loader? Ans. We did not suppose there was a sportsman in the wilds of the Dismal Swamp even who did not by this time know all about the Dittmar powder question. If there be such a one it is simply because he has failed to read this paper.

W. W., Phila.—For paper boats address Waters & Son, Troy, N.Y, the only manufacturers. Cedar shells you can best get at some of the boat-houses on the Schuylkill. Apply to Ellis Ward, in the Park, who will put you on the track of what you want.

C. O. B., Toledo.—Numerous friends and patrons of your paper will be pleased to have you print that exquisite poem entitled the "Old Canoe." Ans. Our correspondent will find the poem printed in our first volume, and we think in a subsequent issue.

C. H., Easthampton.—In a game the other day between our club and the Amhersts one of our men hit a ball which struck in front of the home and bounded back and hit him. The umpire called it out. Was it out? Ans. As you state it the man was not out.

S. M. L., Belleville, Canada.—When does the American Goldfinch breed in this part of Canada? Ans. This species is very irregular in its time of breeding. We should look for the nests in June and later. See article on this subject in FOREST AND STREAM vol. x, p. 442.

C. H. B., Fort Wayne.—I feed my dog on table scraps. He seems to be in good health, but his nose is always hot and dry. Will you please tell me the cause and what to do for him. Ans. Some dogs are habitually so. If he is in good health we would not try to improve it.

W. D. W., Savannah, Tenn.—Has the "Persian insect powder," so highly recommended in your columns, ever been tested with insects on plants? Would it be likely to injure the plant? What is the price of the Osgood folding boat? Ans. It is very efficacious, and will not hurt the plant. The folding boat costs $35 for 12 feet and $45 for fifteen feet.

X. R. O.—What kind of a worm is this? My dog has got one. I have tried areca nut, but it does not do any good. Ans. Your drawing looks something like the head of a tapeworm. If you give the areca nut after fasting your dog for twenty-four hours, it will probably take effect.

W. B. R., Welland, Ontario.—On what shall I feed young mud turtles kept in an aquarium? Ans. Mud turtles will eat almost anything if they are hungry enough. Raw meat is good food, a little at a time. We recently knew of two young painted turtles which devoured a small frog at a meal.

P. H., Bloomsburg, Pa.—The wax for fly tying may be prepared as follows; One oz. clear light rosin, one dr. gutta percha, one teaspoonfull crude linseed oil; heat; thoroughly amalgamate and pour into a bowl of cold water. When cool enough to handle, "pull" it as you used to pull molasses candy when you were a boy.

T., Georgia.—Has any one ever tried the experiment of making fishing rods of hard rubber or gutta percha? Do you think it worth trying? Ans. Experiments have probably been tried, as the attempted use of rubber has been applied to most everything. We are not aware, however, that they have. There are better materials for rods.

H. W. J., Kintnersville, Pa.—You can use the Express bullet in the Shelton Auxiliary rifle barrel if of the right calibre. Trapping around Moosehead Lake, Maine, used to be good. We presume much of the country there now is used up. Michigan pays a bounty on wolves, we believe. For traps address S. Newhouse & Co., Oneida Community, N. Y.

ASA, Staunton, Va.—A setter dog is afflicted with a most distressing cough. Generally it is a dry, hacking one, but sometimes he gets up a little phlegm. He coughs particularly when he is excited—as when he meets a canine playmate or is noticed by his master. His appetite, general health, etc., are good; no sign of disease save the cough. What is to be done? Ans. For remedy see answer to "Subscriber" in last issue.

W. A. M., Jacksonport, Ala.—Gov. Yell and Judge Marx, of Arkansas, desire to submit the following for your decision: Two gentlemen play cribbage. No. 1 leads with a tray; No. 2 plays a six; 1 plays a deuce; 2 plays a four, making 15, and pegs 2; 1 plays a five, and claims a run of five. No. 2 disallows the claim because the last three cards were not in sequence. Which was right? Ans. The cards not being in true sequence no run can be claimed.

J. J., Remington, Wood Co., Wis.—I sent you by express, on the 12th, a small bird that I shot here among a flock of blackbirds. I have some curiosity to know what it is, as I do not remember to have seen one like it before. Please let me know through your paper what it is. If it is in a well enough preserved condition to be mounted I should like to have it sent to Mr. Conway for that purpose. Ans. The bird was duly received. It is a yellow-headed blackbird (*Xanthocephalus icterocephalus*), a species common in Illinois, and from there westward. The specimen was too old when received to be stuffed.

VIDI, Boston.—1. The teeth of my setter pup are somewhat discolored, and look as if they were decaying. What can I do for her teeth? 2. At what age does a setter bitch come in heat for the first time, and how may I know of the approach of the heat, so as to confine her in season? Ans. It is an accumulation of tartar, which results in canker. The dog must have plenty of bones, and the tartar removed by scraping or with a dentist's file. Over-feeding or access to the fermented contents of the swill tub is probably the cause, although hot food will do it. 2. By a swelling and bleeding of the parts.

A. F. H., Coatesville, Pa.—The Pennsylvania law relating to seines reads as follows: *Section* 23—It shall not be lawful, at any time, to catch fish by means of the drawing of a seine or seines in any of the waters of this State, under a penalty of twenty-five dollars for each offence; Provided, That the provisions of this section shall not extend to shad fishing; Provided also, That the meshes of such seines, used for the catching of shad, shall not be less than three inches; And provided further, That no seine shall be drawn within one-fourth of a mile any dam across any river of this Commonwealth, under a penalty of fifty dollars for each and every offence.

M. J. B.—You are right in claiming that the English racing yawl is little else than a cutter. This arises from the fact that the Y. R. A. rule allows yawls to carry main booms two-fifths abaft the end of the load line, thereby reducing the mizzen on the arch board to a mere rag. Naturally such a rig has the unhandiness of the large cutter mainsail with the uselessness of a sail too small to be of service. Cut off the boom, give your boat a large mizzen, and all we have said in favor of the yawl holds good. Do not be alarmed by adverse criticism from the sloop men. It proceeds from ignorance and inexperience. Watch a large sloop's helpleseness in lumpy water, and it will convince you that something is wrong somewhere.

M. B., Saybrook, Ill., and C. B. G., New Haven, Conn.—For taxidermy consult any one of the following books: Coues' "Manual of Ornithology," a manual of taxidermy and field work, price $2.50, published by Government Printing Office; C. J. Maynard's "Naturalist's Guide," price $2, Naturalist's Agency, Salem, Mass.; Brown's "Taxidermist's Manual," price $1, Orange Judd & Co., New York "Taxidermist's Manual," published by Jesse Hanley & Co., 119 Nassau st., N. Y.; J. B. Davies' "Naturalist's Guide" and R. Avis' Bird Preserving" are English books, and can be obtained of Sabin & Sons Nassau st., N. Y. In addition to these works especially devoted to the subject, Hallock's "Sportsman's Gazetteer" has several pages of practical instruction. "Wrinkles and Receipts," published by Munn & Co., N. Y., also treats of the subject. Cut this out.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

NO. 111 FULTON STREET, NEW YORK.
[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

☞ Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, MAY 29, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

☞ Trade supplied by American News Company.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, May 30.—New York Athletic Club Spring Meeting, at Mott Haven; Bedell Club Games, Manhattan Grounds; Orion Rowing Club, at Mott Haven. Base Ball: Capital City vs. Albany, at Albany; Manchester vs. Utica, at Utica. Trotting: Belmont Park, Phila.; Elkhart, Ind.

Saturday, May 31.—Short Hills Athletic Club Meeting. Base Ball: Springfield vs. Holyoke, at Holyoke; Utica vs. Manchester, at Manchester; New Bedford vs. Worcester, at Worcester; Chicago vs. Boston, at Boston; Buffalo vs. Providence, at Providence; Cincinnati vs. Troy, at Troy; Cleveland vs. Star, at Syracuse.

Monday, June 2.—Newark Shooting Society Annual Meeting.

Tuesday, June 3.—Trotting: Mystic Park, Boston; Urichsville, O.; Point Breeze Park, Phila.; Meadville, Pa.; Batavia, N. Y.. Newark Shooting Society, as above.

Wednesday, June 4.—Trotting at Battle Creek, Mich.; Milwaukee, Wis.

IN QUEST OF SALMON.—Our chief editor Mr. Hallock makes his summer trip this year to the Lower St. Lawrence by invitation of that well known veteran sportsman, Allan Gilmour, Esq., of Ottawa, Canada, and will leave for Prescott, Montreal, Quebec, and the Godbout River on June 2d. Mr. Gilmour's private steam yacht "Cruiser," a vessel of 80 tons, will run the rapids of the St. Lawrence, and taking up her outfit at the two cities named, proceed to the Godbout, a noted salmon river leased, or owned, by Mr. Gilmour. The river is 290 miles below Quebec. Birch canoes and Indians will be taken along for use in the river when required; for, although casting is done from the shore, the anglers are sometimes obliged to follow their fish, or lose them; and as these chances occur only when the fish get into broken water, the adventure is always exciting, and sometimes bespeaks a Boyton suit. But all these little details Mr. Hallock is expected to recount in his letters to the FOREST AND STREAM; and as the art and practice of salmon catching is seldom written up by one who is competent to talk by the card, these letters will no doubt be scanned with interest. Mr. Hallock will be gone a month, and on his return attend the quarter-centennial anniversary of his class graduation at Amherst College, Mass., on July 3d.

—We have not been asked by Mr. Chick to recommend his Labrador trip, and his circular refers to the editor of this paper without permission. We know that Mr. Chick's vessel on two previous trips was not seaworthy, and of his present craft we know nothing: neither have we any personal acquaintance with Mr. Chick.

THE INTERNATIONAL FISHERY EXHIBITION AT BERLIN.

MANY readers of FOREST AND STREAM who visited the Centennial Exhibition at Philadelphia in 1876, will remember the section of the Goverment Building appropriated to an exhibit of modern, primitive and aboriginal fishing implements, boats, and miscellaneous appliances; for valued contributions to which this paper received a bronze medal. Some such an exhibit is to be made next April, 1880, at Berlin, Germany, under the auspices of the German Fischerei-Vereins, or Fishery Society, only that the Berlin affair is to embrace many new features and additions which ought to make it altogether complete. It should be a compendium of all there is known at present on the comprehensive subjects of Fish, Fishing, and Fish Culture. Under different groups and classes the Exhibition will comprise: Objects from all parts of the world referring to sea and Inland-Fisheries, and more particularly aquatic animals of all kinds, alive or stuffed, preserved in alcohol or represented in pictures; products of aquatic animals; fishing gear of every kind, or models thereof; fishing craft of all nations in models or representations; fishing tackle and netting in different stages of preparation; machinery and implements used for working up the raw material; piscicultural apparatus of all kinds including incubators, models or drawings of well-known fish-breeding establishments, and contrivances for protecting or improving the breeds of aquatic animals. Aquaria; appliances in use for keeping and conveying freshly-caught aquatic animals; and for the preparation and preservation of the produce of fisheries. Models of fishermen's dwellings and costumes; matters and objects referring to the scientific investigation of different waters in connection with the fish inhabiting them; objects and works referring to the history of fishing; the literature of fishing and fish-culture, and statistics of fisheries; also maps showing the geographical distribution of fish.

The society invites contributions from all parts of the globe, offering to defray all expenses from the Berlin termini to the Exhibition building, and to return them to exhibitors free of charge. Applications for space from abroad are such as to justify the belief that the Exhibition will be of a truly International character. In most instances the governments of the different foreign countries have promised to give the enterprise their hearty support, and we hope that America will unite also. Illustrative of the fisheries of all quarters of the globe it is hoped the exhibition will be the means of stimulating inquiry and introducing improvements in the various departments represented; and more especially that it will tend to increase the interest taken in the preservation and replenishment (by a rational system of pisiculture, etc.) of waters suitable for fish.

The Committee hopes to find it possible to offer pecuniary awards for notable achievements in connection with fishing—the recipients to be exclusively professional fishermen. All communications respecting the Exhibition should be addressed to the "Ausstellungs-Commission des Deutschen Fischerei-Vereins," No. 9 Leipziger Platz, Berlin, W.

"WASTE NOT, WANT NOT."—In certain localities, notably on Michigan streams, nearly all the fishing skiffs have a transverse section formed by parallel bulkheads amidships, with auger holes through the bottom, and a cover, which forms a seat for the angler or oarsman. In this device, which A. B. Turner, the editor of the Grand Rapids *Eagle*, has been chiefly instrumental in introducing so very generally, the fish are placed as soon as caught, and are thus not only kept fresh for use, but alive and well, to be returned again to the river if not wanted. The angler of course has all the pleasure of catching his fish, without any subsequent reproaches of conscience for needlessly destroying life and depleting the streams. It is astonishing what results follow this system of economy. Last year the party to which the writer belonged, while taking grayling on the Au Sable, returned to the stream 700 fish under ten inches in length within four days, those that were larger alone being kept for present use and to carry home. At the same time another party whose boat was not provided with a well, or fish box, confessed to have thrown away five hundred dead spoiled fish.

Of course, it is not only present life which is saved by so returning superfluous fish to the rivers, but the progeny which keeps the streams populous. It is catching the small fry, as well as the big fish, which impoverishes; and this is why conservators of our fish and fish food demand the use of seines and nets with large meshes. Average fish life is of short duration, and many varieties, including trout, begin to propagate at the age of two years, while still quite under size, and not more than six inches in length. What a sin it is then to catch these little seedlings, and what a slander upon the name and art of angling!

In view of the fact that the majority of trout anglers carry baskets, all small trout must be immediately turned back to the stream as soon as they are unhooked, or they will die. But as trout run small in many streams, the angler with indifferent luck dislikes to give up what few he has taken for fear he will not aggregate a mess, and is therefore to an extent excusable in keeping them. But, as a measure of economy, all anglers, as soon as they have taken enough fish, large or small, to insure a mess, should thereafter keep none but the largest which the stream affords. There is, however, a good deal of fishing done from boats, and to those who use boats, when those boats are their own, there is NO excuse for not providing them with wells; much less is there for men who let boats for angling; they are morally bound to fit them out in this way. This well we have found to be a most convenient wash basin and tub when empty; or if tightly plugged with corks, it makes a most convenient locker for portables, or for game in the shooting season. We trust all conscientious anglers will heed these injunctions, and waste no fish. Let them catch legitimately but not inordinately; or, if the maximum of catching will not surfeit them, let them catch to their heart's content, until their arms and shoulders tire and ache, if so be they return to the water alive all the surplus above their wants. Let not a fin be sacrificed to greed, wantonness, or vain-glory. Great strings of fingerlings are not trophies of skill or of manly prowess.

If it is inexpedient to fit a boat with a well, fish of all kinds can be kept in a suitable crate or can towed over the side or the stern of the angler's skiff; or even a basket large enough will answer well.

"DOWN THE BIG RIVER."—Under this caption we print this week a continuation of the series of papers from our issue of May 8th describing a skiff-journey down the Mississippi. It is an honest matter-of-fact statement, and conveys more plainly than a more carefully studied recital would do, an idea of what is to be seen along the channel of that mighty stream. More than this, it proves that it is quite possible for two careless and verdant navigators to pull through without adequate outfit, or even the bare necessaries of life, or the knowledge requisite to procure comforts, avoid distresses or avert disasters. An inanimate waif on the vexed currents of this turbid stream, without aim or direction, would probably fare no worse, and no better than these hardy but inconsiderate voyagers, who camped in the swell of passing steamers; lived on a steady diet of sour slapjacks, and woodpecker soup, or starved alternately, taking no thought of the morrow and hardly of the present. If ever men "roughed it" literally, these did. The most uncivilized bush ranger could bestow himself more comfortably with a simple match-safe and hatchet. Pluck and endurance they had in abundance, to bear up for a journey of 2,000 miles; but if these usually desirable qualities are not balanced by caution and good judgment, they are likely to lead to disaster. We hope the heroes of the voyage will find no imitators of such doings and belongings.

D. HODGMAN & CO'S. RUBBER GOODS.—Readers of this paper who have seen the long standing advertisement of this reputable firm in our columns have learned by repeated visits to their rooms that many articles of personal comfort which formerly they were wholly ignorant of have now become indispensable to their campaigning outfits. It is astonishing what a great variety of conveniences are made from rubber none of which are so important as those which protect from wet and damp. One of the certain vicissitudes of camp life is wet weather, and for this the sportsman should always be prepared. Besides summer showers and autumnal and winter storms, there are the damps of the ground and the night dews and fogs to be guarded against. In the fairest weather the yachtsman cannot enjoy a stiff breeze without a wet sheet and flowing sea; and so with salt water fishing, no professional fisherman undertakes a cruise unless he be provided with an "ile suit;" not more for protection against rain and driving sea than from the slime and gurry of fish, and the pails-full of water he hauls in with his lines. On our inland streams wading pants and overcoats are always a luxury, if not an absolute requisite. Besides clothing and blankets, there are scores of miscellaneous articles of convenience which should very properly be included in the sportsman's outfit.

THE NON-TREATING SOCIETY.—The Business Men's Society for the Encouragement of Moderation in the use of Alcholic Drinks (a most immoderate name by the way), which has been recently started in New York city, bids fair to be most successful in accomplishing its ends. The principle adopted by the society is neither to "treat" friends, nor be "treated" by friends, to alcholic drinks. Besides being a most silly and nonsensical custom, "treating" is responsible for more of the intemperance troubles than anything else connected with drinking. We heartily commend the society, its methods and aims. It is sensible, in the hands of business men, and bound to succeed.

CONEY ISLAND.—The Coney Island season of 1879 is fairly inaugurated to-day by the opening of the Manhattan Beach Hotel, and the thousands of people from Brooklyn and New York who go by boat and cars to the Island to-day are the first of the many thousands which will swell the total number of excursionists into the millions. Visitors of last summer would hardly recognize the Manhattan Beach Hotel with its added wings, cheerful dress, perfected bathing houses and score of new attractions. A new railroad track has been laid and under the efficient supervision of Mr. Corbin the traveling facilities are safe, sure and speedy.

DECORATION DAY.—To-morrow is the day set apart for the decoration of the soldiers' graves with flowers. By common consent the occasion will be observed as a holiday, and as upon all holidays there will be numerous field meetings of clubs and societies. We should not forget the lessons of duty and bravery which this anniversary so beautifully and appropriately commemorates, nor need those who join in the generous rivalry of the sports of the day thereby do less honor to the brave boys who sleep beneath the sod.

A TRUE PROPHET.—Last February we called attention to the admirable system of weather forecasts so successfully furnished by Mr. H. G. Vennor, of the Geological Survey, Montreal, Canada. Those of our readers who may have consulted Mr. Vennor's book, and he tells us that scores of FOREST AND STREAM readers did so (a hint for other men with good books), will bear witness that *all* of his predictions proved true. Those who did not consult the Montreal weather prophet will doubtless learn wisdom now and go to him. We pin our faith to him, every time.

GULF CITY GUN CLUB, OF MOBILE.—The editor of this paper, Mr. Hallock, acknowledges with highest appreciation the courtesy of this excellent Club in making him an honorary member.

—Last Saturday's *Evening Telegram* announced the death by drowning in the Missouri river near Bismark, Dacotah Ter., of Mr. Fred. W. Jones, who with his guide were in a boat attempting to escape from a water spout which burst above them. Mr. Jones was formerly connected with the business department of the *Financial Chronicle* in this city and was well known among sportsmen.

—We have illustrated pamphlets of the sporting resorts along the Wisconsin Central and Grand Rapids & Indiana railroads, which those companies have sent us to distribute. We mail them on application, postage prepaid.

THE LONDON "FIELD" GUN TRIAL OF 1879.

SOME three weeks ago there was held near London one of the most important trials of guns ever instituted, deriving its value in a great measure from the fact that the small-gauge guns now coming into very general use in England, such as 16 and 20 gauges, were pitted against the old orthodox 12 gauges. We condense from the London *Field* the remarks of the Editor, with whom the trial originated and by whom it was managed; also, the rules which governed it and a table giving the averages. One thing about this trial seems remarkable, and that is that but one or two names known to us on this side of the Atlantic as popular or celebrated makers appear in the list of contestants.

The conditions under which the trial was carried out were as follows:

1. The entries to be confined to gunmakers; and in each class every competitor to enter one gun, and no more. The entrance fee for each gun to be 5 guineas; half to be paid at the time of entrance—which shall be forfeited if the other moiety be not duly paid before the trial. The Editor of *The Field* to be the manager, and his decisions on all points to be final.

2. The competition to be at the ground of the All England Croquet and Lawn Tennis Club, near Wimbledon station, commencing at ten o'clock on Monday, April 28, and continuing daily from the same hour till completed. The guns to be shot from *The Field* machine rest, in order according to lot. The competitor first drawn will shoot his No. 12, to be followed by that of the competitor who draws the second lot. Competitor No. 1 will then shoot his 16-gauge, to be followed by competitor No. 2, and so on to the 20-gauges; after which competitors No. 3 and 4 will follow in the same order. Should the weather be unfit for the trial in the opinion of the manager, he shall have power to postpone it from day to day.

3. Every competitor to forward to the manager (346, Strand) the trade number and weight of his guns before the trial, stating also the maker of the powder and shot he intends using, together with the number of the respective make of powder selected. The powder to be furnished by the manager, and to be black powder of English make.

4. The guns to be divided into three classes, as follows:
Class I. For 12-gauges, or under, weight not to exceed 7½lb.
Class II. For 16-gauges, and under, weight not to exceed 6½lb.
Class III. For 20-gauges, and under, weight not to exceed 6lb.
In each class any kind of boring will be allowed; but the patterns must be declared for 40 yards' range prior to the trial, and the figure of merit will be in that respect founded on such declaration. These patterns must not be less, at 40 yards, than 150 for Class 1, 140 for Class 2, and 130 for Class 3. The competitors must also declare the material of their barrels, that is to say, whether English or foreign, and whether Damascus or laminated iron; and if this is incorrectly given, the gun so described to be disqualified.

5. The cartridge cases to be furnished by the competitors, and delivered empty to the manager at the time of trial, for loading in his presence; they must be of the ordinary paper kind. The wadding to be furnished at the same time, and it also must be of felt or paper, as ordinarily sold.

6. The shot to be No. 6, either Lane & Neasham's soft shot or their hard shot, or the chilled shot manufactured by the Newcastle Chilled Shot Company—about 270 pellets per ounce—to be found by the manager. The charges not to exceed 1⅛oz. for the 12-bores, and 1oz. for 16-bores and 20 bores; all by weight, to be verified at the time of loading. The loading to be done by the competitors, in the presence of the manager, immediately before or during each trial, and the cases to be properly turned over to the satisfaction of the manager. The charge of powder must be declared before the trial.

7. Every gun to be fired twenty-five rounds at 40 yards range; and the six highest in each class to be then fired at 60 yards, also twenty-five rounds. If the competition in the first round extends to more than one day, the six are to be selected from those making the highest score in each day, according to the plan adopted in the trial of 1875.

8. The figure of merit to be made up of penetration, pattern and recoil as follows: The penetration to be computed according to the force per pellet indicated on the force gauge, described in the *Field* of Jan. 25, 1879, as made by Mr. Mitchell, 35 Great Windmill street, Haymarket.
The pattern to be computed according to the average deviation of each of the twenty-five patterns made from the declared pattern, which average deviation is to be deducted from the penetration. At 60 yards the deviation to be computed from the average pattern.
The average recoil above 80 to be deducted, and also the difference in recoil.
The final figure of merit to be computed from the totals of the two figures made respectively at 40 and 60 yards.

9. The whole of the entrance moneys to be divided into nine equal parts, two of which are to be given to the gun making the highest combined figure of merit in each class, and one to the second highest, without any deduction whatever.

10. The proprietors of the *Field* agree to bear all the charges of the trial.

11. The manager reserves to himself the right to make any slight deviation from the above plan which may be considered expedient by three of the competitors, and which he himself approves of, without taking a vote.

The following is the table of averages:

In commenting upon the trials the Editor of the London *Field* writes as follows:

"At length, we think, we may congratulate our shooting friends on having arrived at a reliable figure of merit for their shot-guns. Unlike the rifle, which has only accuracy and low trajectory to be considered in es mating its value, the shot-gun must be tested for (1) strength of shooting, (2) pattern (divided into desired spread and uniformity), (3) recoil, (4) putting together of barrels, and (5) handiness—besides other important points unconnected with the performance of the barrels, such as (6) the working of the locks, (7) that of the action, (8) freedom from wear and tear, etc. Many of these points it is impossible to put to the test in a decisive manner, as they can only be pronounced on as matters of opinion; but there are others, such as the first four, on which safe conclusions can be arrived at, and to these we have consequently confined our attention in the recent trial.

"Up to the year 1878, in estimating the merits of a gun, it was considered expedient to combine pattern and strength of shooting in equal proportions, both being *desiderata* of similar value, and usually, as one was gained, the other was lost. Hence, up to that time the figure of merit was compounded in such a way as to make the two subordinate one to the other—the method adopted being to count the pellets of shots striking within a 30in. circle for the one, and the number of sheets of brown paper pierced, multiplied six for the other. This multiplication was suggested as a means of raising the "penetration," as it was technically called, to about an equal position with the pattern, without which the latter would have been "all in all." Prior to the 1878 trial, however, choke-boring came fully into play, by which it was rendered apparent that any desired pattern up to 230 might be obtained; and for this reason we then abandoned pattern, pure and simple, as an element in the figure of merit, and instead of it adopted its variation as an adjunct to penetration, considering uniformity of pattern as the one thing needful to make the gun a reasonably perfect piece of mechanism. This conclusion was arrived at in consequence of the wild shots which so often occurred in testing the choke-bore, and which, of course, led to frequent "misses" in the field, without any fault on the part of the sportsman. In 1878 this was fully tested, and, with a few exceptions, it was found that our anticipations were realized. In addition to these two essentials, we also tested the amount of recoil by means of a Salter's balance, and at the same time the "putting together" of the barrels, through the agency of the machine rest which we had recently invented, and used for the first time at that trial. This machine not only does away with the influence on the results of the human shooter, whose skill was often supposed to be the cause of success rather than the boring of the gun, but it also shows whether the barrels are properly "put together," penalizing them severely if they are not—because both cannot hen be made to shoot at the centre of the target, and all that can be done is to humor them by a compromise, as was done in many instances last week. In 1878 we fully tested this machine rest, and all the competitors were perfectly satisfied with its performance, so that it was unanimously accepted as the best means of testing the gun in a public trial; and this reputation it fully maintained last week.

"In addition to the comparative performances of the guns themselves, it is also desirable to investigate the relative value of different powders and loads of shot. It will be seen that all the competitors used 1⅛ oz. shot with the 12-bores, except Mr. Green, who used only 1 oz. All used 1 oz. shot with the 16-bores and 20-bores, except Mr. Green, who limited his load to ⅞ oz. in both, with 3 drs. of powder in the 12-bore, and 2½ drs. and 2 drs. respectively in the 16 and 20-bores. His success with these reduced loads is worthy of remark, and H tsmen in future will have to consider whether or no they can improve their shooting by following his example. Our own opinion has for some time been that the loads have been overdone, and, without doubt, the recent trial tends to confirm it. It appears that a mistake was made in entering Mr. Green's declared pattern of his 20-bore as 165, whereas we have the strongest evidence of the members of our staff that he gave it as 155. If so it would raise his figure of merit at forty yards to 194.12 from 187.32, and his final figure in a corresponding proportion, viz., from 235.92 to 242.72."

The results of the trial appear to demonstrate that the little 16 and 20-gauge guns possess the same killing power as those of larger gauges. It is now proposed to test these small gauge guns, choke-bored, with large shot at long distances.

GAME PROTECTION.

MIGRATORY QUAIL.—*Lakeville, May* 19, *Editor Forest and Stream:* I am very glad to chronicle the return of the migratory quail turned loose by our club a year ago. The first one was seen by a member of the club on May 3, while plowing, he going within ten feet of the bird, and making sure that he was not mistaken in its identity. The next reported were May 7, when some eight or ten were seen by a farmer in a stubble field, and from the description I have no doubt that they were migratory quail. The last I have heard from were a pair seen and identified by a member of the club on the 16th in a piece of stubble just back of his garden. I feel sure that we shall hear of many more as they begin nesting, and that their introduction here will prove a complete success. Will report what I can learn of broods raised, etc., later in the season.

W. H. WILLIAMS, Sec'y.

—The proposed restocking of the Swiss Alps with game from the Victor Emanuel collection in the Aosta Valley is to be carried out.

The Rifle.

NEW HAMPSHIRE MILITIA.—The Strafford Guards, Capt. Abbott, and Second Light Battery, Platoon A., Capt. Davis, N. H. National Guard had their annual parade and target practice on Tuesday, May 13. Both companies are located at Dover. The Guards are armed with the Springfield rifled musket, and the battery used the Ballard rifle. The best three averaged shots in the Guards were made by Lorenzo Stevens, 9 2-3; Henry E. Young, 11; Thomas Stanton, 12 1-3; and the best single shot by Frank Colbath, 1¾. Of the honorary members Eugene Smart made the best three average shots, being an average of 5 in. from centre. The distance was 100 yards for all the shooting. In the Battery the first prize was won by John Babb. The first prize for honorary members by John T. Hicks.

MASSACHUSETTS—*Boston.*—The spring meeting of the Massachusetts Rifle Association, on the Walnut Hill ranges, was a complete success in every way. The shooting extended through Wednesday and Thursday, and gave opportunity for fine work at long, short and mid-range. All the matches, five in number, were called 11 A. M., but only one the "Di

shooting at the word at 200 yards, allowing 5 seconds to a shot in 10 shots, the leading scores of the first match stood:

J W Mangan	3	5	4	4	4	3	3	3	4	5—38
D O Blydenburgh	3	5	4	3	3	3	4	3	5	4—37

At 500 yards, off-hand, the leading scores in the first match at Creedmoor, May 14, stood:

A McInnis	3	4	5	3	4	0	5	3	4	3—34
A J Howlett	4	5	4	4	3	3	3	3	2	2—33

In the gallery a peculiar match has been started. Each contestant is given one minute to fire 10 shots, off-hand; for every 5 seconds within the minute saved one point is given, and one point is forfeited for every 5 seconds over the minute consumed in the firing. In the possible 50 on a preliminary trial Capt. L. V. Soul made 45 points in 43 seconds, I. C. Duckworth got 43 points in 45 seconds, and Frank Donaldson made 42 points in 39 seconds.

CREEDMOOR—On Saturday last the National Rifle Association range was well occupied with shooters. The weather was warm, the sky bright, and the wind was more tractable than usual, blowing gently from left to right diagonally across the line of fire. There were several long-range riflemen practicing, in hopeful anticipation of the selection of another American team next month. There were 94 entries in the Diamond Match with military rifles. Distance, 200 and 500 yards; 5 shots at each range; possible 50:

A B Van Heusen	43	John Warren	34
E V Price	43	C Wright	32
Capt J L Price	42	G W Munson	32
W J Underwood, Jr	41	Capt John Kerr	32

SCHUETZEN NOTES.—Mr. Henry Bischoff, the banker, has received the programmes of the National Shooting Festival, to be held in Basle, in July next. The Swiss riflemen are prepared to give a hearty welcome to any American riflemen visiting the festival, and the list of prizes should certainly induce some of your champion schuetzen-bund men to visit the Fatherland and take part in the competitions.

Union Hill, N. J.—Practice shooting of the New York Schuetzen Corps, May 16. Distance 200 yards:

First Series—B. Zettler, 199; W. Klein, 191; Phil Klein, 190; Capt. Geo. Aery, 175; H. W. Meyer, 157; H. Lehmkuhl, 131; F. Huner, 121, rings.

Second Series—Distance 200 yards, each man 10 shots at the regular 25 ring target.—Phil. Klein, 195; B. Zettler, 194 W. Klein, 187; Capt. Aery, 179; H. W. Meyer, 146; F Huner, 137; H. Lehmkuhl, 120.

—Decoration Day will be observed at Morsemere Range, Yonkers, N. Y., by a match open to all comers at 500 yards, from 12 to 5:30. Any rifle, any position. 7 scoring shots, no sighting shots. Entries $1. Re-entries (unlimited) at 50 cents. Only the best score of each shooter will count. Five prizes.

The special target used is in all respects like the Creedmoor regulation mid-range, except that a circle 14 2-3 inches in diameter will be inscribed inside the black bull's-eye and will count 6, and another circle 7 1-8 inches in diameter, within his, will count 7.

SEPPENFELDT RIFLE CLUB.—200 yards, reduced Creedmoor target:

A M Anderson	49	G C Walters	45
John Miller	49	John Refen	45
E. Holtzmann	48	John Chambers	43
John Keenan	47	Ow Fitzpatrick	43
A Keller	47	Th Brossard	42
H Deline	47	O Decker	41
J Garrison	46	W T Leary	41
P Brennan	46	Chi Laing	41
John W Adams	46	C Rasch	40
Wm Seppenfeldt	46	Chi D Colen	39

NEW JERSEY.—On the Columbia Range shooting is getting very lively, and plenty of matches are announced, while the complete accessibility of the grounds make them a favorite resort. For the month of June the matches announced are as follows:

Mondays—June 2, 16 and 30—Subscription and Bull's-eye Matches at all distances. June 9 and 23—Sharps Rifle Co.'s Match, 500 yards; N. Y. Advertising Sign Co.'s Match, 500 yards.

Fridays—June 6 and 20—Remington Match, 200 yards; N. Y. Advertising Sign Co.'s Match, 200 yards. June 13 and 27—Lewis Cup, 1,000 yards; Fulton Cup, $50, 200 yards; Subscription and Bull's-eye Matches.

BRINTON, N. J.—The matches at the State Range at Elizabeth on Saturday last were for the Sharps and Association prizes. Both were at 200 yards. The Sharps required 10 shots without cleaning from any military rifle. Twenty-six entries were made, and the leading military scores ran:

F H Hyde	42	F J Donaldson	31
B A Vail	42	A Niemond	39
L H Grove	42	W A Mulford	38
F H Holton	40	H W Gourley	38
E M Squier	40	D Loder	36
F L Sheridon	39		

The conditions of the second contest—the Association Match—were similar to the previous match, excepting that riflemen were allowed to clean their rifles. The leading scores were as follows:

W M Farrow	47	J L Miller	43
F L Sheldon	45	J W Todd	42
E M Squier	45	W A Mulford	41
B A Vail	44	A Niemond	41
H Fisher	43	W J Donaldson	40
F H Holton	43		

Brinton Range.—The second match of the Association long-range competition will take place on the 5th prox. It is open to all members of the N. J. State Rifle Association. 800, 900 and 1,000 yards; 15 shots at each. Any rifle. Position, any without artificial rest. The first prize is a fine double breech-loading shot-gun, presented by Mr. Henry C. Squires, No. 31 Cortlandt st., valued at $75; the second prize, $50 cash, and the third prize a new Sharps Short-Range Rifle, presented by the Sharps Rifle Co., value $40. The first prize to go to the person winning the most competitions during the season. Every competitor will be handicapped on each competition after the first by deducting from his score as many points as he may have made in any of these competitions

B L Woodworth	4	4	5	4	5	4	3	5	5	4—43
P G Sanford	4	5	4	3	5	5	4	4	4	4—44
H Woodworth	4	5	4	5	5	4	4	4	4	4—41
W L Burr	3	4	3	5	4	4	4	4	4	4—39
E Ponzelt	3	4	3	3	4	3	5	4	4	3—36
W S Rogers	2	4	3	4	3	3	5	3	4	4—35

CONNECTICUT—*Bridgeport, May* 23.—Semi-monthly shooting of the Bridgeport Rifle Club. Mr. Harry Nichols was officer of the day. The winning scores, 10 shots at 200 yds., any rifle:

Geo F Hull	42	S H Hubbard	40
Geo W Keer	41	R S Bassett	40

Hull takes second prize, having won a rifle previously.

Seven shot, 200 yds., any rifle, for the Nichols gold badge: Geo. F. Hull won with 33.

Five shots, 200 yds., any rifle: Geo. F. Hull, 23; Isaac McCourt, 22; Harry Nichols, 22.

Ten shots, 500 yards, any rifle: Geo. F. Hull, 50; S. C. Ringman, 42.

Military Subscription match, 5 shots at 200 and 500 yds., was won by Harry Nichols, 21 at 200, 20 at 500.

The wind gusty from 7 o'clock. WHITE DISK.

NEW YORK, *May* 25.—Greener's West Side Rifle Team; weekly score; 200 yard target reduced; 10 shots; possible 50:

J Reitwelsner	50	G Roesner	44
A Dory	49	B Holzman	44
J Roesner	47	J A Reitwelsner	42
C Welker	46	S K Campbell	42
G Greener	44	J Oechsler	42

—The Zettler second team won the third and deciding match against the Seppenfeldts on the 23d inst, score 447 to 439.

CREEDMOOR.—The programme for the spring meeting, June 3 and 4, is as follows:

Directors' Match, 200 yards—Open to directors and honorary directors of the N. R. A; rounds, five; position, standing; weapon, any rifle.

Short Range Match, 200 yards—All comers; any rifle; ten prizes, total $106.

Team Match, 200 yards—Open to teams of four men representing any military company, troop or battery of the regular army or navy, or marine corps, or the militia or National Guard of any State, or any rifle club in the United States, or any four members of the N. R. A. Number of teams from any company, club or association unlimited. Any rifle; three prizes, total $78.

Military Team Match, 200 yards—Open to teams of five men from any company, troop or battery of the National Guard of N. Y. or other States, or of the regular army, navy or marine corps, to be composed of company officers, non-com. officers or privates, certified to have been members of the company they represent on March 1, 1879. Teams to use the rifle their company is armed with. This match to be fired in thirty minutes. Prize, an embroidered flag, value, $100; to be won three times before becoming the property of the organization. Won in 1876 by Co. I, 7th Regiment, N. G. S. N. Y.; won in 1877 by Co. B, Engineer Battalion, U. S. A.; won in 1878 by Co. C, Engineer Battalion, U. S. A. Three other prizes, value $46.

Subscription Carbine Team Match, 200 yards—Open to teams of four men from any troop or battery, N. G. S. N. Y.; standing; Remington carbine, N. Y. State model.

Subscription Match, 200 yards—Open to all comers; standing; any military rifle.

Individual Match, 200 yards—All comers; position, standing; any rifle; six prizes, total $75.50.

Subscription Team Match, 300 yards—Open to teams of four men, representing any rifle club in the U. S., or any four members of the N. R. A. Number of teams from any club unlimited. Position, standing; any rifle.

Subscription Match, 500 yards—All comers; position, any; any rifle.

Subscription Match, 500 yards—All comers; position, any (as allowed in "any rifle" competitions); any military rifle.

Military Team Match, 500 yards—Open to teams of four men from any military organization in the U. S., including the regular army, navy or marine corps. Position, any (as allowed in "any rifle" competitions); weapon, any authorized military rifle; four prizes, value $83.

Subscription Match, 500 yards—All comers; position, standing (off-hand); any rifle.

Team Match, 600 yards—Open to teams of four men, representing any military company, troop or battery of the regular army, navy or marine corps, or National Guard of any State, or any rifle club or association in the U. S., or any four members of the N. R. A. Number of teams from any company, troop or battery or club unlimited. Position, any; any rifle; three prizes, total $50.

Subscription Match, 600 yards—All comers; position, any; any rifle.

Subscription Match, 800, 900 and 1,000 yards—All comers; position, any; any military rifle.

Leech Cup Match—Open to all native-born citizens of the United States and all resident members of the Amateur Rifle Club; 800, 900 and 1,000 yards; position, any; rounds, fifteen at each distance, without sighting shots; any rifle within the rules. Prize, the Leech Cup, to be held by the winner during the year, and championship gold badge, value $50. Won in 1875 by Col. John Bodine, score 205; won in 1876 by Col. H. A. Gildersleeve, score 204; won in 1877 by Major H. S. Jewell, score 213; won in 1878 by Frank Hyde, score 205.

Running Deer Match, 100 yards—All comers; any rifle (sights to be over centre of the barrel); five runs in each entry, one shot to each run; each competitor may enter as many times as he pleases; entrance fee, $1 each entry; three prizes, total $28.

—Forty-six in a possible 50 at 500 yards, off-hand, was the very good finish which C. E. Blydenburgh made at Creedmoor before starting for his Western home.

—J. S. Conlin has been experimenting with the new reduced cartridge of the Sharps Rifle Co. It is made of the same length and thickness as the ordinary cartridge on the outside, so as to fit the chamber, but within the thickness of the shell leaves but a small cavity for powder, while a light-weight bullet is fitted to it. In this way the ordinary military rifle may be used, without the use of any sub-calibre devices, and without the corking of the cartridges. Those who have tried the new shells, which are of steel, find them capable of use through an indefinite number of recharges.

—The spring meeting of the Medford Rifle Association is fixed for June 17 and 18.

N. Y. RIFLE CLUB.—The New York Rifle Club have recently been trying various sorts of tests in markmanship. In

rectors'" match, was finished. In this, Mr. D. Kirkwood made the highest score, 24 out of a possible 25, and will therefore hold the Directors' gold badge during the coming year. The distance was 200 yards, five shots completing a score. Following are the scores, the highest possible being 25:

D Kirkwood	5	4	5	5	5	24	J N Frye	4	4	4	4	4—20
H Tyler	4	4	5	4	4	21	E B Souther	4	4	3	4	4—20
L L Hubbard	4	5	3	5	4	21	W Poland	4	5	3	4	4—20

The shooting in the other matches went on during the day. In the *Herald* match at 200 yards, were 63 entries. Ties was at 200 yards, and J. S. Sumner, the crack long-shooter, showed that he was as steady on his feet as on his back by running up a best 33.

The military match at 200 yards had, on this first day, 27 entries. The carton match at 600 yards had 36 entries, and the carton at 900 yards had 17 contestants.

The closing day on the 23d brought a very large attendance of spectators and riflemen, delegations being present from Medford, Lawrence, Andover, Haverhill, Wakefield, Walpole, and other places where interest is taken in the sport. Many ladies graced the range with their presence.

The *Herald* cup match was the principal event of the meeting, for on the second day 237 entries were made in it, and out of the possible 35 the scores stood at the finish:

J S Sumner	4	4	5	5	5	5	5—33	W H Jackson	5	4	5	4	4	5—32
N W Arnold	4	4	5	5	5	5	5—33	W Charles	4	4	4	5	5	5—32
J B Osborne	4	4	5	5	5	5	5—33	L W Farrell	4	5	4	5	5	5—32
W M Farrow	5	5	4	5	4	5	5—33	H Tyler	5	4	4	5	5	5—32
J N Frye	4	5	5	5	5	4	5—33	L L Hubbard	5	4	4	5	5	5—32
E W Law	5	5	4	5	5	4	5—33	B B Souther	5	5	4	4	5	4—32
E F Richardson	5	5	4	5	5	4	5—33	W Poland	5	4	5	4	5	4—32
J O Mattoon	5	4	4	5	5	5	5—32							

The match resulted in three ties for the cup, between Messrs. Sumner, Arnold and Osborne. These were shot off at 5:30, Mr. Osborne dropping out on the fourth shot and Mr. Arnold on the tenth, leaving Mr. J. S. Sumner the winner of the *Herald* Cup, valued at $50.

The Military Match was the next in favor, and 90 entries were made, the highest possible being 35 at 200 yards, any military rifle:

L L Hubbard	4	4	4	5	5	5	5—32	W Poland	4	4	4	5	5	4—30
H Tyler	4	4	4	5	4	5	5—31	H Mortimer	5	4	4	4	5	4—30
W Klitett	5	4	5	4	4	5	4—31	W M Farrow	5	4	5	4	5	4—30
J N Frye	4	4	4	4	5	4	5—30							

The 600-yard carton match filled with 70 entries, some excellent scores being made, the highest possible being 43:

J F Brown	5	5	6	6	6	6	6—41	W M Farrow	4	6	6	5	6	5—37
W Poland	5	6	6	4	6	5	6—39	Sidney Wilder	5	6	4	5	4	6—37
J O Mattoon	4	5	6	6	6	4	6—39	N Washburn	4	6	3	6	6	6—36
W Gerrish	5	6	4	6	6	5	6—38	S Jones	5	6	6	5	6	4—36
W H Jackson	4	3	6	6	6	6	6—38							

The 900-yard carton match was the least patronized, the number of entries on Thursday amounting to 63. Mr. J. F. Brown excelled his score of Wednesday by one point, taking the first prize with a score of 41 out of a possible 42:

J F Brown	6	5	6	6	6	6—41	A W Howland	5	5	6	6	6	5—39	
S Wilder	6	6	5	5	6	6—40	B J Angell	6	4	5	6	6	6—39	
W Gerrish	6	6	6	6	5	6—40	J O Mattoon	6	5	4	6	6	6—39	
W J Farrow	5	6	4	6	6	6—40	W H Jackson	6	6	5	6	6	5—38	
H Poland	6	5	6	5	5	6—39	C C Hebbard	4	6	6	6	5	6—38	

The prizes were presented at the close of the shooting by Mr. L. L. Hubbard, who made a few appropriate remarks to each recipient. The association has received a challenge from the Medford Rifle Association for a team match, ten men on a team, three rounds of ten shots each to each man. The challenge has been accepted and the date will be fixed in a short time.

MASSACHUSETTS VS. COLORADO.—The detailed score made by the Denver Rifle Club in its recent telegraphic match with the Massachusetts Rifle Association, in which the former was beaten by one point, stood as follows:

200 yards.

O Gove	5	4	4	5	5	5	4	5	5	4—47
O Gove	4	4	5	5	5	4	4	4	4	5—44
W Y Sedam	5	5	4	5	4	4	5	4	4	4—44
W Bemrose	4	5	5	4	4	3	5	5	4	4—43
M Spangler	4	5	4	4	4	5	4	5	4	4—43—221

500 yards.

O Gove	5	4	5	5	5	5	5	5	5	5—49
M Miller	5	5	5	5	5	4	4	5	5	5—48
W J Fay	4	5	5	5	5	5	5	5	5	5—49
Wm Bemrose	5	5	5	5	5	5	4	5	5	5—49
O Gove	4	5	5	6	5	4	5	5	5	5—48—242

Grand total, 364 points; possible 500.

MASSACHUSETTS—*Pittsfield, May* 24.—Score of the Riverside Club; 200 yards:

J H Wood	4	5	4	4	4	4	5	6	4	4—43
B Smith	5	4	5	5	4	5	3	4	4	4—43
O Preston	4	5	4	4	4	3	5	6	3	5—42
Dr Wentworth	4	5	4	4	4	4	4	4	4	4—42
E Leonard	4	3	4	5	4	4	4	4	4	4—40
S Mayo	4	4	4	3	4	4	5	3	4	3—39
F H King	4	4	4	3	4	4	4	4	5	3—39
D M Couch	3	4	3	4	4	3	4	5	4	4—38

MASSACHUSETTS—*Boston Mammoth Rifle Gallery.*—No clean scores have been made as yet this month, though the shooting has been of high standing, many riflemen of the out-of-town clubs availing themselves of the gallery for practice. The standing of the several competitors to date is as follows; 150 feet, rounds 8, possible 40:

F Hollis	5	4	4	5	5	5	5—38	M O Johnson	4	4	5	5	5	5—37
Wm Bradford	5	5	4	4	5	5	5—38	C Edwards	4	4	4	5	5	5—37
Geo Lamb	4	5	5	5	4	5	5—38	G McKibbin	4	4	4	5	5	5—37
G W Barry	5	5	4	5	4	5	5—38	W H Restarick	4	5	4	4	5	5—37
H W Eager	5	5	5	4	5	5	4—38	H Tyler	5	4	4	5	4	5—37
Henry Lowell	4	4	4	5	5	5	5—37	N W Arnold	5	5	4	5	4	5—37

Medford, May 21.—The regular competition of the "May series," on the Bellevue range to-day, resulted as follows; 200 yards:

H H D Cushing	4	5	5	5	4	4	4	4	5	5—46
C H Russell	5	4	4	5	5	4	4	5	5	5—45
C D Harrison	4	5	4	5	4	5	4	4	4	5—44
H Withington	4	5	5	4	5	4	4	4	4	5—44
E Wyman	5	4	5	5	5	4	5	4	4	4—44
J D Henshaw	4	5	4	4	4	4	5	4	5	4—43
J R Teel	4	4	4	5	4	4	5	5	5	3—43

Gardner, May 21.—The following are the scores of the rifle club at Hackmatack range; 200 yards, off-hand:

	R.	C.		R.	C.
C O Best	154	88	H Pierce	124	84
H C Knowlton	148	84	Wm Austin	108	82
G F Ellsworth	150	83	Carl Zeraun	102	82

The club has built an addition to its house, which is now 92 feet long by 12 feet wide.

South Framingham, May 24.—Score of the rifle club for this week; 200 yards:

W A Swan	5	4	4	4	5	4	4	4	4	5—42
W H Trowbridge	4	3	4	4	4	4	3	4	4	4—38
C O Trowbridge	3	3	3	4	4	4	4	4	4	4—37

CONNECTICUT—*Saugatuck, May* 19.—Regular weekly practice of the Saugatuck Rifle Club; 200 yards, off-hand; weather clear; wind 3 o'clock:

above two hundred. This condition to apply only to the scores in determining the winner of the first prize. The second prize to go to the person who at the close of the season shall have made the highest aggregate of three full scores at all the distances, in any three competitions. The third prize to go to the person who, having never won a first prize at these distances, at the close of the season shall have made the highest aggregate of three full scores at all the distances in any three competitions.

NEW JERSEY—*Newark.*—Newark Amateur Rifle Club; 200-yards reduced targets:

Wm Hayes	5	5	5	5	5	5	5	5	5	5—50
J Bayer	4	4	5	5	5	5	5	5	5	3—48
G L Freche	6	4	5	4	4	4	5	[illegible]	5	4—45
V Hesse, Jr	4	4	5	5	4	5	4	4	5	4—44
J F Hill	4	5	5	5	4	4	3	5	4	5—43
T Felsburg	4	5	4	3	5	4	3	5	4	5—42

—The Pennsylvania State Rifle Association is at present the best model of what such an organization ought to be. It is an aggregation of the several rifle clubs in the State, making it rather a rifle congress than a distinct club. It is prepared for fine work, and in the matter of targets has adopted the following refinement on the Creedmoor pattern:

Third Class—To be used in all distances to and including 300 yards.

Bull's-eye—8 inches in diameter sub-divided by one ring 4 inches in diameter.

Centre—26 inches in diameter, sub-divided by three rings 2½ inches apart.

Inner—46 inches in diameter, subdivided by three rings 2½ inches apart.

Outer square—4x6 feet.

Second Class—To be used in all distances over 300 yards, to and including 700 yards.

Bull's-eye—22 inches in diameter, sub-divided by one ring 11 inches in diameter.

Centre—88 inches in diameter, sub-divided by two rings 2 2-3 inches apart.

Inner—54 inches in diameter, sub-divided by two rings 2 2-3 inches apart.

Outer—70 inches in diameter, sub-divided by two rings 2 2-3 inches apart.

Outside square—6x6 feet.

The spaces between the rings on the third class target shall be numbered from three to twelve consecutively, and shall count in a like manner; all that space on the outside of the rings counting as two. On a second class target, the spaces shall be numbered from two to twelve consecutively and count in a like manner.

ILLINOIS—*Chicago*—The off-hand clubs of Chicago enjoyed a mutual competition at the Lake View Range on Saturday last, in the match for a cup, presented by J. E. Tilt. The trial was exhaustive, requiring 30 shots per man, and out of the possible 150 the scores stood:

J S Crum	5	4	5	4	5	4	5	5	3	5	5	4	5	4	4	4	4	4	5	5	4	4	4	6	5	4	4

For Forest and Stream and Rod and Gun.

THOSE SIX GRIZZLIES AGAIN.

OUR correspondent "Bear Paw" will notice in the following communication the omission of that part concerning the mooted question of the respective game killed by the members of that now famous Rocky Mountain party. "Viator" himself gallantly came to the front with a very candid and altogether satisfactory statement in our issue of April 24. Of the Express bullets "Bear Paw" writes:

"Viator" asks my testimony as to the efficacy of the Express bullets. This I have given, and again say that the bullet used by me—375 gr.—and those used by him—260 and 270 gr.—are more effective on game no larger than deer than the solid balls formerly used. But when it comes to bear, elk and buffalo, such light balls are inferior to a heavy solid ball. "Viator's" theory is, that the hollow ball, on striking, "spreads out like a mushroom," and remains together. My observation has been very careful, and is entirely different from his. The fact is, on striking, the sides burst asunder and splinter off with the acquired velocity of the ball, and at an angle with the line of fire, more or less obtuse, according to the velocity. The size of these splinters vary inversely with the velocity of the ball—the greater the velocity the smaller the splinters. They vary in size, also, in proportion to the diameter of hole in point of ball. In case of the thinner-skinned and small-ribbed animals, like the deer, the splinters from the light ball do penetrate the cavity. With the buffalo, bear or elk (thick skin, large ribs, and frequently three or four inches of flesh outside of ribs), these small splinters from the light ball would not have momentum sufficient to reach the cavity; or, if they did, with not sufficient power to be effective. Only the butt of ball would, which, being lighter than the solid ball, is less effective. The only advantage of the hollow ball is when it goes to pieces just before entering the cavity, the splinters flying off in a fan-shape, or rather as the frustum of a cone, and attacking a large portion of the vital organsat once. If these splinters fail to enter the cavity, or with not sufficient force, there is so much power wasted, and the butt has to do all the work.

I cannot indorse "Viator's" opinion, that his .450 Express, with the 260 or 270 gr. ball, was so destructive on bear. His own experience and observation should have brought his mind to a different conclusion. In the case of the bear, shot at the butt from the overhanging rock twenty yards off, the ball struck over the heart, the butt penetrating the heart, which would have finished him without the aid of the ball from the teamster's Winchester, also penetrating near the heart, which would have killed him. I could not see that the splinters from the Express had penetrated the cavity, and were consequently of little service. From my observation of the wound, the solid ball would have been equally as effective.

Again, in the case of the only grizzly killed by "Viator's" rifle, without the aid of another rifle, two balls penetrated behind the bear's shoulders, one immediately behind it and showing a good deal of penetration, and the other farther back, but through cavity, and I think another a little farther back. Either of the first two should have produced instant death to have shown much greater destructiveness than a solid ball. As it was, he reported the bear very lively afterward, finally lying down in a dying condition within ten feet of the opposite side of the edge of the thicket. Approaching the edge of the thicket, he gave that finishing shot in the eye that he so graphically described in your paper, and which he holds up as a triumph of the Express. My own conclusions arrived at, from an inspection of the carcass and from his own account of the affair, were diametrically opposed to those of "Viator." He concludes that any ball playing such a smash with an animal's head, entering the eye, was the very weapon for a grizzly. My conclusion was that any rifle was a failure as an Express rifle that, putting two balls behind the shoulder, did not produce instant death with either of them, and that a heavy solid ball in this instance would have been as much, or more instantly, fatal put, either through the eye or behind the shoulder. I was rather surprised he failed to mention in his article those two balls put about the heart and that failed to finish him. It cannot be successfully controverted that for the spinal column or the head the heavy solid ball is the projectile. A short time since I killed a Big Horn bull, striking an inch below the eye on side of face, coming out on back portion of head, andtouching neither the brain nor spinal column. He dropped as dead as if hit in the brain. How? Simply from concussion of the brain. Whatever advantage there is in the Express ball is confined solely to its action on the vital organs within the cavity, and to the paunch and bowels.

Whoever goes after grizzlies with an Express ball much less than 350 gr., and with plenty of powder behind it, will soon have the "bumble-bee sting" of Captain Williamson, who is to be commended for his candor in stating his experience. The idea of managing a grizzly with a 260 or 270 gr. ball, with any quantity of powder behind it (the more over 100 gr. the worse for the hunter), seems to me preposterous. "Viator" seems to think them "small potatoes." A little solid experience with them will convince him to the contrary. He evidently knows little of their anatomy, nature or habits. Without going into a discussion as to the relative prowess of the grizzly or tiger, I will venture the opinion that, considering the appliances used in hunting the two beasts, the grizzly is the more formidable opponent of the two. BEAR PAW.

Montana, April 23, 1879.

Yachting and Boating.

June 28—Nova Scotia Y S Harbor Cruise.
June 28—Dorchester Y C Championship Regatta.

YACHTING NEWS.

A YACHT RACING ASSOCIATION.—The new Jersey Yacht Club has issued a call to other clubs to select committees for the consideration of some plan looking toward the formation of a Union or Racing Association of some kind. The call should be promptly answered. We have received a letter on this subject and will publish our own views in connection with it next week.

PORTLAND YACHT CLUB.—The annual challenge cup match of this club was sailed May 23. A fresh 16-mile wind from the north was blowing. *Rex*, 50ft., E. E. Preble, and *Viva*, 44ft., Vice-Com. A. K. Paul, were the only entries in first-class sloops. Won by *Viva*, *Rex* not finishing. This gives the Vice-Commodore, whose sloop has already pocketed one cup, winning it three years in succession, the first year on the new cup also. *Rex*, we judge, could not have been in form, for she is one of George Steers' famous models, and a good deal like *America*. In a stiff breeze she ought to have had things her own way. The second-class finished as follows: *Twilight*, 36ft. 7in., W. A. Charlton, 3h. 27m. 42s.; *Edith*, A. M. Smith, 3h. 55m.; *Marie*, 22ft. 8in., T. L. Kimball, 4h. 2m. 18s., and *Nellie*, 28ft. T. F. Bradford, 4h. 30m. 42s. *Nellie* takes second-class schooners prize, *Undine* not finishing, and *Twilight* takes second-class sloops prize. There were no entries for third-class. The length measurements given are on water line. Sloops *Idler*, 24ft. 2in., Geo. O. Owen; *Willie*, 25ft. 10in., C. Stanwood, and *Tempus*, 27ft. 2in., W. W. Goold, all of the second-class, did not finish.

QUINCY YACHT CLUB.—The opening regatta of this club for three classes, over 22ft., 18 to 22ft., and under 18ft., resulted as follows: *Waif*, A. J. Clark, won in first-class in 1h. 42m. 2s., beating *Folly*, J. F. Sheppard. *Thistle*, W. H. Litchfield, won in second-class in 1h. 48m. 48s., beating *Elf*, *Wawa*, *Glance*, *Psyche*, *Wildfire* and *Dream*, the latter ruled out for taking wrong course. In third-class *Rocket*, B. F. Bass, won in 1h. 12m. 9s., beating *Imp*, *Dandelion*, *Elmer*, *Undine*, *Zip* and *Flirt*. Only plain sail was allowed. Boats were measured on water line, including one-third overhang at both ends. Judges, Messrs. J. T. Penniman, J. M. Glover and Samuel Bass. One Prize in first-class, two in each of the others. Next regular regatta off Quincy Great Hill, June 9, 2 P. M.

TWO LARGE STEAM YACHTS.—The two largest steam yachts—one built in America and the other in Great Britain—have recently been launched. The former is for Mr. Dion Boucicault, and built by Ward, Stanton & Co., of Newburgh, N. Y. Length on deck, 168ft.; on water line, 149ft.; over all, 187ft.; beam, 26ft.; depth of hold, 11ft. 4in., and draft of water, 9ft. Tonnage, C. M., 460. Her frame is of white oak, with locust staunchions, hackmatack knees and oak planking; deck beams of yellow pine, with iron beams in wake of the boiler room; white pine decks worked in narrow strips; copper fastened below water and galvanized iron above; engines of the compound inverted condensing type; cylinders, 23in. and 48in., by 30in. stroke; two return tubular boilers, with a heating surface of 2,000 sq. ft., two furnaces to each boiler; working pressure, about 100lbs.; shaft of steel, with a 9ft. 6in. propeller; capacity of coal bunkers, 70 tons. She will be rigged as a schooner. Foremast, 80ft., topmast, 44ft.; mainmast, 83ft., topmast, 44ft.; bowsprit outboard, 32ft.; main boom, 57ft; fore boom, 46ft. A full complement of boats has been made for her by T. Desmond, of Peck Slip. They include a very handsome gig, 25ft., finished in hardwood and brass trimmings; a 25ft. steam launch or pinnace; a metallic life-boat, 19ft. long, fitted with air chambers and life lines; a 25ft. cutter and a 16ft. cutter; also a small dingey. It is needless to add that the interior furnishing and decoration of this new yacht will be of the most tasteful and elegant design. On deck she has a smoking room 14ft. x10ft., and a cabin trunk running from the pilot-house forward to the companion aft, with a width of 14ft This trunk is 2ft. 6in. high. Abaft this will be a second trunk over the engine and boiler space, and beyond that a clear quarter-deck of 50ft. in length. The main saloon is 24ft. square, with 8ft. headroom, and is located forward of the boilers, under the first trunk. Next to it will be the galley, pantry, ice-house, etc., occupying 16ft. fore and aft. Seven state-rooms are to be found forward of the saloon, on either side of a passage leading to a ladder to the smoking-room on deck. Abaft the engine-room bulkhead are located the officers' quarters, consisting of a cabin 10x12ft., and three state-rooms. Next, the galley and crew's quarters, with storage-room, etc. The steamer was successfully launched May 20 and christened "*Shaughraun*" by Miss Beckwith, of New York. The engines are now being lined, and the joiners and upholsterers are finishing up their work.

The other large yacht—the largest in the world—has been built to the order of Mr. Albert Brassey, brother of Mr. Thos Brassey, M. P., who recently circumnavigated the world in his auxiliary barkantine *Sunbeam*. The new steamer measures 564 tons Y. R. A. rule, or about 30 tons more than the *Sunbeam*. The *Czarina*, as Mr. Brassey's vessel is called, was built by Camper & Nicholson, of Gosport, England, and engined by Day, Summers & Co., of Southampton, with inverted compound condensing engines of 60 H. P. nominal. Cylinders, 20, and 40in. by 24in. stroke. On her trial trip a mean speed of 10.17 knots was developed, with 60lbs. pressure, 27in. vacuum and 110 revolutions—an excellent performance, considering the auxiliary nature of her engine power. She is rigged as a three-masted schooner.

SOUTH CAMDEN YACHT CLUB.—This club sailed their opening regatta May 12, from Kaighn's Point to the Horseshoe buoy and return. Wind light, tide favorable. The first-class finished as follows: *McClees*, W. Weaver; *Shook*, E. Bagel; *Gnang*, W. Harper, and *Holland*, M. Roberts. The second-class: *E. Ashton*, J. Baker; *Anna*, C. Rock. The former was disqualified for receiving assistance during a foul with another craft. In the third-class the *Padley* won, her opponent, *Conklin*, not finishing.

SAVANNAH YACHT CLUB.—In their annual regatta, May 7, at the Isle of Hope, the first-class finished as under: *Idaho*, T. M. Newell, 4h. 15m.; *Vernon*, Vice-Com. J. W. Schley, 4h. 16m. 30s.; *Ida C.*, Com. W. Hone, and *Wave*, F. C. Wyily, failed to make the course. In the second-class *Virgie*, S. McA. White, won in 3h. 16m. 30s; *Sophronia*, L. C. Berrien, 3h. 31m. 15s.; *Lilla*, R. M. Demere, and *Bessie*, T. L. Kinsey, not timed. In third-class *Talulah*, I. Beckett, won in 2h. 31m. 30s.; *Stella*, Dr. L. A. Falligant, 3h. 59m.; *White Wing*, G. W. Wyly, Jr., not timed. Bateaux races finished up the day.

DETROIT NOTES.—La Chapelle Bros. have launched the steam yacht *Stella*; Partridge, a 23ft. yacht for Congressman Newberry, and Plass has finished a 22ft. cat.

SEAWANHAKA YACHT CLUB.—The revised edition of their club-book has been received. It has incorporated many new and commendable features. A programme of the races for 1879, as published in these columns, the usual lists of officers, and a roll of 11 schooners, 1 steamer, 25 cabin sloops and cutters, and 17 open yachts, their dimensions and builders. The club-list shows 130 active members, a large number these times, when so many have dropped out of all clubs. Tide tables, time allowance, signal code, and charts of courses have also been included. The following (Rule VII. Sailing Regulations) should be written in letters of gold, for it is something which has not even been attempted by the old and wealthy clubs of Great Britain: Every yacht winning a prize in any regatta of this club shall deposit with the Secretary her "lines," accurately taken off and drawn upon paper by the Measurer of the club, or approved and certified to by him. The scale for

the drawings shall be one-half inch to the foot for yachts o 80ft. over all and under, and three-eighths of an inch to the foot for yachts over this size. Any yacht whose drawings may be on file with the club, and shall, subsequent to such survey, have any change made in her model, shall be subject to the provisions of this rule as though she had not been previously surveyed. The drawings shall consist of a sheer plan, body plan and half-breadth plan. Concerning ballast, the club's rule admits of no doubts, being likewise intended to encourage honest racing, and not the abominable machine sailing under the stupid custom of shifting or rigging out ballast. Rule XII. reads: No yacht contending for a prize, after having taken her position, will be permitted to start water ballast. No booming out of ballast allowed in a race. All yachts must bring home the same ballast with which they started. Among the sails allowed is the spinaker.

THE CANOE REGATTA.—It will be borne in mind that this regatta takes place June 7, and is open to all canoes of the country under very liberal sailing regulations. The entrance fee is $2, for either or both the paddling and sailing race. Seventeen entries have been received, and others are contemplating taking part. The Staten Island Rowing Club has courteously tendered the hospitalities of its boat-house at the cricket grounds on the Northern extremity of the island. The regatta committee consists of Messrs. Sutherland D. Smith (N. Y. C. C.), 21 Nassau st.; Chas. E. Chase (J. C. C. C.), 287 Broadway; L. F. d'Oremieulx, 170 Broadway; W. P. Stevens (Jersey Blue C. C.), Chester, Pa., and K. N. Putnam (Resolute C. C.), 54 Wall st. All restrictions concerning rig and keels having been removed, the race will be full of interest as a test of the many different types and appliances in the way of keels, leeboards, etc. What with the presence of the *Heralds, Rob Roys*, centreboard *Shadow, Qui Vives*, the sliding gunther, sharpie and leg-of-mutton, the scene will not be lacking in the picturesque any more than in the instructive lessons to be drawn from the result,

ALBANY YACHT CLUB.—At a meeting of the Albany Yacht Club held May 12, 1879, the following officers were elected for the coming year: Com., Mason F. Cogswell; Vice-Com., Alfred J. Stone; Treas., Robert D. Evans; Sec., John Hourigan.

NEREUS YACHT CLUB.—At the annual meeting of the Nereus Y. C., May 6, the following officers were elected: Com., C. Coughtry; Sec'y., Thos. F. Miller; Treas., Louis M. Moler. A spring regatta will be held May 30. Course, from Capt. Decker's, Harlem, to and around City Island buoy and return. Yachts to be sailed on Corinthian principles.

MADISON ITEMS.—Capt. E. H. Freeman has launched his steamer *Mendota* on Fourth Lake, Madison, Wis., and is prepared to take sportsmen for a trip or a sail on that delightful sheet of water, and no one is better able to do so than the gallant captain in his pretty little steam yacht.

MARBLEHEAD REGATTA.—The sixth annual regatta at Marblehead, Mass., has been set down for June 17. First class: Sloops and schooners 38ft. and over on water line; one prize to each division. Second class: Schooners less than 38 ft. on the water line, two prizes; all keel and centre-board sloops 2gft and less than 38ft. on the water line, two prizes for keels and two for centreboards. Third class: All sloops and cat-rigged boats 20ft. and less than 26ft. on water line; also all keel boats less than 25ft.; two prizes for keels and two for centreboards. Fourth class: All centreboards less than 20ft. on water line, two prizes. Special class: Open boats and dories, regardless of length, two prizes for each. There will be no restriction as to sails. The committee of arrangements consists of Luther G. Pitman, David K. Phillips, Isaac Atkins, C. A. Choate, William Brydges, S. S. Goodwin and others. Judges—S. S. Goodwin, W. H. Tolman, J. M. Charnock, William Bassett, George A. Palmer, L. G. Pitman, David K. Phillips.

THE YAWL RIG.—A correspondent writes us: "It makes me sick to see our sloops bangling about in their helpless way when the yawl rig is a quick, cheap and satisfactory solution of all their troubles."

PRESERVING CANVAS.—As many yachts visit Gloucester, Mass., it may be well to let them know that while in port they can have their sails treated by the best process known, preventing mildew, rot, stain, etc. This process has been patented by Chresten Nelson, of 307 Main street, Gloucester, and has given such thorough satisfaction to all who have had their sails treated by him that we take pleasure in recommending him to owners who may be thinking of an Eastern cruise. Testimony of the strongest kind has been placed before us by disinterested parties, while the process has the indorsement of many shipmasters and fishermen sailing out of this port.

HANDINESS OF THE CUTTER.—The cutter *Enterprise*, of Boston, will not come out in a sloop's jib, as has been reported. Her owner is well satisfied that he can get as much speed out of the cutter rig as out of the sloop. Moreover, we learn that the hands before the mast express themselves in favor of her present rig, as it is easier work for them, especially in shooting aft on a wind.

TOLEDO YACHT CLUB—*Editor Forest and Stream:* The Toledo Yacht Club was organized in Toledo, Ohio, Feb. 25, 1879, with a membership of eleven. Scarcely ten weeks have elapsed since that time, yet the club now numbers over seventy-five members, with a squadron of eight yachts of the first and second class, and are financially in an excellent condition. Much of their success is due to the conservative yet liberal and generous manner in which the club is managed. While great care is taken in the selection of members, the yacht club offers the very finest inducement to the sport-loving members of the community. Their club rooms being probably the finest yacht club rooms in the State, and a commodious club house situated on Guards Island in the bay, about eight miles from the city, affords a pleasant terminus to a splendid yachting course, besides being in the heart of the best hunting and fishing grounds. Some eighteen miles of river, a large bay and the open lake beyond make the sailing grounds an unequalled one on the great lakes. At their recent election the following officers were chosen: A. L. Smith, Commodore; G. C. Cone, Vice-Commodore; A. W. Williams, Secretary; C. P. Doolittle, Treasurer; O. M. Hepburn, Measurer. The Executive Committee—A. L. Smith, Chairman; E. P. Day, F. G. Doolittle, H. H. Suydam, A. E. Klauser, N. W. Dyer.

A. W. WILLIAMS, Sec'y.

DETROIT YACHT CLUB.—*Editor Forest and Stream:* It has been decided to hold a Club Regatta on July 4th, wind and weather permitting. Our club was organized in June, 1878, and held a regatta open to all comers on the 4th and 5th of July of that year, which but for a lack of wind would have been one of the finest held on the Lower Lakes for a number of years, as we had over thirty entries in all classes. We had a very light wind and on the first day were unable to make a race, and the second we got one or two boats of each class in within the proscribed time, but it was a very slow race. We are now trying to get the Lake Erie Clubs join in with us and hold a union regatta at some point convenient for all. We have another new yacht here besides the ones mentioned in your last issue. She is called the *Myrtle*, schooner-rigged, 30ft. keel. We have revived the yachting interest in this section very much. Since our club was organized they have formed clubs at Toledo, Cleveland and Buffalo, all of which are in a flourishing condition. The election of officers, May 12, resulted as follows: Com., Alex. H. Major; Vice-Com., George Newberry; Rear-Com., O. W. Baker; Sec'y., Ed. H. Williams; Treas., S. H Ives; Meas., Wm. H. Steinbrecher; Regatta and Executive Committee, Edwin Jerome, Jr., Charles Nehl, Addison Lyons, David A. Thayer, Charles Boston.

E. H. WILLIAMS,
Sec'y. Detroit Y. C.

CHARLESTON (S. C.) ITEMS.—Our boating men are on *qui vive*, and we will probably have some splendid racing here on the 30th. The races this year have been gotten up by the three rowing clubs of the city—the Palmetto, Carolina Independants, and Electrics—and the entire management of the whole will be in the hands of the Presidents of the above clubs. Each of these clubs will enter a four-oared shell and four-oared gig crew, and each a single-scull. Augusta will be represented by a good crew for the four-oared shell race, and, if reports are correct, will probably give our boys a severe pull for first place. The Electrics are the favorites among those who have seen the practice work, but the Carolinas and Palmettos both have hosts of friends, who are not afraid to back their crews. The crews have not trained as long or as carefully this year, as it was very uncertain up to a short time ago whether we would have any races at all this spring. It is to be hoped that some sailing races will be gotten up for the occasion, as there are several yachts out this spring, and this would bea splendid opportunity for testing their speed and merits. X.

BUFFALO YACHT CLUB.—Schooner *Fleetwing* has gone on a cruise to Point Atrim, Canada; schooner *Mystic* and sloop *Kittie B.* followed May 24. The fleet has gone for black bass, reported plentiful on the Canada shore. PENNANT.

SALEM ITEMS.—The old-time sloop *Rebecca*, known to metropolitan waters as the first ship property of Mr. Jas. Gordon Bennett, has been altered to a schooner at Brown's yard. She is a sister to the *Una*. A big fleet of small craft of all kinds has gone into commission, and lively times are expected in Salem waters. The *Carrie E.*, Mr. Benson, is for sale. Mr. Geo. W. Mansfield has been appointed Secretary *pro tem.* of the Salem Y. C., on account of the departure for the West of Mr. R. L. Newcombe.

LONGUEUIL BOAT CLUB.—At the annual general meeting of this club, held on Saturday evening, 17th inst., the following officers were elected: President, T. Boyd; Vice-President, Duncan McDougall; Secretary, J. Thos. Ostell; Treasurer, Jas. F. Walker; Committee, John O'Flaherty, E. M. Lovelace, F. Foster, D. Lewis, W. J. Gear, J. Lesperance. The club will begin operations immediately.

PROSPECTS ON THE THAMES.

LONDON, England, May 1, 1879.

EDITOR FOREST AND STREAM:

How we look forward to the day when my little smart 15-ton cutter will be at her moorings off Greenhithe, and how I shall think of your correspondent, "Podgers," if we are unlucky enough to get ashore and have breakfast at a good angle of heel, which I have often experienced in my younger days; but now, as then, I always pick and buy a deep boat,—and can't we lick the shallow fellows to windward, the best point of sailing? Our boat draws 7ft. aft, cutter rigged, with running bowsprit, of course. Her dimensions are 42ft. by 10ft. beam, and most of my chums, except very long fellows, can stand upright in the cabin. I offered to lend her to an American yachtsman for a cruise, and he has done me the honor to call and ask if she is ready, so when he has had a sail I shall know what he thinks of a small English yacht for cruising in comparison with the usual type of American sloop. All our yachts on this side are now busy fitting out, but numbers can be bought, and at very reasonable prices, too, if firm offers are made. Business being so dull, I am afraid the racing part of the yachting season will not be kept up with such spirit as in the good old days; still, the racing among the larger vessels will no doubt give some capital sport. G. W.

THE QUESTION OF TYPE.

BOSTON, Mass., May 5, 1879.

EDITOR FOREST AND STREAM:

I do not know that I have any fault to find with "R. Centro's" ode, dedicated to me. I am sorry, however, that the subject should have made his Muse sea-sick, as it evidently did. Referring to the letter of "Beverly Cove," in a recent issue of your paper, I did not say, and do not think, that a 60ft. sea-going keel yacht can be built to draw less than 8½ or 9ft. and work to windward. He takes exception to the style of my yacht. He passed her frequently last summer, and would not even have "suspected" she was a yacht but for her ensign. I have no doubt "Beverly Cove" is a critic on yachts, but still some people who are supposed to have some taste and judgment on a yacht's lines differ from him. Mr. D J. Lawlor, who is one of the oldest and most experienced marine architects on the Atlantic coast, and whose vessels have been especially noted for grace and beauty of lines above water, has stated publicly that he would be pleased to have designed so handsome a boat above the water as my yacht. I have heard many gentlemen exclaim, "What a handsome yacht!" when they came in sight of my schooner, and they were apparently no novices in the matter of yachts and vessels. Now, Mr. Editor, was it not a little pardonable vanity on my part to think that the best known naval architect in Boston and the public might know something about grace and beauty in my yacht; and is it not a little hard to have my gentle critic, "Beverly Cove," descend so gracefully upon my illusion, and show the ignorance of our naval architects and the public? He wants to know why, if my yacht was built for strength, she was not given a flush deck? Did any one ever hear that the *America* was wanting in strength because she has a break in her deck? or did any one ever hear it of the *Dauntless*, which has a break in her deck amidships? Even the very fishermen that "Beverly Cove" thinks so strong all have a break in the deck amidships. He does not see what is gained by it. When you have a flush deck aft and no cockpit, and are driving your yacht to windward in a heavy head sea, if you have no break in the deck and happen to ship a barrel or less of water forward, just as you come in stays, that whole barrel of water comes rushing down upon your after deck, surging and swashing from side to side before it can escape through the scuppers. The break in the deck stops all this inconvenience, because it stops all water forward of the break until it can have time to escape. When I am driving through a chop sea close hauled, at the rate of twelve miles an hour, as I have frequently done in Boston Bay, I find that no water ever gets aft of my break in the deck. I adopted this feature deliberately, instead of the homely and inconvenient low board wall built round like a cockpit on the decks of so many of the best flush-decked New York yachts. I find it comfortable and convenient.

"B. C." says a visit to my schooner will show how well the specifications I gave of her build were carried out. "No butts in deck plank, butts to break, etc." I invite a visit to my schooner for inspection on this head. There are only two butts in the main-deck plank (which were so located they could not be helped), which do not break joints as stated in the specifications. In justice to the builders of my yacht (at whom I have reason to believe this criticism is aimed), I must reaffirm that these specifications were substantially carried out under my own inspection, as well as that of my agent.

"B. C." is "certain" I could have secured a craft "*here*" faster, for he can name fishermen that have beaten my famous model in her own weather, etc. I will not quarrel with him about that, because if he has found any such fishermen the watching public ought to know it, and the sooner the better. "B. C." may consider himself the benefactor of yachtsmen, and I will do all I can to help him bring out his fisherman to public notice. In order to help him in his good work, I propose that we each of us deposit $100 in the hands of the editor of FOREST AND STREAM, and he pick out his fisherman, and we have a fair and square race into the heaviest easterly gale we can select, either dead to windward from Boston Light to Provincetown and back, or around Boon Island and back, as the case may be. If his fisherman wins my $100, to go to pay her expenses, etc. If I win, "B. C.'s" $100 to be put up as a prize for a race between the best of our fishing schooners, of a size suitable to use as a yacht model, say less than 100ft. long. If "B. C." selects a fisherman larger than my craft, the race to be governed by the rules of a reputable yacht club on time allowance to me, or *vice versa*. Thus we shall have something more than an empty talk, and help settle a question of great interest just now to yachtsmen—the question of type. I will give some idea of the time I made last summer by the watch. For instance, from Handkerchief Lightship to Butler's Hole Lightship, Nantucket shoals, close hauled, against tide, was made in twenty minutes; from Butler's Hole to Pollock Rip Lightship was made in fifteen minutes; from Highland Light abeam to Boston Light abeam, close hauled, was made in four hours and forty minutes against tide; again, from Minot's Ledge to Boston Light, against tide, close hauled, was made in forty minutes, showing a speed of eleven to fifteen miles an hour. I think I am justified by these figures in proposing a plan which, if "B. C." is right, will show us a wonderful fishing boat of the size of mine, say 64ft. water line. OPEN SEA.

In connection with this Essex schooner, the opinion of Mr. J. D. Lawlor, of Chelsea, Mass., will be of interest. He says: "Take out the twenty-six tons of iron ballast and replace it with eighteen tons of lead on the keel, and I will astonish the country with her speed. She can beat anything of her size." The most satisfactory way to test the new departure in model which "Open Sea" has made, would, in our opinion, be to enter her for a series of matches, or come to the starting line in the ocean races to come off this season. Her sailing then would go on official record to the satisfaction of all. Under any circumstances there can be no question as to the excellent sea-going qualities of this schooner, for they are attested by the ready manner in which her owner puts to sea in her in all weathers.

THE SAN FRANCISCO YAWLS.

NEW YORK, May 16, 1879.

EDITOR FOREST AND STREAM:

Some weeks ago I read with much interest "Saucelito's" reply to my remarks on the *Fawn's* performance in San Francisco Bay, going to windward under all sail in a 35-mile breeze. "Saucelito's" last letter seems to make an even greater necessity than formerly existed for the fullest and most precise information on the subject discussed, which, it appears to me, may afford not only interest but instruction also to some of your readers. It is not to be supposed that a writer who expresses himself in such excellent spirit is at all chargable with bad faith, and the figures by which he now sustains himself make it sufficiently evident that strong breezes and able yachts are to be found in San Francisco Bay. If I now make rejoinder to "Saucelito's" letter, it is as much to bring up the whole question of these yachts and their models as to make inquiry in an undogmatic way into the strict accuracy of the belief which "Saucelito" and his friends have of their powers of going to windward in a seaway and standing up to their canvas. If a boat 37ft. long can be made to go to windward in open water, carrying all plain sail, even with a moderate rig, in a 35-mile breeze, I am convinced that nothing in marine architecture can be found that will prove better deserving of study.

It would be well worth while, at the close of the yachting season just now coming on, if our California friends will send on the lines of *Fawn*, with particulars of her ballasting, etc., to make some calculations of her properties for illustration in your pages. To make this subject interesting to your readers, I will refer to some yachting events likely to be remembered, and give the velocity of the wind at the time, as observed at the Signal Office on the Equitable Building; asking that the fact be kept in mind that the wind, moving at the rate of 35 miles per hour, exercises

upon a surface exposed at right angles to it, a pressure of 6lbs. per square foot, and that winds at other rates of movement vary in pressure as the square of their velocities. I will first refer to the New York Bay Regatta of June 27, last year. The velocity was: At noon, 6 miles, pressure .18lbs; 2 P. M., 8 miles, pressure .32lbs; 4:45 P. M., 11 miles, pressure .60lbs. When, with a maximum pressure of 1-10 the strength said to have been experienced by the California boats, our small craft, with their high piles of sand bags, had rather more wind than many of them needed: one, I remember, capsized in Gravesend Bay.

I will next refer to the regatta of the Seawanhaka Club, at Oyster Bay, Sept. 16, 1876. On this occasion the open boats—presumably on account of the wind and sea—were given an inside course. The small steamer engaged for the use of friends lay to off Lloyd's Point, being unable, it is said, to go over the outside course. All yachts in the race smaller than *Vindex* had, I believe, reefs in their canvas, though all of them were, I think, larger than *Fawn*. The velocity of the wind on that day, as recorded here, was: At noon, 18 miles; 2 P. M., 16 miles; 4:15 P. M., 14 miles. At the close of this race the approach of an equinoctial storm was imminent, and out of a large fleet of yachts none left the harbor until Monday morning, except *Vindex*, which yacht, to the surprise and amusement of those who saw her, went out on Sunday A. M. under trysail and other storm canvas, and after getting outside, went off before the wind for New York, running her bowsprit into the sea, I am told, pretty constantly. The rest—a numerous fleet—lay with extra scope and anchors out until Monday morning; one trading sloop dragging ashore. The highest velocity given at the Signal Office here for any part of that day up to 7:15 P. M. is 36 miles, pressure 6.48lbs.

The next day the wind was still high, though greatly moderated, and all the boats started for New York close hauled, as the wind had veered. I noticed nothing that was not reefed, and at about 1 o'clock *Psyche* came through the Gate with three reefs down. The wind velocities recorded are: 8 A. M., 15 miles, pressure 1.12 lbs.; 12 M., 16 miles, pressure 1.28lbs.; 2 P. M., 17 miles, pressure 1.40lbs. The maximum here shown being less than ¼ the pressure under which a 37ft. California boat will stand up under whole canvas going to windward.

I will next refer to the regatta of the New York Club, June 11, 1874, on which day the Signal Office records wind velocity: 8 A. M., 15 miles, pressure 1.12lbs.; 12 M., 18 miles, pressure 1.62lbs.; 4:45 P. M., 8 miles, pressure .32lbs.

In an account of this race the *Aquatic Monthly* says: "The smaller boats were beginning to reef their mainsails." The smallest boat was 20 tons O. M., and out of 13 yachts 10 were over 50 tons. And again: "*Gracie's* achievements were considered still more remarkable, for she had sailed around the lightship in a head sea which had lifted off a portion of the deck of the judges' steamer." In a communication from San Francisco referring to this race, "Podgers" says: "You had all the wind you wanted, and, as I said before, more than you wanted to get speed out of them, and yet you had just about our summer regular trade wind breeze." Well, the breeze recorded for this day has a maximum pressure of 1.62lbs—just about ¼ of a 35-mile gale. Just here I may say that the officer in charge of the Signal Station tells me that at every station orders exist for the storm signal to be hoisted when the wind attains a velocity of 25 miles per hour.

Having said so much about our own, I will now refer to the English yachts. In an editorial article of the *Field* of Dec. 28 will be found, "We have assumed that *Jullanar* and *Florinda* would each have whole lower sail set, but in practice both would be reefed with a wind pressure of 3lbs. per square foot,"—less than 25 miles per hour, and half the pressure experienced at 35 miles pet hour. We are told on the authority of the San Francisco Signal Office that on the day referred to the wind blew at the following velocities: At 4:30 A. M., 6 miles; 1:35 P. M., 20 miles, pressure 2.1lbs.; 2 P. M., 28 miles, pressure 3.92lbs.; 8:30 P. M., 22 miles, pressure 2.42lbs. We are also told that the maximum velocity was 32 miles in the time between noon of that day to the next. The exact time, however, is not given, and the duration of this pressure might be very short, possibly only for the two minutes required to record on the automatic diagram of the anemometer the traveling of a single mile of atmosphere. It is made very evident here that a small yacht which could carry all plain sail and go to windward between 1:35 and 8:30 P. M. must have possessed an uncommon degree of stiffness; but to go to windward with a 35-mile breeze she would encounter three times the pressure that is recorded for 1:35 P. M., 53 per cent. more than is recorded for 2 P. M., and 2.48 times more than that named for 8:30 P. M. We are asked to assume that *Fawn* was going to windward at the precise time when the maximum pressure—momentary or otherwise—was experienced, and that 53 per cent. should be added to the known maximum for difference between the bay and the Observatory, situate, we are told, at 128ft. higher level. This may possibly be correct, but the performance of the boat is sufficiently extraordinary without assuming it. In view of all the facts, it appears to me that such an assumption is not warranted and that the difference may more likely be the other way.

The highest known velocities are observed at stations of great height. The Signal Office here is at an elevation of 164ft., and only once since the office has been established has a velocity as high as 72 miles per hour been recorded, but at Mount Washington the great speed of 180 miles has been known, and I understand that currents of over 100 miles are not uncommon. Without in the least impugning "Sausalito's" good faith, I think he would put us under obligation by sending for our study the lines of *Fawn*, that we may reckon her up and see how she compares with our own boats. I will conclude with the following quotation from the London *Field*, which bears directly on the question of type, and which I feel sure, Mr. Editor, will meet with favor from yourself and an ever increasing number here. It is from date Dec. 28 last: "At any rate, the proportions of the linear dimensions of *Jullanar* exemplify in a marked manner the truth of what those who have made naval architecture a study have long contended—that the best seagoing craft is one of long body in proportion to her breadth of body, accompanied by great depth of body and small initial stability."

BOBSTAY.

That long, narrow and deep vessels are far better sea boats than shallow, beamy craft, we think beyond dispute, and quite concur in the concluding remarks of our correspondent. Possibly the finest sea boats are the White Star steamers with their ten beams or more to their length. Recent experience in England goes to show that the longer and deeper yachts almost invariably prove themselves abler sea boats than others. Owing to the racing season being upon us, we cannot at this time enter into the interesting questions of naval design any further, but must postpone such matters to another period.

Sea and River Fishing.

FISH IN SEASON IN JUNE.

FRESH WATER.	SALT WATER.
Trout, *Salmo fontinalis.*	Sea Bass, *Centropristis atrarius.*
Salmon, *Salmo Salar.*	Sheepshead, *Archosargus probatocephalus.*
Salmon Trout, *Salmo confinis.*	
Land-locked Salmon, *Salmo glaveri.*	Striped Bass, *Roccus lineatus.*
Muskalonge, *Esox nobilior.*	White perch, *Morone americana.*
Pike or Pickerel, *Esox lucius.*	Weakfish, *Cynoscion regalis.*
Yellow Perch, *Perca flavescens.*	Bluefish, *Pomatomus saltatrix*
	Spanish Mackerel, *Cybium maculatum.*
	Cero, *Cybium regale.*
	Bonito, *Sarda pelamys.*
	Kingfish, *Menticirrus nebulosus.*

FLIES IN SEASON IN JUNE.

Hawthorn, No. 11.—Body, shining black; feet and head, black; wings bright hyaline.

Shoemaker, No. 10.—Body, ringed alternately with light and gray salmon; feet, dark ginger; wings, the mottled gray of the mallard and the mottled of the woodcock mixed; setæ, mottled woodcock.

Black June, No. 10.—Body, peacock's herl; feet and wings black.

Dark Stone, Nos. 8 *and* 9.—Body, dark brown; feet, yellow brown; wings, luteus.

Governor No. 10.—Body, peacock's herl; feet, dark red hackle; wings, made of the darkest part of the bittern's wing or brown hen.

Green Drake, No. 7.—Body, white posterior, half ribbed with black, green yellow, mottled with brown; setæ, dark brown.

Brown Drake, No. 7.—Body, feet and wings, a golden yellow brown; setæ, dark brown.

Raven, No. 11.—Body, feet and wing, black.

Wren Fly, No. 9.—Body, clay yellow; feet, made from the scapulary feathers of the English wren or quail; wings and setæ, mottled widgeon.

—If you go fishing send us postal card reports of place, route, expenses, fish, weather, bait, etc. A wonderful deal of information can be compressd into postal card limits.

—When a street *gamin* gets another *gamin* "on a string," has the slang a piscatorial origin? If not, what does it mean to get a person on a string?

—We understand Messrs. Wm. Mills & Son have just shipped a Leonard salmon rod for the Marquis of Lorne. It is 17½ feet long, has two second joints and three tips, and handsomely mounted in Mr. Leonard's best style with American sterling silver. They also shipped by Saturday's steamer five salmon rods to England.

MAINE—*Foxcroft, May* 24.—Moosehead Lake being open, the influx of fishermen has already commenced. A large party went from this place on Monday to enjoy the sport. Good catches are reported from such as have returned. On Thursday there were twenty-two boxes of trout come down over the Bangor and Piscataque Railroad, from Moosehead Lake, and sent to Boston, representing nearly a ton and a half weight of trout in this lot. H.

NEW HAMPSHIRE—*May* 13.—I am writing to-day from an old-fashioned New England house, and trying to appear promptly at the hour of twelve, after a horseback ride of eleven miles from the beautiful village of Colebrook, that lies sequestered among the mountains below. The day has been well chosen for my first trip in Troutland, as this should be called, instead of its old term Coos, which is only applicable to a point where the G. T. R. R. leaves the Connecticut River Valley at North Hartford. To-day, for the first time, I had the pleasure of seeing the Diamonds, so called from a primative mode of capturing the bull moose adopted by a hunter by the name of Diamond, who came near trying the experiment once too often on the banks of these beautiful lakes. They are located nearly on the dividing ridge between the Androscoggin and Connecticut waters, but just enough east to contain those beautiful trout found only in the former waters. They have been called ponds, but the term does them injustice. The grand old mountain that lies alongside of the larger one has no unmeaning name, being called Tumble-down Dick, owing to the mishap of one Fifield, who was the happy owner of a pair of moose antlers. When a good crust came Dick bound the trophy on his muscular shoulders and started on the perilous incline, and soon met with a hunter's predicament, in which the snow-shoes and well-loaded antlers held a prominent part, and from which he was rescued before nightfall by an associate. EDW. NORTON.

MOVEMENTS OF THE FISHING FLEET.—The number of fishing arrivals reported at this port the past week has been 71—6 from Western Bank with 400,000 lbs. codfish, 8 from Grand Bank with 350,000 lbs. halibut, 24 from Georges with 1,175,000 lbs. codfish and 37,500 lbs. halibut, and 15 from Inshore fishing trips with 345,000 lbs. codfish.—*Cape Ann Advertiser, May* 25.

CONNECTICUT—*Bridgeport, May* 25.—Every one says trouting is played out in old Connecticut. A friend caught 122 splendid ones last week, and four gents got 271, both one day's fishing about 40 miles up road. J.

NEW YORK—*Rome, May* 23.—If Barnum were to do his best he could not begin to equal the show presented to the Romans by our returning party from the Adirondacks. Eighty brook trout, weighing from 2 to 4½ pounds, are a grand sight, and as we with hundreds admired their beautiful proportions, the words of that good fisherman of old got away with my thoughts, something after this style, "I envy him and him only who takes larger fish than those caught by MoH."

Shelter Island, May 23.—The weakfish and the bluefish are just making their appearance in these waters. My friend Mr. Alfred Tuthill is taking a few dozen of them nightly in a set net.

—Striped bass are now running of larger size in Coney Island Creek than have been known for years. Old sports like "Piscator Post" and Capt. M. B. Steers take their light tackle and astonish the natives with their skill in landing heavy weights scientifically. Last week, and just now, the tides favor auspiciously, and seekers after sport get all the fun that the weather forecasts promise.

NEW JERSEY—*Barnegat, May* 22.—Plenty of bluefish at Barnegat. First catch of the season yesterday. One boat landed eighty-seven, weighing from two to four pounds.

GEO. H. PITMAN.

Kinsey's Ashley House, Barnegat Inlet, May 24.—Bluefish commenced coming in our inlet on Wednesday last at noon. By night, three yachts captured 200 of them; they run from 2 to 5 lbs. Every morning and afternoon since the water fronting the light-house has been alive with them, and affording splendid sport. Blackfish, flounders and sea bass still plenty, affording capital sport during slack water. B.

PENNSYLVANIA—*Clearfield, May* 26.—Trout have been biting gloriously. The boys tell of famous strings.

NORTH CAROLINA—*New Berne, May* 19.—Probably no place on our coast has finer fishing grounds than Beaufort harbor. It is nothing unusual for us to go out and take 300 and 400 bluefish and Spanish mackerel in two or three hours' trolling, and the sharpie is the favorite boat for this sport.

GEO. N. IVES.

VIRGINIA—*Staunton, May* 23.—The gentlemen from your State (Dansville), Woodruff and DeLang, are out on the North River under a competent escort, and are hoped (and supposed) to be taking 'oodles of trout. The weather is excellent, and the streams have a fine stage of water since the recent rains. Our expedition to Greenbrier River is to start about the 12th to 15th of June. ASA.

WISCONSIN—*Baraboo, May* 21.—Captain B. K. Cowles has returned from a few days' fishing in one of the many lakes which the State of Minnesota is so proud of; reports excellent fishing, and brought back 150 fine bass, *Micropterus salmoides.* ED. H.

OREGON—*Portland, April* 29.—Our spring fishing has commenced in earnest, and we are having royal sport. One party of four gentlemen, well known in this city, went out to Dairy Creek, about thirty miles from here, the other day, and brought home about 400 speckled beauties, the lot weighing a little over 175 pounds—so you can judge what size they were. Another party went out to Gales Creek, in Washington County, and brought home about 500. They caught many with flies, the "Black Gnat" and "Green Drake" proving to be the most killing. A few of the boys went over to Johnson's Creek, but being so near town the creek was pretty well fished out; so they met with indifferent success. One of them, while sitting on the bank of the stream, waiting patiently for a bite, fell asleep, and while in that condition a couple of his chums happened by, and taking his line out of the water, they fastened a bottle (an empty one) to it and threw it in again, and quietly awaited events. Charley soon awoke, and commenced pulling in; but as soon as he lifted the bottle off the bottom the current struck it and started it down stream. Charley thought he had a fish, and commenced playing it, and after a good deal of exertion (Charley is very obese) succeeded in landing his fancied catch, and then—well, he put up for the oysters when they reached home. W. L.

TIM'S POND—*Editor Forest and Stream:* The weather in this State is warm. Foliage and flowers are beautiful. The trout season is improved, and as the streams are well filled with water, some fine strings have been brought in, while, as a rule, the fish do not very much outnumber the fishermen. A letter from Kennedy Smith, Eustis, Me., just received, says that since I wrote you of my trip to "Tim Pond," last September, he has cut out a road from his place to the pond, and can take "packs" in a carriage nearly half the distance. The last of the ice disappeared from the pond the 14th inst. The weather is very warm for the season, and only a few drifts of snow remain. Trout were never more abundant there. There will be three good boats on this clear sheet of water this season. A log house is just being finished with modern cooking stove, near the vitalizing spring of medicinal waters of which, and its wonderful healing qualities, I once spoke to you. Near by are three camps. Parties can get good board there, with boats and guides furnished, all at a very moderate sum, or they may board themselves, and I am sure satisfaction will be given in all that Mr. Smith attempts. Honest, square dealing and low prices are his rule. There is good brook trouting in Eustis and adjoining plantations. Remember this section is in northern Maine, and June is early enough for open-air sporting in that latitude, particularly for those seeking health as well as sport. No doubt the best route to Eustis is by Maine Central Railroad to West Waterville, thence by railroad to North Anson, thence by stage to North New Portland. Here one can get a team or go by stage each Tuesday and Friday to Eustis, where a private team will be cared for while the party visits the pond, or it can be used to go to various trout streams, at no great distance. From North Anson to North New Portland the distance is eight miles, and 35 miles from North New Portland to Eustis, and the roads are excellent, while the scenery is not surpassed by the finest in New England. On account of ill-health I was a seeker after a good and cheap place for recreation for some years, and last September I discovered the place I have spoken of, and found fish, flesh and fun, and gained more strength and health than I should if I had swallowed an hypothecary's shop. I hope to go this year for trouting in June, and for trouting and shooting in September.

New Britain, Conn., May 21. J. WARREN TUCK.

TROUTING ON LONG ISLAND—*Mr. Editor:* The apple blossoms are out, and the birds are making sweet music with their songs in the old orchards. Visions of rippling brooks and cool lakes have taken possession of my mind, and I felt I must go a angling. So, one lovely morning last week, I took the early train to Amityville, where I met my friend with his team. The air was delightful and cool and fragrant with the perfume of thousands of wild flowers and apple blossoms, the fields green, and altogether the short ride was very enjoyable, and a strong contrast to the dusty city and frightful odors of Hunter's Point.

We took a boat at the pond, after hastily putting our rods together, and drifted off with the wind, casting as we went. To our surprise, we could raise no trout. We tried all kinds of flies and all parts of the little lake, up the inlet and back again. The quail called cheerily in the hedge-rows, and the swallows dipped past in countless numbers; but still no trout. then came a smart shower, making the bubbles dance on the water, during which we discussed luncheon under cover of an old barn, while the rain pattered on the shingles overhead. An April shower is not unpleasant, if it does not last too long, for, after it passes over, everything is sweeter and brighter than ever. With our pipes agoing, we take our way

back to the pond. The sun breaks through the clouds, making the trees and bushes look as if hung with diamonds. The Bob White is calling again, and after bailing the rain out of the boat we start. Now what a change! The trout are breaking all over the pond, and we are as busy as we can be. The grizzly king seems to be the favorite to-day, although the coachman is not far behind. It is near train-time, though, and we must leave off, much to our regret. On our way back across the pond I am startled by a large trout jumping clear out of water and over my flies, showing good sixteen inches. I strike quick, and am lucky enough to hook him as he goes down—not in the mouth, but in the tail! Thus harnessed, he has a decided advantage over me; but though short of time, we must save him, notwithstanding a very light and much-worn leader. He goes up and down and across the pond, but with a graceful bend the Conroy rod keeps a tiresome drag on him, and at last the net envelops the largest trout of this season so far out of Carmen's Pond. Weight, 1¾ pounds. Hurriedly we take our rods apart and drive to the station, much pleased with our short but pleasant trip to the south side of Long Island.

W. Holberton.

SEBEC LAKE SALMON FISHING.

Ship Pond Stream, Head of Sebec Lake, May 12, 1879.

Editor Forest and Stream:

This season's fishing for land-locked salmon began under very peculiar circumstances, by notice from a farmer who lives in sight of the main lake; he was watching the ice for me while tilling the soil for his snowflake potatoes. I was notified at 9 A. M., May 7, that the ice in the lake was moving, it all being out of the narrow part of the lake for a distance of six miles from the dam; caused by the current and the high water. I at once sent telegraph dispatches to about ten friends who had previously accepted an invitation, by letter, to join me on my annual trip to this favorite spot. Then I quietly commenced putting up tents, poles, rods, nets, worms, smelts, etc., to be all ready to hoist sail on the arrival of the train and stage at 11:30, May 8. But I was obliged to change my plan a little, as all the Bangor party, including David Bugbee—"the oldest man in the crowd"—Geo Lancaster, John Jennys, Mr Boate, C. E., U. S. N., James Hanney, of the St. John Telegraph, and Loomis Taylor, had left Bangor on the 2 P. M. train, just one hour before my dispatches were received. They had got uneasy waiting for my dispatches by reading postal cards that I sent them every day.

I hoisted sail at 9:30, May 8, leaving teams for friends who were coming on the next train to meet me on "Kemndeland Point," better known as the "Narrows." The breeze being light and the load heavy it was slow beating up the narrow part of the lake. We arrived in sight of the Narrows about 4:30, after calling at Bowerbank and taking on board Mr. Charles Sawyer of Dexter. We found the ice in the main lake had jammed, and it looked impossible to break through it; so we went into camp, hereafter known as "Camp Bugbee." After eating eggs, cooked by Mr. Boate, the evening was spent in many ways. Birch bark being handy every man was notified to equip himself with a flambeau, march up the cow-path of last year, surround the prettiest-toned frog and capture him if possible. It being a cold night (ice forming one third of an inch thick) and the fire getting low, all hands were up before the sun—a very uncommon occurrence with many of the party. Betting was brisk on the question of getting the boat through the broken cakes of ice, all the party betting against me. I received encouragement from several Dover and Foxcroft gentlemen who were camped on the opposite shore, that we could get through in a few hours, which we did, and arrived at Lancaster Gap, mouth of the stream, at 5 P. M.—just in season for the evening's fishing. Now the excitement commenced. With seven or eight men who never saw a land-locked salmon, all armed with Leonard fly-rods, those, and only those, acquainted with the fish can imagine the fun. I can only remember that for a long time some one was calling for another hook, another "shiner," or a dip-net, that kept "Bert" on the jump all the time. After giving orders for pitching the tents, laying down the mattresses and starting the fire, I stole away to the foot of the rough water, waded to a favorite rock, and in less time than I had specified in my bet before starting I hooked a 2¾ pound salmon. I begged "the oldest man" in the crowd to hold him or break my rod. After he had witnessed his strength in rough water I easily led him into a dip net after he had been out of water several times from two to four feet. We had no trouble in taking all the fish we could ask for. Each one of the party succeeded in hooking and landing from one to seven salmon; if we could have remained one or two days longer I know that many fish would have been wasted. Besides the excitement of the fish, the musk-rats were so thick that with a flambeau on the bank one could lie in the *Margaret* and almost touch the rats swimming around her for fun, the boat being hitched on the point that is all undermined with their houses. Every one ought to know what a nice soup rats, snowflake potatoes, and a few onions will make. Old Hunter Lyford once told me it would put more life in a weak man than any other wild meat. The next good fishing will be with fly.

Frank M. Ford.

Game Bag and Gun.

JUNE IS A CLOSE MONTH FOR GAME.

—Messrs G. and A. Hayden, of Jacksonville, Ill., have purchased an interest in the Edwin C. Green's breech-loaders, and with their new arrangements they hope to supply the demand for the arm. Their advertisement appears elsewhere.

—An Iowa City, Iowa, correspondent writes that he has employed with most excellent results the method of browning gun barrels, given in our issue of March 6. We think the fault of the failures is not in the recipe but in lack of skill in applying it.

—The Bohemian Glass Works managers think that there is is no necessity for postponing shooting tournaments, as with the present perfection of glass ball traps and the use of the Paine feather filled balls, a very good substitute for birds may be had. If the pigeons are scarce, the glass balls will never fail so long as the sand holds out. We think ourselves that the employment of any good substitute for birds is preferable to the postponement of these conventions. This is certainly so, if, as it should be, the primary object of the meeting be to confer about the protection of game. Sportsmen's conventions pay too much attention to the shooting, and give altogether too little time to the important questions which should be intelligently and exhaustively discussed.

Capt. Bogardus' Shooting School.—Capt. Bogardus is having great success in his new Shooting School for Wing Practice, at No. 158 South Clark st., Chicago, where he gives instruction in glass ball shooting as preparatory to sport in the field. The Captain and his son Eugene have been giving a series of exhibitions with the shot-gun and rifle, the programme including an unusually extended and varied list of difficult feats. Balls are hit in every conceivable way, and not the least ingenuity displayed is that of devising new tricks with the gun.

Laflin & Rand Powder Co.—When we say that some of the Laflin & Rand Powder Co.'s mills have the reputation of long standing we do not refer to that inherent property of powder mills whereby they may at any moment blow themselves and everything around them into shivers. We must be understood as saying rather that these mills having been established long ago, and having kept up with the times now possess a high record among powder manufactories. The works of the company are located at Newbury, Esopus and Schaghticoke, N. Y.; Wayne, N. J.; Oressona, Moosic and Jermyn, Pa., and Platteville, Wis. The numerous other magazines in various parts of the country afford unusual facilities for quickly supplying all demands. The Laflin & Rand brands, especially the Orange and Orange Lightning, have long been popular with sportsmen. The Creedmoor brand, manufactured particularly for rifle shooting, has given the greatest satisfaction to our best known experts, and is gradually becoming known to the range men. The new Laflin & Rand Powder Co.'s circular has a page of the best illustration of powder grains we have ever seen. It is done by the new Arotype method, a process which is likely to revolutionize book illustrating.

Massachusetts—*Salem, May* 23.—Spring snipe shooting was not up to the average this year. Miles River carried the palm. Newburyport grounds in good order, but few bags made. Winter yellow-legs are along, also some peeps and ringnecks.

R. L. N.

—The following gun clubs have recently been organized in Illinois:

Elmwood (Ill.) Gun Club.—W. W. T. Welles, President; Jno F. Caldwell, Vice-President; T. E. Elliott, Secretary; F. B Tracy, Treasurer; Isaac Huff, D. D. Mendenhall, Geo. Van Sickle, Managers.

Pekin (Ill.) Gun Club.—John Berry, President; Henry Heisel, Vice-President; Geo. E. Schaummfeffle, Secretary; James Haines, Jr., Treasurer; Executive Committee, John Berry, Henry Heisel, John Durans, John C. Ramsey, Louis Staffer.

Delevan (Ill.) Prairie Club.—P. Clark, President; Jno. Warne, Vice-President; H. A. Flint, Secretary and Treasurer.

Canton (Ill) Game and Fish Protection Club.—Jos. Donn, President; Daniel Drake, Vice-President; A. Walker, Secretary; C. A. Emery, Treasurer.

—Mr. C. B. Boughton, of Titusville, Pa., the inventor of the explosive target ball, has also nearly ready a new invention of great value to marksmen, who all appreciate the difficulty of identifying bull's eye shots under all circumstances. The invention of Mr. Boughton consists in a disk prepared of fulminate paper painted black and exactly covering the bull's-eye and fastened at top and bottom with hooks. When struck at any point by the ball, the paper at once explodes and consumes, being a positive proof of a hit to the marksman and his friends. The attendant can at once substitute another disk and at the same time mark the shot. There can be no question as to the value of this invention and the certainty of its universal adoption.

Deer Shooting on the Sisquoc River.—*Santa Barbara, Cal., March* 25.—*Editor Forest and Stream:* Early one morning in July a party of four, consisting of Mr. F., one of the leading merchants of Santa Barbara; E. and W., two jolly fellows in camp, and your correspondent, left town for the old camping ground on the Sisquoc Ranch. Santa Barbara you must know is surrounded on three sides by mountains, and in order to get into good hunting country one must cross over them. By the time we reached the top the sun was two or three hours high and it seemed as if we would melt. However, the other side was still cool and shady, so after a short rest at the Summit House we again started on ward until we reached a clear stream of water, where we stopped to rest our horses and eat lunch. After an hour's stay we hitched up and drove until we reached the Jinaquoc Ranch House, where we decided to stay over night.

We were up betimes and were soon started on our way again. The road ran through some splendid country. We saw as we passed along hundreds of acres of grain standing ripe and ready for the reaper, and as the breeze swept over it it looked like some vast sea stirred by the wind. The river was reached about noon, and for the next two hours we drove slowly over the boulders, working our way well up into the deer country. Our camp was reached about two o'clock, and the tent was soon pitched, horses attended, and everything ready for to-morrow's hunt.

In California every stream of any size is called a river. Eastern people would have called the Sisquoc River a creek had they seen it while we were there, for as it had not rained for several months, the streams had dwindled down very small, but in the rainy season they are very respectable. This river gets its name from an Indian chief who, many years ago, lived on its banks. Indian graves are very numerous on the little flats through which the stream runs. Mr. Steven Bowers, a gentleman employed by the Government, has opened great numbers of them, and has shipped tons of relics away from here.

In the morning F. and I started out together, as we usually do, and had not gone far before I saw two deer standing together about one hundred and fifty yards distant. One dropped to my shot and the other made off, and though I fired several shots after him I failed to hit him. On going up to the dead one, it proved to be a large, fat doe. She was soon dressed and hung on a limb, and we started on. We traveled several miles this day, but failed to find any more deer, though signs were very plenty. Next morning we saddled our horses and rode over to a cañon where the deer were more plentiful. I had separated from F. and was walking slowly along when I heard two shots in quick succession, and soon a large buck came staggering through the brush and fell dead at my feet. F. soon made his appearance, and as we were dressing him we heard four shots on the hill opposite, and on going over we found W. had killed three does. All of us were in good humor that night, and many a song was sung and story told before we sought our beds. F. killed another buck almost as large as the first, and nearly in the same place, and I got a spike buck. The next day, and just as we finished dinner, a young doe came down close to camp to drink and was killed by F. who happened to get his gun ready first. We stayed in camp and rested on the day following, and I had three good shots at two deer that came to drink, but as I was much excited I missed them both.

Next day we started for home and changed our route and came by way of the Gaviota pass. This pass is a channel cut through the mountain range, and as you drive through you can see cliffs some three hundred feet high, towering above you; it is a magnificent spectacle. Thirty miles more and we were again in Santa Barbara.

E. C. F.

—See Bogardus' advertisement.

PIGEON MATCHES.

Challenge to the World.—I will shoot a match at 500 or 1,000 glass balls, each for $500 or $1,000 a side. The match to be shot at 15 yards rise, from my patent glass ball trap; and on the day of match the acceptor and I to toss for choice to shoot, and the man that gets the choice to commence to shoot and shoot until he misses, then the other starts in and shoots until he misses; and the one that breaks his number first to win, on the same plan as billiards.

The match can be made at my headquarters and shooting gallery, 158 So. Clark st., Chicago, at any time.

A. H. Bogardus,
Champion Wing Shot of the World.

New Hampshire—*Ashland, May* 24.—Ashland Gun Club; weekly contest for ten ball match; Bogardus trap and rules:

M.

Massachusetts—*Worcester, May* 24.—The Sportsmen's Club of this city have accepted a challenge from the Marlborough Club to shoot a glass ball match on Memorial Day. In June last the Marlborough team won by a score of 227 to 219 out of a possible 300. July 18 the Worcester team won 231 to 219; August 18 again by a score of 258 to 251. The Worcester Team for the coming match is composed as follows: Messrs. W. S. Perry, A. Houghton, G. J. Rugg, L. R. Hudson, C. B. Holden, N. S. Johnson, E. T. Smith, A. P. Pond, Sted. Clark, W. H. Cole; with Messrs. M. D. Gilman and C. C. Houghton as substitutes.

New York—*Buffalo, May* 24.—Friday, May 23, at Mr. B. M. Shultz's Shooting Park, Buffalo Plains, George W. Smith of the Queen City Club, and Jacob Beier, Jr., of the Audubons, shot a match at 20 birds each, 26 yards, with the following result:

Smith	1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1—19
Beier	1 0 0 1 1 0 1 1 1 1 1 1 0 0 0 1 1 1 1 1—14

H. E. G.

South Carolina—*Charleston.*—Mr. Geo. A. Douglass, an enterprising young sportsman, has opened a shooting park at the Cool Blow Garden, which is delightfully situated within easy walking distance of the city. The park has become very popular with our sporting fraternity, and every pleasant afternoon quite a number of gentleman can be found on the grounds practicing at glass balls. The Charleston Sporting Club, which has been recently organized, had a practice match a few days since, the first of a series of three contests, to select a team of ten men to shoot against a team of ten men from Augusta on the 30th of this month. The best scores made were as follows, 20 shots each: W. L. Cely, 19; Dr. Lanneau, 18; Mr. Hall, 17; W. J. Whaley, Jr., 16. The scores made upon an average were very good, as some of the parties had never shot a glass ball before. Some excellent shooting may be expected, as the visiting sportsmen are all crack shots, and our men are determined to give them a severe fight.

Algonquin Gun Club.—The Algonquin Gun Club, of New York, will open its grounds at Weehawken, N. J. (Forty-second street ferry), to-morrow afternoon. The officers of the club are: Jas. P. Robinson, President; Jas. Dunseith, Vice-President; Geo. Bremer, Secretary. The Committee of Arrangements are: Wm. Burns, Wm. B. Lundie, David Simpson, G. J. Sauer, J. H. Boesseennecker, Rob't Gordon.

Ohio—*Youngstown, May* 24.—The following scores were made on May 17 by the Buckeye Ball Breakers, at the first semi-monthly contest for the championship of the club; Bogardus' rules, Card's rotary trap, 15 smooth glass balls each, 18 yards rise:

Arkwright	0	0	0	1	1	1	0	0	1	1	1	1	1	1	1—10
Hamilton	0	0	0	0	1	0	0	0	0	0	0	0	0	0	0—1
Froggett	0	0	1	0	0	0	0	1	1	1	0	0	0	1	1—6
Head	0	0	1	1	0	0	0	1	0	1	1	0	1	0	1—7

Boggans	1	0	1	1	0	0	0	1	0	0	0	1	0	1	0—6

Buckeye Boy.

Ohio—*Cincinnati, May* 11.—An interesting glass ball match for the championship of the Cincinnati Shooting and Fishing Club took place on the above inst., Messrs. Koch and Whetstone shooting against Caldwell and Disney. The celebrated Bates & Baum rubber band traps were used, the balls being thrown 35 yards and from behind a screen. Rise, 18 yards; number of balls, 50 to the man. A large audience was present, including many ladies, and the utmost enthusiasm was manifested throughout. Score:

W Caldwell	1 1 1 1 1 0 0 1 1 0 1 1 1 0 1 1 1 1 1 1 1 1 1 0 1
	0 0 0 0 1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1—40
D T Disney	1 1 1 0 0 1 1 1 1 1 1 1 0 1 0 1 1 1 1 1 1 1 1 0 1
	1 1 0 1 1 1 1 1 0 1 1 1 1 1 0 1 0 1 1 0 1 1 1 1 1—40—80

Shooting Tournament.—A grand shooting tournament at glass balls and target will be held at Pittsburgh, Pa, commencing June 3, and continuing during the month on each Tuesday and Friday. Messrs. J. Palmer O'Neil & Co., under whose auspices the tournament is held, and who are agents for Mole's rotating glass ball trap, offer over $400 in prizes, the first being a W. & C. Scott & Son gun, valued at $200, for the highest score at 100 balls thrown from a Mole's rotating trap; a P. Webley & Son gun will be given for the second best score; a Winchester rifle will be given for the best score with a Winchester rifle at glass balls, and 1,000 Winchester cartridges for the second best. For target shooting the prizes are a Remington Creedmoor rifle and a sporting rifle by the same makers, the shooting commencing on Thursday, June 5. The shooting will be done on the grounds of the Pittsburgh Exposition Society, which have been rented for the purpose. Each contestant will be allowed to make three scores—that is, if his first score of 100 balls is not satisfactory, he will be allowed to try at a second 100; and if this score does not please him, he can try again, but from the three scores he must select one. A charge of five cents to cover expenses will be made for each glass ball shot at, but there will be no other entrance fee. Circulars containing all information can be had by addressing Messrs. J. Palmer O'Neil & Co., Pittsburgh, Pa.

Fine Gun.—If a person wants a *really first-class gun*, with the very best of implements and case, complete, he will do well to examine the two fine outfits now on exhibition at C. L. Ritzmann's, 943 Broadway, near Twenty-third street. One is a W. & C. Scott & Son, Premier quality, 12-bore, 30-inch, 7⅛ lbs. weight; the other outfit also a W. & C. Scott & Son, Premier quality, with two sets of barrels (10 and 12. These two outfits are the finest and completest these celebrated makers ever turned out, and the best that can be procured. Patterns with each gun.

New Publications.

ATLANTIC COAST PILOT.—BOSTON TO NEW YORK.—U. S. Coast Survey, Washington, D. C.; John Service Bradford, Assistant, U. S. Coast Survey.

The U. S. Coast and Geodetic Survey has again laid yachtsmen under obligations to it by the publication of the most complete coast pilot yet compiled for any stretch of coast at home or abroad. By the use of the charts already in its possession and the systematic arrangement of the surveys made from Boston to New York, a volume has been given to the nautical public for the small price of $3.50, which under other circumstances could not have been produced for less than ten times that sum. It contains numerous charts on an 80,000 scale on parchment, and views of approaches to channels and harbors; a general description of the coast line and shores; a detailed description of all dangers and obstructions; sailing directions; position of lighthouses and beacons; information concerning fog-signals, tides, currents, ice and compass variations; the pilot laws of New York and also an appendix relating to the currents at the entrance to the Gulf of Maine. The volume is in short a complete collection of all that is required by the coasting and yachting fraternity. As a book of reference upon all matters relating to the coast-line and off shore character of the sea and sound it is an invaluable guide to mariners, and the extremely low price at which the book is issued places it within the reach of all. The efforts the Coast Survey is making and the amount of useful work turned out by it upon the niggardly pittance allowed by Congress should receive the heartiest approval of those who desire to see in government something more practical than the disgusting display of sensationalism and sectional animosities which occupy most of the time of the wise men at Washington. Yet the very existence of this bureau, one of the few in which Americans may take pride, was threatened with extinction at the same moment that a raid for millions for pensions was made upon the Treasury. The body of the work is printed in large, clear type, the more important parts in pica and the lesser dangers and notices in minion, while the sailing directions are well leaded. With this on the shelves of the ship's library, there will be no need of other charts, and no excuse for feeling one's way with the board or following a hooker, customs still too frequent among amateur sailers. But to be appreciated, this new volume must be seen. It is to be obtained at all the navigation stores in this city. The same material is also published in seven different parts for local use; each part 60 cents. They run from Boston Bay to Monomoy; Buzzard's and Narragansett Bays; Block Island and Fisher's Island; Sound with Gardiner's Bay; Nantucket and Vineyard Sound; Long Island Sound and East River; harbors in same and South coast of Long Island. In these forms the information is somewhat more handy and readily found. A colored chart of the sea approaches of New York is a special feature of the book, showing the deep tongue-like gulley that makes in toward the Sandy Hook Light-Ship.

SOUTH AUSTRALIA, Illustrated by Photographs and Maps. Edited by Wm. Harcus, Esq. Sampson, Low & Co., London, Publishers, 1876.

In view of the coming World's Exhibition at Sydney and Melbourne, present interest in the development of Australia will be heightened. Any information, therefore, relating to that wonderful country will be welcomed by a great number of people. We presume it is safe to say, however, that comparatively few persons have any idea at all of the great and varied resources of this continent, of the progress of its settlement, or its present condition. They believe it to be still a wilderness inhabited chiefly by kangaroos and savages, just as there are Londoners even now, who imagine all Americans to be aborigines less than half redeemed by the inoculation of the English Colonists who came here to settle. If such is the opinion of any one, a perusal of the book before us will instantly undeceive him. Indeed, if we take its principal towns, cities, fields and plantations as standards of estimate and measure, he will find them scarcely surpassed by countries which have an antiquity. The public buildings of Adelaide, for instance, will compare favorably with those of European cities, while the vast sheep and stock ranges, granaries, and the Hill River farm, with its wonderful machinery and implements, seem the exact counterpart of the stock ranges of Texas and Colorado and the Dalrymple and Warner farms of Minnesota. The volume before us contains 432 octavo pages, and is full of statistics of much value to emigrants and capitalists. Just what all Australia was, and what a portion of it still remains, may be gathered from another volume which has just come from the printer. It is entitled

JUNE MAGAZINES RECEIVED.—We have received from the publishers the *Magazine of Art; Lippincott's; Appleton's; Popular Science Monthly; Phrenological Journal; Atlantic; Eclectic; Golden Rule.*

SAPANULE!

TO SPORTSMEN---"THE ONE THING NEEDFUL!"

SAPANULE—Nature's ally—the best friend to man and beast. A preparation that is antagonistic to Inflammation. Congestion, Soreness and Fever cannot exist where this popular lotion is applied. For animals that are hard worked it is a sure restorative. For wounds, cuts, bruises, sprains, contusions, sores, new or old, it is a prompt and infallible cure. For all skin diseases and abrasions its healing and cleansing power is wonderful. SAPANULE is an admirable article for the bath and toilet. Used in foot and sponge baths, it will bring immediate relief from all pain or soreness in feet or limbs. SAPANULE takes all soreness out of bunions and corns, and is a sure cure for chilblains. Owners of dogs will find that by washing their dogs in Sapanule and water will remove any unpleasant odor, leaving the coat clean and silky.

A GREAT INVENTION!

Imitation
STAINED GLASS.

Patented Dec. 3, 1878.
CURTAINS, SHADES AND BLINDS

dispensed with. New, Elegant, Cheap and Durable. It produces all the unique effects of a richly painted or **Elegantly Stained Window**. It is easily applied to the glass in Windows of Houses, Churches, Public Buildings, Steamboats, Street and Railroad Cars, Libraries, Parlors, Offices, Bath Rooms, Stairways, Transoms, Vestibule Doors, etc., with the full effect and brilliancy of variously colored ground glass. The article has *just been patented*, and not a single agency has as yet been established.

ONE GOOD MAN in each State wanted, to whom exclusive territory will be reserved for five years.

SAMPLES of three of the most beautiful full styles will be sent prepaid with full instructions, WHOLESALE PRICES, etc., on receipt of $1.00.

Agents { L. LUM SMITH, Patentee & Mfr'r. 717 Sansom Street, (Sole Agt. for U. S. & Canada.) PHILADELHIA, Pa. }

Apply to

READ the following Extract from the *Representative Agents' Paper* of the world, THE PHILADELPHIA, PA., AGENTS' HERALD:

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and extraordinary sale. It will offer the best opportunity for coining money that has ever been presented to Agen's, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the Agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

AGENTS' HERALD

THE LARGEST, SPICIEST AND ONLY REPRESENTATIVE PAPER OF ITS KIND.

ACTIVE AGENTS GIVEN GOOD EMPLOYMENT EVERYWHERE

By over 200 responsible advertisers in this month's issue of the AGENTS' HERALD. Grand outfit, including Circulars, terms and a beautiful 10x14 Engraving of the SMITHOGRAPH, sample card and full particulars of the AGENTS' DIRECTORY and sample copies of last month's AGENTS' HERALD, all for 10 CENTS. YEARLY SUBSCRIPTION, $1.00. One cent stamps taken. We cannot afford to give the paper away, so don't ask us. Address in haste,

TRADE— "BEATS THE WORLD." —MARK.

OLD JUDGE SMOKING TOBACCO.

The Only Tobacco Ever Manufactured that Does not Bite the Tongue.

"OLD JUDGE" CIGARETTES.

Manufactured under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effect of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

FOR SALE BY ALL DEALERS.

GOODWIN & CO., Manufacturers, 207 & 209 Water Street,

Sportsmen's Routes.

TO SPORTSMEN:

THE PENNSYLVANIA R.R. CO.

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROTTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

The lines of

Pennsylvani Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, RENOVA, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Also, to

TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

"THE FISHING LINE"

TAKE THE

Grand Rapids & Indiana R.R.

Mackinaw, Grand Rapids & Cincinnati Short Line)

FOR THE

Trout, Grayling & Black Bass Fisheries,

AND THE

Famous Summer Resorts and Lakes

OF

NORTHERN MICHIGAN

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equalled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.

The TROUT Season begins May 1 and ends Sept. 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE also abound in large numbers in the many lakes and lakelets of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The Climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma

affections.

The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address A. B. LEET.
Gen'l Pass. Agent, Grand Rapids, Mich.

NEW HAVEN, MERIDEN, HARTFORD, Springfield, White Mountains, Montreal and intermediate points. The new palace steamer *C. H. Northam* leaves Pier 25, East River, daily (Sundays excepted) at 3 P. M. A passenger train will be in waiting on the wharf at New Haven, and leave for Springfield and way stations on arrival of boat.

NIGHT LINE—The *Continental* leaves New York at 11 P. M., connecting with passenger train in waiting on wharf at New Haven, leaving at 5 A. M. Tickets sold and baggage checked at 944 Broadway, New York, and 4 Court street, Brooklyn. Excursion to New Haven and return, $1.50. Apply at General Office, on the pier, or to RICHARD PECK, General Agent.

ONE OF THE WORLD'S WONDERS,

SOUR LAKE.

The Great Watering Place of Texas.

This remarkable natural phenomenon consists of a circular pool about an acre in extent, in a continual state of ebullition, produced by escaping gases. Around the lake are a great number of wells and springs, of thirteen distinct varieties of water—sulphur, soda, alum, iron, etc. The waters of the lake and many of the springs are very acid. A specific for rheumatism in its worst forms, dyspepsia, chronic diarhœa, skin, kidney, venereal and female diseases. Fishing excellent and game abundant at all seasons. Open all the year. The tourist, whether for health or pleasure, and the student of nature, can find no place more interesting. Sixty miles east of Houston on New Orleans R. R. Board, week, $10; month, $35. Address

J. A. MERCHANT,
apr24 3mos Sour Lake, Texas.

GOODSELL HOUSE.

M. JENNINGS, - - Manager.

BROOKFIELD CENTRE, CONN.

Brookfield Centre is situated on the Housatonic Railroad, three hours ride from New York city and about an hour from Bridgeport, Conn. Its location is on high ground, healthy and picturesque, the neighborhood abounding in pleasant drives. The Housatonic River flows near it, where good bass and other fishing can be had. The hotel accommodates about thirty guests, and is pleasantly arranged. The bar, billiard room and dancing room are separate from the hotel building. Brookfield Centre has an Episcopal and Presbyterian church; services every Sabbath.

Through cars from Grand Central Depot, New York, via N. Y. & N. H. Railroad, or take Bridgeport boat from the East River.

PURE TIN-COATED & BURNISHED DROP AND BUCK SHOT.

AMERICAN STANDARD--EAGLE BRAND.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM: NEW YORK, Jan. 13, 1879.

Having been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot my 6,000 ball match, Jan. 8 and 9, with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting I used them until they became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

THE LEROY SHOT AND LEAD M'F'G CO., NEW YORK.

The DelawareShell.

Our Improved Shell Now Possesses the Following Merits:

1st. Perfect Uniformity of Flange
2d. They are Sure Fire and Gas Tight.

4th. The Primers are Easily Expelled and Replaced, and can be Reloaded a Number of Times.

PRICE AS LOW AS ANY OTHER SHELL.

ADDRESS, **Delaware Cartridge Co.,**
WILMINGTON, DELAWARE.

Dittmar Powder

THE CHAMPION POWDER

OF THE WORLD.

NO SMOKE--NO DIRT--LESS RECOIL

STRONG AND SAFE.

SUPERIOR IN EVERY RESPECT TO BLACK POWDER

6,013 SHOTS WITHOUT WIPING IN A SHOT-GUN.

Captain Bogardus' great feat of breaking 6,000 glass balls has proved that the powder is all that is claimed for it. The barrel, without being wiped, were as clean at the end of the match as after the first shot. The fact of the firing of so many shots in succession, and that the Captain has used about 200 pounds of the same powder during the last year in one gun, shows, without a doubt, that the powder is EFFICIENT, UNIFORM and SAFE.

The rifle powder is also without a rival. The standing challenge to test this powder against any other has never been accepted. Many riflemen throughout the country have been successful with the powder, as, for instance, Mr. E. B. Souther, of the Massachusetts Rifle Association, won last year two gold medals, two silver medals, two revolvers, and four other prizes in using the DITTMAR RIFLE POWDER.

Greater facilities and greater demand have enabled us to reduce the price of the powder considerably, and the fact that the Government Armory at Springfield is making now all kinds of testing machinery for us will enable us to produce always a uniform, and in every way reliable, article.

TRY OUR NEW WATERPROOF SHOT GUN AMMUNITION. Cheap, and warranted to give satisfaction in every respect. Ammunition for gallery rifle practice always on hand, and all kinds of rifle ammunition made to order.

SEND FOR CIRCULARS AND PRICE LISTS.

For Forest and Stream and Rod and Gun.

THE FOUR WINDS.

WIND of the North. O fierce North wind,
That bloweth wild and free!
What of the land thou'st left behind,
Enveiled with mystery?
Where weird Aurora's flash is hurl'd
Thy icy couch is spread,
Thy throne—the spindle of the world—
O North wind, cold and dread!

Wind of the East! O sobbing wind,
Thou pulseth from the sea,
Thy voice with moan of wreck embrined
Wails fitting elegy.
Low o'er the land thy trailing locks
Mysterious shadows wreathe;
The bittern calls, and bleating flocks
Faint notes of warning breathe.

Wind of the West! O gallant wind,
Fair knight of fairest weather,
Thou bringest to the wearied mind
The breath of hill and heather.
Thou tearest from the hidden blue
The webs by Furies tangled,
And sunny days thy steps pursue,
And nights with stars are spangled!

Wind of the South! O gent'e queen,
Bright ward of guardians three,
In garments weft of sunbeam's sheen
Thou trippest daintily.
Thy bosom warms the timid flowers,
Thy cheek the roses press,
And time glides by in golden hours,—
O wind of happiness!

WENTWORTH WADSWORTH.

For Forest and Stream and Rod and Gun.

Down the Big River—No. 6.

SPEAKING from a somewhat varied experience, I find that luck, whether good or bad, always comes in streaks. It was so with me on this journey. Bad luck had been my prevailing experience ever since I lost my money overboard just below St. Louis.

The cause of it all was rain. Ever since we started it had rained on an average four or five times a week, not including the light drizzlings. These showers caused the ruin of an abundant supply of provisions, our clothes, our books, and all things we especially wished to keep dry.

We had expected to find game along the river, but game was not to be found. A mud-hen and some Turkey buzzards were the only large living things we saw. Woodpeckers and kingfishers were plenty, but the dish of woodpecker soup we tried did not captivate us sufficiently to induce us to slaughter more of them.

I find it difficult to describe the state of feeling with which these privations finally filled me. I did not feel the pangs of hunger so much as the loss of sleep for ten successive nights, and the weakness attendant upon lack of nourishment. One day, indeed the third of my fast, the craving of my stomach for food was absolutely painful, but the next day it was much modified. The feeling was one rather of emptiness, and a kind of meditation—if the stomach ever meditates—on the desirability of a square meal. My mouth, from my being so long deprived of sleep, was opened in a perpetual yawn, forming a cavity into which on several occasions flies and gnats entered on tours of discovery. My arms and legs and back ached incessantly. My head also was troubled with a dull, steady pain. During these four days, too, the sun was terribly hot, and all we had to drink was the river water, which, being scarcely one degree cooler than our bodies, did not allay our thirst to any appreciable extent, and it was only the taste of the mud mixed with it that prevented every swallow from acting as an emetic. My real condition can be best understood by the hallucinations which followed, and which I am about to record.

On the evening referred to in my last chapter I wrote letters until the sun was within an hour of the horizon, and then tied up my face and neck in a kerchief, and took my carbine and pistol and started for the mud-hole where the stranger had told us he had seen deer tracks plenty. The route tended diagonally away from the river and through the thickest part of the woods. I found that the reputed two miles were the genuine elastic article. The sun had set before I reached the pond, and had it not been nearly the full of the moon I should have found it difficult to keep in the right direction, for I had to pick and break my way through all the tangled wildness of the virgin forest.

After going about a mile I came to an opening in the woods, in the centre of which was a slough filled with muddy water, covering perhaps half an acre. Around this water, stretching from its edge to the woods, was a belt of soft mud, thinly sprinkled with grass, and on its outer edge piled with dry sticks and brush-wood.

This was not the pond I was seeking, for the man in the skiff had told me that if I went in the right direction I would pass a smaller pond, which was evidently this one. Hence I did not stop here, but merely glancing at the muddy margin to see that no deer tracks were there, I kept on my route.

The sun had set by this time, and only the moon and stars cast their light down through the openings in the cotton-wood and cypress leaves. This light, though bright as only southern moonlight can be, had a mystifying effect, and the shadows cast were so grotesque and weird, and the illumined spots so deceiving, I feared for a while I should lose my way in spite of all my out-door experience; but I soon got used to it, and found that by keeping an eye to the positions of the stars I could easily keep in the right direction.

After about an hour of this moonlight travel I arrived at my destination. It was a large depressed opening in the woods, which the constant rains had nearly filled, and there being no way of escape save by evaporation the long-standing water had absorbed from the soil underneath a brackish taste which attracted the deer. The opening in the woods was circular in form, and contained perhaps a dozen acres, all of which was water save a fringe of mud about two rods in width. On this mud the clear moonlight enabled me to discern several beaten paths leading from the woods to the water. Some of the tracks in these paths were quite fresh, and evidently made that afternoon.

Near one of these paths I concealed myself in a patch of underbrush, and waited for the deer to come. For two hours at least I lay there with eyes and ears wide open, but no sign nor sound rewarded my vigils save the dismal "jug o' rum" of an occasional bullfrog, and the chirping of the insects in the trees overhead. At times I thought I heard a step in the grass or a rustling in the bushes, but it was probably only a falling twig or a night hawk circling overhead. No antlered deer was reflected in the silvery sheen of that silent water. At last nature could endure no more, and I slept. For the first time in nearly two weeks the conditions for slumber were all favorable, and before I was aware of it I was folded tightly in the arms of the drowsy Morpheus. When I awoke the moon was far from the spot where I had last seen her, and the position of the Great Bear pointed to an hour after midnight. The side of the lagoon nearest me was cast in shadow, and the other side, and indeed wherever the moonlight fell, seemed wrapped in an almost imperceptible fog or mist, which gave to everything enveloped by it a magnified and distorted appearance. At the same time, it was not dense enough to wholly conceal its outlines. I rubbed my eyes and walked out into the open. To tell the truth, at the first sight of the strange lights and shadows around me, I felt a coldness about my back and a weakness about my knees that were not wholly caused by the last week's privations. It did not seem at all like the place where I had been when last awake. Every object wore a dreamy hue, though I was certainly awake, and in the same spot; for behind me was the bush I had slept under, and in front were the deer paths I had been trying to watch. These objects being so near to me and in shadow, retained their natural shape and size, but all else, while somewhat familiar, was strangely altered in appearance. The pond stretched off in the distance like the Atlantic Ocean, and yet everything on the opposite side, though fearfully increased in size, was easily distinguished. Even the nest of some large bird I had noted in a dead tree was still visible, only looking to my imagination almost as large as a haystack. A spell of awe held me like one transfixed. I was not frightened, in the strict sense of the word. I was perfectly cool and collected after the subsidence of the first shock on awakening.

At last I aroused myself sufficiently to pick up my gun and start back toward the camp. I had no desire to lie longer in ambush. If no deer had come to drink by this time—and there were no new tracks to be seen—none probably would come. Besides, I was beginning to feel uncomfortably chilly; for between the dew and the mist I was enveloped in a dampness which, though barely palpable, had the effect of keeping me in a half-shivering condition.

I had no difficulty in following the back track, for on coming out I had taken the precaution to break off branches at short intervals to guide me. I had not proceeded far when I realized that I was again getting sleepy; in fact, I was walking along like a somnambulist. On several occasions a bump from a tree trunk, or a scratch in the face, recalled me to full consciousness. I slapped myself and pinched myself, but these expedients were of only transient profit; for, before I had walked a dozen yards, if I chanced to be crossing an open space, I would become oblivious before I could reach its opposite edge. Fortunately, however, I managed, as though by instinct, to keep in the trail; for every time I opened my eyes they fell on some object I had marked the evening before.

It was while I was in this condition that I reached the smaller lagoon or mud-hole, which I had passed going in. Indeed, I was half-way across the muddy margin before I knew it. I only remember that, as soon as I opened my eyes, I was satisfied that I was going in the right direction, and then I remember I came almost to a dead stop suddenly. I stood almost transfixed with fright at what I saw on the opposite end of the lagoon. It was that sort of fright which has lifted the hat or colored the hair of more than one nervous individual. The side of the pond where I stood was enveloped in shadow, the gloom extending half-way across the pond. Beyond that the fog and the moonlight were producing their wierdest effects; trees and stumps were towering upward to illimitable heights. But it was not the distortions of the trees which frightened me. It was a row of objects—ten of them—standing close together at the opposite end of the lake. They seemed to be about fifteen feet high, by two or three in breadth, and of a ghostly white color. At times they moved about, silently as spectres are supposed to move, one or another of them occasionally stooping as though to touch the ground, or stretching out an arm on each side like an old-fashioned guide-board.

What in heaven's name were they! I could not guess. I had never seen, nor heard, nor read of any objects of that description. Had I been a believer in ghosts I should have put them down as such, for they were exact *fac similes* of the regulation spook. But I do not, and did not, believe in spirits of any kind, and though I could not help thinking of ghosts at the moment, I did not entertain any suppositions based on the supernatural. I knew, whatever the objects were, they were perfectly natural and earthly, but that knowledge did not in the least modify the feeling of fear which possessed me from the first moment of their discovery.

I stood there, over my shoes in mud, for half an hour or more, not daring to stir and hardly daring to breathe. To continue on my route and enter the woods at the proper place to strike the marked trail, I would have to pass within two rods of the apparitions, and, hungry as I was, there was never a bill of fare invented by man that would have tempted me to do that. They might be harmless ghosts, or some species of unknown, bloodthirsty, night-prowling monster, but I could not, or would not, undertake to find out their true character. It did at first occur to me to try the effect of an ounce ball on their systems; but when I looked up at their towering forms and counted their number—ten—I let my carbine remain in the mud, where it had fallen at the first shock of fear and surprise.

For half an hour—an hour—an hour and a half, I should judge, I stood there motionless, considering in vain what to do, and trying to scrape up courage enough to do anything. The spectres still preserved their silent, mysterious movements, gliding slowly about at times, or flapping their arms up and down. In these motions they created no noise that was audible to me, and everything was so still I could distinctly hear the throbbing of my heart and the murmur of my suppressed breathing. At last I could stand it no longer. The suspense became unendurable. I began to feel that if I staid and watched the strange figures much longer I should absolutely go crazy. I roused myself by an energetic effort and determined to get away from the spot in some way. Up to that moment I had rejected the plan of backing into the woods, and under cover of their shadows skulking around to the other side of the spectres, for fear that I might not be able to strike the trail if I once deviated from it. Now, however, that I could think of no other way, I determined to run the risk of finding the blazed track.

Keeping my eyes fixed on the ghosts, I lifted first one foot and then the other gently out of the mud, and began walking backward toward the edge of the woods. I walked backward because I could not for the life of me take my eyes off those grim figures, which held my gaze riveted with a horrible fascination. I went slowly and silently, so as not to attract their attention. I believed they had not noticed me. I had taken perhaps a dozen steps when I again came to a pause—a pause as sudden as when I first discovered the ghosts. In my backward walk I had made better progress than I had anticipated, and had reached one of the piles of dry brushwood lying near the edge of the woods, and it was a step, unavoidable in the darkness, on a dry stick that excited my alarm. I heard a rustling in the bushes, low at first, and then a sound resembling the rattling of stiff grass or dry beans in a pod. This was repeated again and again, a foot or so distant, each time in a different spot, until I realized that the enemies in the rear exceeded in number by two the enemies in front.

There was no mingling of the supernatural, however, with the fear inspired by these rattling sounds. I knew well, or thought I did, what they were. They were the warning notes of that most dreaded of American reptiles, the *Crotalus horridus*. In my backward flight from the ghosts on one side I had run into a nest of rattlesnakes on the other, and they were now hissing and squirming as if incensed at being aroused from slumber, within easy striking distance of my heels. I felt the cold sweat bursting through the pores of my skin, and the roots of my hair begin to work and stiffen. With all the strength left in my legs I sprang forward toward the pond. I followed one leap with another until my feet suddenly ripped on the stock of my carbine, which, in

my anxiety to get away from the spot, I had left lying forgotten in the mud. I was instantly pitched forward on my face, my mouth and nose getting half-full of sticky, slimy mud. As quickly as possible I picked myself up and grabbed the weapon, and started on a run along the pond, directly toward that haunted end from which the previous instant I was so anxious to get away. The natural danger behind was much more to be dreaded than the supernatural danger in front. The latter was for the moment forgotten, and it was not until I had got within three or four rods of them that I bethought me of where I was going. Then looking ahead to see if there was a chance for me to pass with safety between the spectres and the woods, and ——!

They were still there, upon the same spot, but greatly changed in size and appearance. Proximity dispelled the optical illusion and enabled me now to tell what they were. The discovery filled me with shame. Deceived by the distorting moonlight, aided by an excited imagination and a state of semi-somnolency, I had allowed myself to be frightened out of my wits by ten of the most harmless creatures in the world—white storks. Yes, the ghostlike objects were only a company of storks, stalking silently as usual around the pond, occasionally flapping a wing or stooping to pick up a worm or shell-fish. Ugh! white storks!

On discovering the real character of the objects my presence of mind very naturally returned, and I continued on my route, the storks, as I neared them, rising into the air and winging their way over the tree-tops. In my disgust at the scare they had given me, I attempted to send a bullet after them, but the mud had got into the tube of my carbine and it would not explode.

I contrived to keep awake and my wits about me for the rest of the journey, and in about two hours reached camp, where I found that Caywood had stayed awake all night, and boiled the half-pint of beans we had reserved for breakfast until they were a perfect mush. I did not see fit to give him the details of the night's experience, merely remarking that I had seen no game, but had fallen into a mud-puddle on my way back.

Early in the morning we discussed our bean soup, and before the fog had well lifted from the surface of the river started down the "Shute of Forty" for the city of Memphis. Meanwhile, however, my curiosity had tempted me back to the pond to search for the rattlesnakes, and to my supreme disgust I found the snakes were more imaginary than the ghosts. By my tracks I found the pile of brush where I had heard the rattling, and at once saw what caused it. I had stepped on the end of a stick which reached under the pile of brush. This stick had branches, and when I stepped on the end of the stick the branches had made a rattling among the dry leaves piled in with the brush. I tried it, and produced the very sounds which had scared me.

We reached Memphis before noon, and there I found letters and money; but instead of the large sum which I expected, there was a mere pittance of $3, which barely sufficed to supply immediate pressing necessities. My friends had evidently mistaken the measure of my wants. After a brief stroll about the city we resumed our voyage down river. We did not care to stop long in towns. I am not especially fond of the society of human beings when the opportunity is offered to be alone in the fields of Nature. The crazy poet, Cowper, has said that, "God made the country and man made the town," and if by this he meant to express the superiority of the charms of the country over those of towns, he was certainly right. I must say, however, that most of the country and many of the towns along this river are no credit to their makers, whoever they may be.

Just below Memphis is a red clay bank, the city itself being located on the northern end of it. These bluffs occur at intervals all along the river, and there is usually a town on or near them. There are often springs in these bluffs, but the water barely oozes out, and is but little cooler than the river; is strongly impregnated with the clay, and has a disagreeable taste. How different from the cool, clear mountain spring water found two hundred miles west of here.

For several days nothing of interest occurred to vary the monotony of our daily experience. There was the same eternal wail of cottonwoods, the same abundance of mosquitoes, and the same absence of game. We were beginning to get tired of our mode of voyaging, and one day—which had been unusually hot—we determined to shorten our trip by traveling at night. We thought we could shove the boat out into the current and turn her bow down stream, curl ourselves up as well as we could and go to sleep, and in the morning wake up and find ourselves fifty miles on our journey. We did not anticipate any danger from such a course. We had seen nothing during the daily travel of the last thousand miles that would indicate that we would run any risk.

[The rest of the narrative is but a continuation of mishaps, privations and famine, culminating in several weeks' sickness at Vicksburg, where the voyage was brought to an abrupt end by the appearance of yellow fever. The climax of the situation occurred just as might have been expected from the determination of the voyagers to float hap-hazard at night. It was moonlight, and they had hardly proceeded two hours on their first venture before they were caught in the swiftest kind of a shute with an up-river stern-wheeler, somewhere near the mouth of French River. The tide ran like a mill-race, so that the steamer could hardly make headway notwithstanding she churned the water into great billows of foam, which swashed up against a perpendicular bluff in a bend where the onset of the current had hollowed out a great whirlpool. Just here we will let the writer resume his graphic recital.]

We passed each other about the middle of the shute abreast the steamer's paddles, a few rods above the spot where the whirlpool was circling. We glanced at her guards and at the walls of her pilot-house, and saw that her name was *Kate*—something. We had no time to read the rest of her name, for we swept past her like a shot into the tumult of her paddles and the vortex of the whirlpool. The great muddy walls of wave towered five feet above our little skiff, and seemed to assume an intenser hue of blackness in their rage. The skiff spun around like a "tetotem." I pulled with all my strength at the oars to keep the boat's head to the waves, but suddenly the right oar snapped in twain and the blade went leaping down the rapids. It was all day with us then, and I knew it. The bow was caught by one billow, the stern by another, while the third rose up amidships. We swung about half-way round, when a large wave took us and pitched us atop of one just forming, and in less than a jiffy the skiff was bottom upward.

[To relieve any anxiety of the reader we will state briefly that the skiff and her two passengers finally brought up safely on a sandbar below. Of course the cargo of provisions, blankets, and *et ceteras*, was a total loss. Very naturally, as the writer continues, they had no desire to travel any farther by night, and so they hauled the boat high up on the bar and lay down on the sand and slept until morning. The next day they arrived at Helena, Ark., where they spent their last twenty cents for corn meal, upon which they subsisted for four days. Once they attempted to vary their subsistence by a levy on a cornfield, but the owner threatened them off. On the fifth day the writer was attacked with chills and fever, and Caywood on the day following. After that they went ashore every day for nearly a week to shake off; meanwhile, having nothing to eat for nearly five days. The writer's time was so occupied that he failed to keep up his diary. Finally, they reached Vicksburg, the goal of their almost forlorn hope, where the first thing they did was to order a square meal; but their stomachs rejected the food. The following paragraph concludes this eventful history.]

We then went to a hotel, and put ourselves under charge of a physician, and for three weeks scarcely stirred from our beds. Toward the latter part of July, just as we were getting able to walk about our room, the presence of yellow Jack in the river cities caused us to give up our hoped-for expedition to Texas and make our way North again.

I am not so fond of boat journeys as I was. I believe there are more pleasant ways in which to wander over the earth.

PERKINS IN PURSUIT OF QUAIL.

OLD man Jenkins, who lives on the Pine Hill road, about a mile beyond Perkins' place, called in the other day to borrow a paper. While I was engaged in routing out the one he wanted, he kept on with his conversation, and at last got to what he wanted to say.

"The boys tell me," said he, giving his quid a preparatory roll, "that you've been writin' to the papers 'bout Perkins' turkey hunt."

"What turkey? what papers?" said I, for I did not care particularly to have the "Pine Hillers" know that I reported their harmless little eccentricities.

"Oh, you know well enough," replied the old man, "that time Perkins shot the buzzard; and the boys say you writ all about it to that paper of yourn what 'lows it's a sin to shoot birds a sittin', and tells about trout flopping around a killing flies with their tails same as a sore back ox in flytime. Anyhow, they say you done it, an' Perkins is powerful mad about it; you better bet he is. But what I want to know is, if you never heard 'bout the time Perkins an' me went out to kill partridges on the fly. Never heard 'bout it? Well, set down here an' I'll tell ye. You see, last fall Perkins met you out there just this side of my place, when you was after partridges with that long-legged pinter of your'n, and he seen you kill two or three birds on the wing. Well, next mornin' he comes over to my house and puts at me for to go along with him. It didn't 'pear to me as I had the time to go proj-ecting about the old fields after little birds, and I proposed to Perkins to try a turkey hunt. Perkins begin to git a leetle riled, and I agreed to go with him, an' got down my old gun an' started.

"When I got out there by the fence, thar stood Bob, Perkins' biggest boy, an all fired smart boy, but mean as the old Nick. But you know Bob, he's the one as told you 'bout Perkins killing the buzzard. Well, thar stood Bob with an old shaggy dog some movers fetched along here about a month before that, an' Bob, he'd stole him from em, you see. Bob had him fast with a plow-line round his neck.

"'What kinder dog's that?' says I.

"'He's an Irish setter,' says Perkins.

"Well, he was Irish enough to be on the fight, it didn't take me long to see that, for he went for me on sight, fit to tear me all to pieces; but Bob, he yanked him down a time or two with the plow-line and kicked him a good one in the ribs, and that sorter soothed him like.

"Then we all went along; but the dog seemed not to care much about going, and sorter hung back, but Bob, he 'lowed he had to go, an' I tell you he drug him along till the dog he changed his mind and then he drug Bob along pretty considerable much, you bet. We hadn't gone very far from the dog fight till I saw a gang of partridges all huddled up in a fence corner 'mong some briers, an' I was just goin' to shoot an' kill the hull lot; but Perkins, he 'lowed that wan't the way, 'Skeer 'em up an' give 'em a chance,' that's what he said. Well, Bob sent in the dog, and he put 'em up and took out arter 'em an' Bob arter him, feared he'd lose him, but it's my opinion he wouldn't a lost much—and Perkins blazed away with both barrels, but never teched a hair, only leetle most a killed Bob. The old dog arter awhile got the plow-line wrapped around some bushes, and that held him fast till Bob could get him again.

"Bimeby we found another gang, and Perkins shot an' fetched one; but plague my cats ef that blamed dog didn't ketch him an' swallow him afore he teched the ground. You just oughter to seen Bob light onto that dog an' choke him; but 'twant no use, the bird was gone clean outer sight, only just a feather or two. I begin to get sorter tired like, but Perkins, he 'lowed he'd just got his hand in, and we took another course down by the widder Smith's, the tow from Perkins' gun sot the old sage field afire, an' leetle most burnt up the poor woman's fence. I tell you, the way me an' Perkins, an' Bob, an' that bow-legged boy of the widder's, Jim I believe she calls him, fit that fire was a caution to snakes. Bimeby we got the fire under an' started for home. When we got most thar we come across a trap of Bob's with eight partridges in it, an' ef you'll believe me, that fool of a Si Perkins wanted to turn 'em out an' shoot at 'em one at a time. 'Give 'em a chance,' he said, same as ef he belonged to one of first families of old Virginy. Bob didn't like the idee much, but he let him shoot at two an' then he grabbed the rest of the birds, an' he an' the dog put out for home. I thought I had 'bout enough hunting an' so I left too.

"When I got home, my old woman, she wanted to know whar was my birds, an' I up an' tells her all about it. When I got through the old woman says, 'Well, you might a knowed that afore you started; the idee of an old man like you, the head man in the Hard Shell Babtist meeting-house, a pokin' around in the briers after birds with that fool of a Perkins, who haint sense enough to keep in out of the rain; it's too redikilus.' An' I kinder thought so too."

WILL.

Savannah, Tenn., April 27.

For Forest and Stream and Rod and Gun

ABOUT BOB WHITE.

IF a familiar acquaintance with our quail (*Ortyx virginianus*), and a close observation of their habits, extending over a period of twenty years, entitle one's views on the subject to respect, I need make no apology for intruding them upon the notice of your readers. I wish to direct the attention of those interested in the protection and propagation of quail to some facts which, I think, are not generally understood, having, it seems, from their very familiarity, escaped notice. The interest every where so happily manifested within the last few years in game protection, and the late wholesale destruction of quail, if report be true, throughout the Northern and Western States, render the subject of more than ordinary interest at this time.

It seems to be generally supposed that if the quail of any particular locality are protected for a number of years—like hares, turkeys, deer, etc.—they will be greatly multiplied; and, on the other hand, if they be totally destroyed, that it will require the number usually found at the pairing season to stock that locality with its former abundance. Now, I contend that neither of these propositions is necessarily true. Wherever they are not migratory (I believe sometimes they are so to a limited extent), and I would treat only of those that are not, in any season, there will not be found more than a certain number of coveys in any particular section of country, and those coveys will be confined to certain well defined localities in that section—*i. e*, each covey will have its own range or *habitat*. As the season for nesting and rearing the young broods has been propitious or otherwise, the coveys will be correspondingly large or small. If the young brood has been destroyed, no birds will be found on their range. If a whole covey of grown birds be killed at one shot, as is often done by pot-hunters, their range will be occupied the following season by a pair from some other covey, and the usual brood reared. Further, the area over which any covey moves and feeds is comparatively small, their peregrinations rarely extending over a radius of more than two or three hundred yards. In localities particularly favorable two or three coveys may be found very near each other, their ranges often overlapping, and without a disturbing cause will so continue. But if the natural face of the ground be changed, as by the clearing away of forests, they may change their habitat or become extinct. To repeat: It seems to be fixed that only a certain number of coveys—not birds—shall occupy a given section. Perhaps it is instinctive and a check on over-production. The supply of grain on which, in this section, they feed in early autumn is soon exhausted, or, from exposure, becomes unfit for food, and they must then resort to the matured seeds of certain weeds, insects, etc.; and as the supply of the latter is an almost fixed quantity, the demand in their economy may be regulated accordingly. Whatever the reason, I can affirm these facts with confidence, as regards Eastern Virginia, and doubt not the characteristic follows them wherever this species is found.

On my shooting ground, embracing about ten square miles, I know where each covey should be found; and when the close season expires, take gun and dogs and go to such known points, and if no birds are found after thoroughly beating any ground, I do not hunt that place again during the season. The next season they will probably be found there. Indeed, my old dog is too knowing to work over field between points, but as he approaches the well known range of a covey none is more alert. In taking out a young dog, or one unaccustomed to the ground, his display of fine action from range to range may give pleasure, but no points.

What becomes of the surplus birds? An answer to that question might be fairly demanded, and yet I cannot reply with confidence. Hawks, their worst enemy in this section, kill many after the gun is laid aside. Foxes, minks and skunks catch some. They are pugnacious, and at pairing time, I have no doubt, fight to the death for literally who shall be "cock of the walk;" and it may be the Darwinian theory of the "survival of the fittest" obtains—but I will not undertake to say the weakest are entirely exterminated. After mating they may seek the points which instinct teaches fulfill the necessary conditions, and if already occupied, another contest may ensue. If unable to breed, they may die. Herbert, I think, states that under such circumstances the cocks collect in flocks to themselves, but I have never observed that in this section. It might be asked if the dead are ever found. The sportsman who brings down a bird in thick cover, carefully marking where it falls, knows how difficult a matter it is to recover it without the aid of a retriever, and will hardly expect to cross accidentally the birds that may die among the rank vegetation of early summer. On the other hand, we might adopt the Yankee's argument of replying to one question by asking another. Why do they not multiply indefinitely when undisturbed? We know they do not. Nature provides a check in some way, and the object of our inquiry is to determine how.

In corroboration of the theory advanced, the experience of a noted shot and keen sportsman of an adjoining county may be cited. He has paid great attention to the protection of game on his estate, situated on the Mattoponi. He states that the more he shoots in any season the greater the increase of birds the succeeding year, and attributes it to the frightening off of hawks by the discharge of his gun, the movement being accelerated occasionally by a pelting at long range. The method he employs to trap hawks is at once ingenious, simple and effective. Common steel traps are baited with birds of bright plumage and placed in the tops of trees and on poles near the haunts of the birds. The lure is conspicuous and tempting, and many are captured in this way.

No bird affords better shooting than quail, or partridge as they are always called in Eastern Virginia, and nowhere is the sport better. Would you compare ducking? The fusilade and slaughter of a favorable hour may be more exciting, or perhaps better satisfy the Anglo-Saxon propensity of killing something; but when we think of leaving a warm bed at dawn, lying in a box or blind on an exposed point with the mercury at zero, and returning nine times out of ten chilled and empty-handed, such excursions are desired only as an occasional variation. The flight of snipe is at best uncertain

and a fatiguing tramp, incased waist high in rubber boots, over bogs and marshes, though enjoyed as a change, would soon become a vexation of spirit. Would you prefer to follow ruffed grouse up mountain side and over rocks with hardly a dozen shots in a day's tramp over the best ground? Prairie chickens undoubtedly afford fine sport, but we must not forget the sweltering August or September sun, the wagons, ice for dogs, ice for self; and later in the season the shyness of the birds and the bleak plains.

But go with me afield in the Indian summer of October or on a bracing November day. You choose your time, the fairer the weather the better the sport; no hurry at unconscionable hours. You take your sport at your ease. You know where your game is: that it is waiting for you. The exercise afoot is exhilarating and healthful; attention to the working of your dogs gives both occupation and pleasure—there is no monotony. You beat the ground with as much confidence as if you were in an English preserve. The birds are found. Look at the dogs! No skulking grouse is there, although there is the mysterious charm of invisibility. You can assure yourself the birds are before you. You walk in—up with a whirr—not one or two, but twenty burst upon the wing. Now for the exercise of cool decision and a practiced eye as you bring a brace to bag. Nor has your quarry, like quacking duck or "scaping" snipe left for parts unknown. You mark it down and renew the sport ere the ardor of pursuit has cooled. Can any sport excel it? Does any equal it? Our planters have always been keen sportsmen, and there is hardly a homestead among us without one or more well-broken setters or pointers, the progeny of some favorite native breed. Our ancestors before us rode to hounds and enjoyed their shooting in season; and, with their double flint locks, could bring down a front and rear on a fair rising, with a grace that would not be discreditable to a Bogardus with a Scott Premier. They saw fit to train up their sons in their ways, and have left a race of fearless riders, good shot, and, I may add, true men.

Here in the Rappahannock Valley game is found in great variety and abundance. In September and October the marshes are covered with sora, and in the creeks a fair number of woodducks are found; later we have mallard, teal and other shoal water ducks, geese, snipe, plover, and a few woodcock and turkeys; hares everywhere; foxes and squirrels numerous, and some deer. But at the head of the list I would place glorious little Bob White, the gentleman, the aristocrat of the feathered tribe, graceful in form, beautiful in plumage, proud and spirited, the dweller among the civilized. He is no tramp or trespasser; he dwells in the cultivated fields that are his by inheritance; he looks down with contempt upon all polygamous broods, and lives in the quiet enjoyment of social ties and in exclusive intercourse with his own family connection. He is worthy of our regard. Let us become better acquainted with him, study his respectable habits and extend him a helping hand. ESSEX.

Loretto, Va.

[OUR GERMAN CORRESPONDENCE.]

WOODCOCK SHOOTING IN GERMANY.

LEIPSIC, Feb. 17, 1879.

EDITOR FOREST AND STREAM:

In your number of Jan. 23 inst. I find a letter signed "Portsa" about woodcock. I do not wonder that the habits of this bird are not generally known among the sporting men of America, for you have in your vast country such an *embarras de richesse* in reference to game that such an insignificant bird rarely seems worth your attention. Among German "yaeger," however, the woodcock is a great favorite, and I could furnish you a whole collection, I might say, of love songs addressed to it. Referring to the lines following that letter in which you express the wish to hear something more about woodcock, I take the liberty of telling you all I know from long experience, without looking in one of the many monographs which have been published in Germany. I suppose that the difference between the habits of American and German woodcock will not be very great, though I am not certain, for when in America I saw only one such a bird (in Alabama) resembling, however, one of the European species of which I am going to speak.

We distinguish here snipe and woodcock, though both belong to the same family of *Schnepfen-scolopax*. The smallest kind is *Scolopax gallinula*, generally called by sportsmen dumb snipe, as it does not utter any cry on starting. It is not much larger than a good-sized sparrow, and its beak is scarcely two inches long. It is not to be found in the woods, but only on wet meadows or in swamps. Far more interesting is *Scolopax gallinago*, generally called, even in Germany, with its French name *bécassine*, or the great *bécassine*, and sometimes "*Himmelsziege*" (sky goat), for a reason I shall explain directly.

This snipe, which, with its wings extended, is nearly as large as a European quail, frequents the same localities as its smaller cousin, and chasing both is sometimes attended with danger. It happens not rarely that his pursuer finds himself submerged up to his neck in the swampy ground, and a pair of long water boots are required under any circumstances. When the sun is shining warmly you may approach these snipe easily with your dog, but whether you will hit it is another question. We consider it here the most difficult shot, and *bécassines* and rabbits absorb more gunpowder and shot than they are worth. Experience, however, will soon teach you when to fire.

On starting, the *bécassine* utters a note which I cannot describe. It makes about a dozen of lightning-like zig zags in the air, and only at a distance of about thirty paces it sails off straight. A quick shot may bring the bird down immediately after its rise, but the generally-followed rule is to let it finish its antics and to fire when it sails straight. Of course we do not use buckshot for *bécassines*, but a very small number.

There are generally four, five and more of these snipe found together, and you must—after having fired—follow them with your eyes, for after awhile they will return to a place not very far from that from which they started. When high in the air—but especially when swiftly coming down—they produce a sound resembling the bleating of a goat, and which in German is called "*meckern*." This sound is produced by the action of the air striking the stiff feathers of the wings. A "doublette" on *bécassines* is a nice thing, and who can perform it repeatedly is looked upon as a crack shot. I assure you whenever I came home with a dozen of *bécassines* dangling in the nooses of my hunting bag I was mightily proud.

Another kind of snipe, in size between *bécassine* and woodcock, is the "*Pfuhlschnepfe*" (pool-snipe). I do not remember just now its Latin name. In Germany it occurs but rarely, but you might meet it more frequently in the marshes of East Prussia. Its color is somewhat lighter than that of the *bécassine* and it is much fatter. Its flight is not much faster than that of the quail, and it is an easy shot. The snipe I saw in Alabama resembled this kind exactly. The woodcock (*Scolopax rusticola*) is the largest bird of this family. Many old German huntsmen distinguish still to-day two kinds of them—one smaller and one larger—which latter they call, on account of their big heads, *Eulenkopfe* (owl's head). This is, however, an error; the smaller birds are the males. Like many other migratory birds, they send their males in advance to reconnoitre the ground. The nightingales, for instance, do the same.

Woodcock are migratory birds, and that's the reason why they are nearly exempted from the protection of the game law. In Prussia they may be killed or caught during the whole year, with the exception of the time of May and June. I say it is a shame, but all our preaching does not avail anything, because the majority of German sportsmen will not give up the pleasure of the "*Schnepfenstrich*" in spring. I assure you there are sportsmen in Germany who with feverish attention count the days until "*Oculi*" for German sportsmen say: *Oculi da kommen sie* (there they are coming); *Laetare die wahre!* (L. the true time); *Judica auch noch da* (J. still there); *aber ach Palmarum terrarum!* (but alas! *Palmarum terrarum!*).

Sunday *Oculi* falls, according to the time of Easter, sooner or later; we may therefore say the woodcock is arriving in Germany about the middle of March and going more north in April. A good many, however, remain in Germany, and are nesting here. On the islands of the Baltic-fl Pruegen, where they assemble before crossing over to Sweden, they are killed by thousands, and therefore it is not to be wondered at if their number is diminishing every year. In Shakespeare's plays are snares for woodcock already mentioned; but it seems that they were scarcely known in Germany two hundred years ago. I at least read once a report from the middle of the Seventeenth Century, in which the appearance of these poisonous night birds was mentioned as a great event. Now they are known and appreciated only too well.

About 1839 I was living in Hanau, near the Rhine, and I remember that a party of five gentlemen bagged in one forenoon not less than sixty-two woodcock, and two days later some forty.

The woodcock frequents woods in which are meadows or swampy grounds, or where cattle are feeding, and true huntsmen go out searching for them with their dogs. To the neck of the latter we attach frequently a small bell, in order to know where he is in the brushwood. If we do not hear the sound of the bell we may be sure that he is pointing some woodcock. Many dogs do not like at first its smell, but after a short time they become very much interested, though they touch them always with a kind of disgust. You notice the same if they bring you a fox or raven. As it is rather difficult to get a good shot among the brushes, and where it is worth the while, battues are arranged, for we pay for woodcock one dollar a-piece, and even higher.

Starting before the dog, the flight of the woodcock is not very swift, and the shot is not difficult. If you miss it you may easily find it again, provided you have a good dog, for it does not go far. At a battue (*trieben*), however, and especially in windy weather, they sail as swift as a swallow, and you must be quick.

The most usual manner of shooting them is, however, on the "strich," a word which is not to be translated exactly, but its meaning is easily explained. The time of the arrival of the woodcock is at the same as their love season. During the day they are feeding, but as soon as the first star appears on the sky the females are roaming through the woods and the males are flying after them. The sportsmen who have selected a convenient place near some clearing or meadow are anxiously listening and all attention as soon as they hear approaching the welcome sound described in the above-mentioned letter and expressed by "tweet, tweet, tweet," or further down by "zig-zig-wauk." I do not know whether American woodcock speak a different language from ours, for I always understood them to say "bisswit, bisswit, crock, crock," which latter sound is not far different from "wauk, wauk." Sporting in the air—they do neither fly swift nor high—you may easily see them against the sky and shoot them. Doublettes are of no rare occurrence, for the male is mostly near the female, and very frequently playingly darting at her with his long beak.

During the three weeks of this "Schnepfenstrich" you may hear, throughout Germany, every evening, firing in the woods, and an immense quantity of woodcock are killed in this manner. Woodcock are not, strictly speaking, nocturnal birds, like the owl, for instance. I have seen them frequently feeding in the daytime, and that they are wide awake then you will hear from many German sportsmen.

Some forty or fifty years ago there were immense numbers of woodcock on the Greek Islands, and, if I remember right, also in Virginia, where they were easily caught or shot at night when started and bewildered by torch light. I repeat it is a shame that German game laws do not prohibit this shooting of woodcocks in the spring time, but all endeavors to bring about such a result have proved in vain; for the majority of German sportsmen say, "Pah! it is a migratory bird, and if we do not shoot it others will." Moreover, the arrival of the woodcock falls right in a time when the chase is closed for all other kind of game. In Prussia woodcocks have only two months' grace in the year—May and June—I suppose on account of the few which remain in Germany nesting there. They are called "Lagerschnepfen." On their return in autumn, woodcock are much plumper, but far less are killed then. The woodcock builds a rather indifferent nest on the ground underneath some shrub; lays in May four yellowish-spotted eggs, which are hatched after twenty days, and after three or four weeks the young ones are fledged.

There is still a dispute going on among sportsmen in reference to the manner in which the woodcock, in case of danger, carries its unfledged young ones. I saw once in a French sporting work an illustration representing a woodcock carrying its young one by means of its legs, and several German sportsmen support this version. I do not believe in it, and many authorities about such things are of my opinion. The legs of the woodcock are not made to hold anything, and it is far more likely that those saw right who assert that the old woodcock carries its young one under its neck, pressing it by means of its head and long beak against its breast.

I am sure there are plenty of woodcock everywhere in the United States, and genuine sportsmen would derive much pleasure from shooting them if they only would take the trouble to observe the time of their migration and the localities which they prefer. Good and well trained dogs are of course a *conditio sine qua non*, and from letters contained in your paper I draw the conclusion that the art of training dogs is not generally known yet in the United States. If I am mistaken I beg your pardon for troubling you with my opinion. For different purposes, of course, are required different kinds of dogs. Dogs trained for hunting the bear, or the deer, or the fox, or the raccoon would not do for grouse, partridges, quails or woodcock. The manner of training even pointers and setters depends on circumstances. To the breeding of this latter kind of dogs much attention and care is given in England, and I must say they are indeed excellent. The best dog I ever had or ever saw was an English setter, which I, however, trained myself. Its father and mother were bought in England and extremely highly paid for by a German sovereign, who was a great sportsman. However, he could not use the dogs in Germany, because they did not work as we require it from our dogs. My opinion is that the manner in which pointers and setters are trained in England will not do for America either, while a good German trained dog would satisfy all your wishes in every respect. I selected and trained all my dogs myself, and they did not only satisfy myself, but were always generally admired. Experience is the mother of knowledge, and if you send me a word of encouragement mine is at your disposition.

To conclude this long yarn I shall wind up with an advice how to cook woodcock. The most delicious of all our birds is the Haselhuhn, a bird about the size and shape of a German gray partridge, but darker in color, with a somewhat stronger beak and feathered legs, living in the woods and to be found especially in Bohemia; but many prefer the woodcock if properly prepared. Gastronomers of the olden times made much fuss about schnepfendreck (verbally translated woodcock's dirt), and to throw the intestines of a woodcock away would be considered by them as a crime. It is served extra on toast. I, for my part, do not like it, and advise to clean a woodcock just in the same manner as is done with a partridge. But while you may roast a partridge immediately after its being killed, never do the same with a woodcock; it must hang at least three or four days in its feathers. Do not cut off its head, for it is delicious. Before putting the woodcock in the frying-pan cover its breast with fine, sweet lard, and then roast it with butter in a covered pan. I can smell even in my room (doors left open) when the woodcock is done, and woe to the cook who dared leaving it half a minute longer over the fire. I am sorry I cannot lend you my nose, and you must try to find out the right smell by experience.

NOTES FROM THE FISH COMMISSION.

UNITED STATES COMMISSION, FISH AND FISHERIES,
WASHINGTON, D. C., May 26, 1879.

EDITOR FOREST AND STREAM:

I send you herewith some paragraphs which may be of interest to your readers. S. F. BAIRD.

NEW BEDFORD, Mass., May 20, 1879.

PROFESSOR S. F. BAIRD:

Sir—I have just been in the fish market and a crew were bringing in their fish from one of the "traps." A noticeable and peculiar feature of the fishery this year is the great numbers of young salmon caught especially at the Vineyard, although some few are caught daily at Scoticut Neck, mouth of our river. There are apparently two different ages of them, mostly about 3 pounds in weight (about as long as a large mackerel) and about one-half as many weighing from six to eight pounds; occasionally one larger. One last week weighed twenty-three pounds and one eighteen pounds. The fishermen think they are the young of those with which some of our rivers have been stocked, as nothing of the kind has occurred in past years at all like this. I am, yours respectfully

(Signed) JOHN H. THOMSON.

WESTPORT, Oregon, May 4, 1879.

U. S. FISH COMMISSION, WASHINGTON, D. C.:

Gentlemen—Some time about the middle of April last some of our fishermen from this place caught a salmon with the letter "W." branded on the left side of the fish about midway of the fish. A few nights afterward three more salmon were caught with exactly the same brand, and branded on the same part of the fish. The fish were caught in a gill net and weighed about twenty pounds. Each and all of them were same size by measurement, and appeared to be of the same hatching. The first fish was caught by a fisherman fishing for the cannery at this place. The fisherman's name is John Strom.

Now, we ask for information in regard to where those fish come from, and from what hatching establishment? As there are no hatching establishments on this coast that have fish branded with the letter "W," and none in this locality that have been running over one year, the supposition is that they are from the Atlantic coast; but how they got here is a mystery. Please answer and give us any information you can in regard to the matter, also whether there is any reward offered for such fish. I remain, your obedient servant,

(Signed) GEO. H. HEATHER,
Westport, Clatsop Co., Oregon.

P. S.—I forgot to mention that Westport is a fishing town on the Columbia River about 30 miles from its mouth, and the most of fish caught are salmon. G. H. H.

ROCKLAND POST OFFICE, R. I.,
PONAGANSET, May 19, 1879.

PROFESSOR BAIRD:

Dear Sir—I have just been to examine Palmer River, which rises in Massachusetts and enters our bay at Warren, R. I. It has always been one of the best shad streams that enters our bay, but it has been fished until there are hardly any left. Four years ago we restocked it with young shad you let us have at South Hadley; we also put them in three years ago, and this year they are taking large quantities. Already the number is above two thousand. They find quite a number of ripe shad, but they are entirely ignorant of the process of hatching. They say the run will continue until the 15th of June. Now, can you not send us a man that understands doing it? All he will need will be about 20 hatching-boxes and 6 cans to transport the fish. I think the place to hatch would be in the town of Rehoboth, about 6 miles from Providence. We can get the boats, seines, and what else is needed

right on the ground. If you can do anything for us please telegraph Mr. Alfred A. Reade, Jr., at Providence, R. I., and write me so that I can meet your man in Providence. Let him report at J. H. Eddy's, No. 587 exchange street.

After looking the place over (and as there are no works on the stream except a small cotton mill) we find the water free from all the refuse and poisonous matter usually thrown into our streams. We can take them from here to the Blackstone, Pawtuket and Pawcatuck Rivers.

Last week there were two salmon caught at Westerly in the traps; one weighed twelve and a half and the other twenty-five pounds.

On Saturday I visited Seconnet Point, where the Church Bros. and others fish for scup. They have taken one salmon weighing four and a half pounds, and but very few scup.

Our last Legislature passed a law that all the traps, pounds and nets, of all descriptions, should be taken up on Saturday morning at sunrise and remain up until Monday morning at sunrise, North of a line from Seconnet Point to south pier at Narrangansett Pier. The fishermen are observing the law. Hoping to hear from you in relation to hatching shad, I am, your humble servant,

(Signed) JOHN H. BARDEN, F C., R. I.

HOUSE OF REPRESENTATIVES,
WASHINGTON, D. C., May 23, 1879.

PROF. SPENCER F. BAIRD:

Dear Sir—thinking probably the inclosed extract, from one of our East Tennessee papers, might be of interest to you take the Liberty of sending it. Very truly,

(Signed) JAMES C. SAUNDERS.

"Some four years ago the United States Fish Commission planted 80,000 young shad in the Holston River above Knoxville. The theory was that these little fellows would follow the stream to salt water in the Gulf of Mexico and grow up to full-sized fish, when they would return to the clear waters of the Holston to deposit their eggs, and in this way our river would be supplied with shad. It seems that those engaged in this business were not mistaken. The regular salt-water shad are here, and have been caught from the Holston River this spring. The only trap we know of left in good order from the effects of the ice gorge of last winter, is the one belonging to Mr. Melindy, five miles west of Rogersville. Last week a number of fish were captured by him which were strangers to river men. Nothing of the kind had ever been seen before as coming from these waters. The fish were brought to town and disposed of. They are pronounced as undoubtedly salt-water shad. If this is so, the question is settled, and in a few years the Holston will be lined with millions of this excellent fish."

LITTLE EELS ONCE MORE—*Editor Forest and Stream:* Last year we had quite a discussion as to whether little eels went up stream or down in the spring. At that time I made up my mind that if ever the opportunity offered I would settle the matter, so far, at least, as my trout brook was concerned; and now I wish to say that the wriggling fry are at it again with a vengeance. This afternoon I took a rule, and by actual measurement found hundreds of eels two and three inches in length, clinging to the damp surface of a perpendicular plank facing, at the lower side of the outlet from my trout pond. Not an individual eel was to be seen above the outlet, while the pool, stones and timbers below were black with them. So eager were they in their effort to surmount the dam, that when I washed or scraped them off the plank, they at once returned, and in five minutes were climbing again. To morrow I mean to boil a few thousand of them and give my trout a feast. THOMAS CLAPHAM.

Troutbeck, May 19, 1879.

EELS FOR MICHIGAN.—*Troy, N. Y., June* 2.—A. J. Kellogg, Fish Commissioner of Michigan, will leave for Toledo with the first shipment of eels (for the State of Michigan) tomorrow. He will take 80,000. The weather has been so cold they were hard to procure. Mr. K. has O. M. Chase with him and is in hopes to catch 500,000 if not a round million. KEE TUSH.

Natural History.

POLYDACTYLE HORSES, RECENT AND EXTINCT.

BY PROFESSOR O. C. MARSH.

[From the "American Journal of Science and Arts," Vol. XVII., June, 1879.]

IT is said that the aborigines of this country, when they first saw the horses brought over by the Spaniards, named the new animal "the beast with one finger nail." Certainly, the single hoof on each foot is the most marked characteristic of the modern horse, and one on which some of his most valuable qualities depend. The nearest living allies of the horse are the ass and the zebra, and they possess the same pedal peculiarities.

In addition to each main digit of the ordinary horse, however, the anatomist finds concealed beneath the skin two slender metapodial "splint bones," which are evidently the remnants of two other toes, originally possessed by the ancestors of the horse. It is an interesting fact that these splint bones are sometimes quite fully developed, and may even support extra digits, which are much smaller and shorter than the main foot. As these small hoofletts are usually regarded as a serious detriment to the animal, they are generally removed from the colt soon after birth, but in such cases the enlarged splint bones not unfrequently indicate in the adult their former existence.

Numerous cases of extra digits in the horse have been recorded, and in nearly all of them a single lateral hoofiet was present on one of the fore legs. In most instances the occurrence was noted chiefly on account of its rarity, and no record was made of the exact position of the extra hoofs with reference to the main digit, nor of the significance of these useless appendages. Since the attention of the writer was called to the subject, a few years since, he has ascertained that these supernumerary digits are much more common in the horse than has been supposed, and in many cases they appear to indicate a reversion to an early ancestral type.

The figures given below represent, (1) the foot of the modern horse in its normal condition, with the splint bones rudimentary; (2) the foot abnormally developed, with one splint bone bearing a small hoofiet, and (3) the foot of an extinct three-toed ancestor of the horse. The feet are all from the left side, and the numbers attached indicate the different digits, counting from the inside. The first and fifth, corresponding to the thumb and little finger of the human hand, are wanting in these figures. A specimen similar to that represented in figure 2 is preserved in the Museum of Yale College.

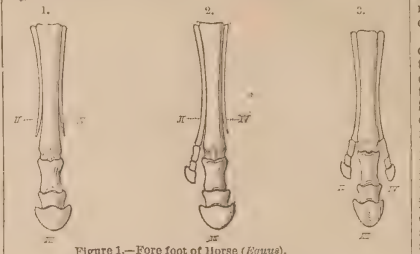

Figure 1.—Fore foot of Horse (*Equus*).
Figure 2.—Fore foot of Horse with extra digit.
Figure 3.—Fore foot of *Hipparion*.

The first recorded instances of extra digits in the horse, known to the writer, are two mentioned by George Simon Winter, in his famous book on horses, published near the beginning of the last century.* One of the horses referred to and figured in this work was "eight-toed," having a small extra digit on the inside of each foot (p. 134, Plate 21 F.). Winter states that this horse was exhibited in Germany in 1663, and a portrait of it preserved in Cologne. His account was derived from a person who had examined the animal. The other horse described by Winter (p. 136, Plate 24) had a small hoof on the inside of each fore foot, and this steed, Winter states, he had not only seen but ridden.

Geoffroy Saint-Hilaire has recorded the fact that he examined a fœtal horse which was polydactyle on the fore feet, the left foot bearing three nearly equal digits, and the right but two.† Owen has described the right fore foot of a horse with a double hoof, the extra digit being on the inner side, answering to the second digit.‡ Arloing has figured and described similar specimens.§ Leidy has described the right fore leg of a horse with a supernumary digit on the inner side; and Allen subsequently discussed the same specimen.§ A number of other instances have been recorded, showing that extra digits are by no means rare in the modern horse.

The most interesting case of this kind examined personally by the writer is the horse represented in figure 4. This animal was on exhibition in New Orleans, in the spring of 1878, and Dr. Stanford E. Chaillé of that city first called the attention of the writer to it, and likewise sent a photograph, from which the cut below was made.

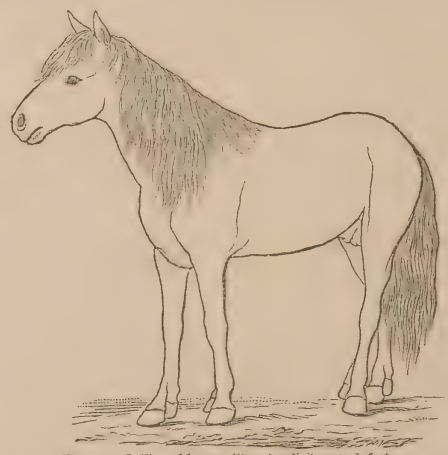

Figure 4.—Outline of horse with extra digit on each foot.

This same horse was subsequently brought to the North, and a few days since was on exhibition in New Haven, Conn., where the writer examined him with some care. The animal is of small size, about ten years old, and is said to have been foaled in Cuba. He is known among showmen as the "Eight-footed Cuban Horse." With the exception of the extra digits, he is well formed, and doubtless is capable of considerable speed, although some of the exploits claimed for him may fairly be questioned.

The four main hoofs are of ordinary form and size. The extra digits are on the inside, and correspond to the index finger of the human hand. They are less than half the size of the principal toes, and none of them reach the ground. An external examination indicates that the metapodial bone of each extra digit is entire, and at its lower end, at least, is not co-ossified with the main cannon bone.

There appear to be two phalanges above the coffin bone in each of these digits, which are thus rendered flexible, especially in a fore and aft direction. There was no indication of "interfering" shown on the inner digits themselves, although it is difficult to see how this could be entirely avoided during rapid motion. The splint bone on the outer side of each leg is apparently of the usual shape and size.

Among the instances of recent polydactyle horses, described to the writer by those who have seen them, are two of special interest. One of these was a colt with three toes on one fore foot, and two on the other. The animal recently died in Ohio. Another is a mare, raised in Indiana, and still living, which is said to have three toes on each fore foot, and a small extra digit on each hind foot. In regard to the latter animal, the writer hopes soon to have more definite information.

Besides the instances mentioned above of extra digits in place in the existing horse, there are many cases on record of true monstrosities, as, for example, additional feet or limbs attached to various portions of the body. Such deformities now admit of classification and explanation, but need not be considered in the present discussion.

In reviewing what is now known of extra digits in the feet of the modern horse, the best authenticated instances appear to fall naturally into two groups. The first of these includes digits which are simply cases of reduplication, quite similar to the extra finger occasionally seen in the human hand. Such deformities are apparently a vegetative repetition, the explanation of which has not yet been satisfactorily determined. The second class includes cases where a true digit is formed, the component bones of which are in their normal position, and in proper relation to the rest of the limb. Such instances appear to be clearly due to reversion to some ancestral type. Some digits, which appear at first sight to belong in the first category, may really illustrate the second, but the converse of this is much less likely to be true. The cases of apparent reversion are of especial interest, and it is important to place on record any information in regard to them, so that they may be compared with extinct allies of the horse.

The cases of extra digits in the horse, so far as at present known, show that these appendages make their appearance more frequently on the fore feet than on the hind feet. This is precisely what a study of the fossil forms of equine mammals would lead us to anticipate.

Another noticeable peculiarity of these extra digits is their more frequent occurrence on the inside of the main digit, while the outer splint remains rudimentary. This, it must be confessed, is directly opposed to the general law of reduction in the ungulate foot, which, briefly stated, is, that of the five original digits, the first or inner one first disappears; next the fifth or outer one, then the second, and last of all the fourth. The third always remains as in the horse. It would, therefore, be naturally expected that when only one additional digit was present it would be on the outside of the fore foot.

The tendency to interference would seem to be another reason against the retention of the inner digit. Possibly the additional protection which an inside hoofiet would receive might more than counterbalance this influence. Again, the above law is not known to apply to the perissodactyle foot, beyond the first and fifth digits, and if the second digit was originally of greater use than the fourth, and hence was longer retained, an ancestor of the horse may yet be found with the second and third toes alone developed.

In considering these double hoofs of the horse, and with them the well-known cleft in the coffin bone of recent and extinct equines, it is important to understand that in no case do they indicate any approach to the true artiodactyle type, as some authors have supposed. The difference between the perissodactyle or "odd-toed," and artiodactyle or "even-toed," structure is a profound one, extending to nearly every part of the skeleton, and marking two distinct groups of Ungulates. The number of toes has really nothing to do with the true distinction, and hence the terms in use are especially misleading. The real difference, so far as the feet are concerned, is that in the perissodactyle type the axis of the limb passes through the middle of the third digit (*Mesaxonia*), while in artiodactyles it is outside of this digit (*Paraxonia*), between it and the fourth.

If, now, we turn back to the early ancestor of the horse for an explanation of the supplementary digits which so often make their appearance, we shall not look in vain, especially in this country. America is the original home of the horse, and during the whole of Tertiary time this continent was occupied with equine mammals of many and various forms. Although all these became extinct before the discovery of this country, their abundant remains mark out the genealogy of the horse in an almost unbroken succession of forms.

If we examine the remains of the oldest representatives of the horse in this country, we shall find that these animals were all polydactyle, and of small size. As the line was continued toward the present era, there was a gradual increase in size, and a diminution in the number of toes, until the present type of horse was produced. In view of the facts mentioned in the preceding pages, it will be profitable to trace the main line of descent in this group, from its appearance to the present period, and note especially the changes in the number of digits. For this purpose the diagram given below will be instructive, as it records the principal stages in the series, both of the limbs and the teeth as well. This diagram was prepared by the writer for Professor Huxley, who used it first in

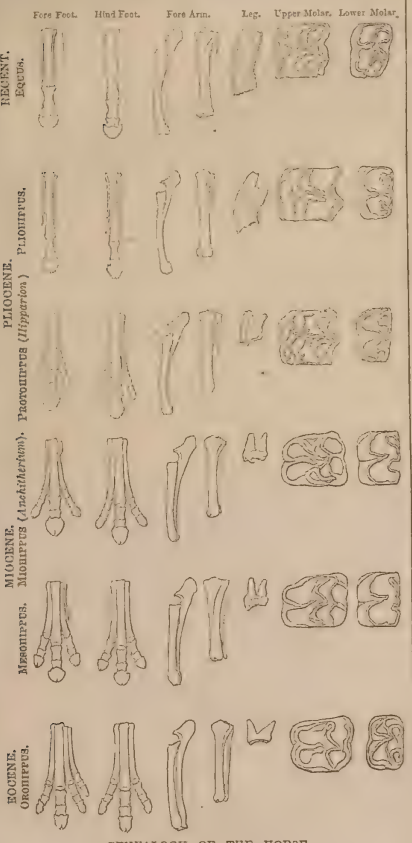
his New York lectures. The specimens figured are all in the Yale Museum.

The original ancestor of the horse, not as yet discovered, undoubtedly had five toes on each foot. The oldest member of the group now known is the *Eohippus*, which had four well-developed toes and the rudiment of another on each fore foot, and three toes behind. This animal was about as large as a fox, and its remains are from the Coryphodon beds, near the base of the Eocene. It is not represented, as it was found since the diagram was made. In the next higher division of the Eocene, another equine genus, *Orohippus*, makes its appearance. It resembled its predecessor in size, but had only four toes in front and three behind, as shown in the lowest series of the diagram. At the top of the Eocene, a third allied genus has been found (*Epihippus*), which closely resembled *Orohippus* in its digits, but differed in its teeth.

Near the base of the next formation, the Miocene, another equine mammal, *Mesohippus*, occurs. This animal was about as large as a sheep, and had three usable toes and the splint of another, on each fore foot, with but three toes behind, as shown in the diagram. At a somewhat higher horizon, a



GENEALOGY OF THE HORSE.

nearly allied genus, *Miohippus*, has been found, which has the splint bone of the outer or fifth digit reduced to a short remnant. In the Pliocene above, a three-toed horse (*Protohippus*), about as large as a donkey, was abundant, and still higher up a near ally of the modern horse, with only a single toe on each foot (*Pliohippus*), makes his appearance. A true *Equus*, as large as the existing horse, appears just above this horizon, and the series is complete.

YALE COLLEGE, *New Haven, May* 15, 1879.

THE BIRDS OF CENTRAL NEW YORK.—We have received through the kindness of the authors, Messrs. F. R. Rathbun, H. Gilbert Fowler, Frank S. Wright and Samuel F. Rathbun, their interesting Revised List of the Birds of Central New York. This list which is based on the observations of the four gentlemen above mentioned is a revision of the well-known Rathbun-Fowler List, which was originally published in August, 1877, in the Auburn *Daily Advertiser*. It has been revised and brought down to the date of publication, April 17, 1879, by Mr. Frank R. Rathbun. The list treats especially of the birds found in the Counties of Cayuga, Onondaga, Seneca, Wayne and Yates, and the observations on which it is based extend over a period of ten years. A peculiar and very valuable feature of this paper is the fact that it is based wholly on original observation, and contains no doubtful or conjectural statements. The authors give facts as they have found them and usually refrain from commenting on them.

No less than 236 species of birds are given in this list, and we regret that we lack space to notice several interesting occurrences on which we should like to comment.

An excellent index of the common names of birds is appended to the list, and an examination of it shows some interesting local names. On the other hand we notice among the Latin names a few typographical errors. Altogether the list is a very interesting and valuable paper, and it will no doubt be for some time the leading authority on the birds of Central New York.

Sea and River Fishing.

FISH IN SEASON IN JUNE.

FRESH WATER.	SALT WATER.
Trout, *Salmo fontinalis.*	Sea Bass, *Centropristis atrarius.*
Salmon, *Salmo Salar.*	Sheepshead, *Archosargus probatocephalus.*
Salmon Trout, *Salmo confluis.*	
Land-locked Salmon, *Salmo gloveri.*	Striped Bass, *Roccus linneotus.*
Muskalonge, *Esox nobilior.*	White perch, *Morone americana.*
Pike or Pickerel, *Esox lucius.*	Weakfish, *Cynoscion regalis.*
Yellow Perch, *Perca flavescene,*	Bluefish, *Pomatomus saltatrix*
	Spanish Mackerel, *Cybium maculatum.*
	Cero, *Cybium regale.*
	Bonito, *Sarda pelamys.*
	Kingfish, *Menticirrus nebulosus.*

FLIES IN SEASON IN JUNE.

Hawthorn, No. 11.—Body, shining black; feet and head, black; wings bright hyaline.

Shoemaker, No. 10.—Body, ringed alternately with light and gray salmon; feet, dark ginger; wings, the mottled gray of the mallard and the mottled of the woodcock mixed; setæ, mottled woodcock.

Black June, No. 10.—Body, peacokk's herl; feet and wings black.

Dark Stone, Nos. 8 *and* 9.—Body, dark brown; feet, yellow brown; wings, luteus.

Governor No. 10.—Body, peacock's herl; feet, dark red hackle; wings, made of the darkest part of the bittern's wing or brown hen.

Green Drake, No. 7.—Body, white posterior, half ribbed with black, green yellow, mottled with brown; setæ, dark brown.

Brown Drake, No. 7.—Body, feet and wings, a golden yellow brown; setæ, dark brown.

Raven, No. 11.—Body, feet and wing, black.

Wren Fly, No. 9.—Body, clay yellow; feet, made from the scapulary feathers of the English wren or quail; wings and setæ, mottled widgeon.

—Dealers in Fishing Tackle and makers of artificial flies will find a large assortment of finest silk-worm gut on sale by F. Latassa, 35 Broadway.

—Capt. George Gelston, the "bald Eagle of Bay Ridge," caught the first weakfish of the season with hook and line last week off Fort Hamilton, at the Narrows. This is the locality where the big twelve-pound "tide-runners" will show themselves by and bye.

THE ADIRONDACKS.—Wallace's Adirondack Guide, with illustrations and maps, contains all routes, resorts, hotels, guides, distances, kinds of game, and all information. It is a most seasonable and valuable book. We can furnish it; price $1.75.

BEAUTIFUL SALMON REELS.—The editor of this paper has taken to Canada two magnificent salmon reels made by Messrs. Abbey & Imbrie, of 48 Maiden Lane. One is of oroide and the other of combined rubber and German silver. The two together we believe are valued at $65.

LAKE GENEVA CISCO.—This is the unique name of the summer season paper to be issued during the season by the publishers of the Geneva Lake *Herald*. These curious fish begin to run June 10 and run about a week when great numbers are caught. At the time of their run the cisco flies are very abundant, so much so as to be a nuisance, but are seen at no other time of the year. The fish weighs about 6ozs. and is very fine for the table.

TENTS.—There are scores of people who use tents for scores of different purposes; the circus, the military encampment, the camp meeting, archery gatherings, tea on the lawn, hunting and fishing excursions; into all these the tent enters as a necessity. We invite the attention of these varied classes of tenters to the advertisement elsewhere of Hemmenway's tents and awnings. Mr. Hemmenway can fill the needs of everyone in this line.

NEW PATTERNS.—New patterns in flies are being invented from time to time, just as new discoveries in entomology are coming to light. A new variety of artificial fly which has just been shown us is called the Bissett fly. It is a pepper and salt hackle with peacock green body and ought to tempt trout when there is a corner in black gnats. It is said to be a deadly line for trout. Another specimen before us is a sort of long-winged-long-bodied bumble bee, which is guaranteed to kill big trout and black bass at 75 yards. Black bass esteem the humble bumble bee a great delicacy. It is one of the sweets of life which is not impaired by its sting. Collectors and specimen hunters can see them at Conroy, Bissett & Malleson's, 65 Fulton st.

CANADA—*Montreal, May* 26.—I have just returned from a two weeks' trip through the eastern townships and northern Vermont, and can report several baskets of trout taken. On the 14th and 15th insts. the weather was quite hot, but we had the luxury of cooling off in various deep snow banks along the roadside. The land-locked salmon that were planted three years ago in Fairfield Pond (Silver Lake) in Fairfield, Vermont, now tip the scale at nearly five pounds each. If the State fishery officers would exterminate "Old Hell" and one or two other poachers who reside near that lake, and who kill the trout during the spawning season, this would be one of the best trout lakes in that State. STANSTEAD.

NOVA SCOTIA—*Halifax, May* 25.—Fishing in Chester District very poor this year. Just had a fair run in Pt. Medway. Weather dry and unusually cold just now. Some fine baskets of lake trout taken lately in this vicinity up to 4lbs. weight. Am off to Lake Ainsley, C. B.; later to Margari. Salmon fishing very poor this season; so far many rivers used up. DOCTOR.

MAINE—*Foxcroft, June* 2.—The general ticket agents of New England, with their wives, went to Moosehead Lake on Saturday. The party numbered about forty. They will return to-day. Mr. C. E. Wyman, of this place, came from the lake with 300 pounds of trout. He reports the fish just beginning to rise for flies. H.

NEW HAMPSHIRE—*Nashua, May* 30.—Trout fishing is at its height. Fine strings are brought in by the disciples of Izaak; among the best was a basket of twenty which weighed seventeen pounds, caught by Mears, and a string of beauties by Wilkins and Parker. WEBB.

NEW YORK.—There is good blue fishing now at Shinnecock Bay, Long Island.

NEW JERSEY—*Riverside House, Forked River, May* 27.—There are plenty of blue fish in the bay now, and large catches are the order of the day. Our Yachts, the *Sarah*, Capt. Mathews, had sixty-six, and the *Vapor*, Capt. Parker, forty-four bluefish. These were taken in a few hours' fishing, within a short sail of this place. There are some striped bass being caught in the nets, but I hear of none taken with hook and line. We look for fine blue fishing from this time forward. C. A. S.

PENNSYLVANIA.—Black bass are now in season in Pennsylvania according to the law, although we think it still too early for them. Philadelphians go to the Schuylkill and Delaware Rivers. In the former stream choice spots are found at the first dam above Manayunk, at the mouth of Mill Creek, at Perkiomen dam, and at Rogers' Ford. Titusville, Lambertville and Tumble are well known places on the Delaware.

Watsontown, May 30.—Trout fishing, this spring owing to the low water, is not very good in this section in Sullivan County. The streams are lower than they have ever been known to be at this season of the year. J. R. H.

KENTUCKY—*Mill Springs, May* 24.—Good fishing in Big South Fork of Cumberland and tributaries has been the rule since the water reached a proper stage. Frequent and heavy early spring rains sustained a degree of high water which precluded sport, but the comparatively small rain-fall since the middle of April has put the streams in fine condition. The writer has spent two afternoons on the river and made a fine catch of bass and salmon each time, although nothing of unusual weight was taken. Some very large salmon and blue cats have been caught by residents on bank hooks, or set-outs, as they are denominated. A friend in central Kentucky wrote me recently that California salmon planted in Dix River three years ago and unheard of since have reappeared in great numbers below the first high mill dam on that stream and prove rapid and ravenous biters. Some two or three parties were supplied with minnows; chanced to meet them upon their arrival and captured them by the scores till bait gave out. They charitably (?) carried off nearly three hundred—all they caught—ranging from ten to twelve inches in length. A subscriber to FOREST AND STREAM, and a thorough sportsman, employs a man by the day to ply a dip net below the dam and throw the little fellows into the pond above, which enables them to reach their native grounds. Some party claiming acquaintance pronounced them not California salmon, but failed to classify them. The California salmon are the only contribution to that stream, except a can of salmon-trout planted in a tributary a year ago. An easy solution could be had by sending a specimen to the President of State Fish Commission. KENTUCKIAN.

SHOOTING AND FISHING IN NORTH GEORGIA—*Crawfordsville, Indiana, May* 28.—In the Answers to Correspondents, of last issue, a mistake of some importance was made in stating that no good fishing was to be found in North Georgia. I have fished in the Oothcaloga and Saliquoy, the Oostanaula and the Coosawattee Rivers several seasons, finding plenty of bass and a kind of large blue perch locally called bream. I recall now with peculiar pleasure a basket of nine bass ranging from one to two and a half pounds, taken one afternoon from the first named stream just below the bridge at the old Longstreet mill west of Calhoun. At the dam-falls of this same mill a friend and myself took twenty or thirty bream in an hour or two of exciting angling. These bream (perch) are quite game. They bite savagely to red worms, wasp larvæ and bits of shiner tail. Their weight may average near half a pound. I am inclined to think you are mistaken in locating trout brooks in the mountains of North Georgia, and I know that while quail, locally called partridges, abound, there are very few ruffed grouse anywhere in the Cherokee region. A considerable number of woodcock drop down in the early spring and late autumn for a few days sojourn and a few breed in the woods of the valleys. In the "bottoms" of the Salliquoy and on the mill ponds of the smaller streams I have found some very good wood-duck and teal shooting. The woods are full of hare and squirrels. Occasionally I have found a deer and not unless often a flock of turkeys MAURICE THOMPSON.

MINNESOTA.—It is early for Minnesota tourists, but we notice that the Chequamegon at Ashand is already opened, and a long list of names on its registers. They evidently intend to make a long season of it this year.

Ashland—May 27.—Brook trout fishing is now prime, and the few parties that have already come to test it have returned from the fishing grounds with well-filled creels. A party from Oshkosh headed by postmaster Harshaw were here last week. Among their catch were several that would weigh from two pounds upward. Reports from White River received to-day state that the stream is literally alive with trout. Never more plenty. The streams all seem to contain their usual number. Black bass fishing is excellent at Lake Harriet, English Lake and at other points. Maskalonge at Drydens and Butternut Lake are quite plenty. The run of whitefish and lake trout this spring is up to the average, hence they are plenty. You can tell your sportsmen friends that everything is in order for their coming and that we want to see them. SAM. S. FIFIELD.

BUNKER FISHING.—*Shelter Island, May* 23.—The bunker fishing on the East Coast has never been more successful than at this season. The large fleet of steamers and sailing craft are taking more fish than the factories can attend to. On the 7th inst there were thirty-five fishing steamers on the grounds at one time, and a large number of sailing craft. Many of these steamers belong on Long Island, but numbers of them come from Connecticut, Maine and Massachusetts. The number of thousands taken by each vessel is estimated by the number of baskets filled, each basket averaging about 100 fish. We have received reports from Capt. Nankins and Capt Cartwright's factories on this island, of one week's fishing. The former employs three steamers, and the latter (the Corwin factory) has one new steamer and two sailing craft. The former factory in one week took 791,000 fish and the 505,000. These fish will yield about 3 gallons of oil to the thousand, worth about 36 cents per gallon. The scraps, after the oil is pressed out, will bring about $12 to the ton; and the manure is in good demand, as Peruvian Guano is held at about $60 per ton. The largest catch so far made by one vessel at one set was made on the 7th by the steamer *Gypsey Girl*, 325,000 in number. Up to the 7th the Falcon Oil Works at Napeaque had received 900,000 fish. These fish are for the most part caught outside of Montauk and off the southside of Long Island, though vast numbers are taken in Gardiner and Peconic Bays. L. McL.

FLY FISHING IN YE OLDEN TIME.—Fly-fishing was evidently known in very early times. Martial asks:—

Who hath not seen the scarus rise,
Decoyed and caught by fraudful flies.

And Ælian gives most interesting evidence as to the antiquity of fly-fishing. He says:—"The Macedonians who live on the banks of the river Astreus are in the habit of catching a particular fish in that river by means of a fly called hippurus. . . . These flies are the prey of certain speckled fish, which no sooner see them settling in the water than they glide gently beneath, and before the hippurus is aware, snap at and carry him suddenly under the stream, as an eagle will seize and bear aloft a goose from a farm-yard, or a wolf take a sheep from the fold." It appears that the fly was, however, very delicate, and, like our May fly, difficult to fish with in *propria persona*. Therefore, says Ælian, "Adepts in the sport have contrived a taking device to circumvent them," and then he goes on to describe the mode of the artificial fly, which consisted chiefly of purple wool and wings of a waxy color.

Clearly, therefore, these ancient anglers were no idiots, and in some sort knew what fly-fishing for trout was, for who can doubt that the "speckled fish" belonged to the *Salmonidæ?* Did they not live in a river? Were they not speckled and voracious? and did they not take the fly?

The inference is, however, that these piscatorial gentry—the Macedonians—were far behind our times in the pursuance of the gentle craft. In Homer's time anglers most decidely were, at any rate, for we read—

Of beetling rocks that overhang the flood,
Where silent anglers cast insidious food,
With fraudful care await the finny prize,
And sudden lift it quivering to the skies.

The last line describes a method of landing fish deliciously funny, and I imagine that not a few have, in their "salad days," deemed the throwing of the fish over one's head the proper method of securing the unfortunate quarry.—*London Fishing Gazette.*

MICHIGAN FISHING NOTES.

PETOSKEY, Mich., May 23, 1879.

EDITOR FOREST AND STREAM:

The trout season in northern Michigan has fairly opened, and the little beauties are biting more freely than ever before. Bear River, which empties into Little Traverse Bay at this place, has been logged and fished so much for the past five years, and so few trout have been taken in the last two seasons, that it has been looked upon as a "played out" stream; but since the opening of this season there have been many good catches, and the numerous anglers now quartered here approach its shaded banks with confidence. I saw this evening a very handsome string, weighing 10¼ lbs., brought in by Mr. Persons, proprietor of the Occidental Hotel, and a gentleman from Cadillac. They were gone but three hours from the hotel, and fished from a boat which they poled up stream. There are quite a number of gentlemen trying their luck at different points along the Grand Rapids and Indiana road. I heard a day or two since from Mr. S. S. Cobb and Mr. Woodbury, of Kalamazoo, who are spending a few days on the Boardman near Kalkaska, and on the South Boardman, which crosses the railroad at a station named for the stream. They were having remarkable success, and report the fish more plenty and biting more readily than on any of their former visits, which they have made every year since the streams were accessible.

A gentleman who got off the train at South Boardman yesterday with rod and creel, told me of his catch on Monday evening and Tuesday morning last. He scored 138, and boarded the train at 8:15 A. M.

Your friend, A. B. Turner, of Grand Rapids, was here last Sunday on his way to Webster, "up the Jordan." Turner, you know, is "very fly" at this business, but when he's through there will be plenty and to spare.

I have cast a line but once this year. In company with a gentleman from Grand Rapids, I tried Bictner's Pond, near Traverse City, two weeks ago to-day. The day was cold and bright, and the fish very shy, but we managed to bring in eighteen of very fair size, enough for a supper for a party of half a dozen.

The bass season is not yet open, but the pickerel, perch and rock bass are being taken on Bear, Crooked and Burt lakes in large numbers. The Indians are busy with their spears, taking suckers from the streams by the "cart load," and I am told that the red men are not particular as to the kind of game they bag. A party of them came in from Bear River a few days ago with three grain sacks filled with nice, large black bass—about 400 lbs. A white man would be arrested and punished for such vandalism as this, but the white man, it appears, has no rights here which the noble red man is bound to respect.

Capt. Dave Smith, of Indian River (foot of Burt Lake), now in command of the steamer *Valley Queen*, just arrived by "inland route" and stage. He says six nice bass were caught at his place last evening. He is putting up a good-sized house near his old one, and will soon be prepared to accommodate all who come, with good, comfortable quarters, show them just where to drop their hooks, and send them home happy.

The track is now being laid from Petoskey to Crooked Lake, and street cars by steam will be running to connect with the boats for Cheboygan and Mackinaw and intermediate fishing-grounds within the next three weeks. J. M. M.

Game Bag and Gun.

JUNE IS A CLOSE MONTH FOR GAME.

—Mr Ira A. Paine, now at the Coliseum, Detroit, Mich., has joined Tony Pastor's troupe, going to the Pacific Coast. Mr Paine appears in his "original" shooting act and is meeting with much favor.

—Mr. Robt. O. Fulton, proprietor of the International Hotel at Niagara Falls, is one of those sportsmen who believe that societies organized for the protection of game should make that their principal end. In the course of a friendly call at our office the other day, he took occasion to endorse what we have said editorially as to the manifest inconsistency of such associations postponing their conventions because pigeons could not be obtained for the shooting tournaments. Moreover, in view of the increasing skill in the use of the shotgun, and the scarcity of the birds at most all times, he recommends the use of the rifle at the traps; besides, it would be more humane, as there could be fewer crippled birds.

THE DUPONT'S POWDERS.—The Dupont powder is manufactured at Wilmington, Del., The mills were established there in 1801, since which time, increased effectiveness of the powder has been the constant aim of the manufacturers. The various brands are used with much satisfaction by sportsmen for glass ball and field shooting and rifle work. It was the Dupont's powder that sped the bullets into the bull's-eyes from the rifles of the American Team in the international contest. The manufactures send circulars descriptive of the various brands upon application to the firm of E. J. Dupont de Nemours & Co., Wilmington, Delaware.

BOGARDUS' GLASS BALL DECISION.—Capt. Bogardus has just received from the Patent Office at Washington the decision in his favor of the long-pending suit, Newman vs. Butterworth, vs. Bogardus. This gives to Capt. Bogardus the sole right to manufacture rough glass balls for targets, and he proposes to immediately prosecute all infringments upon this patent. The Captain has also patented a pyrotechnic device which promises to revolutionize Fourth of July.

SOMETHING NEW FOR THE CAMP.—The proper thing to live upon in the woods is, of course, game and fish; but it is not always that the locusts and wild honey are abundant enough to satisfy the voracious appetite aroused by the fresh air and the fatigue of roughing it. Sportsmen, who have pined under incipient starvation in the camp, profit by their experience and fit out before leaving civilization behind them. Almost every necessary article is put up in compact form nowadays—canned vegetables, desiccated meats, coffee, tea, condensed milk, and other articles of consumption are put into such shape that they may be used with as little trouble in the wilds of Maine as in a metropolitan kitchen. We have just examined the canned meats of the Boston Beef Packing Co., of 187 Congress street, Boston, and No. 15 Front street, New York, and we find them adapted to supply the wants of campers-out. These meats are not corned, but are fresh, cooked, free from bone and gristle, and concentrated by the removal of more water than is removed by ordinary cooking.

NEW HAMPSHIRE—*Nashua, May* 30.—Our crack shots had a half day's sport Decoration Day shooting glass balls, distance eighteen yards, number of balls eighteen. H. B. Payne took the persimmons by breaking fifteen, Lovejoy and Blodget getting fourteen each, Burnham thirteen, Whitmarsh nine. WEBB.

NEW YORK—*Good Ground, L. I., May* 30.—One of the guests at Lane's shot a Wilson's plover here. Lane says it is a great rarity. It was in very poor condition and had evidently come a great distance.

NOTELETS FROM THE CHESAPEAKE REGION—*Washington, D. C., May* 17.—The spring has been somewhat late, but we are now getting summer as rapidly as the most ardent desire. While there is something doing, of course, in the way of bay birds, fowling pieces for the most part are now shelved for the season. While passing through Baltimore last week I called to procure some out-of-the-way technical information of Mr. Sneider, of Clark & Sneider, and was gratified at a pleasant and cordial reception. Their gun was inspected in the various stages of "rawness," and it is gratifying to note that their faithful construction of it has produced the happiest results among those who love an arm of the very first grade. Fishing is now on the carpet, and McComas, Melchior and others in that town, as well as our various stores here, are selling quantities of tackle. Much "gudgeon" fishing is done by ladies and amateurs. R. E. DUCAIGNE.

KENTUCKY—*Mill Springs, May* 24.—The protracted cold and snow of last winter but hardened Robert White and he whistles on meadow and grain-field fences in greater numbers than ever before. A prosperous nesting season and escape from the dangers attending quail infancy will insure the largest crop of which sporting statistics make record. Squirrels, partridges, and turkeys are scared, but hares are thick as fleas on a fox-hound. Their abundance is attributable to the almost complete extermination of foxes by hunters and trappers. KENTUCKIAN.

A FIVE DAYS CAMP—*Mt. Airy, N. C., May* 26.—A party out for sport, about twenty miles from here the other day, returned with one turkey, ninety six trout, forty seven squirrels, a few partridges, rabbits, etc., to say nothing of rattle snakes, which are very plentiful in these mountains. Trout fishing here is very laborous. The streams are very swift with fall and cataracts from twenty to three hundred feet. Trout are plenty and of good size, squirrels and partridges are by the thousand, with some turkeys, deer and a few wild hogs and sheep. Two of our party during the trip killed two squirrels at one shot, not seeing but one at the time of shooting. T. M. B.

THE AUXILIARY RIFLE.—*Whistler, Ala., May* 26.—*Editor Forest and Stream:* We the undersigned who have used the Shelton's auxiliary rifle barrel in combination with our breech loading shot-gun take pleasure in announcing to the sportsmen and public generally that we fully agree and happily testify as to the merits of the arm. Knowing from personal use its superiority we heartily recommend the Shelton Auxiliary Rifle Barrel to all lovers of the shot-gun. It certainly is all that the manufacturers claim for it.

JOLLY & PETERSON.

LOADING SHOTGUNS.—*Editor Forest and Stream:* The amount of shot for a 10 and 12-gauge gun seems generally settled on as $1\frac{1}{4}$ oz and $1\frac{1}{8}$ oz Taking the middle sizes as a basis, I increase the amount for the larger and decrease the amount in the smaller sizes. In a 10 gauge Fox gun, $9\frac{1}{2}$lbs. weight, I load as follows, two wads over powder: Shot No. 1 and 2, $1\frac{5}{8}$ oz; No. 3 and 4, $1\frac{1}{2}$ oz; No. 5 and 6, $1\frac{1}{4}$ oz.; No. 7 and 8, $1\frac{1}{8}$oz.; No. 9 and 10, 1 oz. (using $\frac{1}{8}$ oz. less in a 12-gauge gun), putting behind it powder enough to cause a smart recoil. Of course, the amount that can be used will be found only by actual trial, but it will likely range in the 10-gauge from $3\frac{1}{2}$ to $4\frac{1}{2}$ drams. My reasons for this method must be plain to those who have done much shooting—to get penetration in small and pattern in large sized shot—and I have not been able to attain it in any other way. Let one who always loads 4 drams powder and $1\frac{1}{4}$ oz. shot in a 10-gauge gun try this plan and compare it with previous targets, and on game he will find a great improvement in the killing effect of his arm. P.

Galveston, Tex., May 23, 1879.

THREE WEEKS WITH THE BEARS.

MR. EDITOR: I had put in my time from May till August, 1878, fishing in York County, New Brunswick. Base of operations, Canterbury Station, on the line of N. B. & C. R. R., finding a pleasant home with the family of C. H. Fowler, the courteous station agent. As this sketch is intended primarily for *Ursus americanus*, I will only say *en passant* that I had my fill of sport with trout and salmon in waters near by, having, a large share of the time, the companionship of those accomplished sportsmen, J. Stewart, Esq., St. Stephen; Supt. N. B. & C. R. R.; Dr. F. F. Innis, of Houlton, Me.; N. S. Dicky and W. W. Curtis, of Boston, with John Nicholson, of Canturbury, for guide, and was desirous of rounding out the season on the bear grounds. The country between Canterbury and McAdam Junction—twenty-two miles—is a dreary, monotonous wilderness, a continued succession of rocks, swamps and bogs, wholly uninhabited by people, except the few "section hands," and in the early summer the gangs of hands at the two saw-mills at Deer Lake and Shogomal.

Most of the region is good bear ground, particularly so near Sugar Brook section. Here, for miles along the track, blueberries grow in profusion, which in the season attract the bears. Sugar Brook is a water station, and here in a snug little cottage, embowered in a flower and vegetable garden—an oases—dwells section-boss Wm. Glen and family, with whom I tarried a few weeks; and verily my lines were cast in a pleasant place. After three months camping and roughing it in the woods, though fully enjoyed, it was nevertheless pleasant for a change to find one's self beneath a shingled roof, partaking of open-hearted English hospitality. With the sons, George and Bob—two rugged, honest lads—for guides, a share of the first week was spent in seeking fresh trails and camping-places of the bears, who were now working toward the blueberry grounds. Plenty of their sign and works were found, and during the succeeding week I had set a few steel traps and dead-falls, and soon the fun began. Up the line to Shogomal, eight miles, is an old logging trail, Following it three miles north, it strikes across a bear path, and in the vicinity of a yarding or camping-place, and where last season I caught several bears. Here I planted, directly in the path, two steel traps, putting up a card in a cleft stick, on which was written this legend: "Beware of trap!" This in case a lumber hunter, or others, should chance that way. To visit these traps, George and Bob would sometimes run me up to Shogomal after the up "regular;" at others, took the "regular," when the boys would come up to fetch me after their day's work. The fun soon began; it was the second visit, the boys being with me. On striking the bear-path, it was plain to see one had gone along dragging the sapling log. Now the boys were excited. All were feeling good, and smiled. Then we took up the trail. Hither and yon, up hill and down it led us; now and again was a space within the radius of the chain, where the clog had fouled, denuded of vegetation, the ground dug up, brush and sapling reduced to slivers. Again, bruin had essayed to free himself by climbing trees, as the appearance of the same indicated, the bark being lacerated and torn off high up.

In all the tortuous windings the quarry had traveled half a mile, yet was less than a hundred yards from the starting-place when found—foul in the bushy top of a fallen spruce tree. It required three shots to dispatch her; the first plumb in centre of breast, passing out behind the ribs, tumbling her over, with the blood spurting freely. On gaining the body of the tree, I placed the next behind the ear. Down she went again, but not for long; and when on her perch again I placed another a little nearer the brain, she gave in shortly.

It was near sunset, so we hastened to pelt her. She proved to be then giving suck to cubs, and as there was still another trap in the path near this one, I told the boys it was likely there was a cub in it. Such proved to be the case. I disdained to shoot him, but grasped him by the ears and scalp, with a foot resting heavily on his forepaw, cut his jugular; but I soon repented of the method, for the little fellow sent forth the most heart-rending moans and cries, which were almost human. When the last trap was reset it was nearly dark. George shouldered the cub, Bob the old one's pelt, while I fetched up the rear with ax, gun, etc., and when toward midnight we reached home, a substantial supper awaited us. The two succeeding days were spent near home, visiting other and nearer traps; taking a few trout from the Cranberry, which is close by, and feasting on cub and the delicious blueberries. The next trip but one to Shogomal yielded another large, fat bear. He got foul directly after getting in, and when free again, at once, it appeared, dug down in the wet, clayey earth, placed his foot within the trap therein and heaped up around it a large mound completely enclosing himself. This is a habit of bears, as I have long observed; doubtless done with a view of relieving pain. He died hard. The first shot, directly between and a little above the eyes, went through and downward out at the neck, severing the jugular; another behind the ear failed, then I broke in his skull with my ax. This laid him out for a time, but before I got my knives sharpened he rose up and went for me the length of his tether, grasping in his jaws the but of my rifle in his rage. With the ax I finally finished him, and right here I would remark, that the popular belief that the wild bear is a natural boxer, that he will skillfully parry either round-blows, upper-cuts, choppies or blows straight from the shoulder, has no foundation in fact. In the next two weeks I had three more bears in other traps, all dead when found; one in a steel trap, the others in deadfalls. I got still another, a cub, and that brings me to the wind up. My friend, Stewart, had made several "breaks" from his multitudinous cares and labors to visit me, hoping to be in at the death if possible; but was till now unsuccessful; either just after or previous to coming I tumbled to the game. I was to leave on Monday, the 26th, as he knew, and he came up on the regular, on the 24th. I was out taking up traps till night, leaving out one near by where a cub, as I knew, was prowling, but had not spoken of. The next day opened up rainy, but I had promised on this, the last day, to show the boys how to set steel traps for foxes, so all hands got on the hand car and went up the line. It was noon when we returned, and one of Mrs. Glen's nice dinners was waiting us; after which, the rain still pouring, and old rheumatic pains warning me to tempt fate no more, I allowed the boys, accompanied by Stewart, to go down the line without me, the former to take up the trap, S. to bag a few ducks on the Cranberry. In due time the martial figure of the Supt. appeared; giving the salute, he reported that one of the enemy was found within the lines trying to escape with stolen property,

and recommended he be tried, and if guilty sentenced and executed forthwith; to which I assented with this change, that he be executed and *tried* afterward. Thinking to prevent a repetition of the previous scene, I gave the cub a smart blow on the snout—the most vulnerable spot—but as the steel entered his flesh he cried and moaned like unto the other; henceforth, cubs at my hands will be treated like bears of larger growth. Part of the cub graced the table for the last breakfast, part went down the line with the Supt., and a hindquarter furnished a *piece de resistance* for a spread to my friends when I returned to the "Hub." CORP. LOT WARFIELD.

Weston, Vt., Jan. 12, 1879.

—The Duke of Medina-Celi, the premier noble and grandee of Spain, while shooting over his estates near Avila the other day, stumbled over his gun, received the contents of both barrels in his body and was mortally wounded. The Dukes of Medina-Celi represent the ancient race of La Cerda and the royal line of Sancho the Brave. They were always asked to waive their title to the crown before every new coronation. One of them perished in the great Armada.

—See Bogardus' advertisement.

PIGEON MATCHES.

MAINE—*Bath, May 29.*—Sagadahac County Association for the Protection of Game and Fish; first prize shoot for the society's badge:

Mr Clark	01 00 00 11 01 10 00 w
Mr Williams	11 00 00 00 11 00 00 w

THE MONMOUTH CHAMPIONSHIP.—The shooting tournament of the Monmouth County (N. J.) clubs at Freehold, for the purpose of raising funds for a soldier's monument, was very successful. Teams of five from each township, each man to shoot at twenty glass balls; team making highest score gaining championship of the county, and honor of presenting the gate money to the Battle Monument Fund; member of each team making the highest score to contest for the ownership of a magnificent gold badge. The Long Branch team won, making a score of 95 out of the 100; Upper Freehold, 88; Shrewsbury, 87; Raritan, 86; Freehold, 85; Marlborough, 74; Atlantic, 73; Howell, 73; Middletown, 70; Neptune, 65. The marksmen's badge was won by H. Marks from Howell, the former breaking 15 straight balls. A free-for-all match, in which there were sixty entries, was next shot, the prize being a handsome silver cup, which was won by Mr. F. Van Dyke, of Long Branch.

PENNSYLVANIA—*Mechanicsburg, May 29.*—Glass ball match at Stone House, seven miles west of Carlisle, Pa., on May 23th; first match, 25 yards rise, Bogardus trap and rules:

Rupp	0 1 1 0 1 1 1 1 0 1—7
Keller	1 1 1 0 1 1 1 0 0 0—6
McKeeghan	1 0 1 1 0 0 1 1 1 0—6
"Miller"	0 0 0 0 0 0 1 0 1 1—3

Second match, 21 yards:

Rupp	1 1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1—19
McKeeghan	1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 0 0 0—16

J. A. T.

—The Thimble Islands have long been noted as popular summer resorts. Pot Rock Island has many attractions; those who go there one summer go again. See the advertisement of the Thimble Island House in another column.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

F. D., Bedford, Pa.—When does the woodcock season open in Maryland? Ans. June 15.

F. W. H., Elmira, N. Y.—I have a setter pup who is troubled with her eyes. A white matter collects in them, and they appear to be inflamed. Ans. Sponge the eyes with cold spring water.

H. M. R., Delhi, Ind.—Is there such a thing as a lemon and white cocker spaniel, and where could I get one? Ans. Lemon and white cockers are very rare, and we know of none in this country.

SNELL, Provincetown, Mass.—F. Latassa, 35 Broadway, New York, supplies the trade with first-class silkworm gut. He had some very fine specimens on exhibition at the Westminster Bench Show.

Z. D. W., Marietta, O.—What calibre of Shelton's auxiliary rifle barrel would you advise for 30in. No. 12 breech loader, for general use on squirrels, or, may be, larger game, perhaps target practice; one that is equal to an ordinary rifle carried by hunters? Ans. .44.

G. S. L., Canal, Falton, O.—Enclosed find mole with curious nose and longer tail than have ever seen on mole before. Killed by wheel of corn planter in rich, black bottom land, cultivated corn last year. Is it *Scalops canadensis?* Ans. A star-nosed mole, *Condylura cristata.*

C. R. R., Union, S. C.—Can you give me a plan for a trap that will catch snakes? Also, what to put into the trap to make them enter? What will spiders eat, or how can I entrap them? Ans. We know of no method of trapping either snakes or spiders. To collect them successfully one must give considerable time to the work. Use a forked stick for the snakes, and your fingers for the spiders.

W. L. B., Saugatuck, Conn.—I have a setter bitch, 10 years old, that has a tumor about the size of a small cocoanut under her body, just back of the forelegs. It covers over a space on her body nearly 4x3 in. What will be my best method to remove it? Can easily cut it off, but am afraid it will not heal over. Do you think it would endanger the life of the dog to remove it? Ans. Considering the age of the bitch we should hesitate to remove it, and at all events, would do nothing without consulting a surgeon.

F. W. H. H., San Francisco.—1. Why are Ulm dogs also called Siberian bloodhounds? 2. Will they run game, giving tongue while doing so, like the foxhound? 3. Does the Scotch deerhound give tongue while running game? I mean the old Scotch hound, greyhound shape, shaggy coat. 4. At what price can one-year-old bitches of the Ulm variety be obtained for in New York? Ans. 1. Neither name is correct; the breed is the Great Dane. 2. We believe they run mute. 3. Also run mute. 4. Do not know of any for sale; possibly $50.

SALMON ROE, Jacksonport, Ark.—The fish whose portrait you send us is the Hickory or Gizzard shad, the *Chatœssus ellipticus* of Kirtland. It is closely allied to the *C. signifer*, or thread herring, so called from the prolonged articulate filament of the dorsal fin. You will find a portrait of it in DeKay, Plate 41, Fig. 132. A French surgeon, M. Bert, has just succeeded in producing complete and protracted unconsciousness by a mixture of nearly equal parts of nitrous oxide and oxygen, administered in a compressed state. No ill effects are described as attending the use of the mixed gases, and they are said to be far easier for the patient than either ether or chloroform.

F. G., Flatboro, Pa.—What is a fyke or hoop net? Does the law protect other than such fish as mentioned in the sections referred to? We have nothing but catfish, chub, suckers and eels in our creek, but what little there is left we would like to keep, if possible. Have you or do you know of any one who has cloth covers for FOREST AND STREAM with gold letters for name? Ans. A fyke or hoop net is a series of continuous net funnels within a net-work parallelogram, kept in place by hoops at proper intervals. They are made of any required length The law does not protect catfish, suckers and eels. We do not keep the cloth covers, but can get papers bound for you at $1.50 per volume of 26 numbers

C. S., Rock Island.—In the "Gazetteer's" glossary mention is made of snakeroot as a supposed antidote for rattlesnake bite. Is there anything certain about it? Is it as good as whisky? I got the idea when a boy, from reading Mayne Reid's novels, that snakeroot was a sure cure for snake bite, but I have since grown to believe its virtues more imaginary than otherwise. Ans. The testimony on this point, as in hydrophobia cures, and so-called specifics of various kinds, is very conflicting; yet there is no doubt that rattle-snake weed has cured many bitten men and animals. The Indians use it, and the instinct of animals directs them to it when in need. It has been said that this antidote grows wherever the rattlesnakes are found, but this we cannot vouch for.

X., Montreal.—I saw to-day a colony of small rodents, mice, apparently, of some description. They were about 1½ inch in length, with tails as long as their heads and bodies, and they had large ears and dark bright eyes. In color they were mouse-gray throughout. They were not very lively and allowed me to put my stick very close to them without showing any symptoms of fear. They were feeding, so far as I could see, upon some leaves, or blades of grass. There were six of them visible and, when alarmed, they disappeared beneath some large flag-stones which were lying near the footway. Ans. We regret to say that our correspondent's description is so meagre that we cannot identify the mice. The *Muridæ* are a difficult group even to the studen who has specimens in hand, and in the present case we could give nothing but a wild guess which would very likely be wide of the mark.

M. W. C., Danville Jc. Station.—Can the elder duck be kept in a fresh-water pond, if obtained by getting the wild eggs, and hatching them under a hen, and what food should be given them at first? Can a seal from the salt water of the coast of Maine, if taken young, be kept alive in a small fresh-water pond? What food should be given to young ruffed grouse as soon as hatched by placing the eggs under a hen? Ans. The eider duck, we should think, could be successfully domesticated—indeed, we think that it has been. It would require animal food, such as insects, crustaceans, etc., and would perhaps eat frog spawn, young frogs, or even meat. Seals do well in a fresh-water pond, but should be protected from the sun in summer. Young ruffed grouse should be fed on worms, insects, ants' eggs, etc., with cracked corn and buckwheat as they grow older.

J. A., Valley City, Ill.—In the August, 1877, No. of *Harper's Monthly*, Maurice Thompson had an article on pan fishing, in which he described a bait for black bass as follows: "Launch your silver spoon, tufted with red-blue feathers, so that your little cork bob will keep it whirling right before him. If he does not take it, change the tuft to gray-red." Now, can you tell me whose make it is and the size required? In fishing for black bass with crawfish, how do you hook him? Also, do the pinchers or claws want to come off or stay on? Ans. The bait referred to is the common trolling spoon made by Chapman, Mann, McHarg, Jones, Buell, and a dozen other makers. The spoon is a killing bait for lake trout, pickerel, black bass, and indeed for most any kind of surface fish. Any kind of feathers may be attached to the bob, or one kind substituted for another. See our advertising columns. Put your crayfish on in the fashion that will least expose you to proceedings by the Society for the Prevention of Cruelty to Animals.

FOREST AND STREAM ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 FULTON STREET, NEW YORK.
[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JUNE 6, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

☞ Trade supplied by American News Company.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, June 6.—Trotting: Philadelphia; Meadville, Pa.; Batavia, N Y; Battle Creek, Mich.

Saturday, June 7.—Manhattan Athletic Club Games. Trotting at Milwaukee, Wis.

Tuesday, June 10.—Illinois State Sportsmen's Convention, at Peoria. Pittsburgh, Pa., Shooting Tournament. Michigan Regatta, at Diamond Lake, Cassopolis. Trotting: Boston, Mass.; Pittsburgh, Pa.; Lyons, N Y.; Cedar Rapids, Ia.; Jackson, Mich.; Prospect Park.

Wednesday, June 11.—Tournament as above. Trotting as above.

Thursday, June 12.—Tournament as above. Trotting as above.

PERSONAL.—Dr. Chas. Fitz Mathew, late of H. M. 74th Regt., is on the Margare River, Cape Breton, for salmon.

John Mullaly, Esq., of the Board of Health, and J. H. Welch, of Hartford, Ct., are both booked for Restigouche early in July.

W. J. Florence, E. A. Sothern, and party are about to sail for the lower St. Lawrence in their yacht, in quest of salmon.

AN AUTHORITY ON BEARS.—We have published some scores of bear stories, yarns of imaginative adventurers, scientific discussions of students who carry their books into the woods, sketches of tyros, and rare narratives by genuine woodland sages. The article in another column is from the pen of a writer whose pseudonym is familiar to our readers. What "Corporal Lot Warfield" writes about hunting and trapping is always worth reading. He is a trapper of very long and varied experience, and knows what he is talking about. He trapped "greasers" and "yellow-bellies" down in Mexico thirty-three years ago—the time of the war—and lost a leg thereabouts.

WITH ONE ARM.—We spoke the other day of two or three men, who, having been deprived of one of their arms, had nevertheless acquired extraordinary skill as sportsmen. A correspondent in Ronceverte, W. Va., who writes a great deal better than many of our correspondents do with the full use of their right hand, tells us of himself that he has been shooting and fishing with only a crippled left hand ever since 1864, and yet he can manipulate a Winchester with any of them on game, and with the fly can take as many trout as he can carry, and more too.

CROWDED.—We must beg the indulgence of numerous correspondents for deferring their communications.

A YACHT RACING ASSOCIATION.

THE necessity of some central association with delegated powers from all the yacht clubs of standing in America has long been, to our mind, one of paramount consideration, if we would keep pace in yachting with the other sports of the country and with the rapid strides made of late in the thorough organization of racing under sail upon a national basis abroad. To some the proposition to unify and codify the numerous conflicting interests of the various yacht clubs along the coast, and of substituting for the present harassing varieties one common code of laws to be observed by all clubs claiming rank from a national standpoint, may seem almost too advanced for the stage of development as yet attained by yacht racing in America. We think differently, however, and believe that the sooner efforts looking toward the formation of a National Yacht Racing Association are made, the better will it be for the furtherance of the highest aims and interests of the sport, and the quicker will it be rescued from the present stagnation which certainly results from the fact that yachting has grown beyond its period of infancy, and, having thrown off its swaddling clothes, refuses to be coaxed into brilliant activity by the pap of the "mutual admiration" and "picnic" or "jolly times" kind, which has hitherto sufficed to nourish its younger and feebler days and draw heterogeneous entries enough to the line to make it barely possible to get rid of all the prizes, cups, pennants, and things offered. So racing has gone from bad to worse, until last year it culminated in the failure of the sand-bag affair—for we cannot consider sailing with shifting ballast as legitimate yacht racing—for which the sympathetic public of New York and neighborhood subscribed a grand total of something less than $100! How different would not have been the result had the sailing been under the auspices of a regularly organized association, representing the interests of the entire country? Prizes worth sailing for would have taken the place of the paltry sums which were handed, after long delay, to the disappointed winners; sand-bags would have been ruled out, and crews limited within the bounds of reason. Spars and canvas might then have been in proportion to the boats raced, expenses reduced, and the event would have attracted the community as a whole, its issues would have gone on record and remained for all time as evidence of the winners' seamanship and speed. As the race was sailed, however, the sequence made little or no difference to any one, and in a fortnight the whole affair was forgotten, and consigned to the oblivion of the past as not worth further consideration.

A move in the right direction is now on foot, and it is needless to say that, for want of anything better at present, it has our fullest indorsement. We quote from a coummunication sent us:

The New Jersey Yacht Club has issued a call to other clubs for the appointment of a committee of three to meet with a committee appointed by themselves—consisting of Com. Rogers, Vice-Com. Dillworth, and Ex-Com. Ketcham—to consider the formation of a navy, and instituting a Grand Union Bay Regatta annually. To this invitation the Columbia Yacht Club have promptly responded, and it is to be hoped that other clubs will see the great advantage a central organization, composed of delegates from each yacht club, would be, and appoint committees to meet and thoroughly discuss the project. An association of yacht clubs would be of great benefit to the club's composing it. More life and thoroughness would be infused into yacht clubs, especially those whose fleets are composed principally of open yachts, and who have not the two or three weeks' cruise each fall to keep up the necessary interest. Once each year, or more if possible, a grand combination regatta could be given in New York Bay, and reports of receipts and expenditures turned into each club. Semi-annually or quarterly a pamphlet could be issued by the central association to each member of the clubs composing it, containing matter of interest to yachtsmen, and giving a list of yachts, rigs, measurement, owners, and records; and in many other ways could it be made exceedingly useful.

We need some central authority through which yachtsmen, as a class, can be reached—an authority whose decisions and operations will be looked upon as the standard in all appertaining to the sport. It is only by concerted action that the crying evils and shortcomings of the racing fleet of to-day can be counteracted, overcome, and the material finally led into channels more worthy of public approval, and more to the dignity and fame of sailing in America. The present family plan, the reckless distribution of cups, prizes and pennants to everything from first to last; the innumerable championships and counter-championships, class and club championships; the manifold methods of classifications, different for every port along the coast, different for every club in the same port; the odds and ends in the way of measurements; the looseness of keeping records, and the general inefficiency, limited influence of and rapid decline in the number of entries;—surely all this is quite enough to convince any one that it is high time this aimless play were brought to an end and a national system of some kind adopted for the purpose of unifying, simplifying and promoting the interests of yacht racing! What signifies it at present that some yacht, unknown to the world, rejoices in the champion pennant, won from some kind of a class, no one remembers when, how, or where? Can there be any satisfaction in winning prizes and things that have no meaning, that are not recoguized by any one outside of the half dozen interested local celebrities of Bungtown, who back the *Sallie Ann* as the "fastest thing afloat?"

Let us have a Yacht Racing Association, representing all the clubs of the country. Adopt one rule of classification, time allowance and one set of sailing regulations. Place all clubs on one basis in these respects. Offer annual, semi-annual or quarterly Association matches, open to all yachts of the country enrolled in recognized yacht clubs. Let these matches take place in stated ports, give stated prizes worth sailing for, and then—not until then—will yacht racing receive recognition as a national pastime. Continued in the present inefficient, ragged sort of a way, racing will always remain as thoroughly characterless, insipid, unsatisfactory, barren and local in results and dwindling in entries as now. Has not the time arrived when the close corporation system, the weakly and desultory efforts of individuals, the fruitless rings of bantling cliques, the mere social aims of yacht racing should give way to something more thorough, more manly, sportsmanlike, and more dignified?

Nothing short of the formation of a National Yacht Racing Association will rouse the sport from its worn-out rut, and save racing from falling to the low stage of mere sand-bag professionalism, in which the overrigged and overmanned open boat usurps the place of the legitimate yacht until racing boats and sand-bag sailors become a byword and a reproach to the best and true interests of the sport. The influence of sand-bag racing is pernicious, and a national code of sailing rules alone can cope with this and similar evils.

NEW YORK PRESS CLUB.—The house-warming of the New York Press Club at their new rooms, Nos. 119 and 121 Nassau street, last evening, was a most pleasant occasion. The present quarters of the club are commodious and comfortable. Long may its latch-string hang out.

GAME PROTECTION.

THOSE MIGRATORY QUAIL.—Advices from Messina, under date of May 8th, report the shipment that day of 3,049 migratory quail for the gentlemen in this country who have subscribed for them. Inclement weather made the flight of the birds unusually late this season, and after their arrival some days elapsed before a steamer was ready to receive them, but upon the eighth of May they were finally delivered in fine order into the hands of the steamership *Zeal*, for New York. It was hoped that steamers for Boston and Baltimore would take the birds destined for those two cities, but as none were at hand they were all shipped for New York, at which port they should arrive between the first and fifteenth of June. From that place they will be sent by express to their several owners.

The flight of birds at Messina has been unusually small this year, and the orders for foreign shipment unusually large. An increasing demand prevails for the shipment of live birds to England, the orders from that country alone this year being far upward of 100,000, a fact which shows the value that is put upon them by the English sportsmen. This increasing demand is affecting the market value of the birds, and the importers of this year are to be congratulated upon their purchase, as it is questionable whether shipments can be obtained at so low a rate hereafter.

A few remarks in reference to the treatment of the birds after their arrival may be not out of place. Experience has shown that the birds nest in tufts of grass in open fields and near running water. It would be well to release them, so far as practicable, in localities which shall tempt them to nest in the vicinity of the spot where they are released. In releasing them care should be taken that they are not frightened, in which case they may scatter and fly wildly away. A good plan would be to let the birds be a little short of food for a few hours before their release. Carry them to the appointed spot, set down the cage, and scatter an abundance of food around it. Unfasten the door, and attach to it a long string with which it can be quietly opened. Then retire to the length of the string, get out of sight of the birds, and let the birds have time to recover from their flight and become accustomed to their surroundings. Pull the door open as gently as possible, and the birds will probably run out and feed, and gradually adapt themselves to their new conditions. The spot where they are released should afterwards be occasionally supplied with food, and the quail will be likely to remain in the vicinity, mate and nest, and return to the same spot another year.

It may be worth whileto keep in confinement a few pairs, In a large pen where they can have earth to run upon, and to remove their eggs as fast as laid, to be hatched under bantam hens. The birds will, under this process, lay more eggs than in their wild state, and the rearing of the young quail will be interesting to those who have a taste for such pursuits. They should be released when large enough to take care of themselves, and certainly before cold weather.

PENNSYLVANIA.—The fourth annual meeting of the Pennsylvania State Association for the Protection of Game and Fish will be held at Huntingdon, Pa., on Tuesday afternoon, June 17, 1879, at two o'clock. An invitation series of shooting matches will be held on the following day. The meeting will be under the auspices of the Sportsmen's Association of Huntingdon County.

ILLINOIS TOURNAMENT.—Mr. S. M. Lincoln, President of the Illinois State Sportsmen's Association, announces positively that the postponed tournament will be held at Peoria, June 10th to 13th inclusive. An abundant supply of birds has been secured. The cash prizes aggregate $500 in gold, and there are many other valuable prizes. The meeting will be a brilliant one.

The Rifle.

—Mr. A. H. Weston, Assistant Secy., of the N. R. A., has published his book on "The Rifle Club and Range." A notice of its many admirable features will appear in our next issue.

MAINE—*Portland.*—The Maine Rifle Club held their first long-range prize shoot of the season at East Baldwin, May 30. The day was not favorable for fine shooting, the atmosphere smoky, and wind strong, changing between 12 and 3 o'clock. There were a good number of shooters and spectators present. Below are the three leading scores:

Banks.															
800	5	5	4	5	5	5	5	3	4	5	5	3	5	5	4—67
900	5	5	4	3	5	5	3	5	5	4	5	5	4	5	5—66
1,000	4	4	3	5	5	3	3	5	5	4	3	5	5	4	5—61—193

	800 yds.	900 yds.	1,000 yds.	Total.
Farrington	68	44	30	142
Hersey	62	37	24	113

MASSACHUSETTS—*Walnut Hill, May* 28.—The long-range men here are beginning to settle over the 200 mark in their matches, and those falling below it now deserve little consideration, unless they be new comers. To-day the weather was delightful, the atmosphere bright and clear, and a good light plainly showed up the targets to the shooters. The wind, though, was very aggravating throughout the shooting, and the hand on the registering dial made a complete circuit before the match was concluded. The leading scores were:

W H Jackson.															
800	5	5	5	5	5	5	5	5	5	4	5	4	5	5	5—73
900	5	3	5	4	4	5	5	5	5	3	5	5	4	5	4—67
1,000	5	5	4	4	5	4	5	5	4	5	5	4	5	5	3—69—208
J F Brown.															
800	5	5	5	5	5	5	5	5	5	4	5	4	4	5	5—70
900	5	4	5	5	4	4	5	5	5	5	4	5	5	4	5—70
1,000	4	4	5	5	5	5	5	5	4	4	5	5	4	5	5—65—205
V. Gerrish.															
800	5	5	5	5	5	5	5	4	5	5	5	5	5	5	5—74
900	5	5	3	5	5	5	5	5	5	5	3	5	3	5	5—69
1,000	4	5	4	3	5	5	3	3	5	4	4	4	5	4	3—61—204
Salem Wilder.															
800	4	5	3	5	5	5	5	5	5	4	5	5	5	5	4—68
900	5	4	4	5	5	5	5	5	5	5	3	5	5	5	5—70
1,000	4	3	5	3	5	3	3	5	5	5	5	4	4	3	5—62—200

W M Ward	62	59	183
E W Lord	62	62	182

May 31.—Magnificent off-hand shooting was the order to-day, and off-hand it really was, for Capt. Jackson has not only talked and written against the hip-rest, but he practices as he preaches, and his fine score for 15 shots was made in a *bona fide* off-hand way. Though, if we mistake not, E. T. Osgood, on Feb. 26, 1876, made even a better 72. The day was beautiful, the light good, and the wind steady from the southwest, indicating 8 to 9 o'clock. No trouble was experienced from this quarter, but the heat told upon the riflemen sadly, although sheltered from the sun. The match was called promptly, and capital results secured. Capt. W. H. Jackson made the highest score in the first entry, and wins the principal prize, the Winchester rifle, made expressly for this match and valued at $55. The conditions were that any competitor making the highest score three times on the first entry made should become the possessor. Mr. Jackson won it on 66, 67, 68, out of a possible 75. President Fry, of the Massachusetts Rifle Association, presented the rifle to Capt. Jackson, who generously presented it again to the association, and it will remain still in the Winchester match as the first prize, in connection with the other valuable prizes previously noted. The Schuetzenfest "king," Mr. William M. Farrow, on his visit to Walnut Hill a few weeks since, made 71 in this match, which went upon record as the largest score ever made at this distance. To-day his elegant score was eclipsed by Capt. W. H. Jackson, who made the superb score of 72 out of a possible 75, which places him at the head of all short-range riflemen for 15 rounds. Out of 46 entries is given the following summary:

Capt W H Jackson	5	5	5	5	5	5	4	5	4	5	5	4	5	5	5—72
G M Jewell	5	4	5	5	5	4	5	5	4	4	5	5	4	4	5—69
E F Brooks	4	4	5	5	4	5	4	4	4	5	4	5	4	5	5—67
F C Richardson	4	4	4	5	5	4	5	5	4	4	5	4	5	5	4—67
J B Osborne	5	4	4	5	4	5	5	4	5	4	4	4	4	4	5—66
J N Frye	4	5	5	4	4	4	3	5	4	4	4	4	5	4	5—65
A Babbidge	5	4	5	4	4	4	4	4	5	5	4	5	4	4	4—64
E B Souther	4	4	4	4	5	4	5	5	4	5	4	4	5	3	5—65
C U Melgs	4	4	5	5	4	4	5	4	4	4	4	4	4	4	4—63
F Hollis	4	3	4	3	4	5	5	4	4	5	4	4	5	4	4—62
C R Griffin	3	4	5	5	4	4	5	4	4	5	4	3	4	3	4—61

Boston vs Abington.—Three members of the Massachusetts Rifle Association went down to Abington on the 27th ult., and on Arnold's range met the Abington team. A cross wind did not prevent fine scoring. The conditions of the match called for four men from each club. The Massachusetts team being one man short, it was agreed, in order to equalize numbers, that the scores for the three men be averaged, and that the average be taken for the fourth score. The conditions of the match were: 200 yards; off-hand; 30 rounds to each man. The highest score ever made at Arnold range was 247—same conditions—made by N. W. Arnold. Yesterday Mr. J. B. Osborn made the elegant record of 270. The following is the summary:

Massachusetts Team.															
J B Osborn	9	11	9	10	11	11	6	10	6	11—94					
	6	5	6	9	11	10	10	11	3	11—82	270				
	3	9	11	2	10	5	10	11	10	11—94					
Average, 84, 64, 69—197.															
W Charles	7	10	9	0	1	0	5	5	4	7—48					
	8	8	12	5	4	5	7	5	1	6—61	177				
	5	9	3	6	5	6	9	9	4	10—67

	2	0	7	2	10	4	5	0	7	10—47	143				
	7	10	0	0	0	9	1	8	6	6—47					
Abington Team.															
N W Arnold	9	5	5	3	8	3	5	9	4	9—56					
	9	8	6	9	0	5	7	8	11	10—70	168				
	3	9	9	5	11	10	0	11	4	10—72					
L W Farrar	11	11	9	9	9	5	6	2	5	6—74					
	4	10	0	8	4	6	3	8	5	6—54	190				
	8	9	8	10	7	2	6	8	4	7—62					
S C Noyes	5	2	6	3	7	9	0	2	7	9—50					
	7	9	10	0	6	4	4	0	5	8—58	166				
	0	8	7	5	2	5	12	4	3	9—60					
S E Ring	0	8	3	0	4	7	0	5	6	11—54					
	8	0	9	0	3	0	3	11	10	12—56	146				
	4	12	5	5	0	6	10	5	3	5—55					

Recapitulation.

Massachusetts Team	787	Abington Team	700

The Massachusetts team was victorious by 87 points. Mr. Osborn's score on the Creedmoor target was:

J B Osborn	5	5	5	5	5	5	4	5	5	4—48					
	4	4	4	5	5	5	5	5	4	5—46	142				
	4	5	5	5	5	4	5	5	5	5—48					

The largest three consecutive scores on record. A return match will be fought.

Hopkington.—May series; final shoot; May 30; 500 yards:

N Jewell	4	4	5	4	4	5	5	5	4	4—44
C A Sumner	4	3	5	4	4	3	5	4	4	4—40
W B Claflin	4	4	4	4	5	4	3	4	4	5—41
D Dorchester	4	5	4	5	0	3	2	4	4	4—35
J M Webb	3	3	3	4	2	3	3	2	2	5—30
O C White	0	4	2	2	5	2	2	4	4	1—29
F G Stearns	0	2	3	4	0	4	3	3	4	3—28
S F Phipps	0	3	2	2	2	5	4	3	4	2—28

Haverhill.—Mount Washington Rifle Club weekly shoot; 200 yards; the gold badge was taken by Charles A. Kimball, and the silver by Winn A. Willey:

Kimball	3	3	4	5	4	5	4	4	4	4—41
Willey	3	2	4	4	4	3	5	4	4	4—38
Pillsbury	4	3	3	3	4	4	4	4	4	3—38
Richardson	4	3	4	4	3	3	4	3	2	4—36
Abbott	3	3	3	4	2	4	4	4	4	3—36

Wakefield.—Conclusion of 400 yards series on May 31. The prize, a Sharps' long-range rifle, was won by William B. Daniel by a score of 120 out of a possible 126, D. Ogilvie coming second with 119. At a meeting of the association it was voted to hold a series of matches in June at 200 yards (open only for riflemen of the town), when three valuable prizes will be offered.

Medford.—Last competition of the May "Amateur series" at Bellevue Range. The weather conditions were all that could be desired for the attainment of good scores, and there was a large attendance of riflemen and their friends. There were 91 enteries in yesterday's competition, the best of which are given as follows, ten rounds per man at 200 yards:

W Charles	5	4	5	5	4	5	5	5	5	5—48
H K Richardson	5	5	5	4	4	5	4	4	5	5—46
H H D Cushing	5	5	5	5	4	4	4	5	4	4—45
J B Osborn	4	5	5	4	4	5	5	4	4	5—44
C H Russell	4	4	4	4	5	4	5	5	5	4—44
R Sawyer	4	4	4	5	4	4	5	4	5	4—44
R Abbott	4	4	4	5	5	5	4	4	5	4—42
W Gerry	4	4	4	5	5	5	5	4	4	4—43
E Hildreth	5	4	4	5	5	4	5	4	4	4—42
J R Teele	4	5	4	4	5	5	4	4	4	4—43
A Babbidge	4	4	4	4	4	4	5	5	4	4—42
E Wyman	4	4	5	4	4	5	4	4	4	4—42
F E Garden	4	4	4	5	4	4	4	4	5	4—41
E S Piper	5	4	5	4	4	4	5	3	4	3—41

Mammouth Rifle Gallery, Boston.—The regular prize shoot for May is ended, and some very fine work has been done. The following is the standing of the several competitors; 150 feet; rounds 8; possible 40:

F Hollis	5	4	4	5	5	5	5	6—38	M O Johnson	4	4	4	5	5	5	5	6—37
Wm Bradford	5	5	4	4	3	5	5	5—38	O Edwards	4	4	4	5	5	5	5	6—37
Geo Lamb	4	5	5	5	4	5	5	5—38	G McKinzie	4	4	4	5	5	5	6	6—37
Geo W Barry	5	5	5	4	5	4	5	5—38	W H Restarick	4	5	4	4	5	5	5	5—37
H W Eager	5	6	5	5	4	5	5	4—38	H Tyler	5	4	4	5	4	5	5	5—37
Henry Lowell	4	4	4	5	5	5	5	5—37	N W Arnold	5	5	4	5	4	5	4	5—37

Gardner, May 28.—Scores of the rifle club at Hackmatack range to-day; 200 yards; off-hand:

	R.	C.		R.	C.
G F Ellsworth	165	90	Wm Austin	137	87
A E Robbins	161	88	F H Knowlton	136	85
H G Knowlton	160	86	Chas Hinds	135	85
C O Bent	153	89	Alex Knowlton	130	85
A Colem n	138	89	O M Fitz	114	81

CONNECTICUT—*Collinsville, May* 25.—Canton Rod and Gun Club, Riverside Range; regular practice meeting, held May 23; 200 yards; off-hand; 3 pounds pull; 10 shots:

	Mass.	Creed.		Mass.	Creed.
Lanbenstein	93	44	Lewis	88	42
Bidwell	93	43	Konold	88	41
Moore	94	43	Andrews	80	38
Hull	93	42	Tister	56	31

NEW YORK—*Prospect Hill Rifle Club.*—The resignation of the secretary, J. L. Paulding, is accepted and Mr. T. G. Williamson, of 247 E. 83d street, is unanimously elected secretary. Mr. J. L. Paulding was unanimously elected captain.

SOUTH BROOKLYN RIFLE CLUB.—The following officers were elected for the ensuing year: Pres., Dr. A. W. Ford; Vice-Pres., Dr. G. W. Welty; Sec'y, J. B. Hazleton, Jr.; Treas., J. N. Naughton; Capt., Jas. M. Roche. Regular days for out-door practice have been decided upon, and the club, as well as counting upon a season of social enjoyment among its members, promise to make it lively for any similar club who may desire to dispute their claim to superior marksmanship. BULL'S-EYE.

Jamestown, May 26.—The Chautauqua Sportsmen' Association has always had stated times set apart for ladies to practice in the gallery, and last Friday we invited the ladies to the range for practice at 200 yards off-hand, which invitation was accepted by four ladies, who after shooting five shots each to get accustomed to the hair triggers, which bothered them considerably at first, made the following score on a regulation target, ten consecutive shots:

Mrs Dr Ward	5	5	5	4	4	4	5	5	4	4—45
Mrs H V Perry	5	4	4	4	4	5	4	4	4	4—42
Mrs N J Fenner	5	3	4	4	5	3	3	5	4	3—39
Miss May Parkhurst	4	3	0	3	5	4	4	3	4	5—35

The two best scores were made with a gun used on the range by one of the members, who tips the bar at 212lbs. avoirdupois. Length of barrel, 21 inches; 41 cal., 35 grs. orange ducking No. 2 powder. "PINACENTER."

Morsemere, May 30.—The prize winners on Decoration Day, in the match at 500 yards, any rifle, 3lbs. pull, special target, were as follows: Messrs. Quinn and Morse tied with the brilliant record of 44 out of a possible 49. Quinn won on firing off the tie. When it is remembered that the 7 is smaller than the 200 yards bull's-eye, the closeness of the shooting will appear:

H J Quinn	5	7	6	7	7	6	6—44			
G L Morse	7	6	6	7	6	7	5—44			
C A Hodgeman	6	6	7	7	6	4	7—43			
C Duseubery	6	6	7	5	6	6	6—42			
A D Hodgman	5	7	7	5	7	6	6—42			

Cart (7), 7¾in. in diameter; carton (6), 14¾in. diam.; bull's-eye (5), 22in. diam.

NEW JERSEY—*Newark, May* 28.—Weekly score of the Newark Amateur Rifle Club; 200 yards:

T Felsburg	5	5	5	5	5	4	5	5	4	5—48
W C Gardner	5	5	5	5	5	4	5	5	5	4—48
J Bayer	4	5	5	5	5	5	4	5	4	5—47
W P McLeod	5	4	5	5	5	5	4	4	4	5—46
H Hopkins	4	5	5	5	5	4	5	4	5	4—46
G L Freche	4	5	4	4	5	4	4	5	4	4—43

NEW JERSEY—*Brinton, May* 31.—Fourth contest, Association match; 200 yards; open to members of N. J. State Rifle Association:

J T B Collins	5	5	4	5	4	4	5	5	4	4—45
J W Todd	5	5	5	5	4	4	5	5	5	4—45
F L Sheldon	5	5	4	4	4	4	4	5	5	4—44
A Niemand	5	4	4	4	5	5	4	5	4	4—44
J L Miller	4	5	4	4	4	4	5	4	4	5—43
P Bonnett	4	4	4	4	5	4	5	4	4	4—42
W A Robinson	4	5	4	4	4	4	4	4	5	4—41
L H Greve	3	4	4	4	3	3	4	4	3	5—37
Col G E P Howard	5	5	4	3	4	4	3	2	3	3—36

Same Day: Fourth contest, in Sharps match, for military rifles; 200 yards; military rifles; no cleaning:

Lieut L H Greve	4	4	4	4	4	4	4	5	5	4—42
J L Paulding	4	4	4	4	4	4	4	4	4	5—41
F L Sheldon	4	4	4	3	4	4	4	5	5	4—41
A Niemand	4	4	4	4	4	4	5	3	5	4—41
B A Vail	4	4	3	5	4	4	4	4	4	4—40
Frank Hyde	4	3	4	4	4	4	4	3	4	5—39
J L Miller	3	4	5	5	4	4	3	4	4	4—39
P Bonnett	5	4	4	3	3	4	4	3	4	4—38
Col G E P Howard	5	3	3	5	4	3	4	3	3	4—37
Col D Lodor	3	4	5	4	4	3	4	3	3	3—36
Lieut I R Denman	2	3	4	4	4	4	4	4	3	4—36

Columbia Rifle Range, West End, May 31—Lewis match; 1,000 yards; 20 shots, any rifle, any position; to be won twice; wind and weather bad:

James King	5	5	5	5	5	5	5	4	5	5—49
R Rathbone	5	3	4	5	4	5	5	3	4	5—42

James B Burnside	5	4	4	4	4	4	4	4	3	4—36
Col J O P Burnside	4	4	4	4	4	4	4	4	4	4—36
Corp Stratton	4	4	4	4	4	4	4	4	4	4—36
Chas H Laird	4	4	4	4	4	4	4	4	4	4—36

Same Day: Fulton Cup match; first contest; terms fixed by rate of entries; 200 yards; 7 shots; military rifles received two points; to be won three times; value of cup, $50; wind, fish-tail:

N D Ward	4	4	4	4	4	4	4	4	4	4—28
H Fisher	4	4	3	3	4	4	4	4	4	4—27
C H Seymour	4	3	4	4	4	4	4	4	4	4—27
W W Dodge	3	4	4	4	4	4	4	3	4	3—26
B F Hart	4	3	2	4	3	4	3	4	3	4—23

Capt G Griffiths	4	2	4	4	3	3	4	4	3	4—23
R M Seymour	3	3	4	4	2	4	4	3	2	4—23
T G Williamson	4	3	4	0	3	4	4	4	2	4—22
J R Washington	2	2	5	4	3	3	2	3	2	4—21

RIFLE WORK AT THE CAPITAL.—The Columbia Rifle Association has renounced its programme for a spring meeting, and has made preparations for active practice and record shooting during the month of June. Its printed schedules set down, between May 30 and July 4, three club-badge matches, two subscription matches, and a special badge contest, all open to all professionals. On the 7th of June a gold badge match takes place at 500 and 600 yards, on the 14th a gold badge match at 200 and 300 yards, and on the 21st a match for the gold Maltese cross club badge at 1,000, 1,100 and 1,200 yards. On the Fourth of July a special match is announced for a handsome gold badge presented by Mr. Adee, to be shot for at the three long ranges.

Decoration Day was devoted by the Columbiads to subscription matches. Intense heat and glare with the usual provoking concomitant of "gin-and-sugar" mirage, followed by dense clouds and a passing shower with tricky winds, gave the riflemen a chance to show their judgment. A number of crack shots from the Second Artillery Regiment U. S. A., now stationed at the Washington Arsenal, embraced the all-comers privilege, with an allowance of five points on their total scores for military rifles and pull, and, considering the appalling pull of the service Springfield musket, amounting in the case of one contestant to 18 pounds, did work which promises well for the performance of the regular team they hope to send to Creedmoor in the fall. The following are the leading scores, 10 shots at 200 and 300 yards:

James B Burnside	4	4	4	4	4	4	4	4	4	4—36
Col J O P Burnside	4	4	4	4	4	4	4	4	4	4—36
Corp Stratton	4	4	4	4	4	4	4	4	4	4—36
Chas H Laird	4	4	4	4	4	4	4	4	4	4—36

P J Lauritzen	4	4	4	4	4	4	4	4	4	4—36
Lieut Taylor	4	4	4	4	4	4	4	4	4	4—36
Private Hollinger	4	4	4	4	4	4	4	4	4	4—36

A long-range match followed, up to 1,200 yards. But one practice day had been had, and then Col. Burnside's aggregate of 195 without sighting shots, and followed by Mr. C. H. Laird's very creditable 183, gave promise of better shooting than actually took place in the match. The light and wind, coupled with the fatigue of the marksmen, all of whom had shot in the previous match, ran down the aggregate reached. The following are the leading scores:

	1,000 yds.	1,100 yds.	1,200 yds.	Total.
Col J O P Burnside	65	55	46	166
A A Adee	52	47	53	152
P J Lauritzen	56	37	39	132
C H Laird	48	59	Retired	

The breaking of the mainspring of Mr. Laird's rifle compelled his retirement. Mr. Partello took friendly part in the 1,100 and 1,200 yards stages and made 65 points at each distance, his shooting at the latter being distinguished by nine consecutive bull's eyes; thus showing his determination and ability to keep up his reputation at the extreme ranges.

On Saturday, the 31 ultimo, a friendly return match of ten shots at 200 and ten at 300 yards, was held between the Columbias and the Montgomery county teams of five men on each side. Owing to the hazy glare, the contest became a comedy of errors, the wrong target being fired on four or five times, without serious injury to the markers, however, who expressed their perfect willingness to be shot at all day for the fines exacted from the marksmen and paid to them as compensation for the peppering sustained. The Maryland team, comprising several of the best shots in the State, came out one point ahead on the shorter range, but succumbed at the longer distance. The following are the scores:

Columbias, D. C.	200 yds.	300 yds.	T'l.	Montgomery County, Md.	200 yds.	300 yds.	T'l.
B Chambers	39	39	78	Dr S I Scott	43	36	79
J B Burnside	38	39	77	H H Miller	40	30	70
Col Burnside	41	36	77	Wetherall	41	28	69
P J Lauritzen	40	33	73	W Scott	35	31	66
D W Bruce	39	24	63	Brooks	39	23	62
	197	171	368		198	148	346

At the conclusion of the match, Mr. D. W. Bruce of the Columbias, and Mr. Wetherall of the Maryland team, did some notable shooting, off-hand position, at 500 yards. The former, in five shots, with a Sharps rifle of the new pattern, made 23 points, registering three consecutive bull's-eyes, while Mr. Wetherall pressed him close with a score of 21 points. With these encouraging results of the first experiment in this direction, it is probable that the Columbia Rifle Association will add off-hand contests at the mid-ranges to the regulation series of matches.

VIRGINIA—*Richmond, May* 30.—In a matth at the Brewery yesterday, the following score was made by Mr. C. P. Stokes:

Creedmoor	5	5	5	5	5	5	5	4	4	4—48
Massachusetts	11	11	11	12	12	11	11	11	10	9—109

The distance is 150 yds., the target was one of Dennison's accurately reduced to 150 yards practice; 6 in. bull, 10 lbs. rifle, 3 lbs. trigger pull. I am assured that the 48 has never been beaten, and the 109 never equaled under similar conditions (distance, trigger pull, etc.). What is the fact?

OHIO—*Cincinnati, May* 15.—The Cincinnati Shooting and Fishing Club had their first shoot for club prizes to-day, the conditions being 30 shots and a possible 150; 200 yards; off-hand:

	First Class.														
W Caldwell	5	5	5	5	4	5	5	5	4	5	4	3	4	4	4
	4	5	4	5	0	5	4	5	5	4	5	4	4	5	4—130
G Heuson	4	4	4	5	3	5	5	4	4	4	4	5	5	4	4
	5	4	4	4	4	4	5	4	5	5	4	4	4	4	4—128
L Fender	4	4	6	5	3	4	4	4	4	4	5	4	4	4	4
	4	4	5	4	4	4	4	4	4	4	5	5	4	4	4—125
O Topf	5	4	4	4	5	4	4	5	4	4	5	4	4	5	4—123
	5	4	4	4	4	4	5	0	5	5	4	3	5	4	5—122
W Hall	3	4	4	4	5	4	4	4	4	4	5	5	4	4	4
	5	4	4	4	4	4	4	3	3	3	5	5	4	3	4—121
M Gindelin	4	4	4	4	4	2	4	4	4	3	4	5	0	4	5
	4	3	4	3	3	4	3	5	6	4	4	5	3	5	4—112

Second Class.

A Koehler	4	4	4	4	4	5	4	4	4	5	4	4	5	5	
	4	5	5	4	4	5	4	5	4	4	4	4	4	4	4—123
W Campbell	4	5	4	5	4	4	5	5	4	5	3	4	4	4	
	4	4	4	4	4	4	4	3	4	5	3	4	4	5	0—121
J Weston	4	4	3	5	4	4	4	3	4	4	4	4	4	3	4
	3	4	4	4	5	5	4	4	4	4	4	5	4	4	3 5—120
J Whetstone	4	4	4	4	5	4	3	4	4	4	4	3	5	5	5 4
	4	4	3	3	4	4	4	5	4	4	4	4	4	3	4—120

ILLINOIS—*Chicago, May* 31.—Lake View Rifle Club regular weekly practice to-day; weather cloudy; wind from 11 o'clock, strong; 200 yards:

John Macauley	4	5	5	4	4	4	5	4	5	5—46
John S Crane	4	4	5	4	0	5	4	5	4	4—14
F Henrotin	4	5	4	4	4	4	5	4	5	4—43
Wm Byrds	4	4	4	5	4	3	4	5	5	4—41
E F Chatfield	4	4	4	3	3	5	5	5	5	3—41
										DEAD.

A PROFESSIONAL "BULL'S-EYE."—I agree with your correspondent, "Handicap," that "Mr. Hyde and myself were the only ones in N. Y. who would (not *could*) be styled 'professionals,' and that only so far as our scores were above the average marksman." For who would value the skill of any "professional" who was always at the bottom of the score? W. MILTON FARROW.

—The opening day of the 7th annual spring meeting at Creedmoor on the 3d inst., met a season of wretched weather. The low range and mid-range work showed the regular troop in excellent form. See our next issue; a full report of the meeting will be given.

The Kennel.

REVIEW OF WESTMINSTER REVIEWERS.

JUDGING AT NEW YORK WONDERFULLY SUSTAINED.

EDITOR FOREST AND STREAM:

Since the New York Dog Show I have read every line published in the FOREST AND STREAM, *Turf, Field and Farm* and Chicago *Field* on the subject of the New York, Philadelphia and Boston dog shows, and I have never seen more prejudice, malicious slander, willful perversion and suppression of truth in the same space than is contained in the *Turf, Field and Farm* and Chicago *Field*. One Jacob Pentz is confessedly Kennel Editor of the *Turf, Field and Farm*; the correspondent of the Chicago *Field* calling himself "Gothamite," I believe to be the same individual. If he is not, they hunted in couples at New York, Philadelphia and Boston, and the prime object they have had in view apparently has been to run down the Westminster Kennel Club, to vilify the judges, to abuse the awards, but above all to gratify some violent personal animosity against Mr. Tileston and to blackguard his dogs. To accomplish this no effort has been spared and no delicacy considered. * * * *

No careful readers of the descriptions in the Chicago *Field* and *Turf, Field and Farm* can fail to see a malignant determination on the part of the writer to do everything at all times within his power to injure the Westminster Club and all connected with it.

I propose to review the two papers together from April 11 to date. I propose to show that so far is the writer of these articles from being a candid reporter that he is filled with bile and bad blood, besides being no judge of a dog; or if a judge, that he is so warped by his spleen and animosity that his reports are utterly unreliable. I treat the Chicago *Field* and *Turf, Field and Farm* reports as made by one and the same man. I have not the slightest doubt as to who he is, and my only surprise is that a paper like the *Turf, Field and Farm*, controlled by gentlemen like the Bruces, men worthy of any society, and filled with gentlemanly instincts and pride, should keep such a venomous *sans-culotte* upon the premises.

Readers of sporting papers are as a class sportsmen. Sportsmen are as amiable fraternal fellows as any in the world, and the denunciatory, vindictive stuff, interwoven through the account of the New York show in both *Turf, Field and Farm* and Chicago *Field* was simply sickening to the vast number who plainly saw its *animus*. For example:

April 11. *Turf, Field and Farm:* Launches out with a declaration that the New York Show is a failure. Instead of showing wherein it was a failure the writer proceeds to abuse Sensation, and actually descends to the poor dog's toe nails and suggests they were pared by a kennel man and not honestly worn off in the field. He states, on hearsay, that Mr. Colburn's pair of Sensation's get is utterly worthless (a fact which is as false as can be, for one of them at least is a superb dog), and generally anathematizes the strain.

April 12. Chicago *Field:* Follows the *Turf* ideas exactly, and says: "One individual stating $1,000 would buy every premium;" "Davidson did the work, Wise the aristocratic, Colburn the handsome and agreeable." "Although nominally three judges there was but one actually." In *Turf, Field and Farm* of 18th it is said: "Judging was done without method." Of the judges, "Two of them were probably ignorant of their duties and acted honestly though erroneously." John Davidson, if he had anything to say in the giving of awards, stultified his dog knowledge by the errors of his judging, etc., etc."

Chicago *Field*, 19th: The writer boasts of sneaking about incog. and hearing John Davidson tell thus and so. Speaks of Davidson as a bell-weather leading his unthinking associates. A third of a column is devoted to personal abuse of Mr. Tileston and his dog Lou, and a moral homily is injected about an imaginary difficulty between Mr. Graniger and a priest. Says there was more growling over awards than was ever heard before at a bench show, and that "integrity of the judging was called into question."

Chicago *Field*, April 26th: "In fact the knowledge of the judges there (New York Show) received a Waterloo upsetting here."

I might quote much more from these two journals to show a deliberate purpose on the part of these two writers to injure the Westminster Kennel Club in every way in their power. And it is all mixed up with constant asseverations of truthfulness and impartiality sufficient to convince the reader that to falsehood is added malice. Aye, malice not content with anything less than permanent and widespread injury to its objects.

As to these general charges I will reply as follows:

1st. Sensation is so far ahead of any other pointer in America in bench show points, has taken so many prizes, is so universally admitted to pre-eminence that his critics can fight it out with him.

2d. As to the charges of corruption they are lies so patent that they need no notice, if such charges ever were made, which I doubt, believing they originated and died in the brain of the author.

3d. As to the ignorance of the judges, if they were ignorant they were, as I will prove hereafter, the best guessers that ever guessed, and one at least is a better judge of a puppy than of a dog.

4th. If John Davidson did all the work he did it better than ever a man did before, as I will show by the record of the New York winners in the Philadelphia and Boston dog shows.

5th. As to the writer who sneaked about and listened to what was not intended for him, if he had listened longer he would know more about dogs than I will show he does, by the record he has made.

6th. As to the charge that the knowledge of the New York judges received a Waterloo upsetting at Philadelphia and Boston, I will prove it so false by the writer's own reports as to make a blush mantle his cheek, if it can cover so large a surface.

Let us look at the record. I will review the Westminster awards in the order they were given. I refer to sporting classes solely:

POINTERS.

On this subject the twin Solons, or duplex-elliptic censor, of the *Turf, Field and Farm* and Chicago *Field* were very free in their expressions.

Field, April 12, Gothamite: "Condemnation of pointer judging - unanimous; snub-nosed, sharp-faced dogs, with a bull-dog look, wrinkly and all got the prizes, to the exclusion of better-formed dogs."

Champion dogs over 55lbs.—Snapshot. Approved by both *Turf* and *Field*. Champion bitches over 55lbs.—Columbus K. Club Fan. *Turf, Field and Farm*, 11th April, admits Fan was in fine condition and Psyche out of sorts.

Field, 12th April: "Winners very ordinary in looks."

Field, 19th: "If a trifle lighter in weight would have showed better; extremely ragged in hips and weak in loins; as fat as she was extremely narrow there."

This was poor Fan at New York Show. She did not go to Philadelphia. She did go to Boston, however. There, large and small champion bitches were shown in one class. She was pitted against Orgill's Rose, the New York champion in small classes, and Rose beat her, as she ought to have done. Was this a Waterloo to Westminster judges? Both with New York champion winners of 1879, and both could not get it. Even the writer of the *Field* forgot his abuse of Fan at New York and says:

Field, May 17: "Fan, who won first at New York, though a good bitch, can never compete successfully against a lemon and white in color, even if she were as good."

Large Pointers—Dogs.—Westminster judges gave Rex first. Here the dog solons of the *Turf* and *Field* howled.

Turf, Field and Farm, 11th April: "We fancied the Whiskey blood (Westminster) did the business, and sent first to Rex."

Field, 19th April: "Rex, a black and white dog, of whom could only be said he had a good loin and was in good condition. His shoulders were decidedly weak, while his head was faulty to a degree."

Now, by George! wasn't that a mean dog to be given first! They actually frightened him away from Philadelphia; he didn't go there at all. But he did sneak to Boston. In what sort of class? Fourteen entries. Well, what sort? Only Faust, just imported by St. Louis Kennel Club, costing $1,300, said to be the best dog in England; Coffin's Rake II., Garrett's Shot, Hammond's Brock, and that sort of mettle. Did he win first? Of course he did not; Faust won that. Faust was not at N. Y. Did he win second? He did that, my boy, and he made the *Turf, Field and Farm* and the Chicago *Field* take water and a back seat.

Turf, Field and Farm May 16: "Fourteen entries (Boston), and a walk-over for Faust. We did not think it possible for any dog to have been gotten in such condition as he showed in so short a time. Second went to Rex, the black and white dog who carried off first at the late Westminster Club Show. Our judgment must be at fault, for, while granting the dog is not a bad one, we cannot for the life of us see where the type of a winning dog is in Rex. We still think the award at New York—not the dog's merits—made him win at Boston."

Of course you cannot. Nobody but yourself imagines you know what a good dog is. The Westminster award made him win at Boston, did it? Why, you beggar, you told us not ten days ago that the Westminster awards were treated with no respect whatever. What says the other?

Chicago *Field* May 17: "Rex, who got first at New York, was placed second here. This was an award I did not like, as he, though with good points, is so faulty at others that he should never win in good company. We liked this award less than any given."

Aha! thought you would. You and the *Turf* know all about it. You are the chap who wrote "Condemnation of pointer judging unanimous!" Snub-nosed! Bull-dog! You cannot quarrel with the Boston judges.

Chicago *Field*, May 10: "I fancy the judging will be more satisfactory than at any show yet given." (Boston.)

Large Pointer bitches—First, Grace; second, Flash; third, Gwendolin. There were but three entries in this class. The *Turf, Field and Farm* described them as "all fair dogs," but it and the *Field* preferred Gwendolin for first. None of these bitches attended either the Philadelphia or Boston Show, and no comparison of their merits can be made.

Pointers—Champion Dogs under 55lbs.—First, Sefton; V. H. C., Rush. Only one prize given. Both *Turf, Field and Farm* and *Field* expressed a preference for Rush over Sefton at the time. They charged that Sefton's Sensation blood gave him the preference. The reader of their articles might readily retort that their prejudice against Sensation gave Rush the preference. There was not as much abuse as usual for this award. The class was very small, but two dogs in it really competed. Both were excellent dogs, so described in both *Field* and *Turf*, and the award was given to Sefton at last by the superior muscle developed in his thighs—muscle that on examination was found superb. Sefton and Rush were again pitted at Philadelphia, where the judges put Rush ahead. This was neither surprising nor mortifying to any one, because where two excellent animals are nearly matched in merit, personal preference is apt to decide. In describing the Philadelphia award "Gothamite," in the *Field* of May 3, speaks thus:

Chicago *Field*, May 3: "Champion Pointers—Eight entries, and those of the St. Louis Club, Bow, and Westminster Club, Sensation and Pallas, absent. The first regretted, the last much commented upon. Sensation blood here received such a terrible set-back that the dog's absence was a good thing, etc. Edmund Orgill * * * went to the front in this class with his Rush * * * His career has been almost uniformly successful. Second in Baltimore, 1877, puppies, Rose, mentioned below, taking first, etc. This year they (Rush and Rose) remained unplaced, according to the judging at the late Westminster Show, yet here we find them going to the front only a week later."

Now, is or is not this statement that Rush and Rose were unplaced at New York a deliberate falsehood to excite bad feeling? Rush, who pushed Sefton so close, and Rose, who was placed first at New York—not only placed first, but went to Philadelphia and to Boston and was again decorated—is here referred to as "unplaced." To such a pass will malice and falsehood bring its victim.

Small Pointer Dogs—Open class—First, Weighell's Bob; second, Strong's Ben; third, Terry's Chiswick. Of these, neither the first nor second prize winner has been exhibited since at either Philadelphia or Boston, but Chiswick, winner of third at New York, took second in the class for puppies, dogs and bitches, over eight and under twelve months, in Philadelphia, and although unplaced in the grown dog class at Boston, it will be remembered he was but fourth choice at New York, as Gill's Dash, second prize, was disqualified, and the class had to be judged anew for a third.

These awards were scouted at New York by *Turf* and *Field* correspondents. One of them at least forgets himself at Boston:

Turf, Field and Farm, May 16: "Chiswick, a more than good orange and white, by Flake ex-Lill, was the one we had picked out for first, though not so fine in head as Pete, Jr. Personally we liked Chiswick the better, but have no fault to find in the judging. Where two or three are equally good, it seems hard that but one can carry off first. Though hard, it's fair."

If these Christian reflections had consoled this meek and lowly writer when Sefton was placed ahead of Rush at New York, perhaps he would not have gone into hysterical joy when Rush beat Sefton at Philadelphia and would have to'd the truth instead of saying Rose, the thrice-crowned queen, had been unplaced in New York.

Small Pointer Bitches—Open Class.—First, Dutchess; second, Princess; third, Elf; V. H. C., Orgill's Belle. Of these only Dutchess and Belle went to Philadelphia. Of this bitch Dutchess, the writer will only say that when at New York she was to his eye the handsomest animal of the small class of pointers he ever laid his eyes upon; that he never saw her at Philadelphia, but a friend returning from that show, who had been as enthusiastic over her as himself, told him, before the Philadelphia awards were announced, that she was in such bad condition he did not recognize her when he first saw her there.

Turf, Field and Farm, April 11: "While we think her (Dutchess) a little too fine, too much of the parlor pet style, she is nevertheless a beauty to look at; but unless her gameness belies her looks she would 'peter out' after a couple of hours' hunt. Edmond Orgill's Belle, another of the Flake—Lill blood, only got a V. H. C. We thought her at least worthy of second," etc.

Chicago *Field*, April 19: "Now, this bitch was pretty to look at, having large dark eyes, dark muzzle, and a lovely coat. Her loins were good, and hips round and full, like a bull-dog. She was far too equatly in front, and if judged for adaptability for field work would have been nowhere. For a pet of the house, to be kept as an Italian greyhound would be kept, she would be beautiful in the extreme; but I would ask, is that what we wish our pointer blood for?" etc.

At Philadelphia the New York judges were reversed on this point. It matters not how or why. Belle was placed ahead, taking first. A new bitch puppy named Crystal was placed second, and Dutchess only took third.

At Boston Belle was not entered, and did not appear; Dutchess was entered, but did not appear; Crystal entered and appeared, and only received an H. C.; while Princess, winner of second at New York, took first at Boston in the class for large bitches.

This judgment on Dutchess at Philadelphia, and the reversal of position between Sefton and Rush, gave the Damon and Pythias of *Turf* and *Field* infinite delight.

Turf, Field and Farm, May 2: "Dutchess, who got first at N. Y., was at Philadelphia placed only third in her class, which contained but three entries. Mr. Garrett Roach, who felt aggrieved at the award, asked why there should be such a wide difference in the opinions of two sets of judges. We will tell him: Dutchess, while beautiful in form, has a bad ear. It is altogether too long and hound-like in its shape. It turns with an inward twist to the head, so that the ear makes a perfect curve, as in a foxhound, before it ends. Her throat also shows under the head quite strongly, a dew-lap giving her exceeding throatiness. Outside of these show faults she is a beauty, and we can scarcely wonder at the admiration of one of the New York judges," etc.

Field, April 26: "In bitches, Orgill further distinguished himself by winning first with his Belle against Dutchess, who, despite her crooked tail, won first at the late Westminster show. In fact, the knowledge of the judges there received a Waterloo upsetting here."

Chicago *Field*, May 3: "The Westminster winner of first placed here third. I characterized her in my telegram to you as crooked-tailed. I will take that much back, as, upon closer examination, I found the end of that member all raw and bleeding from switching it against the wire netting. I fancy this bears out what I said of her in connection with her winning first in New York—'so fine as to peter out after a few hours' hunt.'"

Observe now. The expression about "petering out" at New York appeared in the *Turf, Field and Farm* April 11. Nothing of the sort was in the Chicago *Field*. This letter in the *Field*, written by "Gothamite," refers to "what I said of her," and that was in Mr. Pentz's column of the *Turf, Field and Farm*. Can there be any doubt of the fact that Pentz and "Gothamite" are identical after this. That the columns of both papers are poisoned by the same pen? If there is, I will add that the Chicago *Field* tells of a private effort to buy Lou of Mr. Tileston, which effort was made through Mr. Bruce, of the *Turf, Field and Farm*, was learned by Mr. Pentz without fault of Mr. Bruce, and by Pentz used in the Chicago *Field* in "Gothamite's" letter.

This being so, how funny it reads to hear Pentz in the Chicago *Field* telling how he overheard a conversation between himself and Raymond; how his judgment is borne out by Mr. Pentz, whom he heard conversing, etc. It is as funny as tickling one's-self with a straw.

Dutchess was not only first in open class at New York, but took one special as the best of Sensation's get, and another as the best pointer, dog or bitch, at the show. The judges were

unanimous on all these awards, and are willing to stand by them for good or bad, always deferring respectfully to the judgments of others, believing that she was all wrong at Philadelphia, and pointing proudly to the career of their prize-winners—Rose, Rex, Chiswick, Princess, Van, and Beauty—as to their knowledge of pointer dogs.

Turf, Field and Farm and Chicago *Field* both studiously concealed the fact that Princess, first at Boston, was second at New York.

Pointer Puppies Over Six Months—Dogs.—New York gave first to Scheiffelin's Ponto; second, Roach's Van. Ponto did not go to Philadelphia. Van went. Dog and bitch puppies were there exhibited together. Van again took second, to Crystal, who was not at New York. Van died in Philadelphia.

Pointer Puppies Over Six Months—Bitches.—First, Scheiffelin's Beauty; second, Rena. Neither of these went to Philadelphia. Rena did not go to Boston. The following expressions touching Beauty show the judgment of *Turf* and *Field* correspondent:

Turf, April 11: "The bitches in this class numbered sixteen, and were an average lot. First went to Chas. M. Scheiffelin's lemon and white Beauty—Sensation blood, of course."

Chicago *Field*, April 19: "First went of course to Sensation blood, going to Chas. M. Scheiffelin's lemon and white Beauty, though so fine as to be weedy."

Beauty went to Boston. Scheiffelin had sold her to Coffin. Coffin calls her Lola (late Beauty). Dog and bitch puppies were judged there in one class. It was a class of magnificent puppies—ten entries.

This weed—"Sensation blood, of course—" trash, stuff—again took first. How is that again for Waterloo?

This finishes the pointers, as the little pups under six months were not considered at Philadelphia and Boston, as they should not have been. Judgment on little puppies is mere hap-hazard and guess-work at best, and ought not to be called for.

SETTERS.

Well may I quote from *Turf, Field and Farm*, "Now, infidel, I have thee on the hip." At the New York judging of setters both *Turf, Field and Farm* and Chicago *Field* howled as dolefully as did the three black bitches in the Arabian Nights story.

Turf, Field and Farm, April 18: "Judging was done without rule and without method * * * Two of them (judges) were probably ignorant of their duties and acted honestly, though erroneously. John Davidson if he had anything to say in the giving of awards stultified his dog knowledge by the errors of his judging * * * We have had here three exhibitions, and at each one the judges have acted upon their own ideas in giving the awards, and we have now three distinct types set up as models. Which is right? Evidently not all! How our breeders can go along systematically in the face of the different styles of prize-winners is more than we can say," etc., etc.

Ah! Infidel: Ray, Stanley, Thunder, Montague, Derg, Turk, Lady Gordon, Abbey and others at Philadelphia and at Boston make you groan for this folly. Twice and thrice indorsed they show that you are an ignoramus on dogs and blinded by malice.

Chicago *Field*, April 19: "In numbers the classes were all well filled. In the English class the exhibit was a great one. The number was large and the quality above average. In the Irish poor and of no one type in looks of form or color. The red and white classification was a failure. The Gordons were in the same boat as the Irish lot. Broad skulls and narrow skulls, long-faced and short-faced were grouped together regardless of what points they were to be judged by. These two classes reminded us of the witch scene on the blasted heath in the tragedy of Macbeth; as the caldron contained all sorts of trash, so here, and the judges, like the witches, made confusion more confounded by the hell broth they made of their judging. As Hecate and her sister watched the gruesome pot they fed, so the three judges watched the exhibitors who 'boiled' as fast as ever did that historic caldron, when they learned of the awards."

Now, if I show that from these incongruous masses the judges flew straight to the true types, if I show that their prize-winners have been recognized at Philadelphia and Boston almost without exception, the *Turf, Field and Farm* and Chicago *Field* correspondents when next they meet a jackass may quote again from the witch scene in Macbeth and say, "When shall we three meet again?"

Chicago *Field*, April 19: "As to the judging, I heard but one opinion, entire dissent. * * * * Some even went so far as to question the honesty of the awards, one individual making the remark I telegraphed you 'that a thousand dollars would buy every prize.' This I thought severe, but it was probably an outspoken thought, shared by hundreds—but silently."

Turf, Field and Farm, April 25: "We are perfectly willing to leave our judgment of the dogs to those having acquaintance with the standards by which the sporting classes are judged."

Then let us leave their judgment on the Westminster awards to the Philadelphia and Boston judges, as far as we can.

CHAMPION ENGLISH DOGS.—Jersey Duke, first New York. Never appeared at Philadelphia or Boston.

Turf, Field and Farm, April 11: "Duke captured first and we think justly. He is a fine dog every way, and with the handsomest head we have ever looked over."

Chicago *Field*, April 19: "This award and the award of first in open classes occasioned immense remark. I heard several say, 'Oh, that Mohawk could see this,'" etc. Above, the writer says Lark, P. H. Morris, was in superb form, as was also Lincoln & Hellyar's Frank II. The latter was my favorite, being in both looks and make-up a remarkable dog."

This division between *Turf, Field and Farm* and Chicago *Field* was doubtless to cater to "Mohawk's" views. The *Turf*, April 18, says: "Where a judge is hired he is bound to serve his master." Here we see it. But the funniest part of it is that Frank II. was not at New York at all, and the panageric was upon Royal Ben whom the writer mistook for absent Frank II., and who in open class native setters at Boston did not even get a C. out of five notices.

In this class was a roan dog named Grouse, from Philadelphia. A quiet, sober-sided old fellow, entered as five years old, but whose teeth were very badly worn, and the writer thinks he is much older than five. *Turf* and *Field* gave the judges Hail Columbia for not noticing him—after this style:

Turf, April 11: "Grouse didn't gain a glance from the judges; but in spite of that we looked upon him as a grand looking animal," etc.

Turf, April 18: "Grouse, a large-sized, well put together dog, we fancied amazingly. He was of that old-fashioned style we used to see so many good dogs of," etc.

Chicago *Field*, April 19: "A perfectly unnoticed dog was the Grouse of Max Hellmich, of Philadelphia. A noble animal in all and every respect save in color. A decided roan in color, he was not even glanced at, yet in all that makes a show dog save that, he was superb."

Grouse, in Philadelphia, his own town, had but one competitor, Royal Duke, and Grouse was beat as he ought to have been unless Duke is a very poor dog. Then twin stars sung together on that defeat as follows:

Turf, April 25: "We like the Grouse of Max Hellmich infinitely better. This is the same dog we fancied so much at the late Westminster Show. He is a grand dog and his owner should be proud of him."

Field, April 26: "Max Hellmich's Grouse again unnoticed; yet he is more than a good dog," etc.

This illustrates the judgment and the spirit of criticism of *Turf* and *Field* correspondent or correspondents. The *Field* of April 19 gives an account of whisperings, penciling and gesticulation as to this award which is without one scintilla of truth—no such thing occurred.

CHAMPION ENGLISH SETTER BITCHES.—First, D. T. Charles' Rose.

Turf, April 18: "The award in this class justly given."

Field, April 19: "In English Champion setter bitches there were also five entries. I thought that here the award went where it belonged."

Rose was neither at Philadelphia nor Boston. Her only risk in future is that she is endorsed as above.

OPEN CLASS ENGLISH SETTER DOGS.—First, St. Elmo; second, Sam; third, Sir Launcelot; V H C, Royal, Stanley, Thunder, Grouse, Ray. Of these St. Elmo, Sam, Sir Launcelot and Royal were not at Philadelphia or Boston. So Westminster prize-winners in this class have not been put to their test.

This was a glorious class—sixty-seven entries.

"*Turf*, April 18: English setter open class for dogs. The exhibition was a good one, and that class contained more really meritorious animals than all other classes of setters combined."

Chicago *Field*, April 19: "In the English class, the exhibit was a great one, the number was large and the quality above the average."

Turf, April 18, abused St. Elmo roundly. No comment on Sam. Sir Launcelot he pronounced "a fine orange and white who would have been good in any company." Royal, he says, "is one of a grand pair of dogs * * In our judgment should have been placed higher." "Another really grand young dog was Elmendorf's Stanley. Individually we liked him better than any dog in the class. He is unfortunately liver and white in color," etc. Thunder "is a remarkably handsome dog despite his inferior size. * * * His thighs, however, are faulty to a degree," etc. "Grouse, of Salem, Mass., was also a first rate dog. Two other dogs we have marked as worthy of mention"—first, Rogers' Prince, the other was E. Orgill's Ray.

It seems that, excepting St. Elmo, the *Turf* rather approved the awards in this class. Seems to know more of English dogs than usually does of others.

Field, April 19: "A dozen dogs of the 67 suited my fancy better than the winner * * * Second went to Sam * * while third went to Sir Launcelot. He is a fine orange and white dog, and either this one or Sam would have suited me best for first." This writer heard the field editor of *Turf, Field and Farm* say that Stanley was the best dog, and went to see him, adding, "the blood is rich, and while fancying myself Laverack Thunder, I could not help according praise to Stanley." He praised Stanley very highly. Of Thunder he said: "He is one of the biggest little ones ever put together." "Another good one was Orgill's Ray." "A fine brace—perhaps I should write more panegyrically than that—was the brace called Royal and Saxe." This writer never mentioned Grouse. Both these writers mentioned a dog named Snooks. Otherwise they mentioned no other dogs in the class. Royal and Saxe were given the special as the best brace, so they are suited there also. It seems that their objection to this judging lay rather in the order of merit than in the merit. Indeed, St. Elmo was the principal cause of complaint. The merits of the three prize winners and Royal must be an adjourned question until they appear elsewhere.

The V. H. C.'s have had a wonderful run. Stanley took second in natives at Philadelphia, and Thunder, absent in Boston, took second in imported at Philadelphia, and Grouse, absent at Philadelphia, took H. C. at Boston. Ray took first in natives at Philadelphia and Boston. Eight or ten dogs of the New York class went to Philadelphia. No dog unnoticed in New York made any record there. This singular concurrence in judgment surely repels the charge of ignorance. To do the *Turf* and *Field* justice, they showed more knowledge of dogs of this class than of all others combined; yet they both manifestly estimated Ray lower than Thunder or Stanley, while the New York judges placed them as of equal merit. Does this look like Waterloo?

Setters—Open Class, Bitches.—First, Minto; second, Abbey; third, Meg.

Turf, April 18: "A nice-headed, small-sized bitch; in color, black, tan and white ticked. For ourselves, we infinitely preferred Scranton's Meg for the position. Second was given to Ehler's May."

Chicago *Field*, April 19: "Minto. She was a good little bitch; too small, and being also fine, we should not fancy her as a brood bitch. Third went to * * * Meg * * * This bitch was a fine one, and much more fitted for first than the one to whom it was awarded."

Neither of these noticed the since famous Abbey. The *Turf* mis-stated the second prize winner. Both claimed Meg as best for first. Good. Minto was neither at Philadelphia nor Boston. Abbey went to Philadelphia and took first, and then to Boston, where she was pitted against Meg, and Abbey took second, while Meg was unnoticed. Is this Waterloo? Isn't it funny? Whose judgment is right there?

English Setter Pups, Dogs and Bitches—No prize winner in these classes at New York was at Philadelphia or Boston. *Turf* made no adverse comments on these awards. *Field* speaks of the two in large class as given to the Charles blood and the two in small class as "fairly won."

BLACK-AND-TANS

The Turf, Field and Farm April 18, after charging that Irish setters were judged by English type, says: "The same fault was just as noticeable in judging Gordons. Here the broad head, short nose and comparatively high ear were all discarded, and the long head, low ear and long nose of the Irish dog adopted instead. It was all wrong." Of the class: "A class large in numbers, yet, when judged by a standard, very inferior in quality." Again: "In no class was diversity of shape more shown than here."

Chicago *Field*, April 19: "A greater diversity of type and a greater diversity in the giving of awards never was seen. It was simply astonishing. Pig-jawed, snipe-nosed animals came in for just as much commendation as the broad-headed ones, etc., etc. * * * The consequence was a ludicrous medley in the style of the awards." Now let us compare these awards with Philadelphia and Boston, and we shall see what the above stuff means.

Champion Black and Tan Dogs—First, Pond's Trump.

Turf, 18th: "Virtually no competitors, as there were but two entries."

Field, 19th: "It was a virtual walk-over, as there were but two entries."

Trump was not at Philadelphia. Rupert, who was not at New York, beat him at Boston, as he ought to have done. There were but two entries at Boston. Both *Turf* and *Field* were distressed at this.

Turf, May 16: "With all due respect to the judges, we cannot help but take issue with them here."

Field, May 17: "This award I did not coincide in."

How different the tone from that indulged in at New York! So Westminster was O. K. on champion dogs!

Champion Black and Tan Bitches—First, Rodman's Nellie. Seven entries.
